The presumed political implications of Mozart's masonic activities may also be overstated. On 11 December 1784 he had become a freemason at the lodge 'Zur Wohlthätigkeit' ('Beneficence'), which in 1786, at Joseph II's orders, was amalgamated with the lodges 'Zur gekrönten Hoffnung' ('Crowned Hope') and 'Drei Feuern' ('Three Fires') into 'Zur neugrekrönten Hoffnung' ('New Crowned Hope') under the leadership of the well-known scientist Ignaz von Born. The society was essentially one of liberal intellectuals, concerned less with political ideals than with the philosophical ones of the Enlightenment, including nature, reason and the brotherhood of man; the organization was not anti-religious, and membership was compatible with Mozart's faith (Landon, G1982, suggests that an anonymous oil painting showing a meeting of a Viennese lodge includes, in the lower right corner, a portrait of Mozart; fig.8). Mozart frequently composed for masonic meetings: the cantata *Die Maurerfreude* K471, for tenor, male chorus and orchestra, was written to honour Born, and various versions of the *Maurerische Trauermusik* K477 were given in 1786 (Autexier, L1984–5); several songs and other occasional works, too, were composed for lodge meetings. The masonic style is not restricted to music intended exclusively for lodge performance, but appears elsewhere in Mozart's works, with respect to both general themes, as in *Die Zauberflöte*, and specific musical constructions: Sarastro's aria 'O Isis und Osiris', with its strophic, antiphonal structure, is identical in form with other Viennese masonic songs of the 1780s.

Mozart had first made his way in Vienna by taking pupils, and he continued to do so throughout the mid-1780s: the most important of these was Johann Nepomuk

Hummel, who lodged with him between 1786 and 1788. Mozart also taught the English composer Thomas Attwood, whose surviving exercises (now in *GB-Lbl*; ed. in NMA, X:30/i) testify to Mozart's careful, systematic teaching methods, and perhaps carry hints as to how Mozart himself had been taught (see Heartz, H1973–4). The 'English' connection was already strong at the time of *Figaro*: the first Don Curzio was Michael Kelly (in fact an Irishman), and the first Susanna the soprano Nancy Storace; it is likely that Nancy's brother, Stephen – who later pilfered part of the 'Rondo alla turca' of the Sonata K331 in his opera *The Siege of Belgrade* – also consulted informally with Mozart on matters of composition. (After his return to London, Storace prepared a series of publications which included in 1789 the first edition of the Piano Trio K564, in a text that differs from the first Viennese edition of 1790; he probably received a copy of the work from Mozart himself.)

The impending departure of the English contingent from Vienna, planned for the spring of 1787, led Mozart to consider a journey to London during late 1786, but that idea foundered when Leopold took a strong stand against the proposed journey and refused to look after Mozart's children (of Mozart's six children, only two, Carl, born in 1784, and Franz Xaver, born in 1791, survived to adulthood). Mozart did, however, accept an invitation to Prague, where *Figaro* had been a great success. He spent approximately four weeks there, from 11 January 1787, and clearly relished his popularity in the city. He directed a performance of *Figaro* and gave a concert including a new symphony written for the occasion (the Prague, K504 – there is reason to believe that Mozart originally intended to perform the Paris Symphony with a new finale, but, having written it, decided to compose an entirely new symphony altogether; see Tyson, D1987). And it was about this time that the Prague impresario Pasquale Bondini commissioned Mozart to write an opera for the following autumn. On his return to Vienna, Mozart asked Da Ponte for another libretto.

The plot of *Don Giovanni*, based like that of *Figaro* on tensions of class and sex, dates back at least to the time of Tirso de Molina (1584–1648), although Da Ponte drew on the most recent stage version, a one-act opera with music by Giuseppe Gazzaniga and a libretto by Giovanni Bertati, given in Venice in February 1787. Mozart left for Prague on 1 October; the première was planned for 14 October 1787, but because of inadequate preparation, *Figaro* was given instead and the new opera was postponed until 29 October, when it earned a warm reception. Mozart directed three or four performances before returning to Vienna in mid-November. During this time he also visited his friends the Dušeks at their villa outside Prague; he wrote the difficult aria *Bella mia fiamma* K528 for Josefa, an old Salzburg friend. *Don Giovanni* was staged in Vienna in May 1788, with several adaptations: Leporello's escape aria in Act 2 was replaced by a duet with Zerlina; Ottavio's 'Il mio tesoro' in Act 2 was replaced by 'Dalla sua pace' in Act 1, and Elvira was given a magnificent accompanied recitative and aria, 'In quali eccessi . . . Mi tradì quell'alma ingrata'.

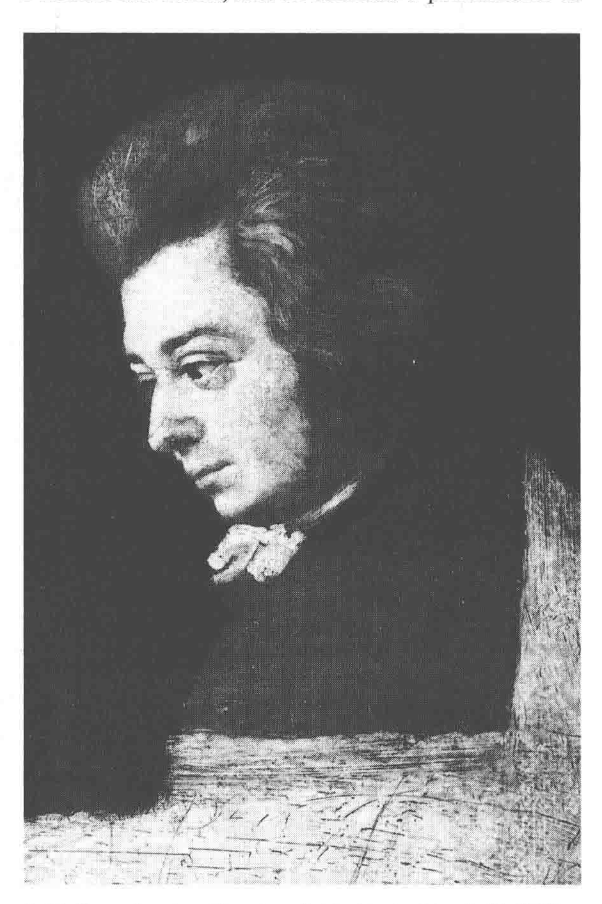
The two Da Ponte operas, along with the increasing success of his publications, initiated a new phase in Mozart's career. Not only did he now give fewer concerts – a grand academy at the Burgtheater on 7 April 1786, less than a month before the première of *Figaro*, was his last in that venue (the programme probably included the C minor Piano Concerto K491) – but other genres came to the fore in his output, including the symphony. The final symphonic triptych, composed between June and August 1788, was apparently intended for a concert series that autumn (Eisen, L1997); it is striking that Mozart chose these works, rather than concertos, for what may have been his first public concert appearance in two years. Whether these changes were also related to Mozart's appointment the previous December as court *Kammermusicus*, however, is unclear. Apparently he was required to do little more than write dances for court balls; nevertheless, Mozart welcomed the appointment, both for the dependable income it provided and for its advancement of his standing in Viennese musical circles. There is little reason to think that the relatively small salary of 800 gulden (Gluck, the previous incumbent, was paid 2000 gulden) was an insult to Mozart, for the post was superfluous to begin with; Joseph II later remarked that he had created the vacancy solely to keep Mozart in Vienna.

The death of Leopold Mozart in May 1787 may have initiated a fallow period for the composer, albeit at some months' distance: Mozart wrote relatively few works immediately following the Prague première of *Don Giovanni*, among them dances and piano music, songs and arias and at least part of a piano concerto (K537) in addition to the three new items for the Viennese première of his opera. A similar fallow period had followed the death of his mother in Paris in July 1778. Leopold's death also marked the final breakdown of the Salzburg Mozart family. Only Nannerl, who in 1784 had married the magistrate Johann Baptist Franz von Berchtold zu Sonnenburg and moved to St Gilgen, remained, and except for settling their father's estate, Mozart apparently failed to keep in contact with her (his last known letter to her is dated 2 August 1788). Nannerl was hurt by Mozart's lack of attention, so much so that when asked in 1792 to describe his life in Vienna, she pleaded ignorance, despite the fact that she had become personally acquainted with Constanze in 1783 and still had in her possession numerous letters from her father, many of them detailing Mozart's activities at the time.

6. THE FINAL YEARS. Mozart's financial circumstances in Vienna can be measured in part by the locations and sizes of the numerous lodgings he rented there. In January 1784 he moved to the Trattnerhof, and in September of that year to an apartment, now Domgasse 5, in the heart of the town, close to the Stephansdom. By mid-1788, however, he had removed to the distant suburb of Alsergrund, where rents were considerably cheaper. It is from this time that a dismal series of begging letters to his fellow freemason Michael Puchberg survives. One refers to the poor response to his string quintet subscription, another to embarrassing debts to a former landlord, and a third to dealings with a pawnbroker; the letters continued well into 1790.

Mozart's finances during the Vienna years must be counted a mystery. Although he was never forced to do without a maid or other luxuries typical of a person of his standing, his finances were unstable. Estimates of his earnings are at best incomplete and unreliable. His main sources of income included profits from his public concerts and payments from private patrons; money earned from

teaching; honoraria for publications; and, from 1788, his salary as court *Kammermusicus*. During his early years in Vienna Mozart's performances represented a good source of income. His subscription series of 1784 attracted well over 100 patrons at 6 gulden for three concerts, and, according to Leopold, he took in 559 gulden from his Burgtheater academy on 10 March 1785. He also must have received cash or other rewards from the princes Esterházy and Golitsïn, at whose homes he frequently performed; for his contest with Clementi Joseph II gave him 50 ducats. After 1786, however, this concert-giving income largely disappeared.



Teaching provided less, although Mozart enterprisingly formulated a scheme to ensure some regularity of payment, which he described to his father in a letter of 23 January 1782: 'I no longer charge for 12 lessons, but monthly. I learnt to my cost that my pupils often dropped out for weeks at a time; so now, whether they learn or not, each of them must pay me 6 ducats'. Publications may also have brought in substantial sums, although the payment of 450 gulden that Mozart received from Artaria for the six quartets dedicated to Haydn was exceptional; he received less for the symphonies and the sonatas, quintets and other chamber works printed during the 1780s. On occasion he acted as his own publisher, sometimes with sorry results: a subscription for his string quintets in 1788 apparently failed. In 1791, however, he apparently sold copies of *Die Zauberflöte* for 100 gulden each. For the composition of an opera Mozart generally received 450 gulden; payments of this amount are documented for *Die Entführung*, *Figaro* and *La clemenza di Tito* (for *Così fan tutte* see below); his share of the profit from *Die Zauberflöte*, however, is unknown.

Mozart's day-to-day expenses, on the other hand, have been little explored. In addition to rent and food, his income had to cover substantial medical bills (chiefly resulting from Constanze's frequent cures), child-rearing expenses and a costly wardrobe (only some of the prices he paid for maintaining his standing in Vennese society, though gladly it seems). By all accounts he was generous to his friends, sometimes lending them money. Other expenses on other items must be taken into consideration as well, among them books, music and manuscript paper. Documents show that Mozart was in debt to the publisher Artaria throughout the 1780s, although it is unclear whether this represents monies owed before or after honoraria paid by Artaria for his published works (Ridgewell, G1999).

The estate documents are difficult to interpret. Mozart was in debt at the time of his death, but not to an excessive degree: the value of his estate, less than 600 gulden, was set against debts of about 900 gulden. However, this does not take into account a judgment of more than 1400 gulden awarded by the courts in November 1791 to Prince Karl Lichnowsky, who had sued Mozart, for unknown reasons (details of the affair and its resolution are known only summarily from an account in the Viennese archives; see Brauneis, G1991). Nevertheless, Constanze managed not only to pay off Mozart's debts but also to collect the value of the estate. It may be that she was provided for by Mozart's friends and patrons, chief among them van Swieten, or that her finances were secured by the sale of Mozart's music and the income from numerous benefit concerts.

Between 1788 and 1790, van Swieten contributed to Mozart's welfare by having him arrange for private performance several works by Handel, including *Acis and Galatea* (K566, November 1788), *Messiah* (K572, March 1789) and *Alexander's Feast* and the *Ode for St Cecilia's Day* (K591 and 592, both July 1790). But the situation in Vienna at the time was complicated by the Turkish war. One effect of this campaign was a general decline in musical patronage during 1788 and 1789, with fewer concerts than there had been earlier in the 1780s. (The war did provide Mozart with opportunities for composition, however, including the 'Kriegslied' *Ich möchte wohl der Kaiser sein* K539 and the works for mechanical organ, K594, 608 and 616, presumably composed for performance at a mausoleum established in memory of Field Marshal Gideon Laudon, the hero of the Siege of Belgrade.)

Perhaps in an effort to alleviate his financial woes, or even to escape what he may have perceived as an oppressive Viennese atmosphere, Mozart undertook a concert tour of Leipzig, Dresden and Berlin in the late spring of 1789. Details of the journey are scarce. At Dresden he played chamber music privately and performed at court, in addition to playing in an informal contest with the organist J.W. Hässler, while at Leipzig he reportedly improvised at the Thomaskirche organ in the presence of the Kantor, J.F. Doles, a former Bach pupil. Mozart may have sold some compositions in Potsdam and Berlin, and he attended a performance of

9. Wolfgang Amadeus Mozart: unfinished portrait (probably 1789) by Joseph Lange in the Mozart Museum, Salzburg

Die Entführung. Nevertheless, the journey was not without its rewards. In Leipzig Mozart renewed his acquaintance with Bach's music, obtaining a score of the motet *Singet dem Herrn ein neues Lied!* (BWV225); its impact is evident not only in the chorale of the Armed Men in *Die Zauberflöte* but also, more substantially, in the contrapuntal disposition and character of the finales of his two last string quintets, K593 and 614. And he was probably invited by King Friedrich Wilhelm II, an amateur cellist, to compose quartets and keyboard sonatas. Almost certainly he started work on this commission on the return journey to Vienna: the score of K575 (fig.10) and part of that of K589 are written on manuscript paper originating from a mill between Dresden and Prague. When the quartets were finally published by Artaria in 1791, however, they lacked a dedication altogether. Mozart wrote to Puchberg on 12 June 1790, 'I have now been obliged to give away my quartets . . . for a pittance, simply in order to have cash in hand'.

His continuing financial problems notwithstanding, Mozart's circumstances were beginning to improve by late 1789. In addition to the first of the 'Prussian' quartets, he wrote two replacement arias for a new production of *Figaro* on 29 August ('Al desio di chi t'adora' K577 and 'Un moto di gioia mi sento' K579, first heard at a Tonkünstler-Societät concert in December), as well as substitute arias for productions of Cimarosa's *I due baroni* (K578), probably for a German-language version of Paisiello's *Il barbiere di Siviglia* (K580), and for Martín y Soler's *Il burbero di buon cuore* (K582 and 583). His work attracted international interest: the poet Friedrich Wilhelm Gotter intended to offer Mozart his opera libretto *Die Geisterinsel* (in the event not set until 1796, by Friedrich Fleischmann), and in April 1791 Mozart was apparently offered a pension by two groups of patrons, one in Amsterdam, the other in Hungary.

His main energies, however, were given to the composition of *Così fan tutte*, his third collaboration with Da Ponte and the only one of the Da Ponte operas for which there is no direct literary source (although, like *Don Giovanni*, it has sources in Tirso de Molina). It may be that the libretto was wholly original to Mozart and the poet, for the subject is sometimes claimed to have been suggested to Mozart and Da Ponte by Joseph II himself, allegedly on the basis of a recent real-life incident. However, it is known that the libretto was initially offered to Salieri, who set some early numbers and then apparently abandoned it (Rice, J1987). *Così fan tutte* is widely reckoned to be the most carefully and symmetrically constructed of the Da Ponte operas. The three men (the two officers Ferrando and Guglielmo and their friend don Alfonso) and the three women (the sisters Dorabella and Fiordiligi and their servant Despina) each have an aria in each act; and the ensembles are calculated so that the four principals are kept in their pairs (officers and sisters), and given relatively little personal identity, until well on in Act 2, by which time the sisters are emotionally affected by their disguised lovers. At this point, the pervasive element of parody characteristic of the opera gives way to music more personal in tone, reflecting the characters' differing moral dilemmas.

10. Autograph MS from Mozart's String Quartet in D K575, 1789, end of the first movement (GB-Lbl Add.37765,f.4v)

Little is known of the opera's genesis. It was rehearsed at Mozart's home on 31 December and at the theatre on 21 January 1790 (Puchberg and Haydn probably attended both); the première was on 26 January. There were four further performances, then a break because of the death of Joseph II in February, and five more in the summer. Mozart apparently expected to receive 900 gulden for its composition, twice the usual amount, but documents survive only for a payment of 450 gulden (Edge, G1991). Although the opera was a success – receipts from the court theatre box offices show that it was one of the most heavily attended of the season (Edge, G1996) – it soon came to be criticized for its apparent moral shortcomings: female fickleness, in particular, was found shocking, and it is made more so by the convention (standing equally in *Figaro* and *Don Giovanni*) that the action should span no more than 24 hours. The opera is susceptible of other interpretations, however. Its appeal to *commedia dell'arte* traditions explains some of the characters and their behaviour, including the use of poison, disguises and elevated rhetoric (Goehring, J1993), while its balance of sympathy and ridicule presents a commentary on the strength and uncontrollability of amorous feelings and the value of a mature recognition of them.

Joseph II died on 20 February 1790, and with the accession of a new emperor, Leopold II, Mozart hoped for a preferment at court; none was forthcoming. Unlike his predecessor, Leopold (who until his coronation had ruled in Florence as Grand Duke of Tuscany) had musical tastes that were thoroughly Italian. During the two years of his reign he transformed Viennese musical theatre: he planned to replace the old Burgtheater with a magnificent new house, he reintroduced the ballet and revived *opera seria*, and he reformed comic opera. Although these changes were seemingly reactionary, they nevertheless looked to the future: they were responsible at least in part for the composition of *Die Zauberflöte* and *La clemenza di Tito*, both of which were influential in the early 19th century (Rice, J1995).

In order to take advantage of the coronation festivities, in which he had no official role, Mozart went in September 1790 to Frankfurt, taking his brother-in-law Franz de Paula Hofer and a servant. They arrived on 28 September, and Mozart gave a public concert on 15 October; though musically a success it was poorly attended and financially a failure. On the return journey Mozart gave a concert at Mainz, heard *Figaro* at Mannheim, and played before the King of Naples at Munich. He reached home about 10 November, joining Constanze at their new apartment in central Vienna, to which she had just moved.

A trip to England became a possibility again that autumn. Mozart was tendered an invitation for an opera, but declined (he was also promised an engagement like Haydn's by J.P. Salomon). During the winter months he composed a piano concerto (K595, possibly performed on 9 January 1791 by his pupil Barbara Ployer at a concert held by Prince Adam Auersperg in honour of the visit to Vienna of the King of Naples; see Edge, G1996) and the last two string quintets (K593 and 614). He played a concerto at a concert organized by the clarinettist Josef Bähr, and an aria and a symphony were give at the Tonkünstler-Societät concerts in April. That same month Mozart secured from the city council the reversion to the important and remunerative post of Kapellmeister at the Stephansdom, where the incumbent Leopold Hofmann

Mit gnädigster Erlaubniß
Wird Heute Freytags den 15ten October 1790.
im grosen Stadt-Schauspielhause
Herr Kapellmeister Mozart
ein groses
musikalisches Konzert
zu seinem Vortheil geben.

Erster Theil.

Eine neue grose Simphonie von Herrn Mozart.

Eine Arie, gesungen von Madame Schick.

Ein Concert auf dem Forte piano, gespielt von Herrn Kapellmeister Mozart von seiner eigenen Komposition.

Eine Arie, gesungen von Herrn Cecarelli.

Zweyter Theil.

Ein Conzert von Herrn Kapellmeister Mozart von seiner eigenen Komposition.

Ein Duett, gesungen von Madame Schick und Herrn Cecarelli.

Eine Phantasie aus dem Stegreife von Herrn Mozart.

Eine Symphonie.

Die Person zahlt in den Logen und Parquet 2 fl. 45 kr.
Auf der Gallerie 24 kr.

Billets sind bey Herrn Mozart, wohnhaft in der Kalbsbechergasse Nro. 167. vom Donnerstag Nachmittags und Freytags Frühe bey Herrn Cassirer Scheidweiler und an der Casse zu haben.

Der Anfang ist um Eilf Uhr Vormittags.

11. Handbill for the concert Mozart gave in Frankfurt (15 October 1790) during the festivities on the coronation of Leopold II; the programme included the piano concertos K537 and 459

was aged and ill; he was appointed assistant and deputy, without pay, but in the end Hofmann outlived him.

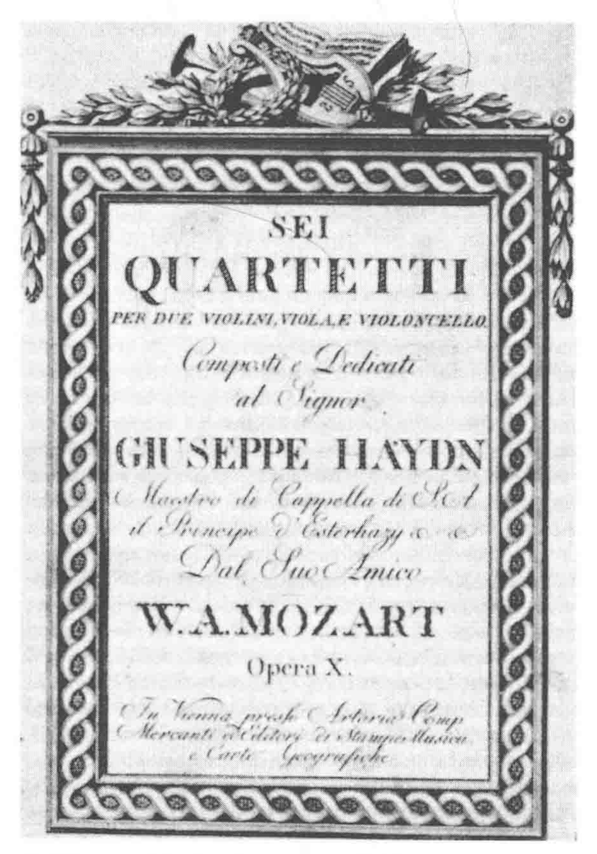
It was for the festivities at Leopold II's coronation in Prague that Mozart composed *La clemenza di Tito*. Reports published soon after his death suggested that it had been written in only 18 days, some of it in the coach between Vienna and Prague, although it is more likely that it written over a period of six weeks. The impresario Domenico Guardasoni signed a contract with the Bohemian Estates on 8 July, and his first choice to compose a coronation opera (either on a subject to be suggested by the Grand Burgrave of Bohemia or, if time did not permit, on Metastasio's *La clemenza di Tito*, 1734), was Salieri. But Salieri refused the commission and the work fell to Mozart. Possibly this was in mid-July: the fact that Guardasoni's contract included an 'escape clause', allowing him to engage a different composer, suggests that he may already have expected Salieri to decline and discussed with Mozart the possibility of composing the opera. The text was arranged by Caterino Mazzolà, who cut much of the dialogue and 18 arias while adding four new ones, as well as supplying two duets, three trios and finale ensembles. In his catalogue, Mozart described *Tito* as 'ridotto a vera opera'. The première took place on 6 September.

Mozart's works were widely published in 1791 – Viennese dealers produced nearly a dozen editions of his works in that year alone – and were intended for audiences that ranged far beyond court circles. Among them were

the string quintets K593 and 614 (December 1790 and March 1791, respectively), the Concerto K622 for Anton Stadler (for whose basset-clarinet, with its downward extension of a major 3rd, Mozart also probably intended the Quintet K581), the Masonic cantata *Laut verkünde unsre Freude* K623, the aria *Per questa bella mano* K612, the piano variations on *Ein Weib ist das herrlichste Ding* K626, the motet *Ave verum corpus* K618, *Die Zauberflöte* K620 and the Requiem K626. *Die Zauberflöte*, written for Emanuel Schikaneder's suburban Theater auf der Wieden, was well under way by 11 June, as a reference in a letter to Constanze makes clear; possibly it was complete in July except for three vocal items, the overture and the march. The opera has several sources, among them Liebeskind's *Lulu, oder Die Zauberflöte*, published in Wieland's collection of fairly tales, *Dschinnistan* (1786–9); this was a source for other operas given at the Freihaustheater and its rival, the Leopoldstädter-Theater (including Benedikt Schack's *Der Stein der Weisen*, to which Mozart may have contributed several passages in addition to parts of the duet 'Nun, liebes Weibchen, ziehst mit mir' K625; see Buch, K1997). Many of the ritual elements are derived from Jean Terrasson's novel *Sethos* (1731), which has an ancient Egyptian setting, from contemporary freemasonry and possibly from other theatrical works of the time. The whole belongs firmly in the established traditions of Viennese popular theatre. C.L. Giesecke, a poet, actor and member of the lodge 'Zur neugekronten Hoffnung', later claimed to be the author of the libretto, but his assertion lacks plausible support. The arguments in favour of Schikaneder's authorship seem incontrovertible.

Although the opera was well received – contemporary opinion on the music was universally favourable – critics found the text unsatisfactory (the *Staats- und gelehrte Zeitung* of Hamburg reported on 14 October that 'the piece would have won universal approval if only the text . . . had met minimum expectations'). One hotly disputed point concerns a possible reshaping of the plot while composition was in progress. The opera begins as a traditional tale of a heroic prince (Tamino) rescuing a beautiful princess (Pamina) at the bidding of her mother (the Queen of Night) from her wicked abductor (Sarastro). In the Orator's scene, however, it transpires that the abductor is beneficent and that it is the princess's mother who is wicked. Although it is tempting to think that this shift can only represent a change in plan by Schikaneder and Mozart (traditionally explained as an attempt to avoid duplicating a rival production, Wenzel Müller's *Kaspar der Fagottist, oder Die Zauberzither*), the moral ambiguities that demand explanation if it does not – Sarastro's employment of the evil Monostatos, for example, or the Queen and her Ladies' gifts of the benevolently magical flute and bells to Tamino and Papageno, or Pamina's fear of Sarastro – are not out of line with Viennese popular theatrical traditions, nor with symbolic interpretations of the work. It has also been argued that Tamino's confrontation with the Orator represents a recognition scene, a standard operatic situation also found in *Figaro*, *Don Giovanni* and *Così fan tutte* (Waldoff, J1994).

Much has been written about freemasonry in the opera. It is unlikely, as has been asserted, that the authors intended the characters to stand for figures involved in the recent history of the movement. They are better understood as generalized and symbolic figures: for instance, Tamino and Pamina are ideal beings seeking self-realization and, especially, ideal union. In this *Die Zauberflöte* may be thought to pursue the theme of selfconscious knowledge predicated in *Così fan tutte*. More broadly, the opera is susceptible to interpretation in light of the philosophical, cosmological and epistemological background of 18th-century freemasonry as an allegory of 'the quest of the human soul for both inner harmony and enlightenment' (Koenigsberger, J1975, and Till, J1992). Such interpretations help to explain how what may superficially seem a mixture of the musically sublime and the textually ridiculous melds into an opera not only theatrically effective but also of a philosophical or religious quality. Goethe tried to write a sequel to it, and Beethoven pointedly quoted from the opera in his *Fidelio*.



Probably in mid-July, Mozart was commissioned by Count Walsegg-Stuppach, under conditions of secrecy, to compose a Requiem for his wife, who had died on 14 February 1791; work on this was postponed at least until October 1791, after the completion of *La clemenza di Tito* and *Die Zauberflöte*. It is likely that Mozart was aware of Walsegg's identity: his friend Puchberg lived in Walsegg's Vienna villa, and the inclusion of basset-horns in the score suggests that Mozart could count on the participation of specific players, who would have been booked far in advance for a date and place already known to him. Later sources describe Mozart's feverish work at the Requiem, after his return from Prague, with premonitions of his own death, but these are hard to reconcile with the high spirits of his letters from much of October. Constanze's earliest account, published in Niemetschek's biography of 1798, states that Mozart 'told her of his remarkable request, and at the same time expressed a wish to try his hand at this type of composition, the more so as the higher forms of church music had always appealed to his genius'. There is no hint that the work was a burden to him, as was widely reported in German newspapers from January 1792 onwards.

By the time of Mozart's final illness, he had completed only the 'Requiem aeternam' in its entirety; from the Kyrie to the 'Confutatis', only the vocal parts and basso continuo were fully written out. At the 'Lacrimosa' only the first eight bars are present for the vocal parts, along with the first two bars for the violins and viola. Sketches for the remaining movements, now mostly lost, probably included vocal parts and basso continuo. Mozart was confined to bed at the end of the November; he was attended by the two leading Viennese doctors, Closset and Sallaba, and nursed by Constanze and her youngest sister, Sophie. His condition seemed to improve on 3 December, and the next day his friends Schack, Hofer and the bass F.X. Gerl gathered to sing over with him parts of the unfinished Requiem. He was possibly also visited by Salieri. That evening, however, his condition worsened, and Closset, summoned from the theatre, applied cold compresses; the effect was to send Mozart into shock. He died just before 1 a.m. on 5 December. The cause of his death was registered as 'hitziges Friesel Fieber' (severe miliary fever, where 'miliary' refers to a rash resembling millet-seeds) and later diagnosed as 'rheumatische Entzündungsfieber' (rheumatic inflammatory fever) on evidence from Closset and Sallaba. This seems consistent with the symptoms of Mozart's medical

history (Bär, G1966, 2/1972), more so than various rival diagnoses, such as uraemia (favoured by Greither, G1970, 3/1977) and Davies, G1989); there is no credible evidence to support the notion that he was poisoned, by Salieri or anyone else.

Mozart was buried in a common grave, in accordance with contemporary Viennese custom, at the St Marx cemetary outside the city on 7 December. If, as later reports say, no mourners attended, that too is consistent with Viennese burial customs at the time; later Jahn (F1856) wrote that Salieri, Süssmayr, van Swieten and two other musicians were present. The tale of a storm and snow is false; the day was calm and mild.

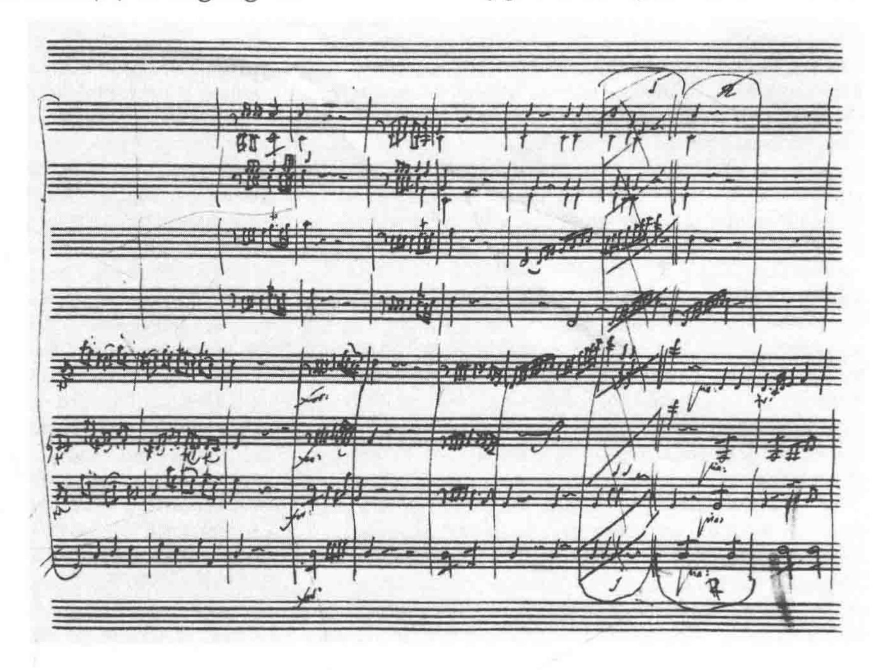
7. EARLY WORKS. It is likely that the full extent of Mozart's original output during the 1760s will never be known. Not only were many of his early autographs heavily corrected by his father, but it is clear that some works, such as the pasticcio concertos K37 and 39–41 and to a lesser extent the J.C. Bach arrangements K107, were jointly composed. Other compositions, among them the Sonata for keyboard and violin K8, take over, wholly or in part, movements first written by Leopold. A related problem concerns Leopold's *Verzeichniss* of 1768, which describes '13 symphonies for 2 violins, 2 oboes, 2 horns, viola, and basso, etc.' (Zaslaw, A1985). Of the early works in the genre attributed to Wolfgang, only eight are demonstrably genuine and known to have been composed by this time, while another four are of uncertain authorship and date. Even if all these symphonies are genuine and early, at least one other is missing. Leopold's list describes additional lost works, including six divertimentos in four parts for various instruments, six trios for two violins and cello, solos for violin and bass viol, minuets, marches and processionals for trumpets and drums. Also, as with many composers of the time, several works are known only from sources with no direct connection to the composer. Some may be authentic, but in other cases there is insufficient evidence for or against Mozart's authorship (for the symphonies see Eisen, L1989).

12. *Title-page of the six string quartets,* K387, 421/417b, 428/421b, 458, 464 *and* 465 *(Vienna: Artaria, 1785)*

Accounts of Mozart's early stylistic development often fail to take these problems into consideration: demonstrably authentic works are often compared with, and analysed alongside, works only insecurely attributed to Mozart. The inevitable result is a patchwork story of progression and regression. When only the demonstrably authentic works are considered, however, not only does the progression in Mozart's style appear more linear, but individual works, often dismissed as showing no significant evidence of Mozart's development, can be seen to represent new plateaux in his sophistication as a composer. In the case of the symphonies this is especially apparent in the works composed up to about 1771. His earliest works in the genre, composed before 1767, are based on models that he encountered on the 'Grand Tour'. All are in three movements, lacking a minuet and trio, and are scored for two oboes, two horns and strings. The first movements are in expanded binary form, in common time, and have tempo indications of Allegro, Allegro molto or Allegro assai, while the second movements, also in binary form, are in 2/4 time and are marked Andante. The concluding fast movements are generally in rondo form and are marked Allegro assai, Allegro molto or Presto, with 3/8 time signatures. For the most part, these works show a remarkable grasp of the principles of J.C. Bach's symphonic style, including the dramatic contrast of a *forte* motto opening and a *piano* continuation, together with hints of cantabile second subjects. In Vienna in 1768, however, Mozart adopted the common four-movement cycle, as well as local formal preferences: K48, for example, is the first of his symphonies to include a first movement in a fully worked-out sonata form. Still later, in Italy, he reverted to the three movement pattern with its attendant busy string figuration, lighter textures and less melodic thematic material (but still including full recapitulations, albeit with little or no preceding development). K74, with its linked first two movements, may originally have been intended as an opera overture.

While these symphonies are indebted to models encountered by Mozart during his travels during the 1760s and early 1770s, several depart from local norms in significant ways. The first movement of K16 is an expanded binary form of a type more common among Viennese symphonies; K19 includes a brief diversion based on the dominant minor, a procedure common among Salzburg symphonies of the 1750s; and K22 includes an extended orchestral crescendo and recurrence of tutti primary material at the middle and end of the movement, typical of Mannheim. K112, composed at Milan on 2 November 1771, is unusual for its inclusion of a minuet and trio. This symphony in particular represents a significant advance: it is the first by Mozart to include genuine development, rather than a mere retransition to the recapitulation; it explores a new tonal relationship between minuet and

trio (previously always in the subdominant but here in the dominant); and it begins to break down the association, previously strictly upheld, of thematic or motivic material with function. The beginning of the transition, at bar 10, is obscured by a re-use of the symphony's stable opening bar as a jumping-off point for the modulation, an effect heightened by the structure of the opening idea. In earlier symphonies with similarly constructed opening material – an aggressive, *forte* and often unison triadic idea followed by a softer motif characterized by conjunct motion – the first idea is more or less literally repeated; in K112, however, the repetition of the opening is initially lacking and is reserved for the first important cadence, where it serves not only to bring the symmetrical pair of five-bar phrases to a conclusion, but also to represent the first element in a two-bar phrase at the beginning of the transition. This reinterpretation of previously-heard material creates an impression not only of unity, but also of ambiguity, and was to become a standard feature of Mozart's symphonies, and his style in general, during the 1770s and later.



Some departures from local norms may have resulted from Mozart's acquaintance with local Salzburg repertories, which have been underestimated in discussions of his development as composer of orchestral music. His father was the leading symphonist in the archdiocese, and works by several other composers, including Caspar Christelli, Ferdinand Seidl, Adlgasser and Michael Haydn, were known to Mozart during the 1760s. Many of these include Viennese and Italian features that he encountered at source only later on the 'Grand Tour', as well as novelties of their own. Salzburg also provided Mozart with opportunities for composition: the three serenades K63, 99 and 100 were probably composed there in the summer of 1769. Following local traditions best represented by Leopold Mozart, each has six or more movements plus an associated introductory (and perhaps valedictory) march. More relaxed in style than symphonies, the serenades show their most refined invention in the slow movements, of which one generally has a concertante part (for violin in K63 and for oboe in K100, which also has concertante parts in a fast movement and the trio of one of its minuets, a pattern that later became standard). The chief influence of Salzburg, however, was on Mozart's church music. The *Missa brevis* K49, although composed in Vienna in 1768, displays all the features of the Salzburg *missa brevis* tradition best represented in the works of Eberlin: in the Kyrie, a slow introduction to the main part of the tutti; solo and tutti writing in the Gloria and Credo, with fugal endings to both; a three-section Sanctus and a solo quartet Benedictus; and a simple, chordal tutti Agnus followed by a lively triple-time 'Dona nobis pacem'. Many other features derive from Italian church music, which was widely disseminated and performed in Salzburg for several decades before the 1760s (Eisen, H1995). Among these are a preference for da capo arias, which is particularly strong in Mozart's solo church music, including the *Regina coeli* K108, with its large, busy orchestra and soprano solos. The *Litaniae de venerabili altaris sacramento* K125 of 1772 is a more sophisticated and individual work, with strong choral writing, strikingly contrasting arias and an opening Kyrie in an elaborate ritornello structure with three levels – orchestra, chorus and soloists.

In Salzburg, Mozart was also acquainted, both directly and indirectly, with Italian theatrical music even before his numerous tours. Italian operas were often given at court during Schrattenbach's reign, and their style informed the local near-equivalent, the so-called *Finalkomödien*, or school dramas, given annually at the Salzburg Benedictine University to mark the end of the academic year. Mozart composed only one work in this genre, *Apollo et Hyacinthus*, which includes full da capo arias and a striking dialogue for the angry Melia and the innocent Apollo, where changes in texture and key support the sense of drama; it is in many respects a successor to his earlier 'sacred Singspiel' *Die Schuldigkeit des ersten Gebots* K35.

La finta semplice, by contrast, gave Mozart his first opportunity to compose *opera buffa*, which required a command of the Italian language, an ability to delineate emotions quickly, a thorough knowledge of a wide range of effective orchestral clichés, and a control of the extended, multi-sectional finales of the Goldoni-Galuppi tradition favoured in Vienna. His next two dramatic works, *Ascanio in Alba* K111 and *Il sogno di Scipione* K126, were of the serenata or *festa teatrale* type. *Ascanio* is a leisurely work, with pastoral choruses and ballets interspersed with the arias, while *Il sogno di Scipione* is less tellingly characterized: the arias are lengthy and contain much bravura writing. The most significant of the early dramatic works, however, is the *opera seria Lucio Silla*, which is less convention-bound and more individual than Mozart's first *opera seria*, *Mitridate, re di Ponto* (modelled in several details of form and treatment on the setting by Quirino Gasparini; see Tagliavini, J1968). This is particularly true of the role of Junia, whose opening aria alternates between an intense Adagio and a fiery Allegro, and whose choral scene at her father's tomb recalls Gluck; the terzetto 'Quell' orgoglioso sdegno', in which the tyrant Sulla expresses his anger, is an early example of simultaneous differentiated characterization. Mozart was clearly pleased with several of the arias, which he had recopied in the later 1770s and early 1780s; he may have performed 'Pupille amate' in Vienna as late as Carnival 1786.

8. WORKS, 1772–81. The pervasive influence of the Italian style lingered on well into the 1770s: it not only informs *La finta giardiniera* and *Il re pastore* but is also found in the church music, including the litanies K195 and 243 (the second of which embraces a variety of styles including simple homophonic choruses as well as dramatic ones, fugues, a plainchant setting and expressive arias with florid embellishment). Several symphonies, among them K181 and 184, are in three movements, without a break, on the pattern of the Italian overture, while the A major Symphony K201, composed in April 1774, combines southern grace with an intimate, chamber music style as well as full-bodied orchestral writing and a Germanic predilection for imitative textures.

No doubt Mozart's interest in counterpoint, as well as a general deepening of his style at this time, was stimulated by his visit in 1773 to Vienna, where he composed six string quartets. For all its pan-European popularity, the string quartet was little cultivated in Salzburg, where the chief forms of chamber music were the trio for two violins and bass and, during the 1770s, the divertimento for string quartet and two horns (Mozart wrote several such works, including K247 and 287). An altogether more

13. Autograph MS of the symphony K133, *showing the end of the recapitulation*

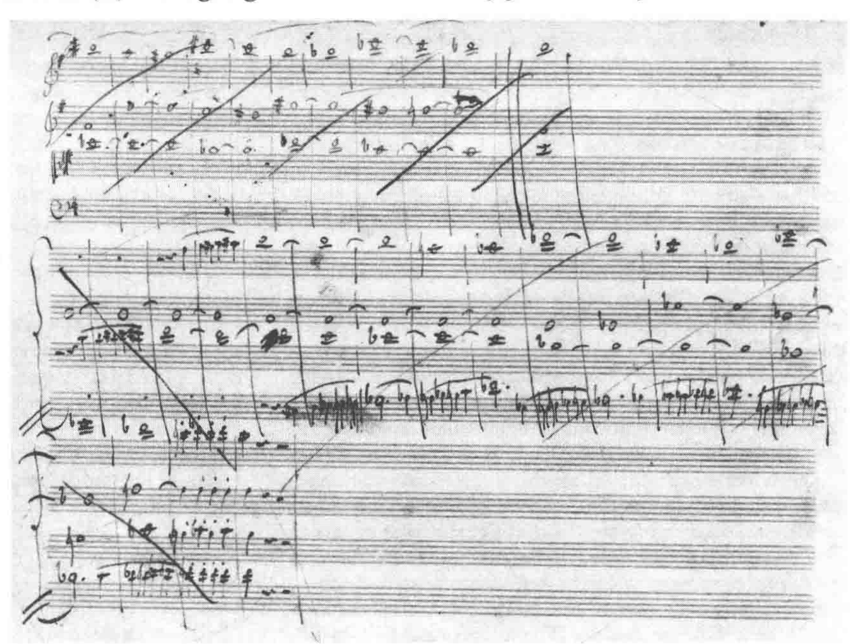
intellectual approach is evident in the quartets: imitative textures are found not only in development sections but in first statements of thematic material as well, while the finales to K168 and K173 are both fugal. Similarly, Mozart's first original keyboard concerto, K175 (possibly intended for organ), exploits counterpoint in ways not previously found in his orchestral music. The finale in particular starts with an imitative gesture that returns in various guises throughout the movement. The Symphony in E♭ K184, its Italianisms notwithstanding, includes a C minor Andante whose main theme is also built on imitation, and the coda to the first movement of the Symphony K201 is a contrapuntal tour de force (the long development section of the finale also includes imitations between basses and first violins). The stormy Viennese style is most apparent in K184 (which was adopted in the 1780s as the overture to T.P. Gebler's *Thamos, König in Ägypten*, for which Mozart also wrote incidental music) and in the G minor Symphony K183. Some of this drama is carried over into the serenades of the mid-1770s, including K185, 203, 204 and 250 (Haffner), which although more relaxed in tone nevertheless frequently touch on a range of affects far beyond those typical of the genre. It was the serenade, in any case, that by 1775 had gained the upper hand in Mozart's orchestral output; there are no Salzburg symphonies – redactions of serenades aside – dating from between 1774 and 1779.

The church music that Mozart composed during this period mostly conforms to Salzburg traditions. The absence of soloists in the Mass K167 recalls Michael Haydn's *Missa S Joannis Nepomuceni* of 1772, while in K275 the distribution of solo and tutti, as well as the contrapuntal endings to the Gloria and Credo, the imitative entries at the beginning of the Sanctus and the solo at the Benedictus are reminiscent of Eberlin. Colloredo's church music reforms, described by Mozart in an oft-cited letter to Padre Martini of 4 September 1776 ('a mass, with the whole Kyrie, the Gloria, the Credo, the epistle sonata, the offertory or motet, the Sanctus and the Agnus, must last no more than three-quarters of an hour'), inform the brevity and style of K192 and 194: both include a minimum of word repetition, simple choral declamation and sparing musical treatment of text meanings, as well as unbroken settings of the Gloria and Credo without extended final fugues. Similar economies are found in K257, 258 and 259. Not all church music composed in Salzburg at this time was subject to Colloredo's reforms, however. A letter written by Leopold Mozart on 1 November 1777 describes a mass by Michael Haydn, the *Missa S Hieronymi*, that lasted an hour and a quarter. And K262 is a long and elaborate work which includes, besides concluding fugues to the Gloria and Credo, contrapuntal writing even at the Kyrie and 'Et incarnatus', and extended orchestral ritornellos.

If the church music mostly fell in step with Salzburg traditions, the symphonies, serenades and concertos of the earlier 1770s differ from other orchestral music composed there not only in their imaginative scoring, formal variety and diverse characters, but also in their susceptibility to critical readings. In the Symphony K133, the opening hammer-strokes do not return at the start of the recapitulation, which begins with the second group, but they appear to be 'realized' in the coda, where the weakly articulated theme first heard in the second bar is repeated with strong, downbeat root motion, reproducing the *forte* dynamic of the hammer-strokes. Not only does this gesture provide stability and closure otherwise lacking in the movement, but there seems little doubt that Mozart considered it quite deliberately. The autograph shows that he originally intended the passage to represent a coda; by cancelling the first ending, however, he integrated it into the movement proper, rather than distancing it from the action (fig.13). Almost certainly it was works such as this that in Salzburg provoked dissatisfaction with Mozart. For his part, he complained that 'there is no stimulus [there] for my talent. When I play or when any of my compositions is performed, it is just as if the audience were all tables and chairs'.

Shortly before his departure for Paris in autumn 1777 Mozart composed the Piano Concerto K271, which in its

scale, mastery of design, virtuosity, elements of surprise (the piano entry in the third bar is unprecedented) and exploitation of the most profound affects, particularly in the recitative sections of the disturbing C minor Andantino, far exceeds his earlier orchestral music. (Some parallels can be found in the violin concertos K216, 218 and 219 of 1775: the first two also have finales in a variety of tempos and metres, while in K219 the soloist is introduced in the first movement by a poetic Adagio episode, and there is a notable 'Turkish' episode in the minuet finale.) In many ways, K271 represents a new, more elaborate style that was to become Mozart's norm in the late 1770s. No doubt personal factors contributed to this development. It is difficult to forgo altogether the notion that the Paris–Mannheim journey of 1777–9, which violently wrenched Mozart from adolescence to manhood, dramatically influenced the style and substance of his music.



Whether as a result of 'foreign' influences or merely a desire to accommodate his works to a specific public, the music that Mozart composed in Mannheim and Paris frequently recalls local styles. Nannerl Mozart remarked of the Piano Sonata K309, written for Christian Cannabich's daughter Rosina, that 'anyone could see it was composed in Mannheim' (letter of 8 December 1777; Leopold, perhaps more astutely, described it on 11 December 1777 as having 'something of the mannered Mannheim style about it, but so little that your own good style is not spoilt'). Nannerl's observation may refer to the sharp dynamic contrasts in the first two movements and the affectation of the Andante; a similar atmosphere is evident in the next sonata, K311. The A minor Sonata K310, on the other hand, follows up the tradition of fiery keyboard writing that Schobert and others had pursued in Paris (although the tripartite Andante cantabile, with its agitated outburst at the centre of the movement, is without expressive precedent). In his six sonatas for keyboard and violin published in Paris (K301–06), Mozart also took over some features of Joseph Schuster's accompanied divertimentos (which he praised in a letter of 6 October 1777 to his father), notably in the structure of the first movement of K303, where the Adagio introduction represents the first subject and recurs at the recapitulation. The sonatas exhibit a wide variety of styles and affects, ranging from the eerie, almost claustrophobic, E minor K304 to the quasi-orchestral K302 (similar variety can be found in the piano sonatas of the mid-1770s, among them the mannered K282 and the orchestral K284). Perhaps the most important orchestral work composed at this time was the Paris Symphony K297. Following Leopold's advice, Mozart carefully tailored the work to local taste, beginning with the obligatory *premier coup d'archet* and continuing with powerful unison and octave passages, brilliant tuttis and exposed passages for the wind. Scored for two flutes, two oboes, two clarinets, two bassoons, two horns, two trumpets, timpani and strings, the symphony consciously exploits the soundscape of the large Paris orchestra.

Formal and textural variety abounds in the works of the mid- to late 1770s. Frequently, as in the Piano Sonata K280, Mozart avoids settling on the dominant (the same process characterizes the Haffner Symphony K385 of 1782), while some works, including the Piano Sonata K311, reverse the order of the material in the recapitulation. Within the recapitulation, Mozart finds effective new ways of avoiding a modulation to the dominant, often incorporating further development that relies on earlier transitional material but does not literally duplicate it. A good example is the Paris Symphony, where the introduction of a C♮ in the basses at bar 175 pushes the harmonies to the subdominant side while also, incidentally, serving to disorientate the listener. Because the movement has no internal repeats, the drop to C♮ conjures up memories of the surprising introduction of B♭ at the start of the development, which serves as the jumping-off point for a modulation to the distant key of F major; consequently, on first hearing the recapitulation may seem to represent a 'new' development.

Many of these styles and techniques remained with Mozart after his return to Salzburg in 1779. This is less true of his church music, perhaps, than of his other works, although the Credo of the Coronation Mass K317 has a symphonic thrust lacking in his earlier works and is broken off by an Adagio 'Et incarnatus'; in this respect it shares with Mozart's instrumental compositions of the time a selfconscious exploitation of musical and affective disruption. In the 'Posthorn' Serenade K320, for example, Mozart recalls the striking formal gesture of the Sonata K303, repeating, at the start of the recapitulation, the music of the slow introduction, rewriting it in the prevailing tempo. In the symphonies K318 and 338 Mozart manipulates the recapitulation. K338 repeats only a part of the first theme, reserving the rest for the final cadence, while K318 is altogether novel in its formal outlines, incorporating an Andante after the development and then returning to the second subject before only partly restating the first. Both the Serenade K320 and the magnificent Sinfonia concertante for violin and viola K364 make extensive use of Mannheim-style crescendos. The Andante of K364 in particular represents a peak in Mozart's orchestral style at this time: its rich orchestral textures, with divided violas, verge on the extravagant, while the unwillingness of the soloists to cadence, as they force each other on, often to higher tessituras, gives the movement an almost ecstatic character. (In this regard the Andante is similar in character to the Adagio non troppo of the G minor String Quintet K516, although part of the effect there is harmonic, deriving from the unexpected shifts between minor and major.)

Idomeneo marks the end of this development; it is unquestionably the most complex and opulent work composed by Mozart before his permanent move to Vienna in early 1781. Although nominally an *opera seria*, *Idomeneo* departs substantially from that tradition. With its French source, it is more natural in its expression of emotion and more complex in structure, with a greater emphasis on the participation of the chorus; its scoring, for the virtuoso Mannheim orchestra now at Munich, is exceptionally full and elaborate. The influence of Piccinni's French operas, as well as that of Gluck's reform works, is strong.

A remarkable feature of the opera is its abundance of orchestral recitative, which sharply reflects the sense of the words. It also uses recurrent motifs. Certain phrases recur throughout the opera, referring consistently to individual characters and their predominant emotions, including Ilia's grief, Electra's jealousy and Idamantes' feelings about the sacrifice (Heartz, J1974). The key treatment is sometimes unorthodox and invariably expressive, as in Electra's D minor first aria, 'Tutte nel cor

14. Autograph MS of the String Quartet K387, corrections and revisions to an enharmonic passage (Seiffert plate 2 fol.12v)

vi sento'. Here Mozart reaches a recapitulation in C minor before returning to the home key; he then modulates, without changing speed, into the music of the tempest, also in C minor and making use of a motif similar to that of the aria. The opera's orchestration includes many new and brilliant details, among them the evocative flute, oboe and violin passages in 'Fuor del mar' and the use of sustained wind against inexorable string triples and muted trumpet fanfares in 'O voto tremendo'. Perhaps the most admired number of the opera is the powerful Act 3 quartet, in which Idamantes resolves to seek death, a tour de force in which intensely chromatic music truthfully embraces four characters' diverse emotions.

9. WORKS, 1781–8. Possibly as a result of the natural development of Mozart's style, or through a wish to accommodate his changed circumstances, the extravagance of Mozart's 'late Salzburg' works gave way, after his permanent move to Vienna, to leaner, more transparent textures and a less ornamental manner. This is true particularly of the six accompanied sonatas published in December 1781 (although only four of them, K376–7, 379 and 380, were composed there; K296 was written at Mannheim, and K378 at Salzburg in 1779 or 1780). At the same time, however, they are broader in conception than the earlier sonatas, with greater forward thrust and, in K380, a deepened sense of rhetorical contrast between full chords and rapid passage-work. Above all, they display a new relationship between the instruments. Although they remain piano sonatas with accompaniment, and contain passages where the violin part could be omitted without damaging the sense of the music, the violin nevertheless increasingly carries essential material, melodic or contrapuntal, and engages in dialogue with the keyboard. The violin part has even greater prominence in K454, composed for Regina Strinasacchi, while in K526, arguably the finest of Mozart's accompanied sonatas, the two instruments are equal in importance. The same trend is evident in the piano trios K496, 502, 542 and 548.

This new equality of partnership is best reflected in the string quartets and quintets of the early to mid-1780s, including the six string quartets dedicated to Haydn, which Mozart described in his dedication of 1 September 1785 as 'the fruits of a long and laborious endeavour', a claim borne out by the relatively large number of quartet fragments from this time as well by numerous corrections and changes in the autographs (fig.14; the thorny question of the textual relationship between Mozart's autograph and the first edition, published by Artaria in 1785, is described in Seiffert, N1997). That Mozart sought to emulate Haydn's quartets op.33, but not to imitate them slavishly, can hardly be doubted: like Haydn's, Mozart's quartets are characterized by textures conceived not merely in four-part harmony, but as four-part discourse, with the actual musical ideas linked to a freshly integrated treatment of the medium. Later critics described them as prime examples, together with those of Haydn and Beethoven, of the 'classical' quartet, as opposed to the *quartor concertant* or *quatuor brillant*. According to Koch, they were the finest works of their kind.

Counterpoint in particular takes on a new aspect in the quartets. In the first movements of K421 and 464, each of the principal themes is subjected to imitative treatment; the Andante of K428 follows a similar procedure, supported by increased chromaticism (which is characteristic of the quartet as a whole). The coda of the first movement of the 'Hunt' Quartet K458, like the coda of the earlier A major Symphony K201, draws on the latent imitative potential of the movement's main thematic material, while the famous introduction to the 'Dissonance' Quartet K465 represents an extreme of both free counterpoint and chromaticism. Similar effects can be observed in the C major and G minor quintets of 1787, K515 and 516.

The finale of K387 represents a different use of counterpoint, which is treated not so much as a texture in and of itself, but as a structural topic. Here the main, stable thematic material is represented first and foremost by fugatos, while transitional and cadential material is

generally composed in a melody-and-accompaniment *buffo* style. This procedure is reversed in the final movement of the Piano Concerto K459, where fugato represents transition and is explosively elaborated in the double fugue of the central episode. The hidden, but inherently contrapuntal nature of Mozart's material in general is already adumbrated in the C minor Fugue K426 for two pianos and its later version for strings K546, where the seemingly commonplace Baroque subject erupts at the end of the movement in the previously unimaginable guise of a melody accompanied by aggressive sawing-away in the upper parts. No doubt Mozart had conceived this possibility as early as 1782 while arranging for string quartet several fugues by Bach and Handel: a similar procedure is found at the conclusion of his version of the D♯ minor fugue from book 2 of Bach's *Das wohltemperirte Clavier*.

The wind music, including the three substantial serenades K361, 375 and 388, shows Mozart's interest in texture in different ways, including the use of novel combinations of instruments (Peter Shaffer, in his play *Amadeus*, puts into Salieri's mouth an evocative description of the opening bars of the Adagio from the Serenade for 13 instruments, K361). The C minor Mass K427, meanwhile, includes grave choruses (some in eight parts, as well as the customary four), among which the 'Qui tollis' is built on an ostinato bass of the Baroque descending tetrachord pattern. Several solo items, such as the 'Domine Deus' duet and the 'Quoniam' trio, are almost Handelian in their counterpoint, figuration and bare continuo textures. The Trio for clarinet, viola and piano K498 and the Quintet for piano and wind K452 are both uniquely scored.

Mozart's deliberate attention to even the smallest details of texture, scoring, rhythm and articulation as elements of both affect and style is evident from the numerous erasures, changes and revisions in his autographs. At bar 106 of the first movement of the D minor Piano Concerto K466, for example, he originally wrote the upper string parts as alternating quaver rests and quavers, continuing the pattern of the previous two bars, but he changed these to straight quavers in anticipation of the approaching imperfect cadence. The second movement was initially conceived to begin with the orchestra (as an erased *piano* marking in the first violin part shows) and to include trumpets and drums, and in a possibly related correction, trumpets and drums were omitted from the two final bars of the first movement. In the final movement, at bar 181, Mozart for the first time writes slurs in the accompanying second violin, viola, cello and double bass parts, possibly because their figure here ascends where previously it had descended.

That texture is also a matter of formal significance for Mozart is especially clear in the case of the piano concertos. The structures of the first movements have been related to sonata form, Baroque ritornello forms and aria forms. Although varied in their structural details, they nevertheless follow a broadly consistent outline, consisting of seven large units: (1) an opening ritornello including a first theme, a more lyrical group and a concluding group; (2) the first solo, reiterating the first theme and then modulating to the dominant for a secondary group and a coda; (3) a medial ritornello, usually based on the opening ritornello; (4) a development-like section, representing the first part of the second solo; (5) a recapitulation, representing the second part of the second solo and largely following the first solo (but omitting the modulation); and (6) a concluding ritornello, using material from the medial ritornello and interrupted by (7) a cadenza. The second and third movements are more varied. The former include *romances*, binary movements, rondos and variations; the finales, although mostly sonata rondos, also include variations and sonata forms.

Viewed chronologically, the piano concertos make increasing use of dialogue between the soloist and the orchestra (both as a whole and in its individual sections); the solo keyboard writing, meanwhile, becomes increasingly varied and demanding. A new feature is the use of a soloistic continuo part in the orchestral outbursts that interrupt the large solo sections. (For a fuller discussion of structural aspects of the concertos, *see* CONCERTO, II.)

While the model of the early operatic aria is at least partly relevant to Mozart's Viennese concertos, it does not apply to *Die Entführung* or the three Da Ponte operas, *Le nozze di Figaro*, *Don Giovanni* and *Così fan tutte*: by the 1780s Mozart had more or less left earlier aria forms behind (Webster, M1996). Several different formal types can nevertheless be identified, including binary forms (*Die Entführung*, 'Traurigkeit'), ABA forms (*Don Giovanni*, 'Dalla sua pace', *Così*, Un 'aura amorosa'), complex two-part forms (*Figaro*, 'Aprite un po' quegl'occhi' and *Don Giovanni*, 'Vedrai, carino'), one-part undivided forms (*Die Entführung*, 'Im Mohrenland'), rondo (in the modern sense; *Così*, 'Donne mie') and rondò (*Figaro*, 'Dove sono'; see Webster, M1991). In every instance, however, a formal scheme is designed to express the text. The solo arias, rather than representing action, simultaneously portray a variety of complementary or conflicting emotions, one of which usually gains the upper hand. 'Non più andrai' is not so much about Cherubino's implied growth from adolescence to manhood as about Figaro's overwhelming need to gloat; the conflict between achieving peace of mind and inflicting punishment on Belmonte is resolved, in 'O, wie will ich triumphieren', in favour of strangulation; and Don Giovanni's rampant sexual desires overwhelm 'Fin ch'han dal vino', as the final phrase spins, like him, nearly out of control, unable to cadence. Otherwise, the arias often reflect differences in the standing of the various characters – Bartolo's 'La vendetta' is blustery and parodistic, the Count's 'Vedrò, mentre io sospiro', menacing – or express social tension: Figaro's 'Se vuol ballare' is a good example (Allanbrook, J1982).

The ensembles sometimes carry more complex kinds of expression: the Letter Duet in *Figaro* is a dramatic tour de force, the music representing the dictation of a letter, with phrases realistically repeated and a condensed recapitulation serving for the reading-back of the text. But it is the finales in particular that, following *opera buffa* tradition, carry the action forward: changes in tempo, metre, tonality and orchestration resolve existing tensions while creating new ones, always closely allied to the action. Whether they represent meaningful or intentional tonal structures, however, is uncertain. By the same token, the notion that the operas exhibit large-scale tonal planning from start to finish has recently come under attack; many of the key successions cited as evidence of high-level organization are fairly common among Viennese *opere buffe* in general (Platoff, J1997). In at least parts of some individual operas, however, tonal planning

appears to be deliberate. The Act 2 finale to *Don Giovanni*, for example, mirrors almost exactly the tonal action of the opera's overture and *Introduzione*. Both begin in D (minor–major in the overture, major in the finale) and then proceed by way of F (Leporello, Don Giovanni's dance band) to B♭ (Don Giovanni is chased from Anna's bedroom and confronts her father, Elvira confronts Don Giovanni) before returning abruptly to D. The similarity is reinforced by the virtual avoidance of a strong A major in both sections, while the conclusion of the action and the final sextet reverse the minor–major progression of the overture. Strikingly enough, it is the two outer sections of the opera that correspond to the traditional Don Giovanni story; the action 'inside' this frame is the unique contribution of Da Ponte and Mozart.

Shortly after the completion of *Figaro*, and hard on the heels of K503, the last of the concertos composed between 1784 and 1786, came the first of Mozart's 'late' symphonies, the Prague K504. While preserving much of the traditional D major brilliance, this work depends more on the arrangement and development of motifs than on thematic material; its surface is more varied, and more complex, than that of any previous orchestral work by him. The first movement in particular has a structure of great originality. The second-group idea starts as a chromatically inflected variant of the first, with a contrapuntal and sequential continuation, before a distinctive lyrical theme appears, while the development includes contrapuntal workings of various of these motifs and elides with the recapitulation, which fuses the two groups in unexpected ways. The variety of topics and figures alluded to, the integration of learned and *galant* counterpoint, and the rhetorical strategies of the Prague all make it a 'difficult' work, both conceptually and in terms of performance (Sisman, L1997). No less difficult are the final three symphonies, K543, 550 and 551, composed in the summer of 1788. K543, like the Prague, includes a long and at times sharply dissonant, tonally wayward introduction, the very sound of which – including clarinets but not oboes – is unprecedented for the time. This was, probably, the most hastily written of the three: the autograph is among Mozart's most careless, showing numerous mistakes of an elementary sort (instrumental lines are misidentified, necessary clefs and accidentals are omitted, and many parts are written on the wrong staves). More than the G minor or the 'Jupiter', the E♭ major Symphony relies on instrumental doublings, although this, too, contributes to its weighty effect. No less remarkable is the enharmonic writing in the A♭ major Andante con moto, where E♭ is reinterpreted (in bars 92–3) as D♯, leading to an outburst in B minor. Similar enharmonic and chromatic writing is found in the development of the first movement of the G minor Symphony, which begins with the first-group material in F♯ minor; in the finale, the development begins with a tonally disorientating flourish before embarking on a four-part contrapuntal working-out of the material, ending in the remote key of C♯ minor, where the music pauses before being wrenched back to the tonic for the recapitulation. It is the finale of the 'Jupiter', however, that is best known, although its supposedly 'fugal' writing does not strictly merit that description; rather, it represents an example of *musica combinatoria*, for the various independent motifs heard earlier in the movement are brought together in the coda to create a fugato in five-part invertible counterpoint. In all three of these works, as well as the Prague, the disposition and handling of the orchestra are unique. Building on his experience with concerto and opera, Mozart brought to the symphony orchestra a new understanding of its possibilities both as a corporate body and as a collection of individuals. The textures and gestures range from the most grandiose and 'symphonic' to the most intimate and chamber music-like; the obbligato orchestral ensemble achieves its first perfection in these works.

Mozart's return to the symphony, no doubt related to the increasing prestige of the genre in the mid-1780s, may reflect a fundamental change in his persona as a composer and his ideas of self-presentation. The final triptych forms a natural conclusion, both stylistically and biographically, to this period. But it is also fair to identify a similarly fundamental change in the works composed from 1784 onwards: beginning with the Concerto K450, Mozart's music is significantly more complex, more expansive, larger in scale and more difficult than previously (that Mozart himself may have been in some way aware of this is documented perhaps by the thematic catalogue of his works that he began at this time; fig.6). This change is apparent from a comparison between the earlier three of the six quartets dedicated to Haydn, written in 1782–3, and the later three, written in 1784–5. Similarly, the Concerto K449, completed in February 1784 but, as the autograph shows, probably begun over a year earlier, is stylistically more akin to the less ambitious early Viennese concertos (K413–15) than to its successors.

During the 19th century, this division of Mozart's works into two stylistic phases, the first up to the end of 1783, the second from 1784 onwards (a division tacitly recognized by theorists, who almost exclusively cite the later works), fused with then current biographical views of the composer as a divinely inspired genius – by implication a paragon of balance, regularity, symmetry and logic – to endorse a view of the 'Classical style', and Mozart's relationship to it, that has persisted in writings on the composer until the end of the 20th century. As a result, several anomalous works, chief among them the final three symphonies and the C minor Concerto K491, are sometimes seen as representing a social rebellion, a 'critical world view', or Mozart's disillusionment with the Viennese musical public (see McClary, M1986, Kerman, M1991, and Subotnik, J1984, but in light of Powers, H1995). It is just as valid, however, to see these works as assertions of self-awareness. Mozart's plays of wit and his elaborate musical sophistication are not restricted to a handful of works: the abrupt shift from B♭ major to B minor in the central episode of the finale of the Concerto K456 or the precipitous modulation from B♭ to F♯ minor in the first movement of the Trio K563, the introduction of new themes in the development sections of the quartets K458 and 464, the three simultaneous dances in the Act 1 finale of *Don Giovanni* and the over-elaborate, almost decadent, ornamentation in the slow movement of the Concerto K450 all testify to a style that in general is concerned less with thematic unity and regularity than with disjunction and surprise. The final apotheosis of the 'Jupiter' does not represent a revelation of the symphony's teleological goal, nor is it a comment on the social 'norms' implied by that formulation. Rather, it signifies a self-realization of 'the intellectual force that activates the

structure of the work . . . that side-steps the coherence of form' (Chua, L1999). In this respect, it is not wayward, but typical of Mozart's music of the mid-1780s.

10. WORKS, 1789–91. The Clarinet Quintet K581 of September 1789 is a late manifestation of the 'Classical' style of the mid-1780s, and in particular of Mozart's ability to create and weld together a diversity of gestures over the course of entire paragraphs and entire movements. This is most notably the case at the arrival on the dominant in the first movement: a rest in all the parts – more a signal to stop the action after a tutti arrival than an indication of any particular length of silence – is followed by a pizzicato cello line outlining the tonic and fifth of the harmony, long held notes in the second violin and viola that seem almost to emerge from the preceding silence and a new lyrical melody in the first violin. The re-entry of the clarinet with the same melody signals further changes: a shift to the minor mode, lower dynamics and syncopations in the strings. All of these lead to a confrontation between the clarinet and the rest of the ensemble, an outbreak of semiquavers and a conclusive trill, on three instruments, resulting in the firmest cadence in the movement to that point. The effect is to drag the listener along on a wave of increasingly agitated activity; in this respect it resembles the increasingly elaborate waves of pianistic activity that animate the first solo of the Concerto K467.

Yet the Clarinet Quintet is not generally representative of Mozart's prevailing style at the time, which is often characterized as ironic, restrained or serenely detached. Some commentators date the origin of this style to the time of the last three symphonies, others to that of *Don Giovanni* or even the two string quintets of 1787. No doubt there are similar elements in other works of the period 1784–8: the Concerto K503 is sometimes described as neutral or cold. But on the whole the late works can be characterized as noticeably more austere and refined than the earlier works, more motivic and contrapuntal, more economical in the use of material and texturally less rich. There are fewer new themes in development sections or in exposition codas, and second-group material is frequently derived from primary ones by some form of extension or contrapuntal treatment.

This is particularly true of the late quintets K593 and 614. K593 has a first movement in a style more spare in texture than that of the preceding quintets but polyphonically richer, most obviously in the recapitulation, where the exposition material is extended and elaborated. The same can be said of K614, the minuet of which is canonic; more impressive still is the finale, the development section of which includes a double fugue. At the same time, both quintets selfconsciously exploit similar topics – each first-movement Allegro begins with a passage imitating horns, while that of K614 retains something of a wind serenade atmosphere – while making use of textures in novel ways. The Adagio of K593, not unlike the slow movement of the G minor Quintet K516, is a study in sonorities: each of its five large paragraphs is similarly structured around a recurring pattern, beginning with the full ensemble, reducing to three parts (the violins and viola alternating with the violas and violoncello) and then returning to five. K614 is novel in a different way. Here the first movement can be seen as a contest between the first violin and the rest of the ensemble, achieving rapprochement only in the final bars. (A similar principle is in evidence in the Piano Trio K502, where the exposition, development and recapitulation each represent an increasingly complex dialogue between piano and violin, with the cello fully participatory only after the second theme.) The textures of the late quartets, however, seem tame by comparison. Mozart must have realized that the new, elaborately wrought four-part quartet style he had previously cultivated would not serve for the concertante quartets popular in Berlin, and for the last two movements of K589 and the last three of K590, presumably conceived in the first instance for the cello-playing King of Prussia, the idea of the cello's prominence seems virtually to have been abandoned. It may also be that hopes of a preferment there – or of successfully completing the commission – had faded.

The notion of a contest in the first movement of K614 suggests that play on genre, consisting in this case of tension between the brilliant and 'Classical' styles identified by early writers on string chamber music, is also selfconsciously present in Mozart's works of the late 1780s (it had been there earlier, as well, in the Piano and Wind Quintet K452, a concerto in all but name, and in the final movement of the Piano Sonata K333, which includes a concerto cadenza). But there is a twist: in some instances Mozart manipulates not merely markers of genre, but markers of form and procedure as well. The slow movement of the E♭ Quintet K614, ostensibly a theme and variations (and among the most popular of Mozart's late variation sets, as several contemporaneous arrangements for keyboard show), takes over characteristic gestures of the rondo (including tonic restatements of the main theme) and, more importantly, the sonata. The passages linking the variations are typical sonata transitions, while the climax of the movement, which includes some of the sharpest dissonances in all of Mozart, corresponds to the increase in harmonic tension characteristic of a sonata development. A clear return to both tonic and main theme characterizes the final variation, which is followed by a sonata-like coda, drawing together the main procedural gestures of the movement.

Mozart's interest in Baroque counterpoint, so evident in the late quintets, may have been rekindled by his Handel arrangements for van Swieten and his trip in 1789 to Leipzig, where he renewed his acquaintance with Bach's works. Although the influence of Bach had been strong during the early 1780s, when Mozart also transcribed several preludes and fugues for van Swieten, a truly classical, integrated counterpoint of a Bachian sort appears to have become a regular feature of his music only in the late 1780s. Sometimes the counterpoint is explicit, as in the central fugato of the overture to *Die Zauberflöte* or in the chorale of the Men in Armour; for the most part, however, it is subsumed within larger forms and textures. In the Variations K613 the introduction and the theme, the song *Ein Weib ist das herrlichste Ding*, are combined contrapuntally in the coda, while in the Piano Sonata K576 the main secondary material of both outer movements is contrapuntally derived from the primary material (the first movement also includes significant contrapuntal working in the development and recapitulation).

Chance dictated that Mozart, in his last months, should compose works in three genres with which he had been little occupied for almost a decade: the Singspiel *Die Zauberflöte*, the Requiem and the *opera seria La clemenza*

di Tito. Until the 1960s Mozart scholars were inclined to dismiss *Tito* as an opera written hastily and with distaste. Yet there is no reason to imagine that Mozart had reservations about composing it; serious opera had always attracted him, and many composers were setting Metastasio's classical librettos modified to meet contemporary taste through the addition of ensembles and choruses. Certainly the opera is written in a style more austere than that of the Da Ponte operas, but it is appropriate to the topic. It is clear that the aria lengths were carefully planned. In Act 2, both the prima donna (Vitellia) and the primo uomo (Sextus) have full-length rondò arias; Sextus's arias involve progressive increases of tempo, no doubt intended to represent the screwing up of his courage. The arias for the other characters, including Titus, are much shorter, while the trios embody some degree of simultaneous representation of different emotions, as in the *opere buffe*. The Act 1 finale, however, moves in a sense opposite from that of the traditional, accelerating *opera buffa* ensemble of confusion. It starts Allegro and ends Andante, with the principals on stage bewailing the betrayal of Titus while the groans of the populace are heard in the distance.

Die Zauberflöte and the Requiem appear on first hearing to be dramatically different in conception – no work by Mozart is more heterogeneous or displays as broad a range of stylistic references as the opera, while the Requiem seems to refer uniquely to its own rarefied spiritual domain – yet both exploit contrast to an extreme. The opera's fugal overture, with its key of E♭ and three introductory chords, is symbolically masonic; other ritual music, including Sarastro's songs, the choruses and some of the ensembles, also derive from freemasonry. Papageno's strophic comic songs, on the other hand, are in the cheerful manner of other contemporary Singspiele. The songs for the serious characters, while rarely using the extended forms of Italian opera, are more italianate; among these are Tamino's lyrical Portrait Aria and the Queen of Night's two bravura arias. Pamina's lament, 'Ach, ich fühl's', falls in between. Its simple, intimate manner reflects her more universal, idealized character. The remarkable Orator's Scene in the Act 1 finale, however, is sui generis (while at the same time recalling Mozart's interest in declaimed musical settings, first evident in the late 1770s).

The Requiem, by contrast, hides its diversity. Nevertheless the three prevailing textures – homophonic or chordal as in the 'Dies irae' and 'Rex tremendae', contrapuntal as in the 'Requiem aeternam', the Kyrie fugue and the 'Recordare', and cantabile as in the 'Te decet hymnus' and 'Tuba mirum' – are juxtaposed almost kaleidoscopically, often succeeding each other in response to single phrases of the text. At times, the enharmonic and chromatic modulations are extreme, notably in the 'Confutatis' (from bar 25), where the successive lines of text are given in A minor, A♭ minor, G minor and then, via F♯ major, F major (Wolff, I1991). The make-up of the ensemble, including basset-horns, bassoons, trumpets, timpani and strings (with obbligato trombone in the 'Tuba mirum'), but no flutes, oboes or horns, lends itself to an extraordinarily beautiful, dark-hued sound. In the 'Rex tremendae' and in particular the 'Confutatis', the orchestra represents a character in its own right.

11. Aftermath: reception and scholarship. To judge by the more than normally laudatory tone of the obituaries and other tributes, Mozart's reputation stood high at the time of his death; although his music was frequently criticized as too audacious and complex, it was understood that he was an artist far out of the ordinary. In 1795, the *Teutschlands Annalen des Jahres 1794* reported that 'In this year . . . nothing can or may be sung or played, and nothing heard with approbation, but that it bears on its brow the all-powerful and magic name of Mozart', and by the end of the century his music held centre stage across Europe. Many of the mature works were already well known during the 1780s: the six quartets dedicated to Haydn, published by Artaria in September 1785, were available in Paris as early as December of that year, and some piano concertos were performed regularly in London from January 1786 onwards. It was *Die Entführung*, however, that first established Mozart's fame and influence throughout German-speaking Europe. The opera had been given in more than 20 cities by 1786, and Goethe, in his *Italienische Reise* of 1787, wrote that 'All our endeavours . . . to confine ourselves to what is simple and limited were lost when Mozart appeared. *Die Entführung aus dem Serail* conquered all.' Most of the other mature operas were similarly well received. Both *Figaro* and *Don Giovanni* were widely performed, especially in German, while *Così* had received numerous performances by 1793; *Die Zauberflöte* was universally popular. *La clemenza di Tito*, on the other hand, was slower to gain public acceptance (except in England, where it remained the favoured Mozart opera until the second decade of the 19th century).

No doubt interest in Mozart's music was fuelled by his premature death and by stories concerning the Requiem that began circulating shortly afterwards. The earliest known account, published in the *Salzburger Intelligenzblatt* for 7 January 1792, already adumbrated what is by now a familiar tale:

> Some months before his death he received an unsigned letter, asking him to write a requiem and to ask for it what he wanted. Because this work did not at all appeal to him, he thought, I will ask for so much that the patron will certainly leave me alone. A servant came the next day for his answer. Mozart informed the unknown patron that he could not write it for less than 60 ducats and then not before two or three months. The servant returned immediately with 30 ducats and said that he would ask again in three months and that if the mass were ready, he would immediately hand over the other half of the money. So Mozart had to write it, which he did, often with tears in his eyes, constantly saying: I fear that I am writing a requiem for myself.

This anecdote neatly summarizes the Romantic image of Mozart that was prevalent throughout the 19th century and much of the 20th, although numerous documented facts and other evidence contradict it. Mozart may have fallen ill as early as his visit to Prague in September 1791, but there is no sign of any protracted bad health that could have given rise to increasingly dark thoughts about his mortality and the work he was engaged on. Nor did the Requiem exclusively occupy his time: both the Clarinet Concerto K622 and the masonic cantata *Laut verkünde unsre Freude* K623 were completed in the autumn. Circumstantial evidence suggests that Mozart probably knew more about the commission than has generally been supposed.

In view of the specific details of the anecdote, which are of a sort unlikely to have been known to the general public so soon after Mozart's death, it may have originated with Mozart's inner circle: from the beginning, apparently, someone was determined to cast Mozart's life in a

particular, and not entirely truthful, light (although see Clarke, I1996). It was only a small step from this first fabrication to a web of stories intended to promote various myths about the composer: that he was an 'eternal child', a social rebel, a libertine, a misunderstood genius, a helpless victim of professional conspiracies, or even an idiot savant who cared for nothing but his music (for a good summary, see Stafford, G1991). Much of the Mozart myth, including his alleged poverty and neglect in Vienna, as well as the jealousy of rival composers, was in place by 1800, when Thomas Busby wrote in the *Monthly Magazine* (London, December 1798):

> Had not the almost uniform practice of courts long explained to mankind the principle on which they act, how difficult would it be to conceive, that that of Vienna could so little appreciate the merit of this extraordinary man, who looked to it for an asylum, and passed in its vicinity the last ten years of his life! the dispensers of royal favours, whose ears imbibe with such avidity the flattery that meanness offers, can neglect that genius which nobly refuses the tale of adulation; can stifle it with poverty, and even follow it with persecution.

Contradictory as the numerous biographical tropes surrounding the composer's life may at first seem, they nevertheless add up to a remarkably consistent picture of Mozart as an artist and personality distinctly outside the 'norm'. And it was this notion of Mozart's lack of connection to the real world that set a course for Mozart scholarship – whether biographical, analytical or editorial – up to the end of the 20th century.

Even the earliest biographies took sides in the struggle to present an 'authentic' version of Mozart's life: Nannerl's account, dealing mostly with the Salzburg years, is included in the obituary of Friedrich Schlichtegroll (F1793), while Constanze's position was first put forward by Niemetschek (F1798); it is worth noting that Constanze bought up and destroyed the entire edition of the publication containing Schlichtegroll's obituary, apparently disliking its portrayal of her. A more substantial presentation of this side of the story is the biography by Georg Nikolaus Nissen, Constanze's second husband (F1828), which served as the main source for many later accounts, including those of Oulibicheff (Ulïbïshev) (F1843) and Holmes (F1845) (the year after the publication of Nissen's biography Vincent and Mary Novello met Constanze and Nannerl, both of whom talked about Mozart; see Medici and Hughes, G1955). The first important scholarly biography, embodying fresh research, appeared in the centenary year, 1856 – Otto Jahn's *W.A. Mozart* (F1856). Ludwig von Köchel's chronological thematic catalogue of Mozart's works, ahead of its time in scholarly method, appeared six years later.

In the early decades of the 20th century, Mozart scholarship was dominated by Wyzewa and Saint-Foix's highly schematic analytical and stylistic study of the works (F1912–46); Alfred Einstein, in particular, took over many of their conclusions in his edition, the third, of the Köchel catalogue (1937). Similarly important are Dent's pioneering study of the operas (J1913), Schiedermair's presentation of the letters (A1914) and Hermann Abert's revision of Jahn (F1919–21). Emily Anderson's edition of the letters, with revised editions appearing in 1966 and 1985, was published in 1938 (Anderson, A1938); although it remains the fullest English translation available, it has been superseded by the complete German edition of W.A. Bauer, O.E. Deutsch and J.H. Eibl (A1962–75). The sixth edition of the Köchel catalogue, published in 1964, included substantial new information but by the late 1990s was badly out of date; a more reliable guide to the authenticity, chronology, history and sources for Mozart's works is found in the prefaces and critical reports to the Neue Mozart-Ausgabe (1955–91). The known documents relating to Mozart's life and works are collected in Deutsch's *Mozart: die Dokumente seines Lebens* (A1961, with supplements in 1978, 1991 and 1997).

Despite the dramatic increase in Mozart research in the late 20th century, and the renewed availability of numerous sources since the recovery in Poland of autographs lost during World War II, modern scholarship continues to rely on a limited range of material. This is especially evident in editions of Mozart's works, which are based almost exclusively on the autographs, for the most part ignoring, or at least undervaluing, contemporaneous manuscript copies and printed editions. This editorial stance has as much to do with past perceptions of Mozart as with modern notions of textual scholarship: the idea that his works were in some way 'perfect', and that transmission inevitably involves corruption, resulted in a misunderstanding of the essential nature of autographs as representing performance as well as the dismissal of some sources that were considered less important, including even Mozart's own performing copies. By the same token, the study of the autographs themselves was for many years limited by a Mozart-centred outlook. Between 1800, when the Offenbach publisher J.A. André purchased the bulk of Mozart's estate from Constanze, and the 1960s and 70s, when Wolfgang Plath published his important articles on *Schriftchronologie*, interest in these documents centred chiefly on the identification and chronological development of Mozart's handwriting. It was only in the 1970s that the watermarks began to be taken into account, in Alan Tyson's systematic and pioneering study, which gave rise to substantial revisions in the dating of Mozart's works. Since then, source studies have broadened in scope to include not only contemporaneous copies, but also Mozart's sketches (Konrad, E1992) and first editions of his works (Haberkamp, A1986). Nevertheless, much remains to be done.

Analytical studies in the 1980s and 90s also departed from traditional formal and Schenkerian models (although these have remained vital). Contextual, topical, rhetorical and genre- and gender-based studies have become prominent, not only in the operas but also in Mozart's instrumental music, chiefly the symphonies and concertos. These two orchestral genres in particular lie at the heart of performing practice studies, an important element of Mozart scholarship from the 1970s onwards. Biography, finally, has continued to command attention, displaying a wide range of concerns from the psychological (Hildesheimer, F1977, and Solomon, F1995, but see also Head, F1999) to the increasingly important contextual (Braunbehrens, F1986, Halliwell, F1998).

WORKS

Editions: *Wolfgang Amadeus Mozart's Werke*, ed. J. Brahms and others (Leipzig, 1877–1905/*R*) [MW]

Wolfgang Amadeus Mozart: Neue Ausgabe sämtlicher Werke, ed. Internationale Stiftung Mozarteum Salzburg (Kassel, 1955–91) [NMA; nos. shown, e.g. Series (IV): Werkgruppe (3)/Abteilung (2)/Band (i), page (273) – IV:3/2/i, 273; Abteilung and Band nos. not always applicable]

Thematic catalogue: L. von Köchel: *Chronologisch-thematisches Verzeichnis sämtlicher Tonwerke Wolfgang Amade Mozarts* (Leipzig, 1862; rev. 2/1905 by P. Graf von Waldersee; rev. 3/1937 by A. Einstein, repr. with suppl. 1947; rev. 6/1964/R by F. Giegling, A. Weinmann and G. Sievers)

K – *no. in Köchel, 1862; for items not in 1862 edn, no. from 2/1905 or 3/1937 given*

(4) (Maria) Constanze [Constantia] **(Caecilia Josepha Johanna Aloisia) Mozart** [née Weber; later Nissen] (*b* Zell, Wiesental, 5 Jan 1762; *d* Salzburg, 6 March 1842). Soprano, wife of (3) Wolfgang Amadeus Mozart and later of his biographer Georg Nikolaus Nissen. She was the third of four daughters of the bass, prompter and copyist Fridolin Weber, and thereby related to the composer Carl Maria von Weber (*see* WEBER). She first met Mozart in 1777–8 in Mannheim; he fell in love with her elder sister Aloisia, who rejected him. Constanze moved with her family to Vienna in September 1779; from 2 May 1781 Mozart lodged with her mother, and on 4 August 1782 married Constanze in the Stephansdom. There were six children, of whom two, (5) Carl Thomas and (6) Franz Xaver Wolfgang, survived to maturity. During a visit to Salzburg, she sang one of the soprano parts in a performance at the abbey of St Peter of the Kyrie and Gloria of her husband's Mass in C minor K427/417*a* (26 October 1783).

After Mozart's death she was destitute and was allowed a pension of one third of his salary. She attempted to improve her financial position by arranging concerts with his works in various cities, herself singing in several of them. She organized several performances of *La clemenza di Tito*. In 1797 she had a vocal score of *Idomeneo* arranged from Mozart's autograph and published by Breitkopf & Härtel, though without financial success, and in 1799 she sold his remaining manuscripts to the publisher André after first having them set in order by Abbé Maximilian Stadler and Nissen, who in part managed her affairs. Nissen was a Danish diplomat; she probably first met him in 1797 when he lodged in rooms in her house. They were married on 26 June 1809 in Pressburg (Bratislava) Cathedral. There were no children of this marriage. In 1810 the couple moved to Copenhagen and then, probably in 1821, to Salzburg, where Nissen collected materials for his biography. He died on 24

15. Constanze Mozart, née Weber: portrait (probably 1782) by Joseph Lange in the Hunterian Art Gallery, Glasgow University

March 1826, however, before its publication: Constanze had it completed (by Johann Heinrich Feuerstein, who cheated her) and saw it through the press. Early 20th-century scholarship severely criticized her as unintelligent, unmusical and even unfaithful, and as a neglectful and unworthy wife to Mozart. Such assessments (still current) were based on no good evidence, were tainted with anti-feminism and were probably wrong on all counts. Mozart's letters prove his devotion to her. Evidence about her dates mostly from after 1791; the travel diaries of Vincent and Mary Novello (1829) are especially revealing. Her diary (1828–37) and correspondence show a capable businesswoman (she died in comfortable circumstances) and devoted mother. But she was an unreliable witness and told many lies about the Requiem, whose completion she had organized: she was of course an interested party. Many of the myths surrounding Mozart's death probably stem from her. Three portraits survive (the most celebrated from 1782 by her brother-in-law Joseph Lange; fig.15) and a fuzzy daguerreotype.

(5) **Carl Thomas Mozart** (*b* Vienna, 21 Sept 1784; *d* Milan, 31 Oct 1858). Second and elder surviving son of (3) Wolfgang Amadeus and (4) Constanze Mozart. Without finishing his schooling, for some of which he was under Franz Xaver Niemetschek in Prague, he went to Livorno in 1797 to begin his apprenticeship with a commercial firm. He planned to open a piano business in the following years, but the project failed for lack of funds. He moved to Milan in 1805 and studied music with Bonifazio Asioli, but gave up his music studies in spring 1810 and became an official in the service of the Viceroy of Naples in Milan. In that year his mother gave him his father's piano. His relationship with his stepfather Georg Nikolaus Nissen was particularly happy. He several times visited Salzburg, notably for the unveiling of the Mozart monument in 1842 and at the centenary celebrations in 1856, and Vienna. Much of his correspondence was published in the Mozarteum *Mitteilungen* (1918–21, 1961).

For bibliography *see* MOZART family, (6).

(6) **Franz Xaver Wolfgang** ['Wolfgang Amadeus'] **Mozart** (*b* Vienna, 26 July 1791; *d* Carlsbad, 29 July 1844). Composer and pianist, the sixth child and younger surviving son of (3) Wolfgang Amadeus and (4) Constanze Mozart. He received his first piano instruction in 1796 from František Xaver Dušek in Prague, where he lived with the Dušek family. In Vienna he continued his studies under Sigismund Neukomm, Andreas Streicher, J.N. Hummel, Antonio Salieri, G.J. Vogler and J.G. Albrechtsberger. His first compositions, which include the Piano Quartet op.1, appeared in 1805. On 30 March 1807 Salieri declared his pupil to possess 'a rare talent for music', and prophesied a career for him 'not inferior to that of his celebrated father'. On 22 October 1807 Franz Xaver went to Lemberg (now L'viv). In Podkamien he accepted a post as tutor in the home of Count Viktor Baworowski, a position he held until December 1810. In 1811 he became a music teacher in the home of the imperial chamberlain, Janiszewski, in Sarki (near Lemberg). He gave up that post in 1813 and lived as a freelance musician in Lemberg, where he supervised the training of Julie Baroni-Cavalcabò. From 1819 to 1821 he undertook an extended concert tour during which he played in Kiev, Warsaw, Copenhagen (where he saw his mother and his stepfather, Georg Nikolaus Nissen), Hamburg, Berlin, Leipzig, Dresden (where he visited his cousin, Carl Maria von Weber), Prague, Vienna, Venice, Milan (where he visited his brother Carl), Zürich, Berne, Frankfurt, Mannheim, Augsburg, Munich and Salzburg (where he visited his aunt, (2) Maria Anna). In 1822 he returned to teach in Lemberg; in 1826 he went to Salzburg to see his mother. In the same year he renewed his studies in counterpoint with Wagenseil's pupil, Johann Mederitsch, who bequeathed him all his compositions. Also in that year he founded the Cäcilien-Verein in Lemberg, but in 1838 he left Lemberg and settled in Vienna. In 1841 he was made honorary Kapellmeister of the Dommusikverein and the Mozarteum in Salzburg, and in 1842 he stayed with his brother there during celebrations on the unveiling of the Mozart memorial; at the festival concert he played his father's D minor Piano Concerto K466. In December of the same year the Congregazione ed Accademia di S Cecilia in Rome named him *maestro compositore onorario*. In his will Franz Xaver stipulated, among other things, that any of his father's autographs found in his papers, his father's portrait and piano, as well as his own library, should be given to the Dommusikverein and the

Mozarteum as a lasting memorial to his father. This Mozart-Nachlass passed partly to the Internationale Stiftung Mozarteum and partly to the consistorial archive in Salzburg.

The brilliant pianistic figuration prominent in Franz Xaver's music reveals the particular influence of his teacher Hummel. The more relaxed quality and richer sonority of his piano writing, as reflected especially in his Second Piano Concerto (1818), however, hint at the characteristic piano style of Chopin and Liszt.

WORKS

for further details, see Hummel (1956), 314ff; printed works published in Vienna unless otherwise stated

VOCAL

With orch: Cant. for Haydn's birthday, 1805, lost; Aria buffa, 1v, op.13, *A-Sm** (dated 15 Jan 1808), *GB-Lbl**, for inc. facs. see Hummel (1956), 322 [for insertion in W.A. Mozart: Der Schauspieldirektor]; Der erste Frühlingstag (cant.), 4 solo vv, chorus, op.28 (1827); Festchor (cant.), solo vv, chorus, op.30 (1842) [for unveiling of Mozart memorial in Salzburg]; Lied für die heilige Christnacht, 2S, org, private collection, Vienna, ed O. Biba (Altötting, 1991)

Choral without orch: Die Nacht (J.P. Uz), 3vv, 1826, pubd in *Wiener Zeitschrift*, li (1839); Frühlingsgruss (Die Frühlingsgöttin nahet), 3vv, pf, op.29 (Dresden, n.d.); Von der Hoheit lichtem Glanz umflossen, 4 solo vv, 1828, *A-Sm**; Pour des morts, *Sm** [15 nos. incl. lieder]

Lieder with pf: Romanze (In der Väter Hallen ruht) (F.L. Stolberg), op.12 (1808) [for (4) Constanze]; Arietta (In questa tomba oscura) (1808); 8 deutsche Lieder (1810); 6 Lieder, op.21 (Hamburg, 1820); An Emma (Weit in nebelgrauer Ferne) (F. von Schiller), op.24 (Hamburg, 1820); 3 deutsche Lieder, op.27 (1820); Vaudevilles, *A-Sm** [16 sketches for Fr. songs]; Erinnerung (Byron), *Wst*; Ständchen, *Wgm* (inc.)

2 untitled duets, *A-Wgm*; for other works cited in auction catalogues see Hummel (1956), 319

INSTRUMENTAL

Orch: 12 Minuets and Trios (1808); 2 pf concs., C, op.14 (Leipzig, 1809), ed. R. Angermüller (Salzburg, 1972; Trent, 2000), E♭, op.25 (Leipzig, 1818); Konzertvariationen, pf, orch (Graz, 1820); Sinfonia, D, *A-Sm** (2 movts)

Chbr: Pf Qt, op.1 (1805), ed. in Diletto musicale, no.180 (Vienna, 1966); 6 piccoli pezzi, fl, 2 hn, op.11 (1808), ed. in Diletto musicale, no.1165 (Vienna, 1991); 2 vn sonatas, B♭, op.7 (1808), F, op.15 (Leipzig, 1813), both ed. M. Hörr (Winterthur, 1996); Grande sonate, E, vn/vc, pf, op.19 (Leipzig, 1820), ed. W. Boettcher for vc (Mainz, 1969); Rondo (Sonate), fl, pf, *A-Sm**, ed. L. Moyse (New York, 1976)

Variations, pf: on minuet from W.A. Mozart: Don Giovanni (1805); on Russ. theme (1809); on theme, G, op.13 (1810); on March from Coriolan, op.16 (Leipzig, 1813); Air russe variée, op.18 (Milan, 1820); on Romance by E.-N. Méhul, op.23 (Leipzig, 1820), ed. J. Draheim (Wiesbaden, 1991); Veränderungen über einen Walzer (1824); on March from W. Müller: Aline (before 1828); Variations sur un thème favorit (n.d.); 2 other sets (n.d.)

Other pf: Rondo, F, 1802, *A-Sm**; Sonata, op.10 (Offenbach, 1808); 12 polonaises, 6 as op.17 (Leipzig, *c*1815), ed. J. Draheim (Heidelberg, 1980), 4 as op.22 (Leipzig, 1820/*R*), 2 as op.26 (Padua, after 1820); Allegretto, 9 Aug 1841, *Sm** (facs. of autograph); Adagio, *Sm**

For details of other works in autograph, *A-Sm*, and in auction catalogues see Hummel (1956), 318–19

CLIFF EISEN (1), EVA RIEGER (2), CLIFF EISEN, STANLEY SADIE (3), RUDOLPH ANGERMÜLLER (4 with C.B. OLDMAN/ WILLIAM STAFFORD, 5, 6)

Mozarteum. Conservatory in Salzburg founded in 1841 as the Dommusikverein und Mozarteum. *See* SALZBURG, §3.

'Mozart' fifths (Ger. *Mozartquinten*). Consecutive 5ths occurring when the German 6th chord resolves directly to the dominant (*see* CONSECUTIVE FIFTHS, CONSECUTIVE OCTAVES, ex.9).

Mozart societies. Mozart's popularity is reflected in the establishment of societies devoted to furthering the appreciation of his music. In 1837 the Mozart societies of Prague and Frankfurt started operating; numerous organizations followed their lead in other cities. The activities of the early societies included the founding of museums, the erection of monuments and the publication of bulletins and research, as well as the organization of concerts. The Mozartgemeinde in Salzburg commenced publishing annual summary reports in 1888, listing 26 societies in German-speaking countries and seven elsewhere. By 1913 the numbers had grown to 40 and 11 respectively; there were over 3000 members in Munich and almost 2000 in Vienna. These statistics were collected under the aegis of the Internationale Stiftung Mozarteum in Salzburg, then, as now, the most important centre of worldwide Mozart

activities, originally established in 1841 (for its history *see* SALZBURG, §3). World War I interrupted data collection and central registration.

The Mozarteum publishes in its *Mitteilungen* the annual reports of participating societies. In the mid-1990s there were more than 60 active Mozart societies worldwide, half of them in German-speaking countries, at least 16 in other European countries, eight in North America (including a new Mozart Society of America, set up in 1996 to serve as a centre for furthering communication among Mozart scholars in the western hemisphere), five in Latin America and one in Australia. Most groups maintain membership in the Mozarteum. In Germany most of the societies belong to the Deutsche Mozart-Gesellschaft (founded 1951), which plays a major role in the dissemination of Mozart materials and has published *Acta mozartiana* since 1953.

The common thread connecting Mozart societies is the promotion of Mozart's music; their focus differs. Most offer musical programmes, some on a commercial basis, others as part of membership benefits. Typical functions include educational and performing opportunities for young artists, assisting other Mozart societies with advice and occasionally with modest financial help, raising funds for international Mozart causes and organizing trips to Mozart events, for example to the annual Salzburg Mozart Week. Some societies issue newsletters covering aspects of Mozart's music, his life and times; others maintain record libraries or produce recordings of their concerts. The societies use a variety of methods for financing: membership fees, commercial activities, contributions by corporations and government subsidies.

PETER SANDOR

Mozeen, Mrs. *See* EDWARDS (ii).

Mozheyko [Mazheyka], **Zinaida Yakovlevna** (*b* Orsha, 6 Dec 1933). Belarusian ethnomusicologist. She graduated from the history and theory department of the Belorussian Academy of Music, Minsk (1961), where she was influenced by Lidiya Mukharinskaya, Mikalay Aladau and Vladimir Olovnikov and completed her postgraduate studies at the Institute of Art, Ethnography and Folklore attached to the Belarusian Academy of Sciences, Minsk (1966), under the guidance of Ye.V. Gippius. She gained the *Kandidat* degree with a dissertation on traditional vocal art (1971) and in 1992 defended her doctorate dissertation on the Belarusian calendrical song culture. In 1971 she became a senior researcher at the institute. The focus of her studies has been Belarusian folklore within the overall historical and cultural framework of the Slavonic singing style. She has examined the dynamics of intonation in specific regions and the social conditions for the occurrence of certain melodies (*Pesennaya kul'tura Belorusskogo Poles'ya: selo Tonezh*, 'The vocal art of the Belarusian Poles'ye: the village of Tonezh', 1971) and has given a generalized picture of the development of Belarusian ethnomusicology and its research methods in the context of contemporary science ('Problemï metodov sravnitel'nïkh slavyano-balkanskikh issledovaniy v sovremennoy etnomuzïkologii', 'Problems of methodology for comparative Slavonic and Balkan research in contemporary ethnomusicology', 1986). She has recorded two collections of folksongs (1986, 1990) which have become the basis for folk concerts, documentary films on music and gramophone recordings.

TAISIYA SHCHERBAKOVA

mp. *Mezzo-piano* (It.: 'moderately soft'). *See* MEZZO, MEZZA.

Mqashiyo. South African urban popular music style. During the late 1960s the vocal stream of the South African township style MBAQANGA characterized by female close-harmony vocals became known as *mqashiyo*. Later, all-male variants were called vocal *mbaqanga*. *Mqashiyo* evolved from the 1950s vocal jive of Dorothy Masuka and close-harmony groups such as the Skylarks led by Miriam Makeba. The pioneers of the new style in the early 1960s were the Dark City Sisters, who established the use of five- rather than four-part harmonies. By 1965, with driving straight rhythms and electric backing, *mqashiyo* was exhibiting the same musical characteristics as instrumental *mbaqanga*. Particularly characteristic of mature *mqashiyo* is the contrast between close harmony female vocals and the deep, hoarse 'groaning' style popularized by Simon 'Mahlathini' Nkabinde. This was best exemplified by Mahlathini and the Mahotella Queens

accompanied by the Makhona Tsohle Band. Other top vocal *mbaqanga* groups included the female Amatshitshi and Izintombi Zesi Manje Manje and the male Abafana Baseqhudeni and Boyoyo Boys.

For recording purposes the personnel of *mqashiyo* groups was fluid. Within each studio the same ensemble of singers recorded as several different groups, each group name generally being associated with a specific lead vocalist. Exact membership was only stabilized for live performances. Like *mbaqanga*, *mqashiyo* is a pan-ethnic urban style produced for ordinary township dwellers. The lyrics (commonly in Isizulu, Isixhosa, Setswana and Sesotho) tend to carry a didactic message or reflect circumstances commonly experienced by *mqashiyo* artists and audiences. From 1975 the Soul Brothers revived the flagging vocal *mbaqanga* market with a distinctive soul-*mbaqanga* amalgam characterized by quavering two-part vocals, electric organ and, later, synthesizers.

LARA ALLEN

Mraczek [Mraček], **Joseph Gustav** (*b* Brno, 12 March 1878; *d* Dresden, 24 Dec 1944). German composer of Czech birth. He studied with his father, the cellist František Mraček (1842–98), at Brno and at the Vienna Conservatory (1894–6) with Grädener, Joseph Hellmesberger and Löwe. In Brno he led the German Theatre orchestra (1897–1902) and taught the violin at the Musikvereinschule (1898–1918). From 1919 to 1924 he taught composition at the Dresden Conservatory and conducted the Dresden PO. Mraczek composed in most genres and was a master of instrumentation. His operas show the influence of Wagner and Strauss. The work for which he was most popular was the symphonic burlesque *Max und Moritz* (1911, based on Wilhelm Busch's nursery rhymes), a piece brilliantly orchestrated in the Strauss manner.

WORKS
(*selective list*)

DRAMATIC

Der gläserne Pantoffel (op, 3, Mraczek, after A. von Platen), Brno, Stadt, 14 April 1902; Der Traum (op, 3, Mraczek, after F. Grillparzer: *Der Traum ein Leben*), Brno, Stadt, 26 Feb 1909; Kismet (ballet, 5, E. Knoblaack), Munich, Künstler, 8 June 1912; Aebelö (op, 3, A. Nikisch, after S. Michaelis), Breslau, Stadt, 13 Nov 1915; Ikdar (op, 3, Glück), Dresden, National, 24 Jan 1921; Herrn Dürers Bild, oder Madonna am Wiesenzaun (op, 3, A. Ostermann, after F.K. Ginzkey), Hanover, 29 Jan 1927; Der arme Tobias (radio op), 1936

EVA HERRMANNOVÁ

Mravina [Mravinskaya], **Yevgeniya Konstantinovna** (*b* St Petersburg, 4/16 Feb 1864; *d* Yalta, 12/25 Oct 1914). Russian soprano. She studied with Pryanishnikov, then with Artôt in Berlin and Mathilde Marchesi in Paris, making her début at Vittorio Veneto in August 1885. From 1886 to 1897 she was a principal soloist at the Mariinsky Theatre. In 1895 she created the coquettish Oxana in Rimsky-Korsakov's *Christmas Eve*, a role particularly suited to her consummate acting ability, lyric purity of tone and supreme musical intelligence. Other roles she sang to perfection were Antonida in *A Life for the Tsar*, Lyudmila in Glinka's second opera and Tatyana in Tchaikovsky's *Yevgeny Onegin*. She also sang in operas by Gounod, Meyerbeer and Wagner. She made three European tours, in 1891–2, 1902–3 and finally in 1906, but by that time her voice and health were already deteriorating.

EDWARD GARDEN

Mravinsky, Yevgeny (Aleksandrovich) (*b* St Petersburg, 21 May/4 June 1903; *d* Leningrad, 19 Jan 1988). Russian conductor. Born into a talented aristocratic family, he studied biology at Petrograd University. After serving as a rehearsal pianist for the Dancing School in Leningrad and joining the Imperial Ballet and Opera, he began his studies at the Leningrad Conservatory. He graduated from Vladimir Shcherbachyov's composition class in 1930 (the year he first conducted at the conservatory) and Aleksandr Gauk's conducting class in 1931. He also studied conducting with Nikolay Malko. After a year as an assistant conductor (1931) at the Leningrad Academic Opera and Ballet Theatre (now the Kirov), he became conductor there (1932–8). He made his début with the Leningrad PO in 1931 and was a regular guest conductor from 1934. After winning the All-Union Conductors' Competition in Moscow in 1938, he was made permanent conductor of the Leningrad PO, where he remained until his death.

Mravinsky toured frequently with his orchestra, making many trips to central Europe and four to Japan, but travelling only once to Britain (1960) and once to America (1962). His reputation in the West derived from a handful of recordings featuring a largely Russian repertory, although since the end of communism many more of his recordings have become available. His 1961 recordings of the last three Tchaikovsky symphonies have received particular critical acclaim. Under him, the Leningrad brass are piercing and bright with distinct vibrato. Despite the dramatic sound, the intensity and the often fast tempos of his performances, his conducting was equally noteworthy for its attention to detail, clarity and balance between sections, and its lack of false pathos; all accomplished with a frosty remoteness and minimal movement. Film of him conducting Shostakovich's Symphony no.5, for example, demonstrates that he could extract astounding sonorities with gestures of almost irreducible subtlety. The Soviet system allowed him to indulge in a meticulous

and near-fanatical rehearsal procedure, requesting eight to ten rehearsals for even the best-known repertory.

Mravinsky was legendary for his electric live performances of Beethoven, Wagner, Bruckner and Tchaikovsky, and his championing of Soviet composers: among many others, he gave the premières of Prokofiev's 6th Symphony and Shostakovich's symphonies nos.5, 6, 8 (also dedicated to him), 9 and 10, and the official premières of Shostakovich's symphonies nos.11 and 12. He also regularly conducted music by Hindemith, Bartók, Sibelius, Honegger, Debussy and Stravinsky, giving the Soviet premières of the latter's *Apollo* and *Agon*. Mravinsky had a personal, political and aesthetic influence on virtually every Soviet conductor since Malko. His students and deputies included Valery Gergiyev, Mariss Jansons (his chosen heir), Yury Temirkanov (his Soviet-picked successor) and Kurt Sanderling. Despite the fact that he was not a member of the Communist party, unusual in Soviet times for a person of his position, he was made People's Artist of the USSR in 1954 and a Hero of Socialist Labour in 1973.

JOSÉ BOWEN

Mṛdaṅgam [mṛdaṅga, mṛdaṅg, mirdang, mirutaṅkam]. An Indian name, in use for over two millennia, for tuned, finger-played, double-headed drums, primarily elongated barrel drums, which accompany Hindustani and Karnatak music. In earlier periods they were used in theatre music, and since that time they have been employed in concert forms and more elaborate styles of temple and devotional music.

Like the even more ancient and historically comprehensive chordophone name *vīṇā*, the Sanskrit *mṛdaṅga* indicates a certain musical status in Indian tradition as much as it does particular types of drum. The tuned barrel drum of Karnatak music preserves the name as *mṛdaṅgam* or *mirutaṅkam*; that of Hindustani music, while often called *mṛdaṅg* or *mirdang*, may also be found as *pakhāvaj*. The *mṛdaṅga* or *khol* of the East (Bengal, Orissa, Assam) and its relative the *pung* of Manipur accompany primarily the complex devotional music *kīrtan*. This tradition of music and drumming was once widespread with regional variation throughout South Asia, but is now obscured by the comparatively recent blanket permeation of the modern northern and southern schools.

1. Early history 2. Modern period: (i) Northern *mṛdang* or *pakhāvaj* (ii) Southern *mṛdaṅgam*.

1. EARLY HISTORY. The only detailed textual source for the early *mṛdaṅga* is the *Nāṭyaśāstra*. This gives some details of a composite barrel-drum set called *mṛdaṅga* in the chapter on membranophones, also listing as elements of an ensemble, the three *puṣkara* ('rainclouds'), the waisted drum *paṇava* and the pot-drum *dardura*.

Marcel-Dubois (*Les instruments de musique de l'Inde ancienne*, Paris, 1941) draws attention to a pair of barrel drums frequently seen in the sculpture of the 2nd century BC: one is placed vertically before the seated player, the other rests horizontally, or leans diagonally against the player's left hip, to give three playing heads in all. A few centuries later we find a three-drum set, with two drums standing vertically, giving four heads. The *mṛdaṅga* were probably made of clay. The right, upright drum *ūrdhvaka* tapers at the ends, and is said to be four *tāla* (probably a hand-span) long, and 14 fingers in diameter at the head. The horizontal drum *āṅkika* is three and a half *tāla* long, and its head (or heads) 12 fingers wide. The left vertical drum (*āliṅgya*) is truncated-conical shaped, and is said to be three *tāla* long, with a face eight fingers across. These descriptions do not always tally with ancient depictions. The skins (*candraka*: 'little moon') are of cowhide, white and unblemished, and soaked in cold water overnight before being scoured with mild cow-dung. They are single, not three-layered as has been stated, but wrapped in a threefold arrangement around the hoops (*kakṣā*) with a criss-cross lacing (*svastika*).

The greatest interest attaches to the 'wiping' (*mārjanā*), or tuning, of the heads. This is done preferably with black earth from a river bank, which is smooth when squeezed free of water, and is neither too heavy or solid nor permeated or containing impurities. A dough of wheat or barley flour, or a mixture of these, can be used as an alternative, but this is said to give a monotonous sound. In the absence of further data, we may think of these as wet tuning-loads, like the dough on the left face of the modern *mṛdaṅgam*, which lowered the pitch of the skin rather than giving it a pitch rich in harmonics like that of the hard pastes for right-hand faces of the modern drums.

The pastes may derive from the need, which arises because of the interlacing of the two heads, to adjust the pitch of the second head after the first has been tuned. Thus, paste is prescribed in the *Nāṭyaśāstra* only for the left head of the *āṅkika* (the only drum of the set played on both heads).

There are three tunings, which relate to the top, right and left heads of the older two-piece *mṛdaṅga*: *mayūrī* ('peacock'), consisting of 4th, tonic and 3rd on the top, right and left heads, respectively; *ardhamayūrī* ('half-peacock'), with 6th, 2nd and 1st; and *karmāravī* (an obscure word, perhaps meaning 'the roar of work' but denoting also a melodic mode-species, *jāti*) with 5th, 1st and 2nd. These are referred to the three ancient parent-scales, the *madhyama*-, *ṣaḍja*- and *gāndhāra-grāma*, respectively. The top head takes the 4th, 5th or 6th of the scale: octave registers are not given, and it may be that, since they apply to the largest drum with the widest head, these degrees should be understood as being below the 1st of the scale. The right head takes the 1st or 2nd degree, and the left the 1st, 2nd or 3rd, generally above the right. Earth is not applied to the right head; an application (*rohaṇa*) of sesamum-paste, cow-butter and oil may be applied only to the *āṅkika*. The head of the third drum, *āliṅgya*, is said to be tuned to the 7th (the only note not covered in the three tunings).

The *mṛdaṅga* were mostly played with different hand-stroke qualities (rather than with the fingers) in sequential patterns from head to head. They were called *mārga* ('way'), and there were four: *aḍḍita*, top and *āliṅgya*; *ālipta*, left and top; *vitasta*, top and right; and *gomukha*, the different heads mixed mostly with *āliṅgya*. They are classified into three 'progressions' (*pracāra*): 'regular' (*sama*) when the left is used on top, left or *āliṅgya*, and right on right; 'irregular' (*viṣama*) when the right is used on top or *āliṅgya*; and regular-irregular when the striking is cross-handed.

Two characteristic aspects of Indian drumming are already strikingly evident in the *Nāṭyaśāstra*. Firstly the

drum syllables are based in large part on guttural, retroflex, flap and dental consonants, as they still are. Secondly the rather large variety of tonal colours implied by so many drum syllables is produced with the same techniques that are still used. The five basic strokes (*pāṇi-prahata*) are full hand, half hand, quarter hand, side of the hand and forefinger. The five strokes can be made with three degrees of *prahāra* (damping): fully damped, half-damped or undamped. Each individual combination of stroke and damping corresponds with one or more ways of hitting the drumhead.

The medieval inheritor of the *mṛdaṅga* tradition, as represented in sources such as the *Saṅgīta-ratnākara* (13th century), is termed *mardala*, though this is equated with the older *mṛdaṅga* or *muraja*. The root for this word and *mṛdaṅga* is the same. The *mardala* body differs somewhat from that of the older *mṛdaṅga* barrel drums, and it has become a single double-headed drum (the old drum-sets becoming rare from around the 8th century); it enters into this tradition by virtue of its paste-tuned heads.

The *Saṅgīta-ratnākara* describes the *mardala* as made of citrus (*bīj*) wood, about 42 cm long, with a wall about 1 cm thick. The right face is about 26 cm in diameter, the left about 28 cm. Here the modern tradition of a smaller, higher pitched, right head appears to have been reached.

The skins are single and are prescribed as thick and round, about 2 cm larger than their drumheads; no hoops are attached, but they are pierced all round with 40 holes, and laced together by a leather strap (*vadhra*). This shows now its upper, now its lower side in a pattern called *vignikā* ('recoiling, zigzag'?) by Śārṅgadeva and *karpara* by Siṃhabhūpāla (late 14th century). Two plaited leather rings are tightened over the skins near the head, and to them is attached a doubled holding-band (*kacchā*) with a decorative border of silk threads which is worn around the hips, like that of the contemporary barrel drum *paṭaha*. A thick tuning-paste made by mixing a glue of boiled rice with ash and pounding them together was applied to both heads.

The first lessons for the Hindustani *mṛdaṅg-pakhāvaj* descend from *Saṅgīta-ratnākara*: *tā dīn thūn nā*, and patterns with filler strokes based on them. In this there is a resemblance with the South Indian *mṛdaṅgam* traditions. Beyond these first, obviously anciently embedded, stages the traditions diverge.

2. MODERN PERIOD.

(i) Northern mṛdang or pakhāvaj. The *mṛdang* of North and Central India (also spelt or pronounced *mirdang*) is frequently called *pakhāvaj*, a medieval name. This name is not recorded in the 13th-century *Saṅgīta-ratnākara*, though other drums are given there with local variant names consisting partly of *āvaja* or *āvaj*.

The name *pakhāvaj* would have been established in the later medieval (Delhi Sultanate) period, for it is recorded in the late 16th-century Mughal *Ā'īn-i-akbarī*, which states that it was 'held under one arm'. The use of the *pakhāvaj* is here recorded either for the Kṛṣṇa devotees, the *kīrtanīya* (Brahmin precentors) and the *bhagatīyā*, or for the dancing-masters *naṭvā* and the lower class of entertainers *kañjarī* (these are all said to be of the Malva-Gujarat region). Two *pakhāvaj* are the drums in the aristocratic house-music (*akhāṛā*) of this period. The modern *pakhāvaj* tradition has two main contexts: the temple and the concert platform, formerly in the courts and more recently the public hall. These would connect with the earlier traditions of use in *kīrtan* devotional music and the court *akhāṛā*.

Little is known of the development of the composite drumheads which are seen on all three modern regional *mṛdaṅga* of North, South and East with only small differences of detail. It would seem, however, that it combines the principle of the tuning-paste of the older *mṛdaṅga-mardala* drums with that of the double skin recorded for the *deśī* or local *paṭaha* barrel drum of medieval times.

The modern *pakhāvaj* is of wood. Many shapes and sizes (chosen or made, as with most Indian instruments, to fit the player) are found. Modern sources still refer to the three shapes defined for the ancient *mṛdaṅga*; however, the most common shape is perhaps an asymmetrical biconical barrel (though a symmetrical bulging barrel is also found). The shell tapers to the ends from a ridge near to the left-hand head.

The skins of the *pakhāvaj* drumhead (*puṛī*) are mostly of goat, previously cleaned by soaking in lime and water. The main right skin is thinner than the left. Over both is stretched a thinner skin, and the two are bound together to a four-ply plaited leather hoop (*gajrī*). The latter is somewhat larger than the drumhead and when tensioned is a little lower than the rim; one or two thick skin rings are stitched under the main skins on to the hoop to protect the drumhead from the edge of the barrel. The greater part (between two-thirds and three-quarters) of the thin upper skin is cut away, leaving an outer ring extending a little from the drum-rim over the cavity on each head. This is called *cā̃ṭi* (cā̃ti: ?'slap') or *kinā* ('edge'). To the greater, exposed area of the lower, main skin on the right head is applied a round, black tuning-paste in several, progressively smaller, layers. The essential element in this is iron oxide mixed in a glue of boiled rice, and according to Śarmā (*Tāl Prakāś*, Hathras, 2/1963), blue vitriol (copper sulphate, *nīlathothā*) is also present, while other sources specify a mangosteen tar (*gāb*). Many sources state that the paste contains metal filings. However, this would be highly abrasive and it would not adhere. The area of the main skin below the paste is first scraped with a blade; the paste is then applied layer by layer, each rubbed smooth with a stone when almost dry and dried before application of the next (there are commonly five layers).

There are thus three areas on the right face, the edge (*cā̃ṭi*), the middle (*lav*: 'bit'; *sur*: 'pitch') and the black (*siyāhi*, *syāhi*). The first two occur about a quarter each of the head, the black about half. Because whole-hand and whole-head strokes predominate on the *pakhāvaj*, and also because one head when struck makes the other vibrate, these are less specific in pitch and timbre difference than on the *tablā*, and all areas of the head may be played both resonant ('open') or non-resonant ('closed'). The main right open pitch is tuned to the singer's or melody instrument's tonic. The left head has no permanent paste, but a pancake of wheat-dough is applied for each performance, lowering the pitch to an octave below that of the right head.

The two heads are interlaced by a leather strap (*tasmā*) laced in a V through 16 holes in either hoop. The skins are tensioned by eight large wooden cylinders (*gaṭṭā*), one under each V, to the left side of the drum between the ridge and the head. The right head is fine-tuned by means of a small hammer struck on the hoop.

The modern *pakhāvaj* is usually placed horizontally on the floor before the seated player with the right end resting on a folded cloth. The principal strokes on either side are whole-hand strokes. Strokes are called *bol*, denoting both the action and its notational syllable. These vary according to context, the real notational group being the phrase. Śarmā (op. cit.) classifies the right-hand strokes as basically five, the left as two; of these, only two (left-hand *gha*, right-hand *ṭa*; the vowel length varies) are regarded as invariable (*acal*) in notation and position. The two main resonant, or 'open' (*khulā*), strokes on the right are *tā* (a 'slap', also called *thāp*), given by the upper (lateral) edge of the hand on the top half of the drum-face, pivoting on the lower (medial) side of the palm to damp the sound slightly; and *dī*, a forceful tap, immediately rebounding, with four or three fingers on the centre of the *siyāhi*. These two strokes give two different timbres of the system tonic. Also resonant is *nā*, a strong tap with the top of the right index (or other finger) on the edge of the head. The right two-stroke roll *kiṭī* (*kiṭa*, *tīṭī*, *tira*) is made with the second and third fingers plus the thumb on the centre of the *siyāhi*; these are held down and are 'closed' (*band)*, that is, non-resonant. A similarly made but resonant double or triple stroke on the edge is called *nanāna* or *tarānā*.

Of the two main left-hand strokes, *ghā* (resonant) is a strong tap, immediately rebounding, on the whole head (partly on the dough) with the top of the hand, while closed *kat* is a flat-hand, held-down stroke on the whole head. *Ghā* played simultaneously with a right-hand stroke (e.g. *tā* or *tiṭa*) changes the notation to *dh-*, thus *dhā* or *dhiṭa*.

(ii) Southern mṛdaṅgam. This version of the double-headed barrel drum is used mainly in the performance of Karnatak music, found in the four southern states of India (Tamil Nadu, Andhra Pradesh, Kerala and Karnataka).

The wooden body of the drum varies between 50 and 70 cm in length depending on the range of pitches desired. It is cylindrical, tapering for approximately half its length; the diameters of the two heads are about 18 and 21 cm. On both heads the wooden rim slopes inward, the angle being shallower on the smaller of the two. Each has a membrane of monkey skin: on the smaller this membrane is covered with another of calfskin with a circular hole (7 to 8 cm in diameter) at the centre; on the larger is a similar but double membrane of calfskin with a hole of 11 to 12 cm. These extra membranes (*mīṭṭu*) are attached to the stretching mechanism by means of a circle of holes located just beyond the edge of the rim. Through these holes pass strips of bullock hide which are tightly woven into a ring approximately 1·5 cm thick.

At 16 equidistant points on each rim a gap is forced in the weave, allowing a single thong of bullock hide, approximately 20 metres long, to pass through and connect the two rims at each end of the drum. The monkey-skin membranes on each face are laced to the *mīṭṭu* so that, by tightening the thong of bullock hide, the membranes are stretched over each head. As the thong slackens through use, up to 16 cylindrical wooden pegs are inserted between the thong and the wooden body of the drum to sustain the tension.

On the smaller head, nearly all the exposed area of monkey skin is covered by a circular patch of black tuning-paste made from a mixture of powdered waste-iron and rice; the patch is nearly 0·5 cm thick, tapering towards the edges. Two dozen or so split reeds are inserted between the *mīṭṭu* and the membrane beneath; these add a characteristic 'buzz' to the timbre of the smaller head. No split reeds are used on the larger head, on which the drum rests when not in use. *Mṛdaṅgam* players sometimes make a temporary tuning-paste from a lump of wet *soji* (a type of flour) to apply to the larger head before a performance.

The absolute pitch (*śruti*) of the drum varies according to the preference of the principal performer within the ensemble. Absolute pitch is reckoned in semitones ascending from middle C of the even-tempered harmonium. The absolute pitch of a *mṛdaṅgam* may be altered by up to two-and-a-half semitones by striking the tightly woven rings with a round stone and wooden peg to alter the head tension. Most players possess two instruments, enabling an absolute pitch range from *śruti* 2 to 7 (D♭ to F♯). Some male vocalists require *śruti* 1 (C) and a few players possess instruments capable of this pitch.

The *mṛdaṅgam* player usually sits cross-legged on a mat with the drum resting on its side in front; the right hand strikes the smaller head and the left hand the larger. The drum rests against the right shin, the right foot forming a cradle for the larger head, and the left knee rests on the drum, holding it in position. Sometimes a rolled-up piece of cloth is inserted beneath the drum near the right-hand head in order to tilt it upwards.

Seven basic strokes are recognized. The left head (with the right head damped) may be struck in the centre of the membrane with four fingers together (the pitch may be altered through an octave by varying the striking position); it may also be struck on the *mīṭṭu* (on the side nearest the player), again with four fingers together but with the first joints of the fingers. For the right head (with the left head damped), the player may strike the *mīṭṭu* near the rim (on the side nearest the player) with the first joint of the forefinger, or the exposed membrane between the *mīṭṭu* and the tuning-paste with the first joint of the forefinger. The tuning-paste itself may be struck with the middle and ring fingers together (using the first joints of the fingers), with the first joint of the forefinger, or with the end of the little finger (this is executed with a quick flick of the wrist and produces a characteristically resonant sound).

Each stroke produces a distinct timbre. In the second and fifth types of stroke the pitches produced are indeterminate; the other five strokes produce more determinate pitches and relationships. The lowest pitch produced in the first type is an octave below *ṣaḍja* (the system tonic); the third type produces *ṣaḍja*, and the fourth a (less distinct) semitone above; the sixth a (barely distinct) 5th above and the seventh *ṣaḍja* with a prominent second harmonic. The first and fifth strokes combined produce an indistinct but very low pitch; this is reckoned as a separate stroke. The *mīṭṭu* strokes require a great deal of force, causing permanent calluses on the finger joints. The different strokes are described and transcribed by means of syllables (such as *tā*, *dhī*, *tom*, *nam*), some of which differ from region to region, and the player learns the instrument in terms of patterned combinations of strokes (*jāti*). *See also* INDIA, §III, 6(iii); for bibliography *see* INDIA, §III, 6.

□

Mr Fox. English folk-rock group. Formed by husband and wife BOB PEGG and CAROLE PEGG, the band was one of the first of the folk-rock movement to fuse English

traditional sounds with those of rock, and used their own compositions (rather than folksongs) to draw on the essence of the tradition. Initially known on the national folk-circuit for their staunch support of traditional music, the Peggs became a leading influence on the folk-rock scene with Mr Fox, which made its début in 1970 at London's Royal Festival Hall. In the initial line-up, Carole Pegg's fiddle style, Bob Pegg's melodeon and whistle playing, and the hard edge of the Peggs' vocals created the English sound; the addition of cello, flute and clarinet gave a chapel-band feel; and drums and bass provided cross-fertilization. Later the band became a four-piece, comprising the Peggs with Alun Eden (percussion) and Barry Lyon (bass).

Mr Fox was one of the most adventurous and quintessentially English of the early folk-rock bands. The first album, *Mr Fox* (1970), drew on the dances, chapel services, folklore and topography of the Yorkshire Dales, mixing eerie narrative songs, such as 'Mr Fox' and 'The Gay Goshawk', with poignant ballads, such as 'Leaving the Dales'. The second album, *The Gypsy* (1971), was musically broader including, for instance, the epic title song and 'Aunt Lucy Broadwood', an example of English rap. It showed the band's great potential but was its last recording. Bob and Carole Pegg went on to follow solo careers.

Mshvelidze, Shalva (*b* Tbilisi, 28 May 1904; *d* 5 March 1984). Georgian composer, teacher and ethnomusicologist. A representative of the first generation of Georgian composers, he studied at the Tbilisi Conservatory, graduating from the composition class of Bagrinovsky and Barkhudarian (1930). As a postgraduate in Leningrad, he finished his studies with V. Shcherbachyov in 1933. From 1929 to 1984 he was a teacher and later (1942) professor of the Tbilisi Conservatory; he was also head of the composition department, dean of the faculty of theory and composition, later assistant director and then director. He directed the Paliashvili Opera and Ballet Theatre (1950–52) and was also chairman of the Georgian Composers' Union (1940–51). He has been awarded many Soviet state prizes and the Nehru State Prize of India.

Although Mshvelidze's development coincided with the isolation of Soviet culture from the newest compositional thinking of Western countries, his style is notable for its orginality and is based on Georgian musical folklore, especially of the Pshava mountain region in the north-west part of the country. He used as his starting point the severe and courageous character of Pshavian folk song with its characteristic monody consisting of a descending improvisatory melody over the range of seventh and set in an original mode similar to the phrygian but with a sharpened sixth and named by him the 'Pshavian' mode. This scale and declamatory monody were organically assimilated into the stylistic system of his symphonic works; since this treatment found a response in the creative process of many other Georgian composers Mshvelidze can be considered the founder of Georgian epic symphonism. In his conception of epic cycles, the rhapsodic unfolding of the material through the course of consecutive sections is carried out by means of continuous development; the general structure, however, sometimes falters through looseness of construction. The depiction of Vazha-Pshavela's poetry in the symphonic poems *Zviadauri* and *Mindia* favours the creation of a colourful world of heroism and patriotism and is conveyed in episodes of poetic lyricism and varied genres. The epic scale of his thinking has also shown its worth in opera, especially in the first two operas *Ambavi Tarielisa* ('The Legend of Tariel') and *Didostatis marjvena* ('The Hand of a Great Master'). In the first of these Mshvelidze continues the tradition established by Paliashvili, while in *Didostatis marjvena* he creates a monumental music drama. The most significant pages of these operas are choral scenes, which in the first opera are marked by majestic *fresco* style, and in the second are full of dynamism and dramatic action. The combination of declamatory and *arioso* writing – apparent in some arias of the main characters – created a new standard for operatic melodic creation in Georgian music.

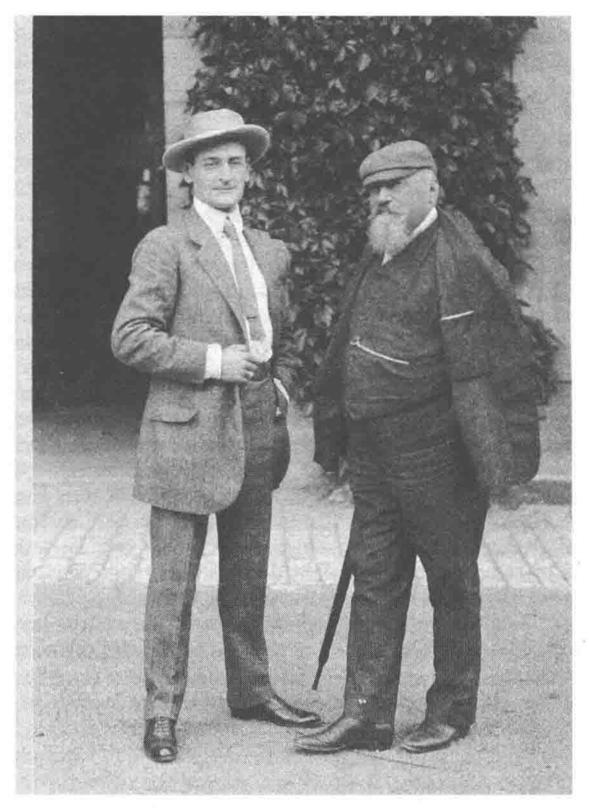
NANA KAVTARADZE



MTNA. *See* MUSIC TEACHERS NATIONAL ASSOCIATION.

Mubangizi, Benedicto Kyatuuka (*b* Igara, western Uganda, 21 March 1926; *d* Kampala, 21 June 1995). Ugandan composer, poet, writer and folklorist. Largely self-taught, he took positions as a teacher of music and literature at several teachers' colleges in western Uganda and at St Kalemba's Catechetical Centre, retiring in his 50s to concentrate on creative writing. His most valued musical work consisted of providing a new musical liturgy for the Catholic church in western Uganda. The hymnbook *Mweshongorere Mukama* ('Let us Praise the Lord', Kampala, 1961, 6/1987) adopted for use throughout the diocese and further afield, contains 79 of his compositions. A second unpublished collection of the same title contains a further 65 settings, including arrangements of Latin, French and English hymns. Despite ill-health and poverty his prolific output included 6 masses, partsongs, liturgical settings (in Latin, French, English and his native tongue Runyankore), novels, folktales, poetry, plays and other historical and linguistic contributions. All but 12 titles remain unpublished and in the care of the Omuhanda gy'Okumanya Publishing Association, Mbarara.

A fine linguist who could write religious poetry rich in traditional imagery, his research into traditional text-setting rules led him to write melodies which preserved the intimate relationship between speech tone and melody as well as the natural rhythms of traditional song. Being furthermore mostly pentatonic, like the traditional music of the region, his hymns and songs were consequently easily learned. Some of his compositions were harmonized but, aware of the basic incompatability between the demands of speech tone observance and independent part movement, he usually restricted himself to near-parallel and oblique part-writing. His music, popular among congregations and choirs throughout western Uganda, is sometimes accompanied by traditional instruments such as pot drums, rattles and hand-clapping. Since musical literacy is rare in the region, much of his music has passed into oral tradition.

PETER COOKE

Muck, Carl (*b* Darmstadt, 22 Oct 1859; *d* Stuttgart, 3 March 1940). German conductor. The son of a gifted amateur musician, he studied classical philology in Heidelberg and Leipzig. In 1880 he took the PhD and made his début in the Leipzig Gewandhaus with Scharwenka's Piano Concerto in B♭ minor. Without ever completing any real course in conducting, he devoted himself from that time onwards to conducting operas. After engagements in Zürich, Salzburg, Brno and Graz he was appointed principal Kapellmeister at Angelo Neumann's Deutsches Landestheater in Prague in 1886. Even at that early date he laid the foundations of his reputation as a conductor of Wagner's works with exemplary performances of the *Ring*. In 1892 he became principal Kapellmeister of the Royal Opera House, Berlin, where he was appointed general music director in 1908. From 1894 to 1911 he directed the Silesian music festivals in Görlitz as guest conductor, Wagnerian performances at Covent Garden in London, and the *Parsifal* performances in Bayreuth after 1901. In 1912 he took over the directorship of the Boston SO but was interned in 1918 amid the anti-German hysteria, and from 1922 to 1933 he conducted the Hamburg PO.

Carl Muck with Hans Richter

Muck was an unrelentingly strict orchestra trainer, and always intent on absolute fidelity to the score. Contemporaries described his conducting as strikingly economical, and praised his sense of form and the strict rhythm of his interpretations. He conducted the *Parsifal* performances in Bayreuth for almost three decades (where, according to the singer Frida Leider, he preferred unusually slow tempos) and was considered in his time to be the greatest Wagner conductor. Having begun recording in 1917, he recorded much of his *Parsifal* between 1927 and 1929. He also enjoyed unchallenged supremacy as an interpreter of Bruckner's symphonies (which he gave without cuts) and favoured Mahler. He had a huge repertory (conducting 103 different operas at the Berlin

Opera) and promoted some new music. He gave the American première of Schoenberg's Five Orchestral Pieces op.16 and directed new works by Sibelius and Debussy in Boston.

HANS CHRISTOPH WORBS

Mudarra, Alonso (*b c*1510; *d* Seville, 1 April 1580). Spanish vihuelist and composer. Raised in Guadalajara in the household of the third and fourth dukes of the Infantado, Diego Hurtado de Mendoza (1461–1531) and Iñigo López de Mendoza (1493–1566), it is likely that Mudarra travelled with the latter in the entourage that accompanied Charles V to Italy in 1529. He subsequently entered the priesthood, probably in Palencia, becoming a canon at Seville Cathedral on 18 October 1546, less than two months before the publication of his vihuela book. During the following 34 years he played an important role in cathedral affairs: arranging the annual Corpus Christi celebrations, hiring wind players, negotiating the purchase and installation of a new organ, and consulting in 1572 with Francisco Guerrero at the request of the chapter concerning the music commissioned from Guerrero for the coming Christmas season. From March 1568 he served as major-domo of the cathedral, in charge of all disbursements. After his death, the 92,000 maravedís raised from the sale of his possessions was distributed to the poor according to the provisions of his will.

Mudarra's *Tres libros de musica en cifras para vihuela* was published in Seville on 7 December 1546 (*R* 1980; ed. in MME, vii, 1949). Comprising 77 works (including six pieces for four-course guitar and one for harp or organ), the book contains numerous innovations. These include the earliest music published for guitar, a newly-invented 14-line tablature system for harp and organ, suite-like groupings of works by mode, and the earliest *fabordón* psalm printed in Spain. The most prolific genre among Mudarra's works are 27 fantasias, mainly polythematic works in imitative style with lyrical free extensions and strong architectonic symmetry. He also included two monophonic ostinato fantasias and several of more idiomatic character. The ingenious *Fantasía que contrahaze la harpa en la manera de Ludovico* is a disguised set of folia variations that use cross rhythms and bold chromaticism to imitate the legendary harpist of Ferdinand III of Aragon. The short tientos are idiomatic preludes used to commence the modally-grouped 'suites' of the second book, while the *glosas* are parody fantasias in which Mudarra alternates intabulated vocal polyphony with original music. Twenty works from the second book were reprinted in keyboard tablature by Venegas de Henestrosa (*Libro de cifra nueva*, 1557; ed. in MME, iii, 1944), several with substantial modification. Other works for solo vihuela include three pavanas, one paired with a galliard, and variations on *Conde claros* and *Guárdame las vacas*. The brief tiento for harp or organ appears in isolation to exemplify Mudarra's new tablature. His songs are without parallel in 16th-century Spanish literature. They include romances, villancicos, canciones, and sonnets by Garcilaso, Boscán, Petrarch and Sannazaro. Latin settings include two psalms, texts by Horace, Ovid and Virgil, in addition to intabulated mass sections by Josquin and Févin, and motets by Gombert, Willaert and Escobar. Vocal parts are notated either on a separate staff, or marked in the tablature with apostrophes. Three signs, Φ, C and ₵, are used to indicate fast, medium and slow tempos. Mudarra's preface also discusses plucking technique, both thumb-index alternation and the plectrum-like *dedillo* stroke.

JOHN GRIFFITHS

Mudd [Mudde, Mud]. Name of several English composers and organists active as church musicians in the 16th and 17th centuries. Many works are ascribed in manuscript sources merely to 'Mudd' or 'Mr Mudd' and cannot be attributed definitely to any member of the group.

(1) **Henry** [Harry] **Mudde** [Moode, Moud, Mudge] (*d* London, ?*c*1588). Records of the Mercers' Company on the award of an exhibition to Gonville and Caius College, Cambridge, to his son John in 1573 described him as 'organ player' of St Paul's Cathedral, though the college registers, in relation both to this son and to (3) Thomas Mudd (i) give his status merely as 'citizen' of London. It is questionable whether at that time there was an established post of organist of St Paul's; more probably suitable vicars-choral performed the duty as required. Henry Mudd is mentioned as a vicar-choral in an episcopal visitation of 1574. Very possibly he is also the Henry Mudd who, judging from his stipend, occupied a leading position among the singing-men of St Dunstan-in-the-West in 1580–86, of which church it has been stated that he was the parish clerk. A four-part In Nomine (in *GB-Ob*) is attributed to him.

(2) **John Mudd** (bur. Peterborough, 16 Dec 1631). On 7 July 1582 he was appointed *Rector chori* of Southwell collegiate church, and he was organist of Peterborough Cathedral from Michaelmas 1583 until resignation shortly before his death in favour of his son (4) Thomas Mudd (ii). Two anthems may perhaps be attributed to him: *Plead thou my cause* and *Sing joyfully*. John, the son of (1) Henry Mudde, graduated from Gonville and Caius College, Cambridge, in 1576–7; he was probably the John Mudd who was a minor canon of St Paul's in 1636–8 and was buried in St Giles, Cripplegate, in 1639. This would rule out his identification with the Peterborough organist. It is also important to bear in mind the usual elementary educational background of cathedral organists of the day, who ranked merely among

the *ministri inferiores*, as well as the almost certain likelihood that such graduate status would have been mentioned on his appointments.

(3) **Thomas Mudd** [Mudde] (i) (*b* London, *c*1560; *d* after 1619). Son of (1) Henry Mudde. From St Paul's School he proceeded to Gonville and Caius College, Cambridge, in 1577, holding a Mercers' Company exhibition on the recommendation of the dean of St Paul's. Having incurred some suspicion of Roman Catholicism he migrated first to Peterhouse (BA, 1560–81) and then to Pembroke College (MA, 1584), where he became a fellow and held an apparently *ad hominem* lectureship in music. There is little or no doubt that he is the Thomas Mudd listed by Francis Meres among 'England's 16 excellent musitians' (*Palladis Tamia*, 1598). Apparently ordained, he left Cambridge to become rector of Cooling, Kent (from 1592), and vicar of Cobham, Kent (1603–19). It is often difficult to differentiate between the works of Thomas Mudd (i) and Thomas Mudd (ii) when they are simply signed or attributed to 'Thomas Mudd', but the following can be ascribed to Thomas (i): a five-part In Nomine, a five-part *In Nomine de profundis*, two anthems (*I will always give thanks* and *Lord, hear my voice*), two keyboard pieces and nine short viol pieces.

(4) **Thomas Mudd** (ii) (*b* ?Peterborough; *d* probably at Durham, bur. 2 Aug 1667). Son of (2) John Mudd. In 1619 he was a chorister at Peterborough Cathedral; he succeeded his father as cathedral organist on 9 June 1631 but remained there only until 1632. His name next appears in the accounts of Exeter Cathedral (1660–61), though at that time he held no official position there. He then returned to Peterborough Cathedral where, in 1662, he was made a petty canon on condition that he took holy orders; he did not do so and by the end of the same year he was organist of Lincoln Cathedral but was soon dismissed for his unruly behaviour and drunkenness. On 5 March 1664 he was appointed organist of Exeter Cathedral, but he held this post for little more than a year. On 20 August 1666 he became Master of the Choristers of York Minster, but this appointment lasted only two weeks; the record of his burial at Durham refers to him as the organist of York Minster. The Service in D (in *GB-Ob*) may be attributed to him, and probably also the tiny but attractive anthem *Let thy merciful ears*, which on its rediscovery in the early 20th century was at first thought to be by Thomas Weelkes.

WORKS

many attributed to 'Mudd', or 'Mr Mudd' etc. in the sources

Full Service, D (TeD, Jub, Ky, Cr, San), *GB-Ob* [by Thomas Mudd (ii)]
Full Service, d (TeD, Jub, Ky, Cr, San, Mag, Nunc), *EL*
Service, d ['Mr Mudd's First Service'] (TeD, Jub, Mag, Nunc), *PB*
Service ['Mr Mudd's Second Service'] (TeD, Jub, Mag, Nunc), *PB*
Te Deum, *Ob*, Susi Jeans's private collection, Dorking, Surrey
Magnificat, *WB*; New Magnificat in G sol re ut, *WB*
Bow down thine ear, verse, anthem, *EL* (inc.)
I will always give thanks, verse anthem, *Cjc* (wrongly attrib. John Mudd; inc.), *Cp*, *DRc* (inc.), *EL*, *Lbl* (inc.), *LF* (inc.), *Ob* (Tenbury) (inc.), *US-SM* (inc.); text pr. in J. Clifford, *The Divine Services and Anthems* (London, 1663) [by Thomas Mudd (i)]
I will sing the mercies of the Lord, verse anthem, text only in *Anthems to be Sung ... in the Cathedral Church of the Holy and Undivided Trinity in Dublin* (Dublin, 1662)
Hear my crying, O God, anthem, *GB-Cp* (attrib. 'Mudd' in index, attrib. 'Hutchinson of York' in some partbooks)
Laudate Dominum, 3vv, bc, *Ge*
Let thy merciful ears, full anthem, 4vv [probably Thomas Mudd (ii)], *Cp* (inc.), *DRc*, *Lbl* (inc.), *Y* (attrib. Strogers; inc.); ed. in TCM, xxxv (n.d.), attrib. T. Weelkes
Lift up your heads, verse anthem, inc., *DRc*, *Lbl* (attrib. J. Hutchinson)
Lord [O Lord], hear my voice when I cry, verse anthem, music lost, *Lbl*, *Ob* [by Thomas Mudd (i)]
O clap your hands, verse anthem, *Cp* (inc.)
Of mortall men [Southwell Anthem], *Cp* (attrib. 'Mudd' in index, attrib. Hutchinson in some partbooks)
O God, thou art my God, verse anthem, inc., *DRc*, *Lbl*, *LF*
O God who hast prepared, full anthem, 4vv, *DRc*, *EL* (inc.), *Lbl*; ed. J. Morehen (Croydon, 1965)
Plead thou my cause, full anthem, *LF* (inc.) [by John Mudd]
Sing joyfully, anthem, 6vv, insts, *Lbl* (attrib. 'Mr Mudd of Peter'; inc.) [by John Mudd]
We beseech thee, O Lord, full anthem, *EL* (inc.)

In Nomine, a 4, *Ob* [by Henry Mudde]
In Nomine, a 5, *Lbl*; In Nomine de profundis, a 5, *Ob* (Tenbury) (inc.); 9 pieces, 3 viols, bc, *Lbl*; A Lesson of Voluntarie, The Answer to ye Former Lesson, kbd, *F-Pn* [all by Thomas Mudd (i)]

SUSI JEANS, WATKINS SHAW

Muddy Waters [Morganfield, McKinley] (*b* Rolling Fork, MS, 4 April 1915; *d* Downers Grove, IL, 30 April 1983). American blues singer and guitarist. He first learnt the harmonica, and changed to the guitar when he was 17. In 1941–2 he was recorded in Mississippi for the Library of Congress; his *I be's troubled* and *Country Blues* (both 1941, AAFS) from these sessions show the influence of Son House, whom he knew personally, and the recordings of Robert Johnson. In 1943 he moved to Chicago, where in 1947 he began to record commercially under the name Muddy Waters. The following year he signed to the Aristocrat label which later changed its name to Chess Records. By this time he had taken up the electric guitar, which he played with a vibrant slide technique, singing with a louder and harder voice. His *Walkin' Blues* (1950, Chess), based on *Country Blues*, was the last title he made with just a bass to support him. From 1950 he recorded regularly with the harmonica player Little Walter, with whom he made the splendidly integrated *Louisiana Blues* (1950, Chess); they were soon joined by Muddy Waters's half-brother Otis Spann (pianist) and Jimmy Rogers (second guitarist) to form the nucleus of his powerful and long-lived Chicago band. By 1953 Muddy Waters was performing dramatically phrased songs which built to a forceful climax such as *I'm your Hoochie Coochie Man* (1953, Chess) and *Mannish Boy* (1955, Chess); these established him among the most important postwar blues singers, and set the model for such later performances as *Got my Mojo Working* (1956, Chess) and *Tiger in your Tank* (1960, Chess), which in their declamatory style and loud amplification express the militant spirit of the ghetto at that time. During the 1960s Muddy Waters toured

extensively in the USA and Europe but lost much of his black audience and frequently re-recorded his songs of the 1950s. However, he made a substanital impact on a new generation of white musicians, particularly in Britain, including Graham Bond, Alexis Korner, John Mayall and the Rolling Stones. A serious road accident in 1970 obliged him to sing from a chair from then onwards.

PAUL OLIVER

Mudge, Richard (bap. Bideford, Devon, 26 Dec 1718; *d* Bedworth, Warwicks., 4 April 1763). English cleric and composer. His father was the Rev. Zachariah Mudge, master of Bideford Grammar School, later prebendary of Exeter Cathedral, vicar of St Andrew's, Plymouth, and a friend of Dr Johnson. Mudge entered Pembroke College, Oxford, in 1735, and received the BA in 1738 and the MA in 1741. He was appointed curate at both Great Packington and Little Packington in 1741, residing in Packington Hall, perhaps as private chaplain to Lord Guernsey (later the Earl of Aylesford), whose family had musical connections, most notably through Handel's friend and librettist Charles Jennens. Mudge was rector of Little Packington from 1745 to 1757 and curate of St Bartholomew's, chapel of ease to St Martin's, Birmingham, from 1750. He became a popular preacher, and in 1756 Lord Guernsey obtained for him the valuable living of Bedworth, where he remained until his death. In March 1747 he married Mary Hopkins at St Cross, Oxford. A daughter was christened at St Martin's, Birmingham, on 29 April 1752.

Two collections of manuscripts have recently come to light (*GB-BENcoke*, *Mp*), and both appear to have their provenance in the Aylesford collection made by Charles Jennens and bequeathed to Lord Aylesford in 1773. Most of their contents appear to be preliminary versions of his published set of *Six Concertos* (London, 1749). This set was written for two solo violins and string ripieno, but the first concerto has an added trumpet and is in the form of a French overture with a final minuet, and the sixth has a solo keyboard part. The string concertos are all in four movements, slow–fast–slow–fast, though one of the manuscript versions has as many as seven movements. The final item is a five-part Adagio, at the climax of which three voices sing the 'Non Nobis Domine' canon, while the strings provide counterpoint. The influence of Handel and Geminiani is evident in the string concertos, and, as Finzi stated, 'several . . . are of outstanding beauty and dignity'. The manuscripts suggest that the pieces were probably formulated carefully over a period of time. The variants often have different development sections, and movements are interchanged between the various concertos. No.2 appears not only as a trio sonata but also as a violin sonata 'compôsta a la gusto del Seign[r]. Bombardini' (probably a fictitious name intended as a joke).

WORKS

6 Concertos, a 7, with Non Nobis Domine, a 8 (incl. 3vv) (London, 1749), pts in *GB-Mp*; other versions: no.1, *BENcoke* (inc.), a 4, *Mp*; no.2, as trio sonata, *Mp*, as Sonata compôsta a la gusto del Seign[r]. Bombardini, vn, *Mp*; nos.3, 5, and trio sonata in D combined, *BENcoke* (inc.), *Mp*; nos.3 and 6 combined, *BENcoke* (inc.); no.4, *Mp*; no.6, *Mp*; Non Nobis Domine, *BENcoke* (inc.), *Mp*
Concerto, B♭, inc., *Mp*
Trio sonata, D, *Mp*, another version, combined with concs. 3 and 5, as Concerto, G, *BENcoke* (inc.)

Miscellaneous frags., sketches, *BENcoke* (inc.)

Medley Concerto, with Fr. hns, *c*1771, lost, listed in catalogue of the Oxford Musical Society

RICHARD PLATT

Mudie, Thomas Molleson (*b* London, 30 Nov 1809; *d* London, 24 July 1876). English composer of Scottish descent. His parents, Thomas Mudie (*b* 1780) and Margaret Wilson, came from Dundee. He was one of the ten successful candidates for entry into the Royal Academy of Music in the severe first examination of 1823. He became a pupil of Crotch for composition, of Cipriani Potter for piano and of Thomas Willman for clarinet, and was regarded as one of the best pupils of his time. From 1832 to 1844 he was a professor of piano at the RAM; during this time many of his compositions were performed at the Society of British Musicians (founded 1834). From 1844 to 1863 he lived in Edinburgh as a private teacher. While there he published several piano pieces and songs, and wrote accompaniments to many songs in G.F. Graham's collection *The Songs of Scotland*. In 1863 he returned to London. His earlier compositions show considerable technical mastery: the Symphony in B♭ is especially notable, and contains a minuet with two trios, all three finally played simultaneously as a coda. His music was formerly in the library of the RAM but most of it is now missing.

No family connection has been discovered linking this Mudie to the Scottish writer Robert Mudie (1777–1842), or to the founder of Mudie's Lending Library, Charles Edward Mudie (1818–90), the son of a London bookseller and stationer named Thomas Mudie.

WORKS

5 syms.: E♭, 1827, *GB-Lam*; C, 1830; B♭, 1831; F, 1835; D, 1837

G.A. MACFARREN/NICHOLAS TEMPERLEY

Muelas, Diego de las (*b* Cuenca, 10 Jan 1698; *d* Madrid, 6 Jan 1743). Spanish composer. In 1707 he became a choirboy at Sigüenza Cathedral, where his uncle and

godfather, José Cardo y Mateo, was assistant organist. Muelas had been *maestro de capilla* at Astorga for several years when in 1718, he competed unsuccessfully for the post of *maestro de capilla* of Salamanca Cathedral. Antonio Yanguas was appointed (even though he had not applied for the post) and on 26 January 1719 Muelas replaced him as *maestro de capilla* of Santiago de Compostela Cathedral. At the same time Muelas became a canon, a title conferred on the *maestro de capilla* of the cathedral, and it was probably about this time that he took minor and major orders. On 21 May 1723 he moved in the same capacity to the Convento de la Encarnación in Madrid (under the jurisdiction of the Archbishop of Santiago), remaining there until his premature death, which followed an illness so severe that he was unable to sign his own will.

During his lifetime Muelas was held in high esteem as a composer throughout Spain and in Latin America. His villancicos with string accompaniment were sung as far away as Guatemala up to 1775; a double-choir villancico with harp surviving at Morelia shows that his reputation extended to Mexico. He also wrote masses, motets, psalms, complines, *Magnificat* settings, antiphons and *Salve regina* settings. His motets for Sundays in Advent and Lent and for Holy Week continued to be sung at Santiago into the 19th century. Six motets for three to eight voices were edited in *Lira sacro-hispana*, i/1 (Madrid, 17th century). Examples of Muelas's music survive at the cathedrals of Astorga, Cuenca, Las Palmas (Gran Canaria), Salamanca, Santiago de Compostela, Segovia and Túy, and at monasteries in Escorial, Aránzazu, Guadalupe and Montserrat.

ROBERT STEVENSON/GUY BOURLIGUEUX

Mueller von Asow [Müller], **Erich H(ermann)** (*b* Dresden, 31 Aug 1892; *d* Berlin, 4 June 1964). German musicologist. He studied with Riemann and Schering at the University of Leipzig where he received the doctorate in 1915 with a dissertation on the Mingotti opera company. After serving as the assistant director of the Neues Theater, Leipzig, he became the artistic director of the International Festival for Modern Music in Dresden in 1917. In the following year he was appointed director of the Wernow Theater and from 1919 he was a music critic in Berlin and Dresden. In 1926 he joined the staff of the Dresden Pädagogium der Tonkunst, of which he soon became director (1927–33). On his 50th birthday he was created a Knight of the Order of the Crown, Romania.

In 1945 Mueller von Asow founded and became the first director of the Internationales Musiker-Brief-Archiv in Berlin. His research resulted in editions of the letters and other contemporary documents of Schütz, Bach, Mozart, Brahms and others, and although they are sometimes faulty, they make primary source material easily accessible. His chief contribution to musicology, however, is his thorough and extremely detailed thematic catalogue of Richard Strauss's works.

M. ELIZABETH C. BARTLET

Muench, Gerhart (*b* Dresden, 23 March, 1907; *d* Mexico City, 9 Dec 1988). German composer and pianist. He received his early training from his father, himself a teacher at the Dresden conservatory. A child prodigy, he made his début at the age of 9. In 1921 he appeared as the soloist in Liszt's Piano Concerto no.2. In 1926 Scherchen conducted the first performance of his *Kammerkonzert*, a work chosen by Hindemith for the International Contemporary Music Festival at Donaueschingen. During the 1930s (1920s according to some sources) he lived in France and Italy, where he met personalities such as Cocteau, Huxley and Ezra Pound, and also the writer Vera Lawson, whom he later married. He settled in Cologne in 1937 and in 1940 was forced to join the German army.

He managed to emigrate to the United States in 1947, though in 1953 he moved to Mexico, eventually settling in Tacámbaro in Michoacan, which was to inspire a signficant part of his output. Despite his relative withdrawal from the main cultural centres, he was able to influence a wide array of Mexican musicians, not only as a teacher but also as a performer and composer. He gave Mexican premières of music by Skryabin, Stockhausen, Boulez, Messiaen and Hindemith.

Because most of his music was lost during the Dresden bombings, Muench's extant catalogue was mostly composed in Mexico. It includes some 70 works, among them a piano concerto, a bassoon concerto, a violin concerto, a string quartet and several virtuoso pieces for piano solo. His style ranges from the quasi-Impressionistic language of his early works (*Marsias et Apollon*) to the use of serial and atonal principles. His *Correspondencias* (written in collaboration with Lavista), *Kreisleriana nova* (a modern evocation of Schumann) and the series of *Tessellatas tacambaresias* (Mosaics of Tacámbero) stand out as some of his most important works.

WORKS
(*selected list*)

VOCAL

Tumulum veneris (chbr op, Muench), 1950, unperf.

Choral (all for children's chorus, org unless otherwise stated): El azotador (cant.), 1955; Misa 1, 1955; Misa 2, 1957; Aurea luce (motet), SATB, 1958; María en la metáfora del agua, 1958; Stabat mater, 1958; Jubilemus Salvatori, 1959; Ave preclara (A. Magnus), SATB, 1960; Misa 3 (Duodecimi tonorum), 1961; No lloréis, mis ojos (villancico), 1961; Corona virginis, 2vv, cont, 1962; Tota pulchra (motet), children's chorus, 1962; Se nos ha ido la tarde, SATB, 1962; Beata Dei Genetrix (motet), children's chorus, fl, perc 1963; Misa 4, children's chorus, 1964; Misa 5, 1965; Cedro y caoba (C. Pellicer), male chorus, 1966; Se nos ha ido la tarde (J. Torres Bodet), SATB, pf, 1983

Solo: 3 canciones, 1v, pf, 1940; 5 Lieder (C.M. Brentano, F. Nietzche, and others), Bar, pf, 1941; Invocationes Mariae, S, org, 1956; 3 canciones (O. Paz), S, pf, 1960; Asociaciones, S, fl, t sax, tpt, trbn, vib, perc, 1969; La pioggia nel Pineto (G. d'Annunzio), Bar, va, pf, 1971; Arroja luz (H. Aridjis), 1v, pf, 1981

INSTRUMENTAL

Orch: Capriccio variato, pf, chbr orch, 1941; Concert d'été, pf, chbr orch, 1942; Vocationes, pf, chbr orch, 1951; Homenaje a Jalisco, pf, orch, 1953; Bn Conc., 1956; Conc., pf, str, 1957; Muerte sin fin, 1957; Vn Conc., 1959; Sic, quinquis, orch, 1963; Intinera (Duo), pf, orch, 1965; Labyrinthus Orphei, 1965; Oxymora, 1967; Auditur, 1968; Epitomae tacambaresiae, 1974; Oposiciones, pf, orch, 1982; Paysages de rêve, 1984

Chbr: Sonata, vc, pf, 1938; Marsias et Apollon, fl, pf, 1946; Thesaurus Orphei, ob, b cl, va, hp, 1951; Sonata a dos (Tropoi Canceris) va/vc, hpd, 1961; Tessellata tacambaresia 2, vn, pf, 1965; Tessellata tacambaresia 4, 2 hp, 1968, Tessellata tacambaresia 5 (Emanationes Tacambarae), eng hn, va, vib, 1969; Tessellata tacambaresia 6, vn, pf, maracas, claves, 1969; Tessellata tacambaresia 7, pf, maracas, claves, 1969; Out of Chaos, vc, pf, 1975; Signa flexanima, pf trio, 1975; Al Muradiel, fl, cl, vn, va, vc, pf, 1975; Tetrálogo, str qt, 1977; Suum cuique, fl, ob, vc, pf, 1982; Ayer, pf trio, 1982; Pentálogo, fl, ob, cl, vn, vc, 1985

Pf: Estudios, 1935; Kreisleriana nova, 1939; Evoluta, 2 pf, 1961; Pièce de resistance, 1962; Tessellata tacambaresia 1, 1964; Tessellata tacambaresia 3, 1965; Añorando-anhelando, 2 pf, 1971; Un aspecto lunar, 1971; 6 piezas, 1972; Tessellata tacambaresia 9, (Silvia tacambarensis), 1972; Presencias, 4 preludes, 1979; Poème ténébreux, 1979; Poème lumineux, 1979; Nocturno, 1981; Correspondencias (with M. Lavista), 1983; 2 petits rêves, 1985

Other solo: Tessellata tacambaresia 8, gui, 1969; Clavicordii tractatio, clvd, 1974

RICARDO MIRANDA-PEREZ

Mueren, Florentijn Jan Van der. *See* VAN DER MUEREN, FLORENTIJN JAN.

Muffat, Georg (*b* Mégève, Savoy, bap. 1 June 1653; *d* Passau, 23 Feb 1704). German composer and organist of French birth, father of GOTTLIEB MUFFAT. He considered himself a German, although his ancestors were Scottish and his family had settled in Savoy in the early 17th century. He was a prominent composer of instrumental music who was particularly important for the part he played in introducing the French and Italian styles into Germany.

1. LIFE. Muffat went as a boy to Alsace, then to Paris to study with Lully and others from 1663 to 1669. He returned to Alsace to become a student, first at the Jesuit college at Séléstat in 1669, then in 1671 at a similar institution at Molsheim, where he was appointed organist to the exiled Strasbourg Cathedral chapter. By 1674 he was in Ingolstadt, Bavaria, and matriculated as a law student. He had left Alsace when war was imminent, and in the autobiographical foreword to his *Florilegium primum* (1695) he referred to his subsequent flight 'to Vienna in Austria, Prague and then finally to Salzburg and Passau'. At the Viennese court he found a patron in the Emperor Leopold I but received no official appointment. In 1677 he was in Prague and the following year took up a post at Salzburg as organist and chamber musician to Archbishop Max Gandolf, Count of Kuenburg. His employer granted him leave to visit Italy in the 1680s: he studied in Rome with Pasquini, heard Corelli's concerti grossi and composed works which were performed at Corelli's house, and later published in his own *Armonico tributo*. It has been suggested that he may have influenced Corelli (Daverio, 1985). The visit ended in September 1682. After the archbishop's death in 1687 he continued to work under his successor, J.E. von Thun, but eventually left Salzburg, disappointed with the unfavourable atmosphere there. Early in 1690 he was in Augsburg for the coronation of the Emperor Leopold's eldest son Joseph as Roman king, and he made a personal presentation of his *Apparatus musico-organisticus* to Leopold, its dedicatee. From later that year until his death he was Kapellmeister at the court of Johann Philipp of Lamberg, Bishop of Passau, and tutor to the pages there. Three of Muffat's sons worked at the Hofkapelle in Vienna: Franz Georg Gottfried (1681–1710), Johann Ernst (1686–1746) and Gottlieb.

2. WORKS. Muffat's only known work dating from before his Italian visit is a violin sonata, composed at Prague in 1677, which is also his only extant autograph. Almost all of his music has survived only in the original printed editions, whose multilingual forewords show that he regarded himself as a pioneer in bringing French and Italian styles directly from their sources to German-speaking countries. His special contribution lay in the detailed information about Lully's and Corelli's practices which he provided for German performers.

The *Armonico tributo*, like Corelli's op.6, belongs to the early development of the concerto grosso. Though defined as 'chamber sonatas suitable for few or many instruments', the five works in the collection are based on the concerto principle of alternating groups. They are notated for five-part strings throughout, using the letters 'T' and 'S' to denote tutti and solo passages (the latter always have the Corellian trio texture of two violins and bass). This compressed notation may have been necessitated by the prohibitive cost of producing a full edition at the time: later the music reappeared in concertos nos.2, 4, 5, 10, 11 and 12 of the *Ausserlesene Instrumental-Music*, newly arranged and with explicit concerto grosso scoring. Like Corelli's op.6 the *Armonico tributo* displays no fixed formal scheme. The number of movements varies between five, six and seven, with a mixture of *da chiesa* and *da camera* elements similar to that in Corelli's last four concertos. Whereas Corelli used only the four basic dances and two additional ones, the gavotte and minuet, Muffat added to these the borea (bourrée) and balletto, as well as

an aria, passacaglia and rondeau. The style of his dances suggests French influence in its harmonic simplicity, flowing melody and clearly articulated phrases. The rondeau (in Sonata no.3) is based on the French form, while the passacaglia (in Sonata no.5) reflects Lully's practice of interspersing trio episodes among five-part passages, and follows the French custom of repeating the theme in rondeau fashion throughout. Corelli's influence appears in the non-dance movements, where two types of slow movement recur: one in simple homophonic style with successions of chords, sometimes broken up by rests, the other in a more continuous contrapuntal style, with characteristic chains of suspensions. In faster movements such features as running basses, sequences on standard chord progressions, rapid tutti-solo contrasts, echo effects and lively contrapuntal writing are clearly derived from Corelli's concerto style.

When Muffat drew on these early works for the *Ausserlesene Instrumental-Music* he altered the number, order and length of movements, filled out the texture and assigned a continuo to both concertino and ripieno; in one case he distributed movements from a sonata among two concertos (nos.10 and 12). The original Corellian basis remains, however, not only in the sonata arrangements but also in the six newly composed concertos, which retain the characteristic trio grouping and the mixture of elements seen in the *Armonico tributo*. Muffat's foreword explains that this mixture makes the concertos unsuitable either for use purely in church or for dancing but that they are appropriate for performance at court and state ceremonies or entertainments and at musical gatherings. Their individual Latin titles refer to the various such occasions on which they were originally performed and have no programmatic significance. The foreword also makes some suggestions for performance, stressing that the scoring may be adapted to the resources available. Among specific instructions are references to bowing, to the precise attack of the first note and to the extremes of dynamics and tempo which characterize the Italian manner. In the foreword to the *Florilegium primum* Lully's style is equally aptly summed up as 'natural and flowing, rejecting all superfluous artifice, extravagant runs, frequent and awkward leaps ...'. The foreword to the second volume describes in greater detail the method of performing ballets 'à la Françoise' and provides a substantial treatise on bowing and ornamentation, copiously illustrated. The importance of the detailed information on performing practice provided by these forewords – especially the emphasis on disciplined performance, precision in ensemble and a flexible approach to instrumentation – has become increasingly valued.

The orchestral suites of the *Florilegia* are among the best of a group of works in this form written by German composers under Lully's influence: others are the *Composition de musique* by Kusser (1682) and the *Journal du printemps* by J.C.F. Fischer (1695). Kusser, who, like Muffat, studied with Lully, was apparently the first to add the French overture to the German orchestral suite: Muffat followed his example in his *Florilegia*. Almost all the opening movements have the customary first section with dotted rhythms, followed by a lively fugal section often in triple time. The other movements vary in number, arrangement and type from one suite to another. They cover a wide range of dances similar to Fischer's in the

Beginning of the first toccata from Georg Muffat's 'Apparatus musico-organisticus' (1690)

Journal and going beyond the limited forms of earlier works such as J.H. Schmelzer's *Balletti francesi* of the 1660s and 70s. Most of the seven 'fascicles' (i.e. suites) of the first *Florilegium* comprise standard dances. The saraband, gavotte, minuet, bourrée and gigue are among the most frequent; other movements include the air, rondeau, chaconne and passacaille, and there are also specialities such as the echo and traquenard (used by Fischer too). In both *Florilegia* the fascicles have fanciful subtitles. In the first these are enigmatically expressed (e.g. 'Sperantis gaudia') but Stampfl (1984) speculates that some of these inscriptions may have had more literal and personal significance for Muffat than has traditionally been assumed. In the second *Florilegium* the subtitles are more directly theatrical or related to the occasion for which they were intended. Numerous individual items bear titles redolent of their function as ballet music to be danced in costume; other references are unclear in origin, such as the three pieces with culinary titles (fascicle no.2). The internal structure owes much to Lully. Whereas in Schmelzer's suites the sections of a binary movement are usually undeveloped and equal in length, Muffat followed Lully in enlarging the second section to as much as twice the length of the first, with further extension achieved by the use of the *petite reprise*. His first sections are generally longer than Schmelzer's and show Lully's influence in their tendency to create a composite structure from recurring elements, often *ABA′B′*. The five-part string texture of the *Florilegia*, like that of Kusser's *Composition*,

is modelled on music for the '24 violons'. The individual parts are always shapely, and the general style is elegantly sophisticated in comparison with the robust manner of earlier German orchestral suites. Among stylistic details showing French influence are some characteristic triple-time rhythms with the accent on the second beat, and a liking for graceful feminine endings at cadences in triple time.

Muffat's versatile musicianship extended beyond orchestral composition into a variety of fields. His manuscript treatise on continuo practice, *Regulae concentuum partiturae*, is outstanding among similar German works of the 17th century for its large quantity of fully figured and realized examples. His contribution to solo organ music survives in the *Apparatus musico-organisticus*, a characteristically eclectic publication incorporating both Lullian and Corellian elements. The main part consists of 12 large-scale toccatas arranged in the order of the church tones. Their multisectional structure, extreme contrasts and variety of figuration within one piece are reminiscent of the toccatas of Frescobaldi, whom Muffat mentioned in his foreword as a forerunner. Another model could have been Pasquini, whose absorption of Italian chamber and continuo idioms into solo keyboard music is a progressive feature found also in the *Apparatus*. The transfer of orchestral and chamber idioms to the keyboard is significant in view of later Baroque trends. Among the six or so sections of one toccata, which are contrasted in time signature, tempo, texture and style, there may be sections of pure toccata writing with runs over or beneath chords, imitative sections in *sonata da chiesa* style, sometimes suggesting two violins over a continuo bass, extended fugues, often with gigue subjects like those favoured by Froberger, and italianate *durezze e ligature* sections. The French style appears in the tenth toccata, where a pompous opening Adagio is followed by a lively fugal Allegro, with a final Adagio related in style to the first, clearly forming a French overture. Stylistic details in these toccatas encompass Frescobaldian chromatic effects and Lombard rhythms, stock Corellian harmonic sequences, recitative-like melody and mechanical patterns of the kind found in Italian violin music. The Passacaglia shows an interesting combination of the French rondeau form and the Italian variation (freely treated). More than any other of his publications, the *Apparatus* demonstrates the wide range of ideas that Muffat absorbed during his varied career. The violin sonata is sectional in form and virtuosic in style, possibly influenced by Biber.

WORKS

Armonico tributo: 5 sonatas, str, bc (Salzburg, 1682); ed. E. Schenk, DTÖ, lxxxix (1953); lute version of passacaglia from Sonata no.5, ed. A. Koczirz, DTÖ, 1, Jg.xxv/2 (1918/*R*)

Apparatus musico-organisticus: 12 toccatas, 1 ciaccona, 1 passacaglia, aria with variations: all org (Salzburg, 1690/*R*) [for evidence of an earlier print see Monson]; ed. M. Radulescu (Vienna, 1982); MS copy in *GB-Lbl* Add.39569 (facs. in 17th Century Keyboard Music, xix (New York, 1987))

Suavioris harmoniae instrumentalis hyporchematicae florilegium primum: 7 orch suites, 4/5 str, bc ad lib (Augsburg, 1695); ed. H. Rietsch, DTÖ, ii, Jg.i/2 (1894/*R*); foreword ed. and trans. O. Strunk, *Source Readings in Music History* (New York, 1950), 442ff

Florilegium secundum: 8 orch suites, 4/5 str, bc ad lib (Passau, 1698); ed. H. Rietsch, DTÖ, iv, Jg.ii/2 (1895/*R*)

Ausserlesene Instrumental-Music: 12 concerti grossi, str, bc (Passau, 1701); ed. E. Luntz, DTÖ, xxiii, Jg.xi/2 (1904/*R*); lxxxix (1953)

Sonata, vn, bc, 1677, holograph, *CZ-KRa*; Preludes, dances, kbd, *A-Wm*

Missa 'In labore requies', 8vv, 12 insts, *Ee*

Doubtful: Kbd pieces, *Wm* XIV 743

SUSAN WOLLENBERG

Muffat, Gottlieb [Theophil] (*b* Passau, bap. 25 April 1690; *d* Vienna, 9 Dec 1770). German composer and organist, son of Georg Muffat. He was the leading keyboard composer in Vienna in the early 18th century.

1. LIFE. Muffat led a more stable existence than his father, entering the musical establishment at the Viennese court early in his career and remaining there for over half a century. It may be assumed that as a child he was taught by his father. He probably did not leave Passau before 1704, the year of his father's death. The first report of his presence in Vienna dates from 1711, when he became *Hofscholar* under the supervision of J.J. Fux (some sources incorrectly give the date as 1706). The education of scholars at the imperial court included performance on the organ and other instruments, continuo playing, singing and counterpoint. Muffat was appointed official court organist in 1717: he was required to play for services in the Hofkapelle and to provide continuo accompaniment for performances of operas. At this time he received a grant for a period of study abroad, but there is no record of the exact date or place of his visit. Subsequently he acquired additional duties at court, including the tuition of various children of the imperial family, among them the future Empress Maria Theresa. On the strength of his devoted service Fux recommended him for a rise in salary in 1723, the year in which he assisted at the famous ceremonial performance of Fux's opera *Costanza e fortezza* in Prague. Three years later, in the preface to his first publication, the *72 Versetl sammt 12 Toccaten*, he acknowledged his great debt to Fux ('without flattery the best master in the world'). In 1729 he was promoted to second organist. After the death of the Emperor Karl VI in 1740 and with the accession of Maria Theresa, the resources of the Hofkapelle were reorganized, bringing Muffat his final promotion to first organist in 1741. He seems to have written no more music after this. A projected sequel to his second publication, the *Componimenti musicali* (*c*1739), never materialized, and all later 18th-century sources of his works are copies of pieces in earlier manuscripts. He was pensioned off in 1763 (some sources have 1764).

2. WORKS. Unlike his versatile father, Muffat chose to restrict himself almost exclusively to one field, that of keyboard music. He came at the end of a long line of Baroque organists and keyboard composers working in Vienna and was the only contemporary of Bach there to make a substantial contribution to the keyboard repertory in both quantity and quality. Much of his music remained unpublished and is still not generally known: it covers a wider range of forms than the two published collections alone would suggest. Although he lived until 1770, he belongs musically to the late Baroque period rather than to the age of Haydn; his keyboard works never desert traditional Baroque structures (toccata, complete fugue, dance suite, ciaccona).

Muffat's conservatism is most evident in his fugues. His reputation as a contrapuntist rests primarily on the short liturgical fugues of the 72 *Versetl*, whose survival was aided by the issue of new editions from *c*1800 and by the incorporation of extracts into fugal treatises (e.g. Marpurg's of 1753–4). However, the versets are overshadowed by the archaic grandeur of the unpublished ricercares. These form the largest single collection of such pieces composed in the early 18th century. They are unusual for their time in having no introductory toccatas or preludes: in this they resemble Bach's *Die Kunst der Fuge* and like that work are notated in open score, following earlier Baroque usage for strict contrapuntal keyboard pieces. Fux's pupils owned printed editions and personal manuscript copies of ricercares by 17th-century composers such as Frescobaldi, G.B. Fasolo, Froberger, Battiferri, Fabrizio Fontana and Poglietti. Muffat's own ricercares show that he was familiar with these models: their fluid continuity is quite different from the stiff, artificial rhythmic style of Fux's 'species' in the *Gradus ad Parnassum* (1725) and is much closer to the true spirit of *stile antico* than to Fux's artefact. Among individual elements showing the influence of the older ricercare are the strong modal flavour, especially in Phrygian pieces such as no.4 (see ex.1); some angular chromatic subjects

Ex.1

recalling the *Recercar cromaticho* in Frescobaldi's *Fiori musicali*; and the use of sectional structures. The ricercares observe the traditional differentiation in character from the 19 canzonas appended to them in being stylistically related to the 16th-century vocal motet, while the canzonas are in a livelier, more idiomatically instrumental style. Several of the canzonas are sectional in form also, most notably no.11. This is a true variation canzona whose rhythmic transformation of a theme throughout successive sections (including a gigue-like version) follows a favourite 17th-century practice. In his comprehensive approach to the canzona Muffat 'stands alone in his time' (Wilson).

Muffat's versets, like his ricercares, belong to a well-established tradition. His chief predecessors in this field were Kerll (*Modulatio organica*, 1686), the anonymous author of the *Kurtzer, jedoch gründlicher Wegweiser* (Augsburg, 1689) – an organ tutor containing versets for practice – Speth (*Ars magna*, 1693) and Murschhauser (*Octi-tonium*, 1696). These publications were all familiar to Viennese organists in the early 18th century. Muffat used the same kind of external structure as they did, arranging his pieces according to the order of the church tones, with a short introductory toccata and a regular number of versets in each tone. He followed their internal structure also in the miniature fugal form of his versets. Like Murschhauser he left the function of the versets open and avoided reference to chant, so they are not restricted to one part of the liturgy. The elimination of chant is one

aspect of a general process of secularization of style culminating with Muffat: more than his predecessors, he used strongly secular, even rustic, subjects (often in dance rhythms). He also applied a wide range of ornamentation symbols and provided an explanatory table similar to the one in the *Componimenti*. Although French composers were using copious ornamentation and secular dance styles in liturgical organ music from at least the mid-17th century, Muffat was the first among Austro-German composers to absorb these trends fully into the traditional verset. Apart from the 72 *Versetl* his liturgical organ music includes some mass movements and a series of 12 short preludes in various keys, all cadencing on a preparatory E major chord.

Muffat's chief contribution to the organ prelude (under various titles) is preserved in a Viennese manuscript notated in so-called Italian organ tablature with two staves respectively of six and eight lines, again in accordance with earlier Baroque notation for such works. Among the pieces are 24 large-scale toccatas in the order of the church tones, each followed by a capriccio in the same tone: Muffat seems to have invented this particular pairing. The system of church tones was apparently ingrained in his musical thinking, for he used it not only for the versets and toccatas but also for the first eight ricercares. His toccatas are of two main types: the first is a unified form like an extended *intonazione*, consisting of florid runs above or beneath chords, sometimes with imitation between the hands. The virtuoso element here is confined to the manuals: like most South German composers, Muffat made very little independent use of the pedals.

A second type of toccata is modelled more on Georg Muffat's *Apparatus* (1690), using a sectional design with contrasts in tempo, time signature and texture. The varied styles of individual sections encompass those of the French overture (no.11) and the Italian trio sonata (no.10), further indicating the influence of his father's toccatas. With the capriccios one title is applied to a wider range of works than in the case of the toccatas: improvisatory preludes, invention-like pieces in free contrapuntal style, more directly tuneful ones such as the expressive *Capriccio desperato* (R165), some in the style of a dance, and others based on special devices (recalling Frescobaldi) such as no.12 (R159), which exploits syncopation.

Some of the shorter improvisatory capriccios and toccatinas from the same manuscript reappear in other manuscripts as preludes to suites. A feature they share is the grandiose succession of arpeggiated chords at the opening: Muffat provided a prelude in similar style for Fux's Partita in A minor, and Fux's own 'harpeggio' and capriccio preludes are examples of this Viennese speciality. Muffat's suites invariably have some kind of introductory movement: his use of the French overture or prelude-and-fugue form suggests the influence of Fux and of Handel (1720 set of suites). There are manuscript copies in Muffat's hand of suites by both these composers: to Handel's he added ornamentation symbols, sometimes to pieces which were totally unornamented in the original. His own suites similarly use lavish ornamentation, clearly under French influence. In addition to Handel and Fux, François Couperin is an important model for the form and style of his suites. Following both Couperin and Fux he kept vestiges of the traditional order of dances and added extras (usually towards the end) such as the menuet and rigaudon, two favourite dances with Fux, or character-pieces with Couperinesque titles such as *La plainte d'une ame abandonnée* or *La coquette*. He also used free pieces entitled 'Finale' to replace the gigue at the end of four of his suites: these are modern in style, with short, simple phrases and instant repetition of motifs. Some of his most attractive and up-to-date music is contained in the suites: while his ricercares belong to the traditional Italian side of Viennese keyboard music, his suites belong to the progressive French side.

Among features worthy of special mention are Muffat's frequent use of the French *petite reprise*; the advanced nature of his binary designs, with second halves often at least twice as long as the first and perhaps encompassing a final return to the original material in the tonic; his free treatment of key, allowing excursions into the relative minor or major or into the tonic minor for slow movements (saraband and air) and trios to minuets; and his successful combination of *galant* traits in melody, rhythm and texture, with a thorough mastery of counterpoint (as one would expect of a pupil of Fux). Although Muffat's keyboard music would seem to be more limited in scope than the total output of his father, there are signs of the same eclectic approach – for example in the fact that he was equally at home in the thoroughly old-fashioned form of the ricercare and in the forward-looking 2/4 or 3/8 *galant* suite finales; he also inherited his father's concern for precision in both notation and performing practice.

The sources and survival of Muffat's works present some special problems and points of interest. The lack of extant autographs and the ambiguous methods of ascription in some of the extant manuscript copies create some insoluble problems of authentication. It is also impossible to establish a precise chronology, as so few of these copies are dated: moreover, Muffat is not a composer whose work seems to reveal any clear chronological development on internal evidence alone. The circulation of some of his pieces in manuscript copies during the 18th century was quite widespread, a notable example being canzona no.7 (R250): in the early 19th century it was ascribed to Frescobaldi (together with two of his other canzonas, R251 and 254) in Clementi's *Selection of Practical Harmony*, and this false attribution gained general credence among subsequent editors of keyboard anthologies (e.g. AMI, iii). Some of the music of the *Componimenti* has also become known under the name of Handel, who incorporated direct borrowings from it into various works, including the Ode for St Cecilia's Day, as well as taking material from Muffat's unpublished music for one of his organ concertos.

SUSAN WOLLENBERG

Muffler pedal. *See* MODERATOR.

Mugnone, Leopoldo (*b* Naples, 29 Sept 1858; *d* Capodichino, Naples, 22 Dec 1941). Italian conductor and composer. The son of the principal double bass in the Teatro S Carlo orchestra, he studied at the Naples Conservatory, composing and producing a comic opera when he was 12. While still in his teens he composed two operettas and *La rosella*, a romance which became popular, and made his conducting début in comic opera at La Fenice in Naples. He became conductor at the Teatro Costanzi, Rome, and in 1888 won a contract giving him the musical direction of operas published by Sonzogno and their performances outside Italy. In this capacity he conducted the première of Mascagni's *Cavalleria rusticana* (Rome, 1890) and began to tour abroad, visiting Paris in 1889 and London in 1905–6, conducting the first Covent Garden production of the same composer's *Andrea Chénier* in 1905 and the British première of Giordano's *Fedora* there the next year. He did much to encourage French opera in Italy with productions of works by Bizet and Massenet, and in 1900 he conducted the première of *Tosca* at Rome. His friendly relations with Puccini were disrupted by a disagreement over the musical direction of *Madama Butterfly* at Rome in 1908, but Mugnone later introduced to Italy the only Puccini opera published by Sonzogno, *La rondine*, shortly after its Monte Carlo première in 1917. He also conducted the premières of Franchetti's *La figlia di Iorio* (La Scala, 1906) and Giordano's *Mese mariano* (Palermo, 1910), and took the latter on a South American tour during which he conducted *Götterdämmerung* and Charpentier's *Louise* in addition to Italian works.

Mugnone's interpretations of *Otello* and *Falstaff* were regarded by Boito as particularly notable, and he conducted *Nabucco* at La Scala in 1913 as part of the Verdi centenary celebrations; Beecham considered him the best Italian conductor of his time. Mugnone returned to Covent Garden in 1919, when he gave the British première of Mascagni's *Iris*, and again in 1925, when he was summoned to rescue some of the Italian performances that had suffered at other hands. He appeared frequently as a symphonic conductor at the Augusteo, Rome, and composed two mature operas in the *verismo* style: *Il birichino* and *Vita brettone*. His extensive personal papers, which include correspondence with Verdi, Puccini, Mascagni, Leoncavallo, Massenet and Richard Strauss, were presented to the museum libraries at La Scala, the Rome Opera and the Naples Conservatory.

CLAUDIO CASINI

Muḥammed 'Abdu [Muḥammed 'Abdu 'Othmān Marzuq al-Dehel al-'Asīrī] (*b* Jizan, Saudi Arabia, 1949). Saudi singer, composer and *'ūd* (lute) player. His father was a well-known sailor who died when Muḥammed was two years old. Muḥammed began singing at the age of six, and at nine he received his first vocal training through the study of Qur'anic recitation, which, along with the call to prayer (*adhān*), he offered at school events. About the age of 13 he became involved with amateur traditional singers and learnt to play the *'ūd*. Because of his close proximity to Yemen, he encountered master musicians of the *al-yamānī* style. He gained a diploma in shipbuilding and was offered a scholarship to study in Japan, but declined the offer, preferring to become a professional musician. His first recognized composition was *Hala yā bū sha'ar tha'ir* (1965). He went on to record over 80 albums in a variety of styles, including popular Egyptian styles, but he has been most appreciated for his folkloric, traditional Saudi and Gulf pieces. He gained an international reputation and has often been called '*fanān al-'arab*', 'The Artist of the Arabs'. He established the largest cassette-tape manufacturing plant in the Gulf region, and by the end of the 20th century he was the owner of the successful recording and production studio Ṣawt Al-Jazīrah.

LISA A. URKEVICH

Mühlen, Raimund von zur. *See* ZUR MÜHLEN, RAIMUND VON.

Mühlfeld, Richard (Bernhard Herrmann) (*b* Salzungen, 28 Feb 1856; *d* Meiningen, 1 June 1907). German clarinettist. He was the youngest of four brothers, all of whom received their first musical training from their father; he played the violin and clarinet in the spa orchestra at Salzungen under his father's direction until he obtained a post in 1873 as violinist at the court of Saxe-Meiningen. In 1879 he was made principal clarinettist at Meiningen, an appointment he retained until his death. When von Bülow was court conductor, Mühlfeld took sectional rehearsals of the orchestra; his thoroughness was recognized as contributory to its reputation for attention to detail. Mühlfeld also conducted his own male-voice choir, and was made music director of the court theatre in 1890.

When Brahms visited Meiningen in March 1891, the court conductor Fritz Steinbach drew his attention to Mühlfeld's excellence as a clarinettist. Mühlfeld was asked to play privately to Brahms, who, although he had written nothing for a year, was immediately interested, and composed his Trio op.114 and Quintet op.115 during the following summer. Mühlfeld gave the first performances at Berlin on 12 December 1891 of the Trio with Brahms and Hausmann, and of the Quintet with the Joachim Quartet. In 1894 Brahms wrote his two Sonatas op.120 and gave the first performances of them with Mühlfeld at Vienna on 7 January 1895. Brahms derived so much pleasure from their many performances of the sonatas throughout Germany and Austria that he gave Mühlfeld all performing right fees during his lifetime, all fees from their joint performances, and the manuscripts of both sonatas after publication.

Mühlfeld gained an international reputation. He visited England many times, performing Brahms's works with the Joachim Quartet and Fanny Davies. Other composers who wrote for him were Waldemar von Baussnern, Gustav Jenner, Henri Marteau, Reinecke, Princess Marie of Saxe-Meiningen, Stanford and Theodor Verhey. He was rewarded with several decorations by the Duke of Saxe-Meiningen and received the Royal Bavarian Gold Medal of Ludwig. He used Baermann system 18-keyed clarinets made by Ottensteiner of Munich. His interpretations were said to be dramatic and very moving.

PAMELA WESTON

Mukesh [Mathur, Mukesh Chandra] (*b* Delhi, 22 July 1923; *d* Detroit, 27 Aug 1976). Indian film actor, playback singer and recording artist. Mukesh's singing career began in 1940 when a respected actor and distant relative, Motilal, brought him to Bombay after hearing him sing at his sister's wedding in Delhi. Motilal initially supported Mukesh, providing accommodation in his house and arranging vocal training. Mukesh's first film role was as the hero in National Studios' Hindi movie *Nirdosh* (1941), in which he sang his first film song as an actor-singer, 'Dil hi bujha hua'. Despite the film's box-office failure he spent two more years working as an actor-singer for Ranjit Movietone. In 1945 he sang his first playback song, 'Badariya baras gai us par', for Ranjit's film *Murti*, and in the same year he recorded the song 'Dil jalta hai to jalne de' by the music director Anil Biswas for *Paheli nazar*, which became a big success. Motilal further assisted Mukesh in his love marriage to a Gujarati girl in 1946.

By the late 1940s and early 50s all the major Hindi film music directors – including Anil Biswas, S.D. Burman, Madan Mohan, Naushad, Roshan and Shankar-Jaikishen – were inviting Mukesh to sing for their film song recordings. In 1951 Mukesh sang playback songs by the music director duo Shankar and Jaikishen for the actor Raj Kapoor in *Awara* and this enormously successful film began a partnership between Mukesh's voice and Raj Kapoor's screen image that lasted for the remainder of Mukesh's life.

Mukesh turned his focus to acting once again in the mid-1950s, playing the hero in such films as *Mashuka* (1953) and *Anuraag* (1956), but his singing proved more successful than his film acting. Mukesh thus returned to his playback career and recorded a string of popular song hits in *Madhumati* (1958), *Anari* (1959) and *Jis desh men ganga behti hai* (1960).

In addition to some 900 film songs, Mukesh recorded approximately 90 non-film songs in Hindi and Gujarati,

including *ghazals*, *gits* and *bhajans*. He won the Filmfare award for Best Male Playback Singer in 1959, 1970, 1972 and 1976, and was on one of his concert tours of the USA when he died.

ALISON ARNOLD

Mukharinskaya, Lidiya Saulovna (*b* Tbilisi, 14/27 March 1906; *d* Minsk, 27 May 1987). Belarusian ethnomusicologist. She graduated from the faculty of history and theory at the Moscow Conservatory (1939) and gained the *Kandidat* degree with a dissertation on Belarusian folksong (1968). She began teaching at the Belorussian Academy of Music, Minsk, in 1939 and continued working there in 1948 after World War II. Her main area of research was Slavonic folklore, in which she recorded some 900 songs and focussed on the genesis of its intonation, typology and aesthetic nature (*Melodicheskiy yazïk sovremennoy belorusskoy narodnoy pesni*, 'The melodic language of present-day Belarusian folksong', 1966; *Nekotorïye voprosï tipologii narodnïkh napevov*, 'Certain questions surrounding the typology of folksongs', 1976). The historical links of the songs with social movements and wars were highlighted in her articles 'Sorok let istorii belorusskogo naroda v narodnoy pesne' ('40 years of the Belarusian people in folksong', 1958) and 'Partizanskiye pesni Belorussii i ikh slagateli' ('Partisan songs of Belarus and their composers', 1964). She relied on the methods of contemporary palaeo-psychology and palaeo-linguistics and succeeded in revealing the dynamics of intonation in the classic forms of the song tradition and its more recent formations. She was also interested in the composers, creators and performers of folksongs and published works on R.R. Shïrma, Kliment Kvitka, Jadvyga Čiurlionytė and Z.Ya. Mozheyko.

TAISIYA SHCHERBAKOVA

Mukhatov, Veli (Muhamed) (*b* Bagir, Astrakhan district, 22 April/5 May 1916). Turkmen composer. After serving in an infantry regiment in the Donbass region during World War II, he studied with V. Beliy and S. Vasilenko at the Moscow Conservatory, graduating in 1951. One of the founders of contemporary Turkmen professional music, he headed the Turkmen Composers' Union, composed the Turkmen national anthem and received much official recognition including the titles People's Artist of the USSR and Hero of Socialist Labour. His compositions combine national elements with 20th-century techniques. His brother Nury (*b* 18 Jan 1924) is also a composer.

Ashirov and K. Kurbansakhatov), 1967; Pamyati Makhtumkuly [In Memory of Makhtumkuly], sym., 1974; Moya Rodina [My Motherland], poem; film scores, choral works, chbr works, songs and romances

RAZIA SULTANOVA

Mukherjee, Budhaditya (*b* West Bengal, 1955). Indian *sitār* player. He began his training on the *sitār* under his father, the *sitār* player Pandit Bimalendu Mukherjee, at a young age, and he won a national music competition at the age of 15. His musical lineage may be traced back to his father's teacher, Ustad Enayat Khan. This tradition of *sitār* playing is termed the *Imdadkhānī gharānā*, after Enayat Khan's father Ustad Imdad Khan, who taught many pupils in Bengal. His style of playing is therefore related to the styles of Enayat Khan's sons, Ustads Vilayat Khan and Imrat Khan, although his playing is distinct in several respects and is easily recognizable. He has pursued a successful career as a concert and recording artist for many years, and his playing is widely appreciated for both technical accomplishment and his profound grasp of the expressive potential of the rāga repertory.

MARTIN CLAYTON

Mukle, May (Henrietta) (*b* London, 14 May 1880; *d* Cuckfield, Sussex, 20 Feb 1963). English cellist of Hungarian Gypsy origin. She began playing the cello at the age of four and made her first public solo appearance at nine. She entered the RAM at 13 to study with Pezze, won many prizes and was elected an associate of the RAM at 17. A pioneer among British women cellists, she was an exceptionally gifted soloist and quickly gained an international reputation. She performed chamber music with Casals, Thibaud, Tertis, Sammons and Rubinstein, and also played in several string quartets. She had a long association with the pioneering American violinist Maud Powell, and with her own pianist sister, Anne, they toured South Africa and the USA as a trio (1908–9). In 1911 she gave the première of Holst's *Invocation* for cello and orchestra and in 1926 the first performance of Vaughan Williams's Six Studies in English Folk Song for cello and piano, of which she was the dedicatee. During World War II she founded the MM (Mainly Musicians) club in London, which she ran for 20 years. She played a fine Montagnana cello from the Hill Collection given by an anonymous donor. Although her platform personality was somewhat reserved, her playing was notable for its warmth of tone and emotional intensity. The May Mukle Prize, founded in her memory in 1964 by Rebecca Clarke and friends, is awarded annually to a cello student at the RAM. (*CampbellGC*)

MARGARET CAMPBELL

Muldowney, Dominic (John) (*b* Southampton, 19 July 1952). English composer. He studied with Harvey at Southampton University, privately with Birtwistle, and with Rands and Blake at the University of York (1970–74). From 1974 to 1976 he was Southern Arts composer-in-residence and in 1976 he was appointed assistant music director of the Royal National Theatre (director, 1981–97).

In Muldowney's earlier works, for example the Piano Trio (1980), angular melodies and dissonant harmony predominate. However, his experience of working with actors, communicating directly to audiences, and, most importantly, absorbing the theatrical ideals of Brecht, created a desire to forge a more direct language. Three Brecht settings chart this progress: *Five Theatre Poems* (1980–81), *In Dark Times* (1981), and his first mature work *The Duration of Exile* (1983). The Brechtian influence is evident in particular in the syllabic setting of words emphasizing their natural rhythms, and the avoidance of word-painting and melismas.

The use of diatonic harmony that underlies Muldowney's mature music reflects Stravinsky's methods in extending tonality. His influence is present too in the clarity of textures, and an interest in re-examining Baroque and Classical forms within a 20th-century context. Muldowney's compositions have a taut unity arising from a rigorous approach to structure and thematic material; works are created from a few core ideas, and invariably cast in single movements. With the song cycle *Lonely Hearts* (1988) he began to experiment with polyrhythms created by the combination of different tempos. This frequently requires sending pulsed information via a click track to some of the performers listening through earpieces. The simultaneous tempo layering of performers playing in different metric proportions results in an exuberant rhythmic frisson.

Writing for the theatre has had an important influence on Muldowney's works for the concert hall; significantly the two genres which have mainly engaged him are songwriting and the concerto. In the former Brecht has been a continuing stimulus; further settings including the *Baal* songs (1981), written for David Bowie, and others for productions of Brecht plays. They follow in the tradition of Weill and Eisler, as do the cabaret settings of James Fenton in *Out of the East* (1990). Concerto form has been explored in a series of highly individual works beginning with the Piano Concerto (1983). This is built around an intricate set of variations utilizing Baroque forms, while the Saxophone Concerto (1984) exploits music commonly associated with the instrument, especially jazz. In the Violin Concerto, Muldowney's rhythmic superimpositions are used to dramatic effect with the soloist caught in the struggle between the two tempos of two orchestras and their conductors. Complexities of

rhythm are further elaborated in the Trumpet Concerto (1992–3) where a drama between three layered tempos is worked out. In the Oboe Concerto (1991–2), the composer's twin concerns of song and concerto form are brought together in a song cycle without words.

Muldowney's theatrical flair has also led to other dramatic projects, including a ballet, *The Brontës* (1994), scores for films and television, and a radio opera *The Voluptuous Tango* (1996) which won the Sony Award and the Prix Italia in 1997.

ANDREW BURN

Mulè, Giuseppe (*b* Termini Imerese, nr Palermo, 28 June 1885; *d* Rome, 10 Sept 1951). Italian composer. He studied at the Palermo Conservatory, where he was appointed director in 1922, leaving three years later to take a similar post at the Conservatorio di S Cecilia, which he held until 1943. His talent for organization was recognized by the fascist government; he was made national secretary of the Sindacato dei Musicisti, which he and Lualdi represented in parliament from 1929.

Mulè's music was at first influenced by the *verismo* school, and in particular by Mascagni; but he soon came under the spell of the folksongs and landscape of Sicily, and of the island's ancient Greek heritage. He wrote some of his most characteristic music for Greek plays performed in the open-air theatre at Syracuse. But in his operas, too, the emotion and atmosphere bear the stamp of a racial instinct, evident as much in legendary or mythical drama as in popular comedy. Moreover, Mulè's harmony, though it never freed itself wholly from derivative elements, is often distinctively rugged, exotic and tritone-obsessed. A first step in this direction is apparent in the immature *La baronessa di Carini*, e.g. in the oddly effective orchestral prelude, with its rasping tritones in the bass (though the piece resolves into pure Mascagni at the end). A far more extreme example of Mulè's individuality is the first half of his last opera, *La zolfara* – particularly the extraordinary 'whiplash' dance, which shows him as a kind of lesser Sicilian counterpart to Bartók. Yet even in this boldest of his operas he lacked the courage to defy conservative taste to the end: the dénouement is disappointingly tame and sentimental. Among the intervening operas, which represent intermediate stages in Mulè's evolution, the most celebrated was *Dafni*. Though not his most perfect work (it is uneven, and lacks the concision of the slightly mawkish but evocative *La monacella della fontana*), it contains some of his finest music, particularly in Act 1, which expresses in more complex terms the same archaic, atavistic spirit that pervades the best of the Syracuse scores.

ALFREDO CASELLA/JOHN C.G. WATERHOUSE

Mulet, Henri (*b* Paris, 17 Oct 1878; *d* Draguignan, 20 Sept 1967). French organist and composer, son of Gabriel Mulet, choirmaster of the basilica of Sacré-Coeur, Paris. After having taken first prize for cello in Delsart's class in 1893, he continued at the Paris Conservatoire, studying harmony with Leroux and Pugno (first prize 1896) and organ with Widor and Guilmant (second prize 1897). He then held a succession of posts as titular organist at St Pierre-de-Montrouge (until 1901), St Eustache, Ste Marie des Batignolles (1910), St Roch (1912), and finally St Philippe du Roule in Paris, where he had the Mutin organ

overhauled, the most significant alteration being the addition of new mixtures (1924). He was professor at the Ecole Niedermeyer and at the Schola Cantorum from 1924 to 1931. In 1937 Mulet burnt his manuscripts and left Paris for Provence, where disastrous financial dealings rapidly reduced him to penury. He was cathedral organist in Draguignan (Var) until 1958 and died there in 1967 as an inmate of the convent of the Petites Soeurs des Pauvres.

Mulet was a champion of the symphonic organ, for which he composed the significant part of his output. In *Les tendances néfastes et antireligieuses de l'orgue moderne* (1922) he made public his hostility towards certain innovations in contemporary organ-building: the proliferation of gamba and voix céleste stops, the addition of tremulants and sub- and super-octave couplers, and the disappearance of mutations and mixtures.

His *mélodies* and some compositions for orchestra, piano and even harpsichord (*Petit lied très facile*, 1910) are forgotten today; his output for organ is expressive in a post-Romantic manner, including richly-harmonized meditations and toccata or carillon movements. His *Esquisses byzantines* (1914–19) is among the most often played of his works; it is a group of ten pieces inspired by the Sacré-Coeur. His *Carillon-Sortie* (composed *c*1912) is somewhat different in nature, a *moto-perpetuo* fit to stand beside similar pieces by Widor, Gigout and Boëllmann.

FRANÇOIS SABATIER

Muling [Mulinus], **Johannes.** *See* STOMIUS, JOHANNES.

Müllenbach, Alexander (*b* Luxembourg, 23 January 1949). Luxembourg composer. He studied piano at the Luxembourg Conservatoire (1956–62) and the Conservatory of Metz (1961–2), then at the Paris Conservatoire (1963–70, with first prizes in piano, chamber music and theory). Later he studied at the Mozarteum in Salzburg (1977–80), where his principal teachers were Gerhard Wimberger (composition) and Cesar Brasgen (music ethnology). In 1970 he became professor of piano at the Luxembourg Conservatory and in 1981 professor of composition there. Since 1983 he has taught music at the Salzburg Mozarteum, where in 1995 he became professor of harmony and counterpoint. He was founder and chairman of the Luxembourg New Music Society (1983–94) and president of the European Music Institute in Besançon (1990–96).

As a composer he has received numerous commissions and his music has been performed at international festivals including Salzburg (1986), Styrian Autumn Festival (1987) and the Salzburg Mozart week (1998); first performers of his music include Ernest Bour, Leopold Hager, Hans Graf, Udo Zimmermann, Heinrich Schiff, Roberto Szidon, the Vienna String Sextet, Atelier Musique Nouvelle Paris, Philharmonische Virtuosen Berlin. He has been given the Roger Ducasse Foundation special award (1970), the First Composition Prize from ÖRF (1980) and the Bernhard-Paumgartner-Medal (1981). His music has stayed strictly independent, avoiding all dogma; he has processed tonal, atonal, dodecaphonic, post-serial and sometimes also serial techniques into a language of both impressive craftsmanship and powerful expressivity, in which soft and dreamlike soundscapes or lonely cantilenas contrast with exploding, relentless toccata-like eruptions and surreal sonic 'nightmares'.

LOLL WEBER

Muller. *See* MALER.

Müller. German family of string players. Aegidius Christoph Müller (*b* Görsbach, 2 July 1765; *d* Brunswick, 14 Aug 1841), *Hofmusikus* to the Duke of Brunswick, had four sons who formed a string quartet. The eldest, Karl (Friedrich) Müller (*b* Brunswick, 11 Nov 1797; *d* Brunswick, 4 April 1873), was the leader of the quartet and, until 1830, Konzertmeister to the Duke of Brunswick. The second violinist, (Franz Ferdinand) Georg Müller (*b* Brunswick, 30 July 1808; *d* Brunswick, 22 May 1855), was until 1830 Kapellmeister to the same duke. The other members of the quartet were (Theodor Heinrich) Gustav Müller (*b* Brunswick, 3 Dec 1799; *d* Brunswick, 7 Sept 1855), the violist, and (August) Theodor Müller (*b* Brunswick, 27 Aug 1802; *d* Brunswick, 20 Oct 1875), the cellist. Besides playing in the quartet, Theodor Müller was a successful teacher in Brunswick for over 40 years, numbering among his pupils Bernhard Cossmann, Wilhelm Fitzenhagen, Robert Hausmann and his nephew

Wilhelm Müller. As employees of the duke the brothers were forbidden to perform publicly and were compelled to rehearse in secret, coached by their father. They resigned in 1830 and made their public début in Hamburg the following year. In 1832–3 they played in Berlin, acquiring a distinguished reputation; they then embarked on the first of many tours which took them to Germany, France, Denmark, the Netherlands and Russia. The works of Haydn, Mozart and Beethoven comprised their principal repertory. The quartet was dissolved on Gustav Müller's death in 1855.

Karl Müller's four sons formed a second quartet soon afterwards. They were Karl Müller-Berghaus (*b* Brunswick, 14 April 1829; *d* Stuttgart, 11 Nov 1907), the leader of the quartet, who was married to the singer Elvira Berghaus; Hugo Müller (*b* Brunswick, 21 Sept 1832; *d* Brunswick, 26 June 1886), the second violinist; Bernhard Müller (*b* Brunswick, 24 Feb 1825; *d* Rostock, 4 Sept 1895), the violist; and Wilhelm Müller (*b* Brunswick, 1 June 1834; *d* New York, Sept 1897), the cellist. As a quartet they were appointed to the ducal court at Meiningen but also toured extensively, visiting France, Denmark and Russia. In 1866 they went to Wiesbaden, but they soon moved on to Rostock, settling there when Karl was made Kapellmeister (Auer replaced him on the quartet's tours). The quartet was disbanded in 1873 when Wilhelm replaced Jules de Swert as solo cellist of the royal chapel in Berlin and teacher at the Hochschule für Musik. Wilhelm was also a founder-member of the Joachim Quartet (1869–79). Despite their distinguished ensemble playing, the second Müller quartet was hampered by their unsuitable choice of repertory and never achieved the status of the earlier quartet.

Two other musicians named Müller, apparently unrelated to the above-named Müllers, were active in Germany as cellists. Hippolyte Müller (*b* Hildburghausen, 16 May 1834; *d* Munich, 23 Aug 1876) made his début at the age of 11, studied with Joseph Menter and was appointed to the royal chapel and conservatory in Munich in 1854. Valentin Müller (*b* Münster, 14 Feb 1830; *d* after 1868) also studied with Menter, then went to Brussels in 1848 to become a pupil of Servais. He was a deputy teacher at the conservatory and for a time a member of the Maurin Quartet. In 1868 he moved to Frankfurt to join the Museums-Gesellschaft Quartet and to teach at the conservatory.

LYNDA MacGREGOR

Müller [Schmid], **Adolf** [Adolph] (*b* Tolna, Hungary, 7 Oct 1801; *d* Vienna, 29 July 1886). Austrian composer and Kapellmeister. Orphaned at an early age, he was brought up by an aunt and trained for the stage. He received his first musical instruction from Joseph Rieger, cathedral organist at Brno, and is reported to have appeared in public as a pianist at the age of seven. After engagements as an actor and singer at Prague, Lemberg (L'viv) and Brno he moved to Vienna in 1823. He continued his musical studies under Joseph von Blumenthal, and on 27 February 1823 his cantata *Österreichs Stern* was performed at the University of Vienna on the occasion of Francis I's birthday. A Singspiel, *Wer andern eine Grube gräbt, fällt selbst hinein*, was given in the Theater in der Josefstadt on 13 December 1825, and in December 1826 Müller became famous overnight with his score to *Die schwarze Frau*, Meisl's enormously popular parody of Boieldieu's *La dame blanche*. That year he was engaged as singer at the Kärntnertortheater, where he rapidly advanced to the position of Kapellmeister and gave up his acting and singing activities. At Beethoven's funeral he sang second tenor in B.A. Weber's *Rasch tritt der Tod den Menschen an*, after a last rehearsal for *Die erste Zusammenkunft*, his first Singspiel for the Court Opera, which had its première that night (29 March 1827). In 1828 Müller became Kapellmeister at the Theater an der Wien under Karl Carl, and until 1847 he was director of music at this theatre or at Carl's other theatre, that in the Leopoldstadt suburb. In 1847 he returned to the Theater an der Wien, under new management, and continued as music director until 1878; among his late scores are those for some of Ludwig Anzengruber's plays. Müller was married in 1827; of his three children the most famous was Adolf Müller (*b* Vienna, 15 Oct 1839; *d* Vienna, 14 Dec 1901), a Kapellmeister and talented composer, best known for his operetta *Wiener Blut*, based on his arrangements of dances by Johann Strauss.

Müller's output was prodigious even by the prolific standards of his time. Throughout a long working life (what was probably his last new score was performed in January 1878) he produced new Singspiel and *Posse* scores at an average of more than one a month, apart from his duties as arranger, conductor and director. Wurzbach in his incomplete list included about 580 theatre scores for the period up to 1868 containing roughly 4500 individual musical numbers; Müller himself made several manuscript copies of many of his scores and arranged some of his most popular numbers for other instruments. Not surprisingly, the bulk of his output proved ephemeral, yet many of his 41 scores to Nestroy's plays are still performed in Vienna, and at his best his music has more than mere melodic charm to commend it. There are innumerable witty, effective *couplets*, and on occasion extended concerted numbers and large-scale quodlibets; the instrumentation is neat though usually unadventurous. He also composed a mass (performed in the court chapel in 1842) and other pieces of church music, some 400 songs and instrumental chamber music. His *Grosse Gesangschule in vier Abtheilungen* (published by Haslinger, Vienna, and in a French edition), and also an *Accordeon-Schule* (published by Diabelli, 1854) were popular in their time. Several of Müller's scores have been successfully revived since the 1970s, notably by the Wiener Kammeroper.

There are large numbers of Müller's autograph scores in the principal Viennese libraries, especially the Stadtbibliothek and Nationalbibliothek. Many songs from his popular theatre scores were brought out in series by Haslinger, Diabelli, Spina and others. Contemporary vocal scores (or a modern transcription of the vocal line for all solo and ensemble numbers) of Nestroy's plays are (re)printed in each volume of the historical-critical edition.

PETER BRANSCOMBE

Müller, August Eberhard (*b* Northeim, 13 Dec 1767; *d* Weimar, 3 Dec 1817). German conductor, flautist, keyboard player and composer. He was first taught the keyboard and organ by his father, the organist Matthäus Müller, and later took lessons in harmony and composition with J.C.F. Bach in Bückeburg. In 1786 he began to study law at Göttingen, where he attracted attention as a flautist in the informal concerts at the home of the Officer of Justice, Püttner. He then made concert tours in northern Germany and lived for a time in Brunswick. In 1788 he married the pianist Elisabeth Catherina Rabert in Magdeburg, and in the following year succeeded her father as organist at the Ulrichskirche there. From 1792 he conducted the Masonic concerts and the private concerts of the nobility. During the 1792–3 season he appeared in Berlin, where he made the acquaintance of several important people. On J.F. Reichardt's recommendation he became organist at the Nikolaikirche, Leipzig, in 1794 and also joined the Gewandhaus orchestra as first flautist. His wife played there regularly as a pianist in Mozart concertos. In 1800 he became assistant at the Thomaskirche to the aging Kantor J.A. Hiller, whom he succeeded in 1804. He continued the concerts begun by Hiller at the Thomasschule and the church, and in them he conducted several of Bach's cantatas, probably for the first time since the composer's death. In 1810 he left Leipzig to become musical director of the Weimar court orchestra and court opera, which entailed teaching duties at the Gymnasium and the teacher-training college; he was also responsible for the Stadtkirche music.

Müller was a capable organist and keyboard player as well as a proficient flautist. Goethe, who always had difficulties with the opera in Weimar, valued him as an energetic Kapellmeister. He had an excellent ear and tried to raise the standard of the performances. His Singspiel *Der Polterabend* was unsuccessful, but his flute concertos and various piano works were well received. His sacred works were also praised (*AMZ*, iv, 1801–2, col.233), but only a few survive. The starting-point for his compositions was Mozart, whose influence is predominant in the early works. The later piano capriccios, opp.29, 31, 34 and 41, and the Variations on Mozart's 'Ein Mädchen oder Weibchen' op.32, however, reveal virtuoso developments in piano technique approaching those of Liszt. Müller did much to propagate the works of Mozart and Haydn: in addition to performing their works he prepared piano arrangements for Breitkopf & Härtel and assisted that firm as an adviser and co-worker in the publication of their first complete editions. Beethoven wrote to Breitkopf (3 September 1806) that he held Müller in high esteem as an artist. Müller's pedagogic works had a great influence in his lifetime. Besides a guide to Mozart's keyboard concertos and tutors for the flute and keyboard, he published a *Klavier- und Fortepiano-Schule* (1804) as a revised, much enlarged sixth edition of Löhlein's *Clavierschule*; this was revised by Czerny as late as 1825.

WORKS

published in Leipzig unless otherwise stated

VOCAL

Der Polterabend (Spl, 1, A. Wolff), Weimar, 1813 or 1814; vs (*c*1820)
Cantatine zu Familienfesten, 4vv, chorus, insts (n.d., after 1817); sacred cants., Gerechte frohlocket dem Herrn, *D-Bsb*, *Dl*, Preis und Dank, *Dl*, *GOa*, Siehe, ich verkündige euch, *Bsb*; TeD, D, *Dl*; Psalm cxii, *Dl*; [12] deutschen Lieder, i (Hamburg, 1796), ii (n.d.); other lieder pubd separately

ORCHESTRAL

Fl concs.: op.6 (Berlin, *c*1794); op.7 (Berlin, *c*1794), lost; op.10 (Offenbach, *c*1795); op.16 (*c*1798); op.19 (1801); op.20 (*c*1801); op.22 (*c*1804); op.24 (*c*1806); op.27 (*c*1807), lost; op.30 (*c*1809); op.39 (*c*1817)
Polonoise, fl, orch, op.23 (*c*1805)
Grande fantaisie, fl, orch, op.40 (*c*1818)
Kbd concs.: op.1 (Berlin, *c*1792); op.21 (*c*1802)

KEYBOARD

Sonatas: 3, op.3 (Offenbach, 1792); 3, op.5 (Offenbach, 1793); 3, op.7 (*c*1795); 3, op.14 (?1801); 3, op.18 (?1802); 1, op.26 (*c*1806); 1, op.36 (1813)
Caprices: op.4 (Offenbach, 1793); 6, op.29 (*c*1808); 3, op.31 (*c*1809); 3, op.34 (*c*1812); 3, op.41 (*c*1818)
Variations: op.8 (1795); op.9 (Hamburg, 1796); op.12 (*c*1796); op.32 (*c*1810); op.35 (*c*1813); op.37 (1813); others
Other: Sammlung von Orgelstücken . . . 12 leichte und 6 schwere Sätze, org (1798); Walzer in 12 Durtönen, op.33 (1810)

OTHER INSTRUMENTAL

Fl duets: 3 grands duos concertants, op.11 (Hamburg, n.d.); 3, op.13 (*c*1797); 20 petits duos, op.19 (Paris, n.d.); 3 duos concertants, op.28 (1807)
Solo fl: Theme favorit de W.A. Mozart varié (1801); 6 variations (Hamburg, n.d.)
Grande sonate, pf, acc. vn, vc, op.17 (1800)
Grande sonate, pl, fl, op.38 (*c*1814)

PEDAGOGICAL

Anweisung zum genauen Vortrage der Mozartschen Clavier-Concerte (1796)
Klavier- und Fortepiano-Schule (Jena, 1804 [as 6th edn of G.S. Löhlein: *Clavierschule*, 1765]; 8/1825, ed. C. Czerny)
Kleines Elementarbuch für Klavierspieler (*c*1807)
Elementarbuch für Flötenspieler (*c*1815; Eng. trans., 1982)
Cadenzen zu den 8 vorzüglichsten Clavier-Conzerten von W.A. Mozart (*c*1818)
Several collections of practice pieces, fl, pf

GUNTER HEMPEL

Müller, Eduard (*b* Basle, 12 Oct 1912; *d* Bottmingen, nr Basle, 16 May 1983). Swiss organist. He studied at the Basle Musikakademie with Adolf Hamm and in Leipzig with Günther Ramin (a pupil of Straube). In 1934 he was

appointed organist and choirmaster of St Paul, Basle, and in 1939 teacher of organ, harpsichord and thoroughbass at the Schola Cantorum Basiliensis (where Gustav Leonhardt was among his pupils); he also taught at the Musikakademie from 1945. He held the post of organist at Basle Cathedral from 1970 until his death. Müller received an honorary doctorate from the theology faculty at Basle University in 1978.

His activities as a church musician focussed upon the musical enrichment of the liturgy, with especial attention to the works of J.S. Bach; he gave several performances of Bach's complete organ and harpsichord works. Equally important for him was his work on 19th-century organ literature and the music of Messiaen. Together with August Wenzinger he was a pioneer in the teaching of early music performing practice, and he made numerous recordings in this field, notably award-winning versions of Frescobaldi's *Fiori musicali* (1956) and Handel's organ concertos (1966).

JÜRG STENZL/PAUL HALE

Müller, Erich H(ermann). *See* MUELLER VON ASOW, ERICH H.

Müller [Miller; Krasinsky, Graschinsky], **Ernest Louis** [Millard, Millerd] (*b* Warsaw, 26 Oct 1740; *d* Paris, 15 April 1811). Polish flautist and composer, active in Germany and France. He may have been born Krasinsky, though Choron maintained that this was a pseudonym and further distinguished him from a German composer of flute music by that name; on the title-page of J.P. Kemble's *Alexander the Great* he is called Krazinsky Miller. He was living in Berlin in about 1760, and in 1768 he moved to France in the service of the wealthy amateur and flautist Chevalier de Salles, first at Dijon and later at Auxonnes. In 1776 he settled in Paris, but his career was greatly handicapped by a tendency to drink. Through the help of the violinist and ballet-master Pierre Gardel he was able to obtain ballet commissions for the Opéra; they brought him some considerable fame and were frequently revived well into the 1820s. In 1793–5 he seems to have worked in London, where he wrote music for several more ballets. He also composed flute duets and *duos concertans* for flute and violin which were apparently known throughout Europe, and Choron mentioned the extraordinary popularity in Germany of a volume of flute trios by him.

His stepdaughter Marie Elizabeth Miller (*b* 8 April 1770; *d* 18 May 1833) achieved fame as a dancer. Engaged principally at the Opéra, she received much acclaim at the King's Theatre, London, in 1793; among her roles was Clytemnestra in Noverre's *Iphigenia in Aulide*, for which her stepfather composed the music. She married Gardel in 1795.

ROGER J.V. COTTE

Müller, Fidel. *See* MOLITOR, FIDEL.

Müller, Franz. *See* MÜLLER, SILVERIUS.

Müller, Georg Gottfried (*b* 1762; *d* 1821). American Moravian violinist and composer. *See* MORAVIANS, MUSIC OF THE, §3.

Müller, Heinrich (*b* Lübeck, 18 Oct 1631; *d* Rostock, 17 Sept 1675). German poet and theologian. The family fled from Rostock to Lübeck when Wallenstein's armies occupied Mecklenburg, returning to Rostock in 1644, where Heinrich matriculated at the age of 13. From 1647 he studied theology in Greifswald, and received the master's degree in Rostock in 1650. He then spent a year visiting universities, including Danzig, Königsberg, Helmstedt, Wittenberg, Leipzig and Jena, after which, in 1651, he gave lectures on philosophy at the university of Rostock. He became a doctor of theology at the age of 21 in Helmstedt. In 1653 he became archdeacon of the Marienkirche, Rostock, where he became pastor in 1659. That year he was also appointed professor of theology, and in 1671 was made city superintendent.

Müller's writings are considered important sources for J.S. Bach's works. The sermons from his *Geistreichen Passions-Schule* (1669) served as the basis for Picander's text for Bach's *St Matthew Passion*, and his devotional work *Der leidende Jesus nach den vier evangelisten* (1668) provided the source for Salomo Franck's text for Bach's cantata *Alles nur nach Gottes Willen* (BWV72). Müller's *Evangelische Schluss-Kette und Kraft-Kern, oder, Gründliche Auslegung der gewöhnlichen Sonn- und Fest-Tags-Evangelien* ... (1672) and his other devotional works provided the textual source for Bach's cantata *Ich will den Kreuzstab gerne tragen* (BWV56). Bach owned five voluminous works by Müller, and it is believed that the composer himself suggested these texts to the poet. It is not clear how Bach became familiar with Müller's works; perhaps the link was Bach's visit to Buxtehude in Lübeck. Emblematic aspects of Müller's texts seem to have provided further inspiration for Bach.

Müller's theology combines doctrinal Lutheranism with a new subjectivism, which situates him in the middle

ground between orthodoxy and Pietism. He leaned towards the mystical-erotic tradition and wrote ecstatic works in praise of Heaven (*Himmlischer Liebes-Kuss*, 1659) and Christ. He also wrote subjective songs for private devotion, such as in his hymnal *Geistliche Seelenmusik bestehend in zehn Betrachtungen und 400 auserlesenen geist- und kraftreichen sowohl alten als neuen Gesängen mit allerhand schönen, unter andern fünfzig ganz neuen Melodien gezieret* (Rostock, 1659), a collection of both old and new songs, including 112 from the 16th century. Müller was one of the first poets to rework songs from the previous century, and thereby contributed to both the reform and the continuation of the German Protestant hymn. His collection contains 126 melodies with continuo, 50 of them by Nikolaus Hasse. The ten *Betrachtungen* (meditations), reprinted as *Hymnologia sacra* (Nuremberg, 1728), are in prose and treat the value and use of sacred songs. Among the songs are ten religious poems under a separate title, *Himmlische Liebes-Flamme*, by Müller himself. Because of his mystical spiritualism Müller can be considered a forerunner of Pietism.

The Nuremberg poets, Shepherds of the Pegnitz, wrote lyrics based on Müller's writings with music by Johann Löhner, who wrote the introduction and published the work *Geistliche Erquickstunden* (1673).

M.R. WADE

Müller, Iwan (*b* Reval [now Tallinn], Estonia, 3 Dec 1786; *d* Bückeburg, 4 Feb 1854). German clarinettist and basset-horn player. He was also active as an inventor: in 1808 he produced an 18-key basset-horn, and in 1809 a prototype clarinet of the class now known as 'simple system'. The clarinet had 13 keys, seven of which were new, and gave much better intonation through more carefully placed holes. Müller was the first to use stuffed pads over counter-sunk tone holes, and in 1817 he invented the metal ligature. Early in his career he added three keys to the bassoon, which he played at that time, and later claimed the invention of the alto clarinet.

Müller was no less energetic as a performer; his 'carrière agitée', as Fétis called it, took him to all major European cities. Wherever he went he advertised his new clarinet, and his success as an artist inspired composers to write specifically for it. His style was brilliant and expressive, though impetuous and somewhat lacking in polish. From 1800 he was in St Petersburg, where he became an imperial chamber musician. He left in 1807 and travelled through Austria and Germany to Paris, where he spent considerable periods throughout his life, though without any fixed appointment. Müller lived in England from 1815 to 1820 and during 1829; he dedicated his tutor of 1825 to George IV. In later years he made several extremely successful Italian tours, and he ended his days as court musician to the Prince of Schaumburg-Lippe. His studies are still used, but his numerous concert pieces are no longer popular.

PAMELA WESTON

Müller, Johann (*fl* 1656–82). German singer, instrumentalist and composer. Gerber's remarks about him distort those of Walther; Eitner (in his second and third 'Müller' entries) confused various composers. Müller studied composition with Peranda. From 1656 he was a member of the Dresden Hofkapelle; about 1666 he is recorded as an alto singer and as an instrumentalist there and in 1676 as being 'attached to' the Kapelle. He is named in a salary document of 1680, and in 1682 he is mentioned as music master to the choirboys and thus must still have been a member of the Kapelle. He may be identical with the schalmei player of the same name mentioned in 1692 (but definitely not with the court organist Hans Müller, who was engaged in 1615). Of the few works identified as his, two, the ten-part *O Jesu Christe, Gottes Sohn* and five-part *Dein Wort ist meines Fusses Leuchte*, are in the Bokemeyer Collection. The concertos mentioned in the Catalogus CAS (*D-Dl* Mus.2118-E-503; see Steude) – *Fürwahr er trug unsere Krankheit*, for 18 voices, *Age homo numeremus*, for six voices, and *Cogita, o homo*, for seven voices – are lost, as too is his important contribution to the 17th-century *historia*, *Die Aufferstehung unsers Herrn und Heilands Jesu Christi* (1676). The two concertos marked 'Molitor' (= 'Müller') in the inventory of the Michaelisschule, Lüneburg – *Si Deus pro nobis*, for three voices and *Wie lieblich sind deine Wohnungen*, for ten or 15 voices – may also be by Johann Müller.

WOLFRAM STEUDE

Müller, Johann Adam. *See* MOLITOR, ALEXIUS.

Müller, Johann Christian [Christiaan] (*b* Andreasberg, Harz, 4 Feb 1690; bur. Amsterdam, 8 March 1763). Dutch organ builder of German birth. In about 1720 Christian moved to Amsterdam where he met the organ builder Cornelis Hoornbeeck, whose workshop he probably took over after the latter's death in 1722. Until 1729 Müller was assisted by his nephew Johann Caspar Müller

(*b* 23 July 1697; *d* 1746), who went on to rebuild the Christiaan Vater organ in the Oude Kerk of Amsterdam in 1738.

Although Christian is best known for the monumental three-manual, 60-stop (32′) organ in the Bavokerk, Haarlem (1735–8), his first large organ (three manuals, 37 stops) was completed in 1727 for the Grote Kerk, Leeuwarden. Other significant work was done in the Lutheran church, Amsterdam (1720, upperwork added), Old Walloon (Oude Waalse) church, Amsterdam (1734, in a 1680 case), Zaandam, Lutheran church (1737), Bennebroek (1742), Beverwijk (1756) and Koepelkerk, Alkmaar (1762). He also built a number of smaller organs (Westerbork) and domestic cabinet organs, some of which survive.

Müller's organs present an interesting synthesis of the Dutch style (as epitomized by the work of the Duyschot family) and German instrumental features. After Christian's death the firm's production was continued by his pupil J.H.H. Bätz (1709–70). Christian's son Pieter Müller (*b* Amsterdam, bap. 27 May 1738; *d* after 1789) continued the firm after his father's death, and built harpsichords as well as organs.

ADRI DE GROOT

Müller, Johann Nicolaus (*b* *c*1700; *d* after 1749). German organist and composer. According to his publications he was also a sworn legal notary (*Act*[*uarius*] *justit*[*iae*] *jur*[*atus*]) in Wurzbach, Lobenstein (Thuringia). His simple, rather naive keyboard suites *Des musicalischen Frauenzimmers musicalisches Divertissiment* (Nuremberg, from 1736) were popular in their day and included many types of dance in the French and Italian styles. Only the last set of six (not three) is extant (*D-Mbs*). His *Harmonische-Kirchen-Lust: bestehend aus XII. Arien XII. Praeludien und XII. kurzen leichten Fugen vor Orgel und Clavier* (Nuremberg) did not survive World War II, but the 12 fugues that survive in manuscript (*D-Bsb* 15708/10) are probably a contemporary copy. Like south German models, the writing is more fugato than fugal, without regular counter-subjects, strict part-writing or obbligato pedal. The best examples show a certain flair for keyboard writing in a somewhat vapid Italian style. The motet *Schaffe in mir Gott ein reines Herze* (27 May 1677; *D-Bsb* 15708) is probably by the J.N. Müller named on the rolls of the Thomasschule, Leipzig, 1665–74. (*FrotscherG*)

HUGH J. McLEAN

Müller, Johann Patroklus. *See* MÖLLER, JOHANN PATROKLUS.

Müller, Maria (*b* Theresienstadt [now Terezín, nr Litoměřice], 29 Jan 1898; *d* Bayreuth, 13 March 1958). Czech soprano. She studied in Vienna with Erik Schmedes and made her début as Elsa at Linz in 1919. Engagements followed at the Neues Deutsches Theater in Prague and in Munich, and in 1925 she made her début as Sieglinde (a role which was to become one of her best) at the Metropolitan. She remained there until the 1934–5 season, singing in a number of American premières including Alfano's *Madonna imperia* (1928), Pizzetti's *Fra Gherardo* (1929), *Švanda the Bagpiper* (1931) and *Simon Boccanegra* (1932). She first sang in Berlin at the Städtische Oper as Euryanthe in 1926 and later sang at the Staatsoper until 1943. After World War II she retired to live at Bayreuth, where she had sung regularly from 1930 to 1944 as Senta, Eva, Elisabeth, Elsa and Sieglinde, all of which are recorded on disc. At Salzburg she appeared as Eurydice (1931), Reiza (1933) and Donna Elvira (1934). She made her Covent Garden début as Eva in 1934 (with Beecham) and sang Sieglinde in the 1937 *Ring* cycles (under Furtwängler). Her large repertory included the title roles in *Die ägyptische Helena*, *Jenůfa* and Gluck's *Iphigénie en Tauride*, Djula in Gotovac's *Ero the Joker*, Pamina, Tosca and Marguerite. Müller possessed a vibrant, rarely beautiful voice and sang with rare conviction and passion, qualities evident in recordings of her Sieglinde, Elsa and Senta, among others.

HAROLD ROSENTHAL/ALAN BLYTH

Müller, Mathias (*b* Wernborn, nr Frankfurt, 24 Feb 1770; *d* Vienna, 28 Dec 1844). Austrian piano maker of German birth. He is first mentioned in the Viennese records of 1796; in the next year he was granted rights as a citizen and master craftsman of the city. From 1804 he also held a privilege to manufacture instruments, which entitled him to add the imperial double eagle to his signatures. He was president of the association of Viennese piano makers, appraiser for musical instruments and one of the most innovatory builders of his time. He bequeathed to his wife and 11 children a considerable fortune on his death.

As early as 1797 Müller announced the invention of a new kind of piano, with its body shaped like a harp set at a diagonal angle so that it took up less space than a normal grand. However, the so-called 'Dittaleloclange' (also known as the 'Ditanaclasis'), first made in 1800, had greater significance for the development of piano making: it was an upright piano with a compass of five and a half octaves. In contrast to the 'pyramid' and 'giraffe' pianos, its strings were struck close to the upper fastening point, a feature that influenced the sound, but also meant that the strings ran from nearly floor level (rather than from keyboard level) ensuring that the instrument did not stand so tall. A double upright model was also made which allowed the two players to maintain eye contact with each other over the top of the case. From 1801 onwards Müller produced and improved in conjunction with K.L. Röllig a bowed string keyboard instrument known as the 'Xänorphica' (*see* SOSTENENTE PIANO, §1). The bows, one for each string, were fixed to a mobile frame which performed the bowing action, and bow contact to each string was produced by pressing a key. Further patents were for a *Prellmechanik* piano action (1823 and 1824), an instrument with a *Stossmechanik* (1835), and improvements to frames made of iron (1829) and wood (1833). In the 'Gabel-Harmon-Pianoforte' of 1827, Müller used tuning-forks instead of bridge pins for each note. The additional resonance thus achieved made it possible to dispense with the third of each set of strings without loss of tone.

RUDOLF HOPFNER

Müller [Miller, Millner, Müllner], **Silverius** [Franz] (*b* Oberhöflein, Lower Austria, 27 Feb 1745; *d* Vienna, 21 Aug 1812). Austrian composer and teacher. He entered the Piarist order on 3 October 1764 and took the name Silverius a Sancto Leopoldo instead of his baptismal name, Franz; he was ordained on 22 December 1770. He received his musical education at the Piarist Gymnasium at Horn. Between 1770 and 1783 he worked chiefly as *regens chori* and *instructor musicae* at three Piarist colleges: Maria Treu, Vienna, and those at Günzburg and Krems. Because of the reforms of the Emperor Joseph II there were fewer opportunities for such employment after 1783 and Müller subsequently worked for his order not as a musician but as a prefect and, from 1800, as professor of classical literature and philosophy at the Löwenburg Konvikt, Vienna. In 1796 he visited Naples for study purposes. His music won a certain admiration in his day; the most important is his chamber music, which deploys Classical forms in a lively manner. The Mass in D stands out among his church music, which follows the conventions of the time.

WORKS

Str qts: 6 (Vienna, 1785); 6 (Vienna, 1795), announced but probably not pubd; 3 as op.3 (Vienna, 1803); 6 as op.2, *A-Wgm* (? copied from unknown pubn); 13, *I-Mc*; 6, *SK-J* (inc.)

Other inst: 6 str qnts, *A-Wgm*; 2 pf qts, *I-Mc*; 6 duos, vn, va, *A-Wgm*; 6 fl qts, lost (cited in Traeg's catalogue, 1799); Marsch beym Abzug der Franzosen, pf, 1806, *Wn*

Vocal: 6 neue Lieder beym Clavier oder bey der Harfe zu singen (Vienna, before 1799); 2 masses, C, *SEI*, D, *Wp*; motet, offertory, *CZ-Bm*

OTTO BIBA

Müller, Therese. *See* MALTEN, THERESE.

Müller, Valentin. *See* MOLITOR, VALENTIN.

Müller, Wenzel (*b* Tyrnau [now Mestectro Trnávkal], 26 Sept 1759; *d* Baden, nr Vienna, 3 Aug 1835). Austrian composer. He studied music with the schoolmaster at Chornitz (Kornice), south-east Moravia, and could soon play all the instruments of the orchestra. At the age of 12 he wrote a mass for the ordination of an older brother. He was sent to the Benedictine foundation of Raigern (Rajhrad), near Brno, where he concentrated on mastering wind instruments; taught and encouraged by the choirmaster, Maurus Haberbauer, he also composed. When the prelate went to Johannisberg, the seat of the Prince-Bishop of Breslau, he took Müller with him and Dittersdorf became his teacher. In 1782 Müller joined Waizhofer's theatre company at Brno as third violinist and composed a successful Singspiel, *Das verfehlte Rendezvous, oder Die weiblichen Jäger*. Encouraged by the comic actor and singer Anton Baumann, as well as by the new theatre director Bergopzoomer, Müller made excellent progress. The story that Emperor Joseph II, impressed by Müller, determined to send him to Italy to study must be discounted on grounds of chronology. But in 1786 he was taken on as Kapellmeister by Marinelli at the Theater in der Leopoldstadt in Vienna ('The tenth of May I Wenzel Müller was formally engaged as Kapellmeister', he wrote in his diary – the first definitely authenticated date since his birth).

Müller's first Vienna appearance was on 30 May 1786, when he conducted the Leopoldstadt première of Gassmann's *La contessina*. From then until 1830, except for the period of an engagement in Prague, he served as Kapellmeister to the Leopoldstadt theatre, most of that time in charge of the theatre's musical activities. In this post he had the task of making the musical side of Marinelli's performances worthy of the actors' skills (these included his friend Baumann, and Johann 'Kasperl' La Roche). Under Müller the orchestra was enlarged and improved, and the appointment of Ferdinand Kauer as second Kapellmeister, and later as head of the theatre's music school, meant that the company was assured of a steady supply of well-trained singers and musicians.

Müller's autograph diary contains a wealth of fascinating information about performances at the theatre as well as its social and economic circumstances. For several years he listed the number of performances he had to conduct and the number of new scores he wrote; in 1794 he was exceptionally busy, conducting on no fewer than 225 evenings, though in this year he wrote a mere seven 'operas' (the title loosely used for Singspiele of some pretension) as opposed to 15 or 20 theatre scores in other years. His first major success as a composer was with *Das Sonnenfest der Braminen* (9 September 1790; text by Hensler), given over 90 times in 15 years and published by at least three German houses. *Das Neusonntagskind*, the first of the Singspiele adapted by Joachim Perinet from originals by Philipp Hafner, was given on 10 October 1793 and heard 162 times in the Leopoldstadt up to 1829. The première was Müller's first benefit night, and as he said in his diary, 'I won my musical renown with this opera; this opera is known in every land'. The 1790s were splendid years for this theatre – the abandonment of the National Singspiel left the field wide open, and the enterprising Marinelli stepped in; the remarkable number of royal and imperial visitors testifies to the theatre's renown. Müller's most popular works of this period include *Kaspar der Fagottist*, *Die Schwestern von Prag*, *Die zwölf schlafenden Jungfrauen*, *Das lustige Beylager* and *Die Teufelsmühle am Wienerberg* (163 performances in the Leopoldstadt up to 1860).

The first few years of the 19th century contained no major success for Müller, which may well account in part for his decision to accept an invitation from the director, Liebich, to become Kapellmeister at the German Opera in Prague, a post he held from March 1807 until May 1813; his daughter Therese (the distinguished soprano Madame Grünbaum, born 24 August 1791) was engaged as a singer at the same time. It is clear from contemporary reports that Müller was not equal to the demands of his Prague contract (even Weber, his successor, was exercised to improve standards); there is, however, a valuable report on Müller as a conductor from J.F. Reichardt, who heard him direct *Das Neusonntagskind* there in November 1808:

The finale of the second act was performed entirely comically by all the cast, with Italian liveliness. Most of the waltzes and other folk melodies were, however, played and sung much more slowly and gracefully than almost anywhere else, whereby the whole took on a *gemütlich* quality, which obviously pleased all hearers and assuredly has something national about it.

Müller resumed his duties at the Theater in der Leopoldstadt on 15 June 1813; he recovered much of his former fire and enthusiasm, owing at least in part to the successes of his daughter, son-in-law and, later, his grand-daughter Caroline (who made a successful début at the Hofoper in August 1829, aged 15). Müller's numerous popular Singspiele, parodies and *Posse* scores after his return from Prague include *Tankredi* (1817), *Aline, oder Wien in einem andern Weltteil* (1822; based on Berton's opera), *Der verwunschene Prinz* (1818; based on Seyfried's arrangement of Grétry's *Zémire et Azor*) and his scores for Raimund's *Der Barometermacher auf der Zauberinsel* (1823), *Die gefesselte Phantasie* and *Der Alpenkönig und der Menschenfeind* (both 1828). He continued to compose until the year before his death, though not without meeting charges of self-plagiarism.

Of all the regular composers of music for the Viennese *Volkstheater* Müller was the most popular and the best; his scores for Raimund's works are still regularly performed, and others (including *Kaspar der Fagottist* and *Die Schwestern von Prag*) have been successfully revived. A number of his songs rapidly achieved lasting success in the guise of street songs and *Volkslieder* ('Wer niemals einen Rausch gehabt', 'Lieber kleiner Gott der Liebe', 'So leb denn wohl, du stilles Haus'). Although later in his career he was seldom as ambitious, a number of his early works fully deserve the description 'opera': the finale to Act 1 of *Die unruhige Nachbarschaft* is so extensive that it was bound as a separate manuscript volume (now in *D-Mbs*); the first finale to *Die Schwestern von Prag*, with its interrupted serenades, beatings and nightwatchman's call, is also a full-scale ensemble. Müller was at his best and most characteristic in simple, unpretentious songs and duets. The famous quintet from *Der Alpenkönig* is nothing more than a plainly harmonized refrain with contrasting solos. His scoring is simple but almost always effective. He experimented eagerly and with success in operatic parody and in melodrama (*Der verwunschene Prinz* includes four melodramas, one of them comic). Müller's most obvious weakness lies in his general inability to develop and combine his ideas to any cumulative effect. Yet in solo song (easily the most important single category in contemporary Viennese theatre) Müller achieved an astonishing number of successes in all types, especially with tender, reflective numbers, but also with gay or satirical and occasionally (*Die Teufelsmühle*) with effectively sinister songs.

STAGE

for complete list of stage works see GroveO (P. Branscombe)

all listed stage works first performed in Vienna, Theater in der Leopoldstadt

Das Sonnenfest der Braminen (heroisch-komisches Original-Spl, 2, K.F. Hensler), 9 Sept 1790 (facs. in GOB, xvi, 1986)
Kaspar der Fagottist [Der Fagottist, oder Die Zauberzither] (Spl, 3, J. Perinet), 8 June 1791
Das Neusonntagskind (Spl, 2, Perinet, after P. Hafner: *Der Furchtsame*), 10 Oct 1793
Die Schwestern von Prag (Spl, 2, Perinet, after Hafner), 11 March 1794
Der alte Überall und Nirgends (Schauspiel mit Gesang, 5, Hensler), 10 June 1795; pt 2, 16 Dec 1795
Das lustige Beylager (Spl, 2, Perinet, after Hafner: *Der beschäftigte Hausregent*), 14 Feb 1797
Die zwölf schlafenden Jungfrauen (Schauspiel mit Gesang, 4, Hensler), 12 Oct 1797; pt 2, 24 July 1798; pt 3, 27 May 1800
Der Sturm, oder Die bezauberte Insel (heroisch-komische-Oper, 2, Hensler, after W. Shakespeare: *The Tempest*), 8 Nov 1798
Die Teufelsmühle am Wienerberg (Volksmärchen mit Gesang, 4, Hensler and L. Huber), 12 Nov 1799
Die unruhige Nachbarschaft (komische Oper, 2, Hensler, after Huber), 2 March 1803
Die Belagerung von Ypsilon, oder Evakathel und Schnudi (Karrikatur, 2, Perinet, after Hafner), 4 May 1804
Die [travestierte] neue Alzeste (Karrikatur-Oper, 3, Perinet, after Pauersbach and Richter), 12 June 1806
Der Schlossgärtner und der Windmüller (komische Oper, 1, B.J. Koller), 1 July 1813
Der Fiaker als Marquis (komische Oper, 3, Bäuerle), 10 Feb 1816
Tankredi (komische Parodie, 2, Bäuerle), 25 April 1817
Doktor Fausts Mantel (Zauberspiel mit Gesang, 2, Bäuerle), 11 Dec 1817
Der verwunschene Prinz (Parodie, 2, Bäuerle), 3 March 1818 [parody of Grétry: Zémire et Azor]
Die travestiette Zauberflöte (Posse mit Gesang, 2, Meisl), 13 Aug 1818
Die Fee aus Frankreich, oder Liebesqualen eines Hagestolzen (Feenmärchen mit Gesang, 2, Meisl), 23 Nov 1821
Aline, oder Wien in einem andern Weltteil (Zauberoper, 3, Bäuerle), 9 Oct 1822 [parody of Berton: Aline, reine de Golconde]
Der Barometermacher auf der Zauberinsel (Zauberposse mit Gesang und Tanzen, 2, F. Raimund), 18 Dec 1823
Herr Josef und Frau Baberl (Posse mit Gesang, 3, Gleich), 11 May 1826 [rev. version of Der Fleischhauer von Odenburg]
Die gefesselte Phantasie (Zauberspiel, 2, Raimund), 8 Jan 1828
Der Alpenkönig und der Menschenfeind (romantisch-komisches Zauberspiel, Raimund), 17 Oct 1828
Der Sieg des guten Humors, oder Die Lebenslampen (Zauberspiel mit Gesang, 3, J.K. Schickh), 17 Sept 1831
*c*225 other ops, Spls, plays with music, pantomimes, ballets, melodramas
Other works (?most lost), incl. church music, syms., chbr music and wind pieces, pf pieces

PETER BRANSCOMBE

Müller, Wilhelm (*b* Dessau, 7 Oct 1794; *d* Dessau, 30 Sept 1827). German poet. He attended the University of Berlin from 1812 to 1817, interrupting his studies to volunteer for the Prussian army in the War of Liberation. In Berlin he joined the literary salon of the court councillor Friedrich August von Stägemann and his wife Elisabeth, for whose circle in 1816–17 *Die schöne Müllerin* was originally conceived as a Liederspiel (inspired in part by Goethe's mill-ballads and by Paisiello's opera *L'amor contrastato* [*La molinara*]). Müller left Berlin in 1817, travelling to Vienna and Rome before returning in August 1818 to Dessau, where he became the ducal librarian and a literary critic. The first volume of his poetic anthology *Siebenundsiebzig Gedichte aus den hinterlassenen Papieren eines reisenden Waldhornisten* was published in 1821, and began with his revised version of *Die schöne Müllerin*. The cycle *Die Winterreise* was first published in its entirety in 1824 in the second volume, dedicated to Müller's friend Carl Maria von Weber.

Müller's fame in his own day was based largely on his 47 *Griechenlieder*, which did much to spread Byron's fame in Germany and to stir up sentiment on behalf of Greece at war. A student of folk poetry, Müller was praised by Heine for his skilful emulation of the essence of German folksong. In Müller's aesthetic, 'naturalness, truth and simplicity', rather than complexity and grandiosity, were requisite for poetic beauty. He admired in folksong 'the immediacy of its influence on life', and believed that poetic artfulness should be hidden in the service of this directness. While many of his more facile 'folk' poems are conventional in the extreme, the two cycles which Schubert set are original variations on clichés of the era (wanderers, rustic genre figures), and are notable for their psychological depth and emotional power.

Müller, an amateur musician with a pleasant baritone voice, invited musical settings of his poetry, and wrote to the composer Bernhard Klein: 'My songs lead but half a life, a paper existence of black and white, until music breathes life into them'. His poems, which are filled with pictorial images which lend themselves to musical setting, were popular with composers throughout the 19th century, including Marschner, Spohr, Brahms (*Vineta* from op.42) and many lesser figures, in addition to Schubert.

SUSAN YOUENS

Müller-Blattau, Joseph [Josef] **Maria** (*b* Colmar, Alsace, 21 May 1895; *d* Saarbrücken, 21 Oct 1976). German musicologist. He studied musicology with Friedrich Ludwig at the University of Strasbourg, composition and conducting with Hans Pfitzner, and the organ with Ernst Münch at Strasbourg Conservatory. After World War I he continued his studies with Gurlitt at the University of Freiburg, taking the doctorate in 1920 with a dissertation on the history of the fugue. In 1922 he completed the *Habilitation* with a work on Schütz's pupil Christoph Bernhard at Königsberg University, where he was appointed music director, ran the musicology seminar, founded the series *Königsberger Studien zur Musikwissenschaft*, and was promoted to reader in 1928. In 1935 he was named professor and university music director in Frankfurt. In 1937 he was actively recruited to Freiburg because of his politically apropos interest in Alemannic folk music; he replaced his teacher Gurlitt, who was dismissed on grounds of Nazi racial laws and reduced to poverty until the end of the war. Müller-Blattau continued Gurlitt's efforts as a proponent of the *Orgelbewegung*, while simultaneously serving as director of the Städtische Musikschule in Freiburg. He accepted a position at the University of Strasbourg in 1941. After the war, he worked as a teacher in the Pädagogische Akademie und Gymnasium in Kusel (near Kaiserslautern) and in Kirchheimbolanden. In 1952 he accepted an offer to direct the Staatliches Konservatorium in Saarbrücken and to teach at the university, where he was promoted to full professor.

Besides his work on Bernhard, Müller-Blattau is chiefly known for his studies of German folksong and medieval monophonic music, of which he produced important editions. While a soldier in World War I, Müller-Blattau was impressed by the power of communal singing. Thereafter he was active in the youth movement (serving on the editorial board of its journal, *Die Singgemeinde*) and worked along with other musicologists to develop the study of German folksong as a serious musicological discipline. This interest, in which he focussed on tracing inherited Germanic traits in folk music from prehistoric times to the 'Horst-Wessel-Lied', won him support from Nazi organizations: the publication of his 1938 *Germanisches Erbe in deutscher Tonkunst* was underwritten by both the SS and the Hitler Youth. He produced a number of biographies, including a series of volumes devoted to German composers, published in Königstein, and also worked on the relationship between words and music in song and opera.

M. ELIZABETH C. BARTLET/PAMELA POTTER

Müller-Hartmann, Robert (*b* Hamburg, 11 Oct 1884; *d* Dorking, Surrey, 15 Dec 1950). German composer. He studied at the Stern Conservatory in Berlin and from 1914 was a music critic and theory teacher in Hamburg. From 1923 to 1933 he was a lecturer in music at Hamburg University and, when the Nazis came to power, served on the cultural council of the Jüdische Kulturbund. He emigrated to London in 1937, and in 1941 established a strong friendship with Vaughan Williams, translating the latter's opera *The Pilgrim's Progress* into German.

As a composer he did not adhere to any of the modern schools. In Germany his works, which included a Symphony (1926), several suites and variation sets, chamber music and songs, were performed by eminent figures such as Fritz Busch, Muck, Schnabel and Strauss. He received far less attention in England, although a set of Five Pieces for piano was published by Fürstner in 1943.

ALFRED LOEWENBERG/ERIK LEVI

Müller-Hermann, Johanna (*b* Vienna, 15 Jan 1878; *d* Vienna, 19 April 1941). Austrian composer. She studied with Guido Adler and Zemlinsky and later with J.B. Foerster, whom she succeeded as professor of composition at the Neues Konservatorium in Vienna. Although her works adhere to traditional form and tonality, they reveal considerable harmonic richness and resourceful instrumentation.

WORKS
(*selective list*)

Orch: Heroische Ov., op.21; Sym. Fantasy (after H. Ibsen: *Brand*), op.25; Sym., d, op.28
Choral-orch: 2 Frauenchöre, op.10, 3vv, incl. Von Tod und Gedenken; Der sterbende Schwan, op.16; Deutscher Schwur, op.22; Sym., d, op.27 (R. Huch), solo vv, chorus, orch (?1919); Ode, op.29; In memoriam, op.30 (orat, J. Schlaf, after W. Whitman), 4 solo vv, chorus, orch, org (1930)
Chbr and solo inst: Sonata, vn, pf, op.5; Str Qt, E♭, op.6 (?Vienna, *c*1910); Str Qnt, op.7; Pf Sonata, op.8; Sonata, vc, pf, op.17; Pf Qnt, g, op.31; pieces for pf, opp.3, 12, 19
Other vocal: 2 duets, op.15; Songs, op.26, 1v, orch; songs, 1v, pf; unacc. choral works

KARL GEIRINGER/ROSARIO MARCIANO

Müller-Siemens, Detlev (*b* Hamburg, 30 July 1957). German composer. A precocious musician, he entered the Musikhochschule in Hamburg at the age of 13 and graduated when he was 17, his teachers having included von Dohnányi and Klauspeter Seibel for conducting, and Günter Friedrichs and Ligeti for composition. He then studied with Messiaen in Paris. In 1980 and 1982 he was at the Villa Massimo in Rome; in between whiles, in 1981, he was assistant conductor for the Paris production of Ligeti's *Le Grand Macabre*. He was subsequently Kapellmeister in Freiburg, and in 1991 moved to Geneva, commuting to Basle to teach composition at the music academy. In 1997 he moved to Basle itself.

As a young man he was linked with a new generation of German composers, for whom a return to traditional qualities of continuity and expression was important. But he quickly proved himself to have a distinctive sensibility, marked by fantastical colouring, irony, sarcasm and a sharpness of imagery, qualities all to be found in the *Under Neonlight* series of the early 1980s. In his opera *Die Menschen* (1988) he made a break from tradition-related thinking. The work concerns archetypes and different aspects of human existence, and its musical characteristics include polyphony in which separate parts are thoroughly audible, strong melody, a bold, percussive theatricality and long arias made with repeating patterns. Since 1993 influences from mathematics and chaos theory

have become increasingly important, along with elemental forms.

WORKS

Dramatic: Genoveva oder die weisse Hirschkuh (chbr op after J. Schrader), 1977; Die Menschen (op, after W. Hasenclever), 1989–90

Orch: Conc., 19 insts, 1975; Passacaglia, 1978; Sym. no.1, 1978–80; Pf Conc., 1980–81; Under Neonlight I, chbr orch, 1981; Va conc., 1983; 4 Passages, 1988; Hn Conc., 1988–9; Carillon, 1991–2; Conc., vn, va, orch, 1992; Maïastra, 1996

Vocal: Lieder und Pavanen (after F. Kafka), T, orch, 1985; Arioso, S, T, hn, 4 choruses, orch, 1986; Tom-a-bedlam, 6vv, chbr orch, 1990–1, arr. inst ens, 1993; Lieder (F. Hölderlin), S, pf, 1999–2000

THOMAS GARTMANN

Müller von Asow, Erich H(ermann). *See* MUELLER VON ASOW, ERICH H.

Müller-Zürich [Müller], **Paul** (*b* Zürich, 19 June 1898; *d* Lucerne, 21 July 1993). Swiss composer. He added Zürich to his surname to avoid confusion with other Müllers. He was a pupil of Andreae and Jarnach at the Zürich Conservatory (1917–19) and then studied in Paris and Berlin. In 1927 he returned to the Zürich Conservatory as a lecturer in theory; he remained there, also teaching conducting and composition, until his retirement in 1969. In addition, he held a lectureship in music theory at Zürich University (1958–69). As director of various choruses he gave performances of old and new music; he also appeared as an orchestral conductor, principally in performances of his own works.

Müller-Zürich, whose influence on subsequent generations of Swiss composers was immense, belongs to the group of major Swiss composers (others included Beck and Burkhard) who, at first entrenched in Romanticism, adopted Baroque canonic and other contrapuntal techniques, arriving eventually at a neo-Baroque style characterized by advanced but tonal harmony. In Müller's case it was above all an acquaintance with the music of the Renaissance Netherlanders, Monteverdi and Purcell that brought the change in direction, one that had been anticipated by Reger, who was another strong influence on him (see the String Quartet op.4 and the Violin Sonata op.5).

Baroque forms such as toccatas and fugues occur frequently in Müller-Zürich's work, whose primarily diatonic and often modal character was not obscured by an increasing chromaticism in later compositions. Other attributes of his style are strict formal integrity, a feeling for architecture and transparent part-writing which eschews contrapuntal virtuosity for clarity and audibility. His choral polyphony is eminently singable (reflecting his experience with choirs). Among the honours he has received are the Music Prize of the City of Zürich (1953) and the Composer's Prize of the Schweizerischer Tonkünstlerverein (1958), of which he was president (1960–63).

WORKS
(*selective list*)

DRAMATIC AND VOCAL

Dramatic: Die Simulanten (play with music, M. Müller), op.7, 1922; Dr Faust (puppet-play score), op.9, 1922; Das eidgenössische Wettspiel (E. Arnet), op.30, 1939; Jedema (O. Eberle after H. von Hofmannstahl), op.31, 1941; Feuer vom Rütli (Freilichtspiel, H.F. Schell), op.35, 1941; Der Pass (Festspiel, Welti), op.44, 1947

Choral: TeD, op.11, S, B, chorus, orch, 1924; Chor der Toten, op.16, chorus, wind orch, db, perc; Kleine Messe, op.17, female vv, insts, 1931; 3 geistliche Chöre, op.18, female vv, str, hpd, 1931; TeD II, op.20, female vv, insts, 1933; Mein Vaterland, op.27, male vv, orch, 1938; Der Sonnengesang, op.29, S, A, female vv, 7 insts, 1938; Dona pacem, chorus, orch, 1946; Von Werktag und Sonntag, op.41, female vv, orch, 1946; Friede auf Erden, op.42, A, male vv, org, 1946; Mein Land, op.47, A, T, B, chorus, orch, 1950; Aus Knechtschaft zur Freiheit, op.48, A, B, chorus, orch, 1951; Gesänge von Gott, op.49, male vv, orch, 1951; Psalm cxlviii, op.67, chorus, orch, 1964; Psalm ciii, op.71, chorus, youth chorus, ob, bn, str qt, org, 1967; other pieces for unacc. chorus, youth chorus etc.

Solo vocal: 4 Duette, op.15, S, A, orch, 1928; An die Toten, S, vn, vc, 1937; 2 Gesänge, op.33, S, cl, vn, pf, 1941; Psalm xci, op.39, 1v, org, 1943; songs with pf

INSTRUMENTAL

Orch: Little Sym., D, op.3, 1920; Little Serenade, vn, ob, bn, hn, chbr orch, 1921; Hymnus, op.14, 1927; Conc., f, op.24, va, small orch, 1934; Conc., G, op.25, vn, small orch, 1935; Conc., op.28, org, str, 1938; Sym., C, op.40, str, 1944; Sym., d, op.43, 1947; Sym., e, op.53, str, fl, 1952; Vc Conc., op.55, 1954; Sinfonischer Prolog, op.57, 1955; Sinfonische Suite, E, op.59, 1957; Vn Conc. no.2, op.60, 1957; Conc., op.61, 2 vn, str, hpd, 1958–9; Sinfonietta no.1, op.66, 1963–4; Sinfonietta no.2, op.68, 1964; Sonata, op.72, str, 1968; Sinfonietta no.3, 1987

Chbr: Str Qnt, F, op.2, 1919; Str Qt no.1, E♭, op.4, 1921; Sonata no.1, B♭, op.5, vn, pf, 1921; Marienleben, op.8, 9 insts, 1923; Präludium, Arie und Fuge, op.21, ob, bn, hn, tpt, str qnt, 1933; Sonata no.2, op.32, vn, pf, 1941; Petite sonate, op.37, cl, pf, 1942; Fantasie und Fugue, E, op.45, vn, org, 1949; Str Trio, op.46, 1950; Little Suite, op.51, hn, va, hp, 1952; Sonata, op.52, vn, 1952; Elegie, vc, pf, 1953; Str Qt no.2, op.64, 1960–61; Trio, op.70, fl, cl, pf, 1965–6; Qnt, op.74, cl, bn, vn, vc, pf, 1972; Sonata, va, 1979; Serenata turicensis, basset hn, va, vc, 1981

Org: Toccata, C, op.12, 1925; Präludium und Fuge, e, op.22, 1934; Canzone, e, 1936; Toccata, D, op.38, 1943; Toccata, a, op.50, 1952; 4 Choralfantasien, op.54, org, 2 tpt, 2 trbn; Passacaglia, op.65, 1962; Toccata, f, op.76, 1974; Fantasia 'Urbs turegnum', 1978; chorales and chorale intonations

FRITZ MUGGLER/CHRIS WALTON

Mulligan, Gerry [Gerald Joseph, Jeru] (*b* New York, 6 April 1927; *d* Darien, CT, 20 Jan 1996). American jazz baritone saxophonist and arranger. He first learnt the piano. After moving to New York in 1946 he joined Gene Krupa's big band as staff arranger, and attracted attention with his *Disc Jockey Jump* (1947, Col.). He then became involved with the nascent cool-jazz movement, contributing scores to the big bands of Elliot Lawrence and Claude Thornhill and taking part in the performances (1948) and recording sessions (1949–50) of Miles Davis's nonet. By this time he was specializing on the baritone saxophone and playing in groups with Kai Winding and

others. He also wrote scores for Stan Kenton's band and recorded with his own 'tentet' (1951), which was modelled on Davis's ensemble.

In 1952 Mulligan, then based in Los Angeles, formed his first 'pianoless' quartet, with Chet Baker on the trumpet. The group was instantaneously successful, and brought Baker and Mulligan international acclaim; among their recordings were *Line for Lyons* and *Bark for Barksdale* (both 1952, Fan.). Baker was replaced in 1953 by Bob Brookmeyer on the valve trombone, and the following year the group made a sensational appearance at the Salle Pleyel, Paris (*Paris Concert*, 1954, Vogue). Mulligan began dominating jazz opinion polls for his instrument. In 1960 he organized his own 13-piece concert jazz band and recorded the album *Concert Jazz Band* (Verve); the band toured Europe that year and Japan in 1964. After it disbanded Mulligan became an active sideman, working often with Dave Brubeck (1968–72) and as a freelance arranger. He formed new big bands and a sextet, and appeared regularly in New York and Italy; he also began playing the soprano saxophone. In 1986 he led a quintet.

Although he was slow to develop as an instrumentalist, Mulligan has long been recognized as the most important baritone saxophonist in jazz since Harry Carney. Apart from the cool idiom which he helped to create, he was equally at home in a big-band, bop or even dixieland context (playing the clarinet in the last), and his excellent recordings with musicians as varied as Johnny Hodges and Thelonious Monk show an unusual musical adaptability. Initially, however, Mulligan made his reputation as an arranger of band scores with intricate inner parts, careful balancing of timbres, low dynamics and light swing, all of which features are present in his settings of *Jeru*, *Godchild* and *Venus de Milo* (all 1949, Cap.) for Davis's nonet. Later he abstracted these qualities in his pianoless groups, where the low volume and absence of chordal underpinnings freed the wind players to improvise in delicate two-part counterpoint. Some of Mulligan's best playing may be heard in his recordings with Chet Baker, Bob Brookmeyer and most notably Paul Desmond, with whom he shared an unusual talent for improvised countermelody.

J. BRADFORD ROBINSON

Mulliner, Thomas (*fl* 1563). English anthologist and composer. His main importance is as the compiler of the Mulliner Book (*GB-Lbl*), an eclectic collection of keyboard music, original and arranged, sacred and secular. He is possibly to be identified with Thomas Molyneux of Sefton, Lancashire, who was admitted to Gray's Inn on 2 February 1589. A 'Mulliner' was clerk at Magdalen College, Oxford, in 1557–8, and Thomas Mulliner was appointed 'modulator organum' at Corpus Christi College, Oxford, on 3 March 1564. Flynn has proposed that Mulliner compiled his manuscript in London between 1558 and 1564 as a student of John Heywood, who witnessed Mulliner's ownership of the book; during this time Mulliner was possibly associated with St Paul's Cathedral. Of the contents of the manuscript, the organ pieces or excerpts based on chant melodies (including at least 25 by Redford) appear to be arranged according to their compositional complexity, and the book is also an important source for songs used in the training of choirboys.

He presumably arranged the vocal pieces in the Mulliner Book himself. His initials are attached to two compositions in it: a fragment of a partsong, *The higher that the cedar tree* and *The Queen of Scots Galliard* for cittern (both printed in Stevens, 1952). In addition, he may well have composed the four unascribed 'Points' and the psalm-tune setting *O Lord turn not away*.

Mullings, Frank (*b* Walsall, 10 May 1881; *d* Manchester, 19 May 1953). English tenor. He studied singing at the Birmingham School of Music (1905–9), gained experience in concert and oratorio, and in 1913 sang Tristan with notable success under Beecham in Birmingham. His first performance as Othello was in Manchester (1916), his Covent Garden début being in the English première of de Lara's *Naïl* (1919), with *Pagliacci* and *Parsifal* following later that year. As principal dramatic tenor in the British National Opera Company (1922–;9), he also sang Apollo in the première of Boughton's *Alkestis* (1924, Covent Garden) and had such roles as Siegfried, Tannhäuser and Radamès in his repertory. From 1930 to 1945 he sang mainly in concert, and taught at the Birmingham School of Music (1927–46). Recordings show a strong, heroic voice of distinctive timbre, sometimes uncomfortably produced but beautiful in the middle register. Tributes by Beecham, Newman, Cardus and others testify to his greatness as an operatic artist; many considered his Tristan, Othello and Canio the finest heard in England in living memory.

Müllner, Silverius [Franz]. *See* MÜLLER, SILVERIUS.

Mullova, Viktoria (*b* Moscow, 27 Nov 1959). Austrian violinist of Russian birth. She studied at the Central Music School, Moscow, with Volodar Bronin, a pupil of David Oistrakh, from 1969 to 1978, and at the Tchaikovsky

Conservatory with Leonid Kogan. At 16 she won first prize in the Wieniawski Competition in Warsaw in 1981, first prize in the Sibelius Competition in Helsinki, and in 1982 the gold medal in the Tchaikovsky Competition in Moscow. In 1983, while on a tour of Finland, she defected to the USA, where her career as a soloist soon became internationally established. She has since played with most of the world's major orchestras under leading conductors and has made numerous recordings, ranging from solo works by Bach to concertos by Sibelius, Prokofiev and Shostakovich. In 1994 she formed the Mullova Chamber Ensemble, which has also achieved international recognition. In addition to her virtuosity and impeccable technique, Mullova is known for her strongly individual approach to interpretation and her ability to communicate with her audience. She plays a Stradivarius, dated 1723, the 'Julius Falk'.

MARGARET CAMPBELL

Multiphonics. Sounds generated by a normally monophonic instrument in which two or more pitches can be heard simultaneously. The term is customarily used to describe chordal sounds played on a woodwind or brass instrument.

Any sound created by a wind instrument consists of a simultaneous set of frequency components or partials. For a conventional monophonic tone, the partials are locked into a harmonic relationship by the interaction between the air column of the instrument and the sound generator (reed, air jet or lips). The resulting sound is perceived as a single, well-defined pitch (*see* ACOUSTICS, §IV). A multiphonic sound can be achieved on a woodwind instrument by choosing an unconventional fingering pattern for which the resonant modes of the air column are not harmonically related. The player may then be able to sustain simultaneously two inharmonically related tones, each based on one of the air column modes: the interaction with the sound generator mixes the two tones, giving additional sum and difference tones. The result is a rich complex of generally inharmonic partials. Such a sound may be perceived as a stable chord with several pitches, or as a tone cluster with periodically fluctuating loudness and timbre. Multiphonic fingerings for several woodwind instruments have been tabulated by Bartolozzi (*see* OBOE, §II, 4(iii), esp. fig.21.

Woodwind multiphonics are also possible using conventional fingerings, if the player uses an appropriately modified blowing technique. Similar multiphonics can be obtained on brass instruments by altering the combination of lip setting, tension and pressure known collectively as the embouchure. These multiphonics can consist of either inharmonic or harmonic partials; in the latter case, two or more of the upper partials are generated so powerfully that they stand out as individual pitches in the tone complex. A useful classification of multiphonics is provided by Castellengo.

A further technique for generating multiphonics relies on the player singing one note while playing another on the instrument. Additional sum and difference tones are created by mixing of the two tones in the sound generator of the instrument. This is the basis of the technique of horn chord playing, which has been known and practised since the 18th century.

MURRAY CAMPBELL

Multi-piece. A collection of short pieces published together as a single opus and displaying a significant degree of structural interconnection. The term was suggested by Dunsby in 1983 as a useful concept in understanding the 19th-century genre of the collection of piano miniatures, specifically in relation to Brahms's *Fantasien* op.116.

The idea that certain collections of short pieces – for example Schumann's song cycles or piano cycles such as *Carnaval* – might be structurally integrated by means of formal, tonal and thematic connections was neither new nor controversial. However, Dunsby proposed a rather more complex generic distinction than had generally been supposed, in which the multi-piece was distinguished not only from the collection of unconnected pieces, but also from the single multi-movement work. This posed a challenge to the idea of organic unity, which until the 1980s was largely unquestioned as a premise for musical analysis: the idea of the multi-piece entails a sense of incompleteness in the individual pieces, but it does not automatically follow that a multi-piece thereby forms a complete whole that corresponds to a multi-movement work. This sense of incompleteness is found in several places in Brahms's op.116 where an unresolved or ambiguous progression is completed in a subsequent piece. Dunsby then discussed the other features that define op.116 as a multi-piece. These include an arch-like formal symmetry around the central Intermezzo (no.4), a process whereby the thematic substance of each piece is formed from the combination of the same two simple figures, and a large-scale tonal structure which is loosely centred on D minor.

There has been no attempt to write a comprehensive history of the multi-piece genre. Such a history would have to take into account parallel developments in the song-cycle, as well as in the degree of integration found within conventional multi-movement works. A fairly continuous line of development is evident in the German Romantic tradition from Beethoven, through Schumann and Brahms, to the Second Viennese School. Marston has claimed that the last five of Beethoven's op.119 Bagatelles constitute a multi-piece, and the same could arguably be said of that composer's op.126. Some of Schumann's piano and chamber works seem clearly to fall into the category of the multi-piece, including *Carnaval*, *Kreisleriana* and the *Kinderscenen*, controversially analysed by Réti as a 'theme with variations'; however, it is by no means clear that this could apply to all his short piano pieces. It also remains to be seen whether the multi-piece or the collection is the exception to the norm in Brahms's output, let alone that of his lesser contemporaries. Finally, the cycles of orchestral and piano pieces by Schoenberg

and Webern, along with Berg's op.5 clarinet pieces, seem to represent the next stage in the development of the genre. Whether the multi-piece has any relevance to keyboard music from outside these narrow chronological and geographical limits – for example to French music from the time of Couperin, or to programmatic cycles such as those of Liszt and Mussorgsky – is also a question awaiting further research.

PETER FOSTER

Multiple stopping. In the playing of bowed string instruments, the technique of sounding more than one note simultaneously. Playing on two strings at once is known as double stopping, three strings as triple stopping, etc. Although these terms imply creating notes by holding down (i.e stopping) several strings at once, chords or two part-passages which include open strings are also described as double (triple etc.) stops.

The technique of multiple stopping seems to have developed early among viol players. It is described in Ganassi's *Regola rubertina* (1542–3). Chordal playing, highly developed by such exponents of the English lyra viol as Alfonso Ferrabosco (ii) and Tobias Hume at the beginning of the 17th century, seemed central to French Baroque composers. De Machy (*Pièces de violle*, 1685), went so far as to claim that *pièces d'harmonie* best suited the character of the viol and that simple melodic playing 'should be compared to a person who could play the harpsichord or organ perfectly with one hand'. Christopher Simpson (*The Division-Violist*, 1659) and Thomas Mace (*Musick's Monument*, 1676) both describe the bowing of chords; they emphasize that the lowest string should be sounded properly before the bow is moved across the other strings.

Double stops and chords appear in violin music early in the 17th century. They dominate several sections of Carlo Farina's *Capriccio stravagante* (1627) and appear in various sonatas in Marini's op.8 (1629), notably Sonata no.4 (inscribed 'per sonar con due corde') and Sonata no.2 'd'Inventione' where the use of scordatura creates passages in parallel 3rds which are fingered as 5ths (using only one finger for each pair of notes – see ex.1).

Ex.1 Marini: op.8 no.2 'd'Inventione'

Multiple stops become especially prominent in the works of late 17th-century German composers (Walther, Biber, Nicolaus Bruhns and J.P. von Westhoff). The fugal movements of Corelli's op.5 contain complex double stopping – and these sonatas were imitated and their techniques extended by the next generation of composers. J.-M. Leclair was described in 1738 as 'the first Frenchman who, imitating the Italians, played double stops, that is to say, played chords of two, three and even – by means of the thumb – up to four notes; and he has taken this kind of playing so far that the Italians themselves acknowledge that he is one of the first in the field'. The *locus classicus* of this kind of playing are the sonatas and partitas for solo violin (1720) by J.S. Bach. Ex.2, from the Fugue of

Ex.2 J. S. Bach: Sonata no.1 in G minor BWV1001, 2nd movt

the G minor sonata, shows the texture building up to four voices with each new entry. 14 of Kreutzer's *42 Études* (1796) focus on double stopping, and 19th-century virtuoso repertory (Paganini's *24 Caprices*, 1820, for example) is full of it. Spohr (*Violin-Schule*, 1832) described the technique as being 'among the principal resources of the violin'.

Many difficulties arise in the reading of multiple stops in 17th- and 18th-century violin literature: what is written by the composer is often musically neither possible nor even desirable to play; it is therefore to be assumed that what is written is not what the composer expected to hear. Which notes to sustain in fugal movements often poses a problem. It is clear that some note values are indications of part-writing rather than prescribed durations. Even in Corelli's music it is impossible to sustain every note in an interlocking chain of suspensions for its full written value, and Geminiani's fingerings for fugal movements in his revised op.1 (1739) indicate that he did not always expect performers to sustain all notes for their full value (*see* FINGERING, §II, 2).

The norm for triple or quadruple stops has always been to break the chords in some way. Quantz (1752) says that in playing chords 'the lower strings must not be held . . . they must be struck quickly one after the other'. There are, in fact, numerous chords in 18th-century violin literature which must be arpeggiated, not because of the characteristics of the bow but because of the way the notes lie on the instrument. Both Leclair *l'aîné* and *le cadet* wrote some four-note chords which necessarily use only three strings. Veracini, too, has a number of such chords (ex.3). J.-A. Mathieu gives fingerings in his op.1

Ex.3 Veracini: *Dissertazione . . . sopra l'opera quinta del Corelli*

(1756) which demonstrate that he expected the bottom notes of a chord to be released in time for the player to re-use the same fingers for notes on higher strings (ex.4).

Ex.4 J.-A. Mathieu: op.1 no.4, 4th movt (1756)

In each of these cases, the player has no option but to make the chord ripple from bottom to top; the notes

cannot all be sounded simultaneously and sustained equally.

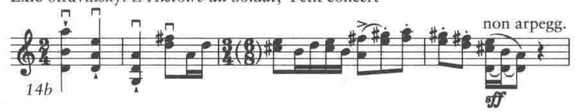
In Baroque music the word 'arpeggio' appears frequently; in other cases the performer must arpeggiate even without instruction, as in the Chaconne of Bach's second partita for solo violin. In most cases the strings are stopped as for simultaneously sounding multiple stops, although the notes sound contiguously. Geminiani (*The Art of Playing on the Violin*, 1751) gave 19 ways of arpeggiating a chord progression.

Occasionally, however, 18th-century composers specified that they did not want chords arpeggiated. Leblanc, in his Sonata in E♭, has a series of three-note chords together with the instruction 'Strike all three strings at once and always use a down-bow'. In op.4 no.6 Leclair *l'aîné* indicates that he wants three notes sounded together at the beginning of each group of oscillating notes. Pierre Baillot (*L'art du violon*, 1834) listed among the beauties of the violin the fact that it 'lent itself so well to harmony that it could produce broken chords like the harp and simultaneous chords like the piano – the first by means of arpeggios, the second by chords struck simultaneously'.

The extent to which the development of the Tourte bow changed the way in which chords were treated by violinists is, in fact, quite hard to quantify. The idea that the convex bow sticks of the Baroque period facilitated the playing of chords as chords (an idea promoted by the advocates of the unhistorical 'Bach bow'; *see* BOW, §I, 6) is a myth. If anything, early bows (which are lighter and have a greater separation between hair and stick at the frog) encourage the spreading of chords and, in comparison to the Tourte bow, are not so tolerant of the kind of force required to make more than two strings sound simultaneously.

It is in the 19th century that the practice seems to have developed (which can still be regarded as virtually standard) of breaking four note chords into two pairs, with the bottom pair held for only an instant and the top pair sustained. This method of execution is first unequivocally described by Spohr (1832) who writes of the excerpt shown in ex.5: 'In executing four-part chords, the

Ex.5 Spohr: *Violin-Schule* (1832)



bow, close at the nut, is placed firmly to the two lower strings and brought, with a strong impetus, over to the two higher; the stroke being steadily continued upon the upper notes for their full duration . . . . The two lower notes, although frequently written in crotchets or minims, can be, at most, of only a semiquaver's length'.

From Corrette's *Méthode* (1741) onwards nearly all cello treatises, with the exception of Crome's *Compleat Tutor for the Violoncello* (*c*1765), have something to say on the subject of fingering chords and double stops. Baumgartner (*Instructions de musique . . . à l'usage du violoncelle*, 1774) explains how to furnish self-contained chordal accompaniment for 'ordinary' (i.e. *secco*) recitative. The cello method of Jean-Louis Duport (*Essai*, 1806), which set the technical norm for modern cello playing, deals systematically with the subject of double stops. Solo cello repertory, too, has always made extensive use of chords and multiple stops. The Bach Suites (BWV 1007–12) are famous examples. Geminiani exploits the chordal possibilities of the cello in his six sonatas. Furthermore, Kodály's Sonata for solo cello, op.8 (1915), and the opening of the Elgar Cello Concerto (1919) stand out as memorable examples of the instrument's capacity for eloquent multiple stopping.

In the 20th century the methods of Auer, Flesch, Dotzauer and Piatti are standard texts for string players wishing to practise double stops. In the music of the 20th century complex multiple stops are common. The violin part of Stravinsky's *L'Histoire du Soldat* abounds in chords and double stops; Stravinsky is very specific about the articulations for these passages and frequently instructs the player to perform three-note chords without arpeggiation (ex.6).

PETER WALLS

Mumford, Jeffrey (*b* Washington DC, 22 June 1955). American composer. He studied at the University of California, Irvine with Peter Odegard, in Washington DC with Lawrence Moss, and at the University of California, San Diego, where his teachers included Bernard Rands. He went on to study with Elliott Carter in New York. His honours include awards from the Guggenheim and Rockefeller foundations and the Atlanta SO, and commissions from the Library of Congress (1986), the National SO (1995), Meet the Composer (1996) and the Fromm (1990) and Naumberg (1991) foundations.

Even in his earliest works, Mumford showed an interest in long, fanciful, lyrical lines of contrasting character, superimposed in layers of simultaneous activity. Later he began to use poetic titles to evoke cloud imagery, recognizing in his compositional style an analogy with cloud movement: a constant cycle of separation and recombination, dissipation and reformation, with layers moving at different speeds. Two orchestral works, *as the air softens in dusklight* (1994) and *within a cloudburst of echoing brightness* (1995) are important examples of how Mumford uses these techniques to create intense drama and lyricism.

DAVID FROOM

Mumma, Gordon (*b* Framingham, MA, 30 March 1935). American composer and performer of electronic music. He attended the School of Music (1952–3) and Institute of Science and Technology (1959–62) of the University of Michigan and studied composition, piano and the horn privately. As a composer and performer he co-founded and worked with the Cooperative Studio for Electronic Music in Ann Arbor (1958–66) and the ONCE Group (1960–68). Mumma also collaborated with Milton Cohen's Space Theater in Ann Arbor (1957–64) and in New York with the Merce Cunningham Dance Company (1966–74) and the Sonic Arts Union (from 1966). With these ensembles and as a soloist, he toured widely in the Americas, Europe and Japan. From 1973 to 1992, he taught at the University of California, Santa Cruz; he has also held numerous visiting lectureships, including Darius Milhaud Professor at Mills College (1981) and on the Cursos Latinoamericanos de Música Contemporanea (1975, 1977, 1981).

Mumma's musical development coincided with the rise of audio electronics, and he was a pioneer in exploring their musical applications. His reputation was founded on his contributions to electro-acoustic music, particularly his custom-built circuits for sound creation and manipulation. Mumma's 'cybersonic' circuitry modifies and interrelates live instrumental, ambient and electronically-produced sounds and their various transformations. Works employing these circuits resist the tendency of electronic music towards fixity; the electronics function instead to highlight the variability of live performance. *Hornpipe* (1967) joins cybersonic equipment with a French horn equipped with a double reed mouthpiece. According to Mumma 'What happens next in the piece depends entirely on the interaction of resonant characteristics of the space with the horn itself and the performer, and those interactions are mediated and expanded by the series of electronically resonant circuits that literally make a map of the acoustical resonances of the space'. Mumma investigated phase- and time-shifting effects in *Passenger Pigeon 1776–1976* (1976), *Pontpoint* (1966–80) and, most fully, *Stressed Space Palindromes* (1976–82), whose custom-built doppler-shift circuitry creates the impression of rapid changes in the size, shape and acoustic of the performance space. In the earlier *Conspiracy 8* (1970), he had also begun to explore the possibilities of the computer as a performance instrument, an investigation which has continued in, for example, *Than Particle* (1985) for percussion accompanied by a commercially available synthesis system.

Beginning in the 1980s, Mumma's work has increasingly involved conventional, acoustic instruments. After the effulgence of electronics, Mumma became interested in severely limiting the compositional material and trying to 'put that material together in relationships that sustain a larger form'. These instrumental works often employ classical structures as a reference point. The musical procedures of the *Eleven Note Pieces and Decimal Passacaglia* (1979) relate to those of the Baroque period, but with a 20th-century approach to pitch distribution. In the *Sixpak Sonatas* (1984–94), Mumma employs sonata form on the Scarlatti model, though with quite different content. His references to such structure give the listener a framework such that the form remains recognizable despite 'preposterous deviations'.

RICHARD S. JAMES/DAVID REVILL

Munajjim, al- [Yaḥyā ibn] (*b* Baghdad, 856; *d* Baghdad, 912). Arab courtier, poet and writer on music. He was a member of an intellectually distinguished family closely associated with the Abbasid court. His father, 'Alī ibn Yaḥyā al-Munajjim (*d* 888), had been a pupil of Isḥāq al-Mawṣilī, the most celebrated musician of his day, and had written a book about him. The one extant musical treatise by al-Munajjim is of considerable interest; unlike other theoretical works of the 9th and early 10th centuries, it does not attempt to expound Greek ideas but outlines certain basic features of the modal system in terms of the indigenous theory as elaborated by Isḥāq al-Mawṣilī. It is a vital source for any study of the modal structure of Arab art music from the 7th to 9th centuries, despite its brevity and, especially, incompleteness, qualities that have also permitted, if not encouraged, a considerable variety of interpretations.

OWEN WRIGHT

Münch [Munch], **Charles** (*b* Strasbourg, 26 Sept 1891; *d* Richmond, VA, 6 Nov 1968). French conductor and violinist. He first studied the violin at the Strasbourg Conservatoire, where his father was a professor of the organ, and was later a pupil of Carl Flesch in Berlin. In 1912 he went to Paris to study with Lucien Capet, but as a resident of Alsace he was conscripted into the German army for war service, 1914–18. He became a professor of the violin first at the Strasbourg Conservatoire (in 1919) and then at Leipzig, where he led the Gewandhaus Orchestra under Furtwängler, 1926–33. On his return to Paris in 1933 he financed his conducting début (which, he later said, he had been unable to afford sooner), and its success enabled him to concentrate on conducting. Based in Paris for the next 15 years, he played an increasingly important part in introducing new works into the programmes of the Lamoureux Orchestra, the Concerts Siohan and Concerts Straram and the newly founded Orchestre Symphonique de Paris. He played a similar role after taking over the direction of the Société Philharmonique de Paris in 1935 and the Société des Concerts du Conservatoire in 1937, and became admired for performances in which a sensitive feeling for tone-colour was balanced by a strong architectural sense. During these years, when he was also a professor at the Ecole Normale de Musique, he gave the first performances of many works by such composers as Honegger, Roger-Ducasse, Ropartz, Roussel and Schmitt.

Münch toured widely as a conductor in Europe, including concerts with the BBC SO in 1938, and in 1946 made his American début with the Boston SO and other orchestras. In 1949 he succeeded Koussevitzky as chief conductor of the Boston orchestra and remained until 1962, resuming the policy initiated there by Monteux in the 1920s of making the Boston SO the chief agent for the introduction of new French music to the American public, as well as of new works by Barber, Foss, Piston, Schuman, Sessions and others. He was welcomed in Boston for the spontaneity he brought to his performances, and under his direction the Boston SO maintained a high standard of brilliance and discipline that reflected his own dynamic personality. His many recordings with the orchestra include outstanding versions of Berlioz's *Grande messe des morts* and Ravel's *Daphnis et Chloé*. He returned to France after leaving Boston, and in 1967 shared with Baudo the formation and direction of L'Orchestre de Paris; he died while on tour with the orchestra in America. He wrote *Je suis chef d'orchestre* (Paris, 1954; Eng. trans., 1955/*R*).

MARTIN COOPER/R

Münch, Christian (*b* Freiberg, Saxony, 11 April 1951). German composer and conductor. The son of a family of Kantors, he was taught the trumpet and the organ by his father; he also took piano and clarinet lessons. At the Musikhochschule in Dresden (1971–6) he studied conducting with Rudolf Neuhaus, the piano with Günter Händel and composition with Manfred Weiss and Wilfried Krätzschmar. In order to familiarize himself with electro-acoustic composition, he attended Georg Katzer's masterclasses at the East Berlin Akademie der Künste (1983–5). After serving as répétiteur at the Dresden Staatsoper he became a freelance musician in 1979. He works regularly with the Gruppe Neue Musik Hanns Eisler of Leipzig, the 'musica-viva-ensemble dresden' and the Ensemble für Neue Musik Berlin. He has conducted more than 100 premières and many radio performances, and has given concerts throughout Europe. He teaches the performance practice of new music at the Dresden Musikhochschule.

His creative work as a composer is rooted in a deep love of the works of J.S. Bach, and takes its guidelines from the relationship of the parts to the whole in Bach's music. Münch rejects dogmatically applied processes of composition, instead seeking conspicuously independent musical phenomena, which are often interconnected by extremely refined variation techniques. Poetry often inspires his musical imagination, even in constructing purely instrumental works. Precise directions regarding a performer provide a basis for spatial effects, structural relationships and scenic components in his music. The

Piano Variations illustrate Münch's particular sensitivity towards colour processes produced by complex pitch groups and highly differentiated directions for performance, and they link serial tendencies to sonoristic elements. Analogies with noises in the actual world extend this sound spectrum in the electro-acoustic strata of his work *In schöner Trägheit*, while his orchestral piece *Dakrion ... Dakrion* continues the process of the nuancing of sound with cluster-like chord formations and micro-intervals.

CHRISTOPH SRAMEK

Münchhausen, Adolph [August], Baron von (*b* Brunswick, *c*1755; *d* Paris, 1811). German musical dilettante. He was chamberlain to the Duke of Brunswick-Lüneburg, from 1788 was in the service of the Prince of Prussia, and from 1799 served as a diplomat in Munich and Paris. He composed symphonies, chamber music and keyboard sonatas in a *galant* style similar to that of J.C. Bach, and his *Dix ariettes allemandes* contain folk material and show a talent for melodies. Gerber considered Münchhausen a good keyboard and glass harmonica player and a creditable composer, although elsewhere his works were criticized for their antiquated forms and ornamentation.

WORKS

Orch: 3 syms., op.1 (Berlin and Amsterdam, ?1791); 2 syms., op.5 (Berlin and Amsterdam, 1790); 2 concs., hpd/pf, op.7 (Paris, n.d.); 2 simphonies concertantes, opp.9–10 (Paris, n.d.); Symphonie périodique (Mainz, 1800)

Chbr: 3 sonatas, hpd/pf 4 hands, 2 as op.2 (Paris, 1793), 1 as op.3 (Paris, ?1793); 3 duos, vn, va, op.8 (Berlin and Amsterdam, 1797); Sonate, hpd/pf, va/fl, op.8 (Mainz, *c*1800); Grande sonate, pf, va, op.10 (Paris, n.d.), ed. U. von Wrochem (Mainz, 1994); Sonate, hp (Paris, n.d.)

Vocal: 10 ariettes allemandes, 1v, hpd/pf, op.4 (Berlin and Amsterdam, 1793)

HEINRICH SIEVERS

Münchheimer, Adam. *See* MINCHEJMER, ADAM.

Münchinger, Karl (*b* Stuttgart, 29 May 1915; *d* Stuttgart, 12 March 1990). German conductor. He studied at the Musikhochschule, Stuttgart, and at the Leipzig Conservatory (conducting under Abendroth). After working in Stuttgart as organist and choirmaster, he was first appointed conductor of the Hanover SO (1941–3). In 1945 he founded the Stuttgart Chamber Orchestra, one of the most successful chamber orchestras of its time, and remained its artistic director until 1987. With the orchestra he toured Europe, North and South America and East-Asia, and made numerous recordings, including admired readings of Bach's major choral works and Haydn's *The Creation*.

Münchinger's repertory was based on Bach, but extended to Classical composers, and to a modest range of music for strings by Britten, Berkeley, Hindemith and others. In 1966 he formed the Stuttgart Klassische Philharmonie (45 players) by supplementing the nucleus of the chamber orchestra to enable them to extend their repertory to larger works. Münchinger's conducting could be a little stiff, but at its best was characterized by elegance, spirit and clarity of texture.

WOLFRAM SCHWINGER/R

Munclinger, Milan (*b* Košice, 3 July 1923; *d* Prague, 21 July 1990). Czech flautist and conductor. He studied at the Prague Conservatory (1942–8) and the Academy of Musical Arts (1946–50) (conducting with Doležil, Dědeček, Talich and Ančerl, composition with K. Janeček, Krejčí and A. Hába), and at Prague University (musical sciences) (1946–51). During World War II he worked as an orchestral player in the Leipzig Gewandhaus Orchestra and at the opera in Breslau (Wrocław). He was the founder and from 1951 the artistic director of the ensemble Ars Rediviva with which he performed pre-Classical and Classical works. He was concerned with questions of the reproduction of historical music, which he edited for performance by the ensemble or for publication. He also appeared as a solo flautist and conductor. As a player of 17th- and 18th-century music Munclinger strove to combine historical sensitivity with a 20th-century approach. He participated in numerous recordings and was a frequent guest at European music festivals and concert halls.

ALENA NĚMCOVÁ

Mundharmonika (Ger.). *See* HARMONICA (i).

Mundry, Isabel (*b* Schlüchtern, Hessen, 20 April 1963). German composer. She studied at the Berlin Hochschule der Künste (1983–91), where her teachers included Frank Michael Beyer and Gösta Neuwirth, and in Frankfurt with Hans Zender (1991–4). From 1992 to 1994 she worked in Paris, where she completed a course in information technology and composition at IRCAM. After teaching in Berlin, she accepted a post at the

Frankfurt Musikhochschule; in 1996 she was appointed professor of music theory.

Mundry's compositions show the influence of intensive contrapuntal study and experimentation with small ensembles, characteristics that are taken to the limits of aural experience in *11 Linien* for string quartet (1991). A new stylistic path, initiated with *Le Silence – Tystnaden* (1993), led to the string quartet *no one* (1994–5), a turning point of her musical career. The score, based on harmonic and rhythmic proportions generated by computer software, gives each player an individual temporal level, creating a contrapuntal yet open polyphony. She developed this principle further in *Gezeiten* (1995), *words* (1995–7) and *Le voyage* (1996), large ensemble works performed partly without a conductor. With *Gesichter* (1997) and *Flugsand* (1990), Mundry integrated aspects of vocality, speech and space in her instrumental style.

CHRISTIAN THORAU

Mundstück (Ger.). *See* MOUTHPIECE.

Mundt, Johann Heinrich (bap. Cologne, 15 November 1632; *d* Prague, 18 March 1691). Bohemian organ builder of German birth. Mundt arrived in Bohemia before 1668 and learnt his craft under the Prague organ builder Hieronymus Artmann, whom he probably assisted with the instruments at St Benedikta and St Mikuláš in Prague. The first original work definitely attributable to him is the repair of the organ in St Tomáse in the Little Quarter of the city in 1668, in collaboration with Matthäus Köhler (or Kehler) of Svitavy. Mundt's most noteworthy instrument is that in the Týn Church, Prague, for which he received without charge the freedom of the city. The work failed to meet the approval of an apparently conservative board in its examination of the organ on 28 April 1673; for this reason, and also partly because of a fire in the church in 1682, Mundt made several modifications to the instrument, above all in its voicing. In March 1691, a few days before he died, Mundt purchased the house U zlaté židle (the Golden Seat) in Prague. He was buried in the crypt of St Jiljí.

Mundt may be counted one of the leading organ builders of Bohemia in the 17th century. His work combines elements of Bohemian and Italian organ building, and his progressive ideas form a bridge between the styles of the 16th–17th centuries and the 18th. The two dominant rank sections of his instruments are the principals and the flutes. Mutations and reeds are notably fewer. The *Rückpositiv* is based on the 2′ Principal. The 8′ Copula, with its thin-walled oak pipes, has a special function in Mundt's characteristic registration; this stop stands tonally between the principals and the flutes and underlines the basic character of the instruments. Tin pipes are prominent, and mixtures include the Tierce. Mundt's preferred form of frontage was a flat arrangement of pipes and decorative features.

FELIX FRIEDRICH

Mundy [Moondaye, Munday, Mondy, Mundie etc.], **John** (*b* ?London, *c*1555; *d* Windsor, 29 June 1630). English composer and organist, the elder of two sons of WILLIAM MUNDY. Some time after November 1580 he succeeded Richard Farrant as organist at St George's Chapel, Windsor, a post he held jointly with Nathaniel Giles from 1585; there is no basis for Hawkins's assertion that he also served as organist of Eton College. Mundy graduated BMus at Oxford on 9 July 1586 and DMus on 2 July 1624. The dedication of his *Songs and Psalmes* (1594) suggests that he had secured the patronage of Robert Devereux, 2nd Earl of Essex.

It is clear not only from Mundy's biography but also from the pieces themselves that his Latin music cannot have been written for the Roman rite. For instance, the text of his pseudo-liturgical Lamentations corresponds, with the exception of the Hebrew letters and introductory rubrics, with that of an anonymous motet in Susato's *Liber quartus sacrarum cantionum* (1547). However, his *Dum transisset*, a cantus firmus setting of the third Sarum respond for Easter Matins, does acknowledge tradition by providing breaks in the polyphony at 'aromata' and 'Jesum' to allow for the performance of the plainchant verse and doxology. Mundy's *Songs and Psalmes*, which follow the pattern of Byrd's 1588 volume of *Psalmes, Sonets and Songs*, provide further evidence of his conservative orientation. The choice of verse is old-fashioned, and although there are some conventional madrigalisms, his approach is always purely musical. His liking for sequential repetition is apparent here and in the boisterous verse anthem *Sing joyfully* for solo bass and four instrumental parts. Although many services and anthems are ascribed simply to 'Mundy', stylistic considerations can occasionally help to distinguish John's work from that of his father.

Mundy's keyboard music includes a set of eight variations on *Goe from my window*, seven of which are also attributed to Morley in the same source, and a rare descriptive fantasia which alternates sections marked 'Faire Wether', 'Lightning' and 'Thunder'. Four In Nomines for viol consort are definitely ascribed to him; a fifth, anonymous in Baldwin's Commonplace-Book, is probably his work also.

DAVID MATEER

Mundy [Moondaye, Munday, Monday, Mondy, Mondie etc.], **William** (*b c*1528; *d c*1591). English composer, father of JOHN MUNDY. He appears to have worked exclusively in London. In 1543 he succeeded Thomas Giles as head chorister of Westminster Abbey, and four years later he was employed as a conduct at St Martin Ludgate. Between 1548 and 1558, as parish clerk of St Mary-at-Hill where his father, Thomas, was sexton, he was responsible for regularly augmenting the parish choir with singers from the Chapel Royal. In 1557 Mundy and his father took part in the festivities held on the saint's day of the church of St Clement Danes. By 1559 he had become a lay vicar at St Paul's, for in that year he subscribed with other members of the cathedral's music staff to the basic tenets of the Act of Supremacy and Uniformity. In 1564 he was elected a Gentleman of the Chapel Royal where, according to a 17th-century pedigree of the Mundy family, he held the position of sub-dean. Presumably he died shortly before 12 October 1591, the date of his successor's appointment. Among the scribes and musicians who testified to Mundy's contemporary reputation was Robert Dow, whose partbooks include a Latin couplet that punningly compares the composer's moon with Byrd's sun.

The task of allocating to either William or John works attributed merely to 'Mundy' can be difficult, although the sources themselves usually provide some guidance. Thus the equivocally ascribed *O mater mundi* and *Sermone blando* can confidently be assigned to William, since their earliest appearance is in manuscripts compiled respectively in the 1570s and 80s. The problem becomes more acute, however, when dealing with the English service music, the sources of which date mainly from after 1625. William's most accomplished setting in this category, his *Magnificat* and *Nunc dimittis* 'in medio chori', harks back to the sonorities of pre-Reformation polyphony in its use of trebles and solo voices divided in gymel; the style, however, is basically syllabic with passages of homophony relieving the prevailing imitative texture at key points. The best of Mundy's full anthems are the substantial *O Lord, I bow the knees* and the ever popular *O Lord, the maker*; the latter is in the common bipartite form with optional repeat of the second section, while the former is through-composed. His *Prepare you, time weareth away*, though doubtless sung as an anthem, is really a carol. The importance of such secular forms to the development of English sacred music is apparent in Mundy's verse anthems, which are among the earliest essays in the genre. *Ah, helpless wretch*, for solo alto and five-part choir with instrumental accompaniment, combines elements of the consort song, the metrical psalm and the full anthem; *The secret sins*, attributed to Gibbons in some sources, is stylistically so similar that it must be Mundy's 'lost' anthem of that name.

The quality of Mundy's Latin compositions, like that of his vernacular output, is uneven. The earliest and least effective pieces are in the Gyffard Partbooks (*GB-Lbl* Add.17802–5), which include two masses based on various 'squares', and part of an *alternatim*, faburden-based setting of the processional psalm *In exitu Israel* for Easter Vespers, composed jointly with Sheppard and 'Mr birde'. On the other hand, his large-scale Marian antiphons *Vox patris* and *Maria virgo*, with their sure architectural sense and ornate yet vocally grateful lines, are among the crowning glories of Tudor polyphony; they fall into the traditional triple-and duple-time halves in which passages for reduced voices of various combinations alternate with sections for full choir. Mundy's extended psalm settings show a variety of approaches; the fragmentary *Miserere mei*, whose text draws primarily on a translation by the humanist Franciscus Vetablus, is structurally indebted to the votive antiphon, whereas *Adolescentulus sum* is characterized by continuous full treatment without metrical or textural contrasts. Stylistically many of these pieces belong to Elizabeth's reign, as do the non-liturgical *Sive vigilem* and *Beatus et sanctus*.

DAVID MATEER

Munerat, Jean le. *See* LE MUNERAT, JEAN.

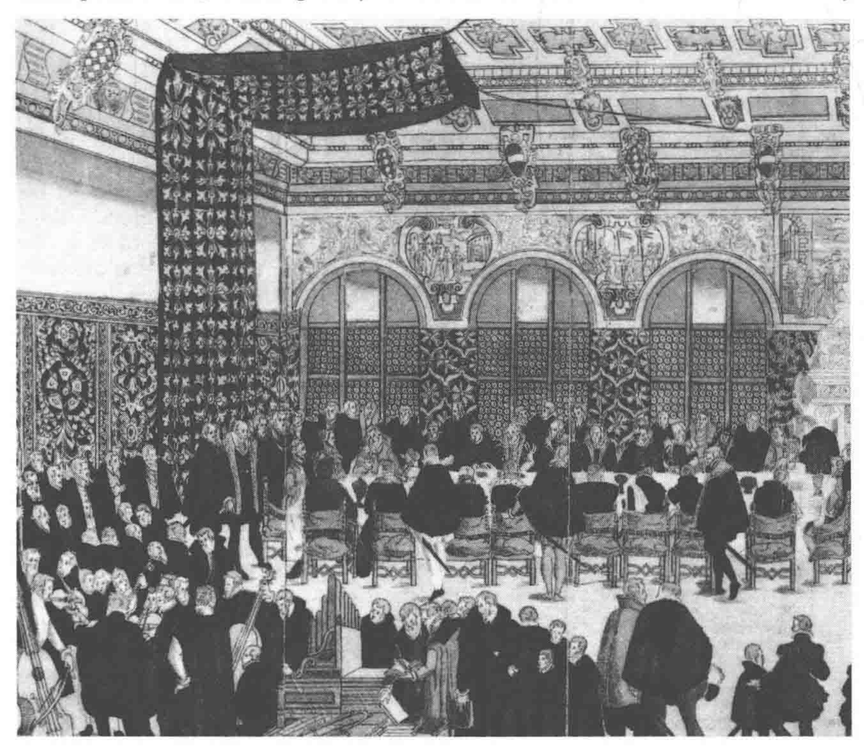
Munich (Ger. München). City in southern Germany, capital of the state of Bavaria.

1. Before 1651. 2. 1651–1806. 3. 1806–1918. 4. Since 1918. 5. Musical education and musicology.

1. Before 1651.

Munich was the seat of the dukes of Upper Bavaria from 1255, and the capital of the whole duchy from 1550. Records of early musical activity in the city are sparse. Since the parish schools taught singing as well as Latin and German, it may be assumed that music was heard at services in the oldest church in Munich, St Peter's (first mentioned 1225), from an early date. The parish of Munich was divided in 1271 and the little Marienkapelle became the parish church of Our Lady (Frauenkirche, or Unsere Liebe Frau). Gregorian chant (in the so-called Germanic dialect) is reported as being sung in both churches and in the Franciscan friary on the Anger at about this period. In 1384 St Peter's acquired a new, larger organ and the new Frauenkirche (built 1468–88) had a splendid instrument installed in 1491, which was mentioned by Zarlino (*Supplementi musicali*, 1588).

Equally little is known of the music enjoyed by the citizens. It is safe to assume that domestic music-making was carried on, but there is no extant record of it. The city normally maintained four pipers and one drummer for all public and private occasions; they were sometimes augmented by the court trumpeters, just as the city pipers helped out at court on occasion. It was not unknown for a city piper to be in the court service at the same time. The head of the Bavarian musicians' guild, the *Spielgraf*, was always one of the court trumpeters from the 15th century onwards. The city musicians did not in any case form a guild until after the Thirty Years War. The art of Meistergesang did not flourish to any notable extent in Munich, although Hans Sachs studied there under the linen weaver and Meistersinger Nunnenbeck.



The music of the court is the most fully documented: the trumpeters and drummers essential to the court's dignity are on record as permanent members of the household at an earlier date than the chapel musicians. Itinerant minstrels were well received. Music at the court of Munich began to flourish in the 15th century, when Conrad Paumann was the court organist. The first

evidence of a chapel of priests and clerks comes from the time of Duke Albrecht IV (1465/1467–1508); it included two Bavarian musicians who had formerly worked in London. Closer connections with the court of Burgundy were fostered by the engagement of Ludwig Senfl, previously a singer in, and director of, the court chapel of Emperor Maximilian I. The Kantorei of singers and instrumentalists which he built up was independent of clerical control; it provided secular entertainment as well as fulfilling religious duties and was capable of performing the large repertory of the age. After Senfl's death the standing of the chapel waned, but it revived with the advent of Lassus. The earliest record of his residence in Munich is 1557, and under him music in Bavaria rose to a high level of importance. He was officially appointed Hofkapellmeister in 1563 and vigorously set about reorganizing the Kantorei. From then on Munich was a musical centre of significance, with a chapel that could stand comparison with those of the emperor, the King of France and even the pope. The summit of its achievement under Lassus was the music for the wedding of Wilhelm, the duke's heir, and Renata of Lorraine in 1568. On this occasion the Kantorei was built up to larger numbers than ever before (fig.1).

The court of Munich was European in its musical outlook. Lassus, by birth a Walloon and educated in Italy, composed in all the national styles of the age and directed an ensemble which originally had a strong Netherlandish contingent but gradually recruited more and more Italians. Duke Albrecht V (1550–79) founded Munich's reputation as a home of the arts, not only by his generous endowment of music at court, but also by his collections, which form the nucleus of the present-day Bavarian state library, the state art collections and other institutions. Adam Berg opened his printing house in 1564 and founded Munich's reputation as a publishing centre, particularly with his music publications, including many editions of Lassus's works. Munich had much to offer to the musicians it attracted from abroad: Andrea Gabrieli and his nephew Giovanni were among those who played under Lassus. For two years after 1568 Duke Albrecht and his son maintained a chapel each, the latter employing at his residence in Landshut some of the musicians originally engaged to augment the chapel for his wedding. As this proved prohibitively expensive, Wilhelm had to give up his chapel, and from then on the Munich Kantorei continually oscillated between reductions and increases in numbers until the accession of Duke Maximilian (1597), when the musical establishment was finally cut and the great efflorescence of Bavarian music ended. Lassus had succeeded Ludwig Daser as Kapellmeister; his own successors, up to the middle of the 17th century, were his deputy Fossa, his son and grandson, both Ferdinand, Giovanni Battista Crivelli and Giovanni Giacomo Porro.

The church music of 16th-century Munich did not flourish with the music at court. Polyphony with instrumental accompaniment was heard in the Frauenkirche in the mid-15th century, but it was rare before the end of the century, not least for financial reasons. On festive occasions the churches had to help each other out or call on the court musicians or the city pipers if they wanted to perform polyphonic music, and great events like the funeral of Albrecht V in 1579 were accompanied only by choral monody. The reform of church music, after the introduction of the Roman rite laid down by the Council of Trent, began at the court in 1581, with the parish churches following suit in the early 17th century, and eventually polyphony became the rule in all the churches, though it did not gain a footing in St Peter's until about 1635.

Religious life took on new impetus with the arrival of the Jesuits, whom Albrecht V invited to Munich in 1559. Before the end of the year they had opened a grammar

1. Music accompanying the wedding feast of the marriage of the future Wilhelm V to Renata of Lorraine, 1568: coloured etching by Nikolaus Solis, from Hans Wagner's 'Kurtze doch gegreundete beschreibung des ....Hochzeitlichen Ehren Fests' (Munich: Alban, 1570)

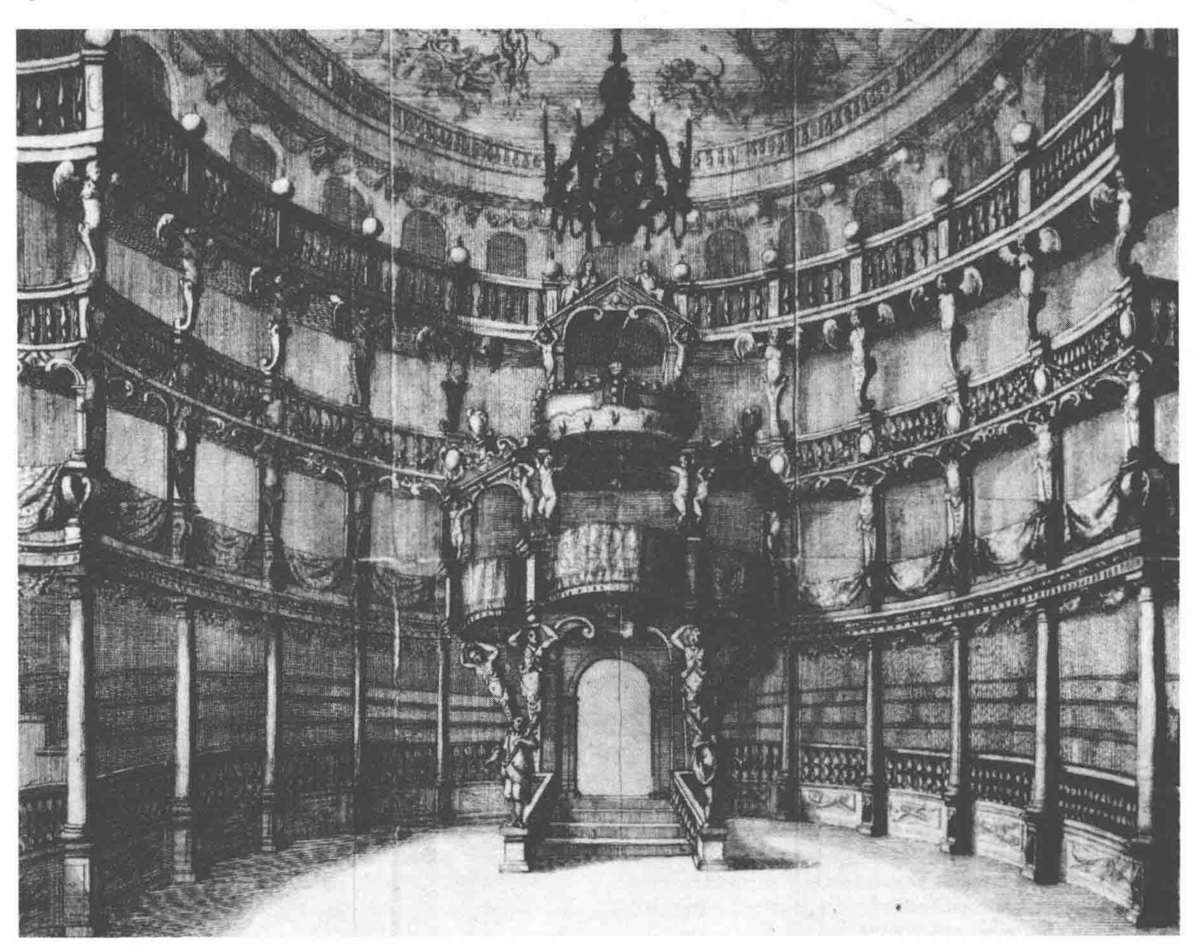
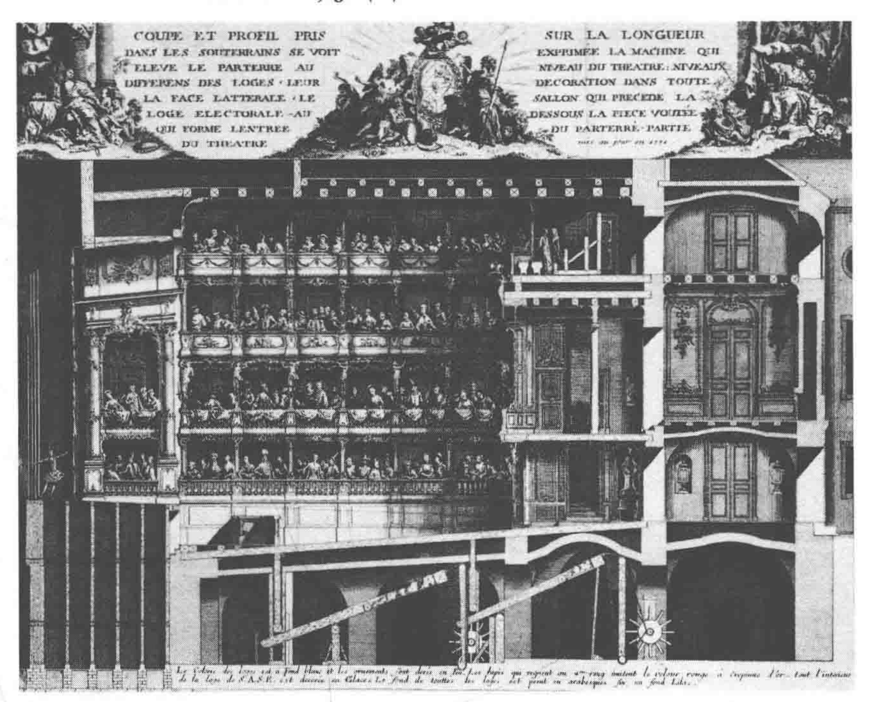
school and an educational institute for poor scholars; they recruited court musicians to teach music. The free tuition and the academic standards of the Jesuits immediately deprived the parish schools of pupils, fees and choirboys. The Jesuit church, St Michael's (consecrated 1597), became the centre of church music in Munich. The Jesuits' Latin plays, with casts of hundreds, also attracted attention away from the plays performed in the Rathaus by the city poet and his pupils, travelling players or craftsmen (*Esther* 1567, *Samson* 1568, *Cenodoxus* 1607). Lassus probably composed choruses for some of the Jesuit plays.



The Corpus Christi processions held since 1343 had become occasions of great splendour, for which the court

made itself solely responsible, providing the costumes, paying most of the cost of the ostentatious decorations and employing the full strength of the court musicians, beside whom the four city pipers could not hope to shine. In this way the music of the townspeople and of the two parish churches was overshadowed by that of the court and the Jesuits, and was unable to develop independently. The Thirty Years War, which reduced the whole of Germany to cultural stagnation, also hindered the advent of Italian opera in Munich, so that the next stage in the musical history of the city did not begin until the second half of the 17th century.



2. 1651–1806.

(i) Opera. Music at court benefited greatly from the enthusiasm of Henriette Adelheid of Savoy, the wife of the elector's son and heir, Ferdinand Maria. Concerts, musical theatre and ballet were performed, including Maccioni's dramatic cantata *L'arpa festante* (1653) and *La ninfa ritrosa* (perhaps by Zambonini, 1654). In 1654 the Opernhaus am Salvatorplatz (also known as the Salvatortheater) was completed (fig.3); it was not closed until 1799, by when it had fallen into disrepair. The magnificent productions mounted there, under the direction of the Hofkapellmeister Kerll, put the Munich court opera on a level equal to any in Europe. Kerll's own operas and those of his successor Ercole Bernabei (Hofkapellmeister 1674–87) are lost, but some scores by Steffani (Kammermusikdirektor 1681–8) and Giuseppe Antonio Bernabei (Hofkapellmeister 1688–1732) have survived. Changes resulted from the appointment of Elector Maximilian II Emmanuel (1680–1726) as governor of the southern Netherlands and from the War of the Spanish Succession (1701–14): the electoral chamber musicians, under Pietro Torri and later E.F. dall'Abaco, followed the elector to Brussels and to exile in France; virtually the only music still performed at court in Munich, under G.A. Bernabei, was at religious services. During the Austrian occupation opera was performed in German by travelling companies, augmented by such individual court musicians as Schuechbauer. Meanwhile at the elector's court in the Netherlands a taste for the French style in the manner of Lully, which had already gained ground in Munich, finally prevailed. Prominent composers of instrumental music of the early years of the century included, besides dall'Abaco, Brescianello, Pez and Mayr.

On Maximilian's return in 1715 a number of French musicians also came to Munich, among them Jacques Loeillet who remained in the service of the court until 1732. Music and drama at court revived in the years up to 1726, with such sumptuous productions as the operas by Torri (Hofkapellmeister between 1732 and 1737) and

Albinoni performed on the occasion of the marriage of the heir apparent, Karl Albrecht (1722), with magnificent sets by Giuseppe Galli-Bibiena. During the electorate of Karl Albrecht (1726–45; emperor from 1742) musical pursuits at the court continued, with a distinct return to the Italian style. They were interrupted once again by the unhappy outcome of the War of the Austrian Succession (1741–5) and the two-year exile of Karl Albrecht, but under Maximilian III Joseph (1747–77), a zealous patron of music, the court musicians were again brought up to full strength after a few years. The elector, himself a musician and a composer, preferred Neapolitan opera. Besides the composers who were in the elector's service, Porta (Hofkapellmeister 1737–55), Ferrandini, Francesco Peli, Aliprandi and Bernasconi (Hofkapellmeister 1755–84), music was commissioned from Sales, Antonio Tozzi, Traetta, Sacchini and others. Germans who wrote for the stage included J.A. Camerloher, F.C.T. Cröner, Joseph Michl, Naumann and the elector's sister, Maria Antonia Walpurgis of Saxony. The only Gluck work heard, apart from performances by travelling companies, was a much-adapted *Orfeo* given during Carnival 1773. On the other hand Mozart's *La finta giardiniera* (Salvatortheater, 1775) was commissioned for the programme of *opera buffa* initiated at his own risk by the Intendant of court music, Count Seeau. The Residenztheater (fig.4) in the electoral palace, also known as the Cuvilliéstheater, was opened in 1753; it was destroyed in World War II but rebuilt on the original pattern and reopened in 1958.

The elector's cousin Duke Clemens of Bavaria (*d* 1770) also maintained his own ensemble of singers and instrumentalists at this period; he patronized the education of gifted musicians generously and had close ties with the Jesuits. Some of his musicians, Holzbogen, Kirmayr, Vogl and Haindl, belonged to a circle of Munich composers who were overshadowed by the Mannheim composers gathered by Carl Theodor. Despite such honoured names as Cannabich and Toeschi, the Mannheim composers did not reach their former standing in Munich; they did not create anything equivalent to the Viennese Classical tradition, but with Winter, Danzi and Fränzl they prepared the ground for the Romanticism of Weber and Spohr. In 1787 Carl Theodor banned Italian opera, which had reached its peak with Mozart's *Idomeneo* (1781). Thereafter the repertory consisted predominantly of German translations of French and Italian operas, and of Singspiele by Schubaur, Gleissner, Destouches and Winter. Count Seeau, who encouraged German theatre, ended his 45 years in office in 1799, leaving his successor, Babo, to cope with the results of his indescribable mismanagement. In the opening years of the new century music at the court laboured under stringent economies and the 'French requisition' of scores and parts. In succession to Johann Friedrich Eck, Carl Cannabich, a skilful orchestral trainer, became the last electoral director of music in 1800.

(ii) Church music. The principal institutions were the Jesuit college and church of St Michael and the associated Seminarium Gregorianum, which was famous for its music teaching. Court musicians were among the teachers, and the students swelled the ranks of the chorus in the court opera. The greater part of the music for the Lenten meditations, held annually until 1774, was by Bavarian composers. Franz Xaver Murschhauser was the most important of the choirmasters and composers of church and organ music at the collegiate church of Unsere Liebe Frau. Of his successors, Christoph Hirschberger (in office 1742–56) and Joseph Adam Obermiller (1757–69) should be mentioned for their church music and their sacred dramatic works. The music at the older parish church of St Peter was reorganized from 1649 and a school of singing and instrumental playing was founded. The inventories of 1655 and 1662 testify to a comprehensive repertory, from Senfl to Kerll. Victorin and Pez were the best-known musicians at St Peter's. Musical standards were high, particularly in the 18th century, at some of the

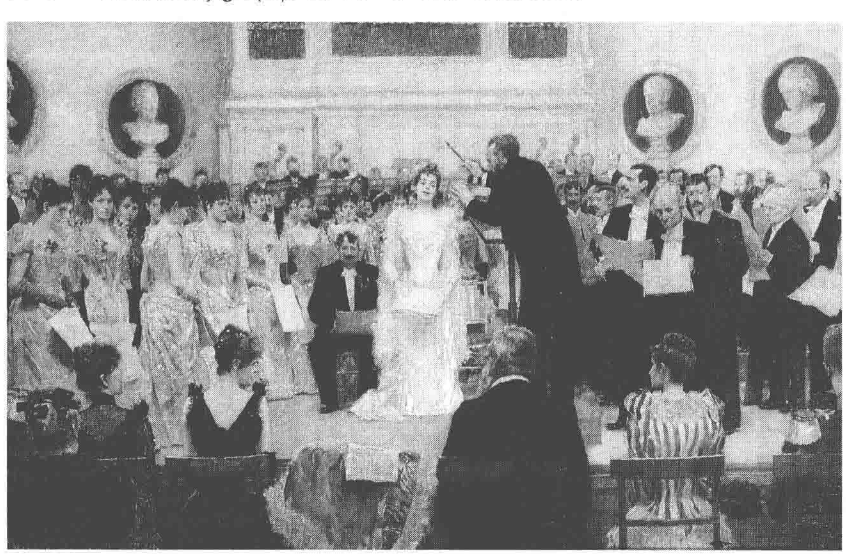
5. Musicians in the gallery of the Kongregationssaal (now the Bürgersaal), Munich, built by Johann Georg Ettenhofer to plans by Giovanni Antonio Viscardi, 1709–10: engraving by Johann August Corvinus after Matthias Diesel, c1720

religious houses in the city: those of the Augustines, Hieronymites and Franciscans, and the nunneries on the Anger and the Ridler Regelhaus among the female foundations. The court heard sacred music in its chapel and, on feast days, also in the Theatinerkirche (later St Kajetan), built in 1675. The scope of the repertory is indicated by a thematic catalogue compiled *c*1810–40, which lists the names of 89 composers. Sacred oratorios by Pampani, Bernasconi, Jommelli and Mysliveček were among those performed during Lent in the court theatre or in the chapel.

3. 1806–1918.

(i) Opera. During the first decades of the 19th century there were many new musical enterprises in the city, but at the same time the standard of public taste declined. The 1787 ban on Italian opera was lifted in 1805, and that genre dominated the repertory again from 1816. The dilapidated Salvatortheater, which had closed in 1799, was pulled down in 1802; the Hof- und Nationaltheater designed by Karl von Fischer, completed in 1818, was rebuilt in 1825 (fig.6) after a fire (and again in 1963, having been destroyed in 1943). The most notable works to receive their first performances in the Residenztheater at this time were Weber's *Abu Hassan* (1811) and Meyerbeer's first opera *Jephthas Gelübde* (1812). Both composers remained in Munich for some time, Weber hoping in vain, like Mozart before him, for a conducting post. At the Isartortheater (opened 1812), under the musical direction of Peter von Lindpaintner, Singspiele and farces in the Viennese manner by Müller, Röth, Lindpaintner, Weigl and others were performed. It was closed by Ludwig I in 1825, in the interests of more lofty cultural aspirations.

After Winter's death in 1825 the direction of the operas was undertaken by Ferdinand Fränzl (retired 1826) and Joseph Stuntz. Partly because of the inefficient division of responsibility between Stuntz and the Konzertmeister Moralt, standards steadily dropped until 1836 when, under the excellent Intendant Küstner, Franz Lachner took on the fundamental reorganization of the repertory and, as a first-rate orchestral trainer, restored the court ensemble to its former heights. His own opera *Catarina Cornaro* was a great success. He also directed new works by Spohr, Lortzing, Marschner, Gounod and Verdi, and in spite of a personal lack of sympathy for Wagner's work he conducted the first performances there of *Tannhäuser*



and *Lohengrin*. In 1864 Wagner himself was invited to Munich by Ludwig II, but his plans for the reform of the Musikschule and the Wagner Festival Theatre designed by Semper did not materialize. Wagner's extravagant style of living, at the king's expense, and the offensive behaviour of his supporters led to his having to leave the city after 18 months. Ludwig remained, notwithstanding, the chief patron of the composer and of his work. The first performances of *Tristan und Isolde* (1865) and *Die Meistersinger* (1868), conducted by Hans von Bülow, were outstanding triumphs for Wagner. Against the composer's will the king ordered the first performances of *Das Rheingold* (1869) and *Die Walküre* (1870), conducted by Franz Wüllner. Lachner, virtually ousted from office when Bülow arrived, retired in 1868; but it was he who instigated the award of the Order of Maximilian to Brahms and Wagner in 1873.

On Hermann Levi's appointment as Hofkapellmeister in 1872, Munich became one of the principal centres for the performance of Wagner's music dramas, a tradition that was carried on by such men as Zumpe, Mottl and Fischer. Richard Strauss and Kienzl also spent short periods as young men conducting the Munich opera and, like Levi, played a part in the Mozart renaissance. The Munich opera festival dates from 1875, when the Intendant Karl von Perfall organized a 'festival summer' with operas by Mozart, Wagner and others. The true, eventual founder was Ernst von Possart, under whom the Prinzregententheater was opened for festival performances in 1901. The last royal Generalmusikdirektor was Bruno Walter, from 1913 to 1922. The climax of his memorable term of office was the première of Pfitzner's *Palestrina* (1917). The Staatstheater am Gärtnerplatz, opened in 1865, was devoted to operetta.

(ii) Concerts. In 1811 some of the court musicians formed the Musikalische Akademie, which still exists, and organized subscription concerts. The lack of a dominating personality as conductor and public preference for the entertaining and undemanding led to a marked decline in the number of these concerts in the 1820s, until they were abandoned altogether in 1832. By contrast the evenings of music and recitation organized by private societies giving themselves such names as 'Harmonie', 'Frohsinn' and 'Museum', at which famous virtuosos like Hummel and Moscheles could be heard, were always well attended. Secular choral singing was cultivated by male choral societies; at least 30 were founded by 1874, including the Liederkranz (1826), Bürgersängerzunft (1840), Liedertafel (1841) and Akademischer Gesangverein (1861). In addition to the Musikalische Akademie, revived by Lachner, the Oratorienverein, founded by Karl von Perfall in 1854 and conducted for many years by Rheinberger, the Lehrergesangverein (1878) and the Porges'scher Chorverein (1886) all organized large-scale choral concerts. Among the amateur orchestras the two outstanding were the Wilde Gung'l, founded 1864 and directed by Franz Strauss from 1875, and the Neuer Orchesterverein (1879). Concerts were given by the Musikalische Akademie in the Odeon, opened in 1828 (burnt down in 1944), and in 1893 the private Kaim orchestra inaugurated another series of symphony concerts which proved very popular and took place from 1895 in the Tonhalle (also destroyed in 1944). The conductors of this orchestra included Zumpe, Löwe and Weingartner. Mahler conducted the orchestra in the first performances of his Symphony no.4 (1901) and Symphony no.8 (1910). Towards the end of the 19th century the school of Munich composers led by Ludwig

7. *Hermann Levi conducting Haydn's 'Creation' in the Odeon, Munich: painting by R. Reinicke (Stadtmuseum, Munich)*

Thuille began to gain a reputation which spread beyond the city.

(iii) Church music. The secularization of the monasteries in 1803 was a setback for church music, but from 1816 Schmid and Ett at St Michael's set a shining example in their revival of classical vocal polyphony and the resumption of the south German tradition of sacred instrumental music, especially the work of Michael Haydn. In the Frauenkirche, raised to cathedral in 1823, the choirmaster Anton Schröfl and his son Johann Baptist were equally diligent in pursuing both traditions. The Cecilian reforms in the second half of the century had a far-reaching effect on the repertory. The royal Vokalkapelle performed in the newly built court Allerheiligenkirche from 1837. It was conducted by Winter, Aiblinger and Stuntz before its reorganization in 1864, when it came under the baton of Franz Wüllner, who was replaced in 1877 by Rheinberger, much esteemed as a composer of church music. At their popular soirées the royal choir also performed some secular works. Danzi and Winter were among the first to compose music for the Lutheran church established at the court in the early years of the century. From 1843 to 1854 the Lutheran Matthäuskirche boasted one of the leading organists of the day in J.G. Herzog. A synagogue was opened in 1826 and in its early years commissioned compositions from Stuntz and Ett.

4. SINCE 1918. The representatives of the Munich school active in the early years of the century, such as Courvoisier, von Franckenstein and von Waltershausen, were succeeded by Haas, Kaminski and others such as Fritz Büchtger, Karl Höller, Harald Genzmer, Günther Bialas, Wilhelm Killmayer and Josef Anton Riedl, while Carl Orff and Karl Amadeus Hartmann achieved international standing. Under Knappertsbusch and Krauss the Munich opera built up a resounding reputation, specializing in the works of Richard Strauss, whose *Friedenstag* and *Capriccio* had their first performances in Munich (1938 and 1942). Until the Nationaltheater, destroyed in 1943, was reopened in 1963, the opera company played in the Prinzregententheater. Its principal conductors have included Ferdinand Leitner, Georg Solti, Ferenc Fricsay, Rudolf Kempe, Joseph Keilberth, Wolfgang Sawallisch, Peter Schneider and, from 1998, Zubin Mehta. The Staatstheater am Gärntnerplatz is devoted mainly to comic opera, operetta, ballet and musicals; musical stage works can also be heard occasionally in such other theatres as the Schauspielhaus and the Deutsches Theater. The popular puppet theatre has a tradition dating from 1859 and performs works by Haydn, Mozart and Orff.

In 1924 the Kaim orchestra became the Munich PO and it is now financed by the city. Conductors have included Pfitzner, Hausegger, Kabasta, Rosbaud, Kempe, Celibidache and, from 1999, James Levine. Orchestras founded since 1945 include the Bavarian RSO (conductors Eugen Jochum, Rafael Kubelík, Colin Davis and, from 1993, Lorin Maazel), the Radio Orchestra, the private Kurt Graunke Orchestra, later the Munich SO (which runs its own subscription concerts) and the Munich Chamber Orchestra (Hans Stadlmair and, from 1995, Christoph Poppen). The Philharmonic Choir and the Bach Choir (Karl Richter and, from 1982, Hanns-Martin Schneidt) are the best-known choral societies; the Bach Orchestra is associated with the latter.

The Capella Antiqua (disbanded 1981) and the Studio der Frühen Musik (disbanded 1977) specialized in medieval music. More recently several groups have specialized in Renaissance and Baroque music, among them the Ensemble Estampie, the Gruppe für Alte Musik, the Lassus-Kreis, the Carissimi-Consort and Concerto Vocale. The vocal ensemble Die Singphoniker has gained an international reputation in a wide repertory. Christian Döbereiner and the Bachverein (whose conductors included Karl Marx and Carl Orff) set new standards in the performance of Baroque music. The concerts and recordings of the Musica Bavarica chamber orchestra specialize in the Bavarian musical tradition since the 17th century. There are also several chamber music societies in the city. The Association for Contemporary Music founded in 1929 was re-formed in 1945 as the Studio for New Music. In 1946 Karl Amadeus Hartmann founded the internationally famous Musica Viva concerts, which champion the contemporary cause with exemplary performances. The Via Nova choir also specializes in contemporary music. In 1988 Henze founded the Münchner Biennale, a festival of music theatre held every two years. The music department of the Bayerische Akademie der Schönen Künste organizes events and concerts, often of new music.

The cathedral choir became one of the leading German *a cappella* choirs under Ludwig Berberich. Under his successors Johannes Hafner, Max Eham and Karl-Ludwig Nies it has concentrated on carrying out the changes in its role resulting from the liturgical reforms of the Second Vatican Council, which have restricted the old tradition of orchestral masses. Other Catholic churches where music is important are St Michael, St Peter, St Kajetan and St Ludwig. Lutheran church music is represented by the Bach Choir, the motet choir of the Matthäuskirche and other bodies, which also include the Catholic repertory.

5. MUSICAL EDUCATION AND MUSICOLOGY. The theory and practice of music are taught at the Städtische Singschule (founded 1830), the Richard-Strauss-Konservatorium (formed from the Trappsches Konservatorium in 1957), and the Staatliche Hochschule für Musik in München (previously the Königliche Musikschule, 1846–92, and the Akademie der Tonkunst, 1892–1946). The chair of musicology at the university has been held by Adolf Sandberger, Rudolf von Ficker, Thrasybulos Georgiades and (from 1973) Theodor Göllner; von Ficker, Georgiades and Göllner were also chairmen of the Musikhistorische Kommission of the Bayerische Akademie der Wissenschaften, which is responsible for the complete Lassus edition. The Gesellschaft für Bayerische Musikgeschichte, founded in 1958, is devoted to research and publication (Denkmäler der Tonkunst in Bayern). Two more recent research institutes are the Richard-Strauss Institut der Stadt München (1983) and the Orff-Zentrum (1990). The complete edition of Wagner's works is appearing under the auspices of the Bayerische Akademie der Schönen Künste. The music collections of the Bayerische Staatsbibliothek and the Städtische Musikbibliothek contain abundant source material for research and performance. Other notable collections include the Theatermuseum, the large municipal collection of instruments in the Stadtmuseum and the instrument collections in the Deutsches Museum and the Nationalmuseum. Major exhibitions have been mounted (some with comprehensive catalogues) on Orlande de Lassus (1982 and 1994), Richard Strauss (1964 and 1999), Max Reger (1968), Hans Pfitzner (1969), Carl Orff (1970 and 1978) and Werner Egk (1971).

HORST LEUCHTMANN (1), ROBERT MÜNSTER (2–5)

Munktell, Helena (Mathilda) (*b* Grycksbo, Dalarna, 24 Nov 1852; *d* Stockholm, 10 Sept 1919). Swedish composer. Her father was a talented amateur musician and a successful industrialist. Her mother was well educated and arranged lively salons in Stockholm. Munktell was taught the piano by Carl Fexer and composition by Ludvig Norman, Johan Lindegren and Joseph Dente. She studied in Paris (1877–9) and, until about 1910, spent every winter there. Composition, which she studied with Benjamin Godard (1885–92), gradually became her main interest. About 1890 she met d'Indy, with whom she continued her studies (*c*1892–1910). She became a member of the Swedish Royal Academy of Music in 1915.

Munktell made a name for herself as a composer in Stockholm in 1885 with songs such as *Sof, sof* and *Ater i Sorrento*, which showed an individual style (with some French influence) and were well received. During the 1890s she was especially productive, composing songs and choral works. Her ballad for baritone and orchestra *Isjungfrun* (*Vision polaire*), composed in 1889, was performed in Paris at the Salle Pleyel and her comic opera *In Firenze* was given in Stockholm in 1889 and 1891.

WORKS
(*selective list*)

Stage: In Firenze (oc, 1), Stockholm, 1889

EVA ÖHRSTRÖM

Muñoz Molleda, José (*b* La Línea de la Concepción, Cádiz, 16 Feb 1905; *d* Madrid, 26 May 1988). Spanish composer. In 1922 he began his studies at the Madrid Conservatory, where his teachers included Antonio Cardona and José Tragó (piano) and del Campo (composition); he was also advised by Respighi. In addition he studied painting at the Escuela Central de Bellas Artes de S Fernando, Madrid. He won many prizes including the Rome Prize (1934) and the National Prize of Spain (1951). He was elected a member of the Real Academia de Bellas Artes de S Fernando in 1961 and the Real Academia de Bellas Artes de S Carlos, Valencia, in 1973.

In his youth Muñoz Molleda greatly admired the music of Beethoven, Falla and Debussy, though he avoided their direct influence. His music is traditional in style, homogeneous and well-balanced, recalling Ravel in the Piano Concerto. He also cultivated an Andalusian picturesqueness. His later compositions are of a religious nature, and the influence of Gregorian chant can be heard.

WORKS
(*selective list*)

Dramatic: La niña de plata y oro (ballet), 1936–7; La rosa viva (ballet), 1954; film scores

GUY BOURLIGUEUX

Munro, Alexander (*fl* Edinburgh, 1732–40). Scottish composer. Hawkins gives his first name as Alexander and states that he was 'a native of Scotland'. On internal evidence of his *Recueil des meilleurs airs ecossois . . . avec plusieurs divisions et variations* (Paris, 1732), he was born about 1700, probably studied at a university on the Continent, was a gifted amateur, was closely in touch with fashionable Edinburgh in the 1720s, and was familiar with Paris, but not resident there to check his printer's proofs. All these things point to his identity with Alexander Monro (1697–1767), professor of anatomy at the University of Edinburgh from 1720.

His *Recueil*, a set of 12 pieces for transverse flute (or violin) and continuo, launched a chamber music genre that Johnson has called the 'variation sonata'. Here traditional Scots airs are transformed into a succession of Italian dances, blending Scots-fiddle variations with the forms of Corelli's *da camera* sonatas (no.7 is ed. in Johnson, 1984). Munro's work had a profound influence on his Scottish contemporaries and on Geminiani, whose Scots-tune sonatas in *A Treatise of Good Taste* (London, 1749) are a continuation of the genre. Munro's sonatas circulated in Scotland until the end of the 18th century, though the collection was never reprinted. He also wrote a set of variations on *Widow are thou waking* for violin (1740, *GB-En* 2084). His music is imaginative and tasteful but technically uneven, especially in its handling of Baroque harmonizations of the Scots airs; several of the sonatas, however, deserve revival.

DAVID JOHNSON

Munrow, David (John) (*b* Birmingham, 12 Aug 1942; *d* Chesham Bois, Bucks., 15 May 1976). English player of

early wind instruments. After leaving school he spent a year teaching in South America, then read English at Pembroke College, Cambridge (1961–4), where he founded a group to perform early music. He subsequently spent a year studying 17th-century music at Birmingham University. His year in South America had given him experience of folk music, which he heard and played on the descendants of earlier instruments, and was a valuable foundation for his later studies of the playing techniques of those earlier instruments. He built up an extensive collection of folk and early art instruments and produced a set of records with a companion book on instruments of the Middle Ages and Renaissance.

Munrow was soon in demand as a recorder player, and formed his own recorder consort. In 1967 he began part-time lecturing at Leicester University, and in 1969 started to teach the recorder at the RAM. He made many broadcasts, and his radio series 'Pied Piper' (1971–6) was very successful. In 1967 he formed the Early Music Consort of London (see illustration), with James Bowman, Oliver Brookes (viols) and Christopher Hogwood (harpsichord), who were joined in 1969 by James Tyler (lute). The consort was first heard in London in 1968 but had given its début in Leuven in 1967. Besides regular concerts it provided 'period' music arranged and composed by Munrow for television and films, and gave the first performances of several works, including Peter Dickinson's *Translations* (1971) and Lutyens's *The Tears of Night* (1972). Peter Maxwell Davies scored for the group as a stage band in his opera *Taverner* (1972).

The consort, both in its original format and augmented by extra instruments and voices, gave polished and thrilling performances of medieval and Renaissance music, often in programmes based on broad themes such as Kings and Queens, Music from the Royal Courts of Europe or Music of the Americas. Its style was considered brash by some critics, but it brought to enthusiastic audiences a large, important repertory of music previously regarded primarily as the domain of scholars. Munrow's exuberance guided and dominated the group's work and his industry and musicianship were responsible for many attractive and well-balanced performances and recordings. When he took his own life at the age of 33 he was already regarded as one of the most influential musicians of his generation. His comprehensive collection of books, purchased by Ian Wilson after his death, is now based in the RAM, London.

DAVID SCOTT/GINA BOAKS

Münster, Joseph Joachim Benedict (*b* Gangkofen, nr Salzburg, ?30 Jan 1694; *d* after 1751). German composer and theorist. He matriculated at Salzburg University in 1710, but in 1712 his father's death and his mother's immediate remarriage ended his studies. By 1715, the year he married, he was working as schoolmaster and choirmaster at the church of St Zeno in Bad Reichenhall. He later changed his profession from teaching to law, while retaining his post as choirmaster. As well as several volumes of church music, he produced a manual of sight-singing, *Musices instructio*, which was published in the 1730s and went into nine editions, and a plainsong manual, *Scala Jacob*, in 1743.

Münster was one of the first composers to publish simple church music for parish choirs in the style

Early Music Consort of London: (from left to right) Christopher Hogwood (harp), David Munrow (flute), James Tyler (lute), Oliver Brookes (rebec) and James Bowman

popularized by JOHANN VALENTIN RATHGEBER from 1721 onwards. The psalms in both collections are through-composed, and neither solo nor tutti parts present the performers with many difficulties. However, despite the description of his style as 'comico-ecclesiastical' on the title-page of his 1743 Vespers, the general effect of the music is dull. He had little talent either for musical organization – most of his psalm settings are rather shapeless – or for writing good tunes, especially in choral passages; even in the longer psalms of 1729 his tuttis consist largely of repeated-chord declamation. Münster is unusual among composers of church music at this time in giving a tempo marking for each psalm: almost all are very slow.

As a theorist, Münster was old-fashioned. The *Musices instructio*, intended, according to the preface, to enable young people to learn singing as easily as possible, is based on the hexachord system, and is redolent of an earlier century.

WORKS

all published in Augsburg

op.	
1	Sacrificium vespertinum (1729), vesper psalms
2	VIII lytaniae... cum IX antiphonis (*c*1735)
3	Epithalamion mysticum (1740), 60 German arias
4	Helicon sacer (1743), 4 ant, 5 ps for Vespers
?5	Solsequium (*c*1745), concs.
6	Fons signatus (1751), 7 lit, 1 Te Deum

Musices instructio ... Kürtzist doch wohl gründlicher Weg ... die Edle Sing-Kunst ... zu erlernen (?1732 [*GerberNL*], 9/1781)

Scala Jacob ascendendo et descendendo (1743, 2/1756)

ELIZABETH ROCHE

Münster, Robert (*b* Düren, 3 March 1928). German music librarian and musicologist. He studied musicology with Rudolf von Ficker and Georg Reichert at Munich University (1949–56); at the same time he continued his private studies in music theory (with H.W. von Waltershausen) and the piano. He took the doctorate in Munich in 1956 with a dissertation on Toeschi's symphonies. From 1957 to 1959 he was assistant to E.F. Schmid on the editorial staff of the new Mozart collected edition. He joined the staff of the Bayerische Staatsbibliothek, Munich in 1959 and in 1961 he completed the state examinations in higher librarianship; he was director of the music collection at the library, 1969–90. Münster's main interest has been the music collections of Bavaria (particularly those of monastaries), as well as the music history of this region. He is the historical editor of the gramophone record series Musica Bavarica. Other research interests include Mozart, on whom he has written a number of articles, and 19th-century composers, especially Brahms; he has also edited music by Boccherini, Cannabich, Mysliveček and other 18th-century composers. He was awarded the Bundesverdienstkreuz in 1982 and the Silberne Mozart Medaille in 1991.

HANS HEINRICH EGGEBRECHT/JUTTA PUMPE

Munter (Ger.: 'merry', 'cheerful', 'brisk', 'vigorous'). Perhaps the nearest German equivalent of the Italian term ALLEGRO. Schumann used it twice in his *Album für die Jugend* op.68: the 'Soldatenmarsch' is marked *munter und straff* with the translation given as *gaio e deciso*, and

'Fröhlicher Landmann' has *frisch und munter*, translated *animato e grazioso*. It is otherwise relatively rare.

See also TEMPO AND EXPRESSION MARKS.

Müntzer, Stephan. *See* MONETARIUS, STEPHAN.

Munzinger, Karl (*b* Balsthal, canton of Solothurn, 23 Sept 1842; *d* Berne, 16 Aug 1911). Swiss conductor and composer. He studied first in Basle (1859–60), then at the Leipzig Conservatory (1860–63) under Hauptmann, Reinecke, E.F. Richter and Moscheles. He later taught the piano and was organist at Wesserling in Alsace. In 1866 he was appointed director of the Solothurn Liedertafel and Cäcilienverein, whose standards he greatly improved. He succeeded Adolf Reichel as conductor of the concerts of the Musikgesellschaft in 1884 and through his activities he exercised a profound influence on the musical life of Berne. One characteristic of his conducting was the range of music he performed; he introduced to Berne works by Brahms, Wagner, Berlioz and Bach. Though his output as a composer is rather small, his cantatas and *a cappella* compositions were once very popular throughout Switzerland; one of his major works was the music for a pageant commemorating the 700th anniversary of the foundation of Berne. He also composed piano pieces, organ music, a piano quartet and a mass.

F.R. BOSONNET

Muradeli, Vano Il'ich (*b* Gori, Georgia, 24 March/6 April 1908; *d* Tomsk, 17 Aug 1970). Russian composer. He studied composition with Barkhudarian and Bagrinovsky at the Tbilisi Conservatory, from which he graduated in 1931. Subsequently he was a composition pupil of Shekhter and Myaskovsky at the Moscow Conservatory. He was a praesidium member of the Composers' Union organization committee (1939–48), and in his last years he headed the Moscow branch of the union (1959–70). During the war he led the central song ensemble of the Soviet Navy, and he is best known for his choral and vocal pieces; the song *Bukhenval'dskiy nabat* ('The Buchenwald Alarm') achieved international renown. His fame chiefly rests on the fact that his opera *Velikaya druzhba* ('The Great Friendship') sparked off the infamous decree of 10 February 1948 which led, in turn, to the condemnation of composers such as Myaskovsky, Popov, Prokofiev, Shebalin and Shostakovich. His work shows a striving for monumentality, propagandist effectiveness and oratorical pathos. Among the awards he received was the title People's Artist of the USSR.

WORKS
(*selective list*)

Dramatic: Velikaya druzhba [The Great Friendship] (op, 4, G.D. Mdivani), 1940–47, Perm', 19 March 1947, rev. Orjonikidze, 22 April 1970; Oktyabr' [October] (op, prol, 3, V. GALINA GRIGOR'YEVA

Murail, Tristan (*b* Le Havre, 11 March 1947). French composer, performer and theorist. He studied economics and Arabic at the Ecole d'Hautes Etudes before entering the Paris Conservatoire to attend Messiaen's composition class (1967–72). That year he was resident at the Villa Medici in Rome, where he remained until 1974. In 1973 he founded the Group de l'Itinéraire which quickly established itself as the leading new music ensemble in France throughout the 1970s and 80s (other composers associated with it included Levinas, Grisey and Dufourt). In addition to composing a number of his most significant scores for the group, Murail also participated in it as a performer on electronic keyboard instruments such as the synthesizer and ondes martenot. He is a well known virtuoso of the latter instrument, and has made many appearances as soloist in such works as Messiaen's *Turangalîla symphonie* (which he has recorded twice) and *Trois petites liturgies*. Between 1987 and 1996 he taught computer assisted composition at the Paris Conservatoire and at IRCAM, during which time he also had a number of successful private composition pupils, including Marc-André Dalbavie and Philippe Hurel. In 1997 he moved to the USA to become professor of composition at Columbia University, New York.

Murail belongs to the generation of French composers after Boulez, and his development, like that of his colleague Grisey, may be seen to some extent as a reaction against the serial-dominated techniques prevalent until the mid-1970s. Stimulated by Messiaen's research into resonance and his refinement of instrumental timbre, Murail and Grisey both used acoustics and the study of the perception of sound as the starting point for a new musical aesthetic which has since become known as SPECTRAL MUSIC. In Murail's case, the first works to

reflect this development were *Sables* for orchestra composed in 1974, and *Mémoire/Erosion* for horn and nine instruments from 1976. In both these pieces the musical structure is defined by drifting between moments of pure consonance derived from the natural overtone series, and passages of extreme dissonance analogous to so-called 'white noise'. In *Sables* the transformations between these two states are effected very smoothly, in a continuous orchestral texture which evolves without interruption or punctuation for nearly twenty minutes. In *Mémoire-/Erosion* the structure and texture are derived from an instrumental simulation of a device found in analogue electronic studios of the time called 're-injection loop', in which an instrumental sound is recorded and passed across multiple tape-heads while new sounds are fed in. The ensemble, imitating everything the horn plays, simulates the canonic and echoing effects of this process, as well as the inevitable deterioration and deformation of the sounds towards pure noise (which results from the tape being repeatedly copied). Murail developed these processes of transformation further in two other concertante works from the late 1970s, *Ethers* (1978) for flute and five instruments, and *Les courants de l'espaces* (1979) for ring-modulated ondes martenot and small orchestra.

In the later 1970s, Murail began using other techniques from electronics to derive his forms and harmonic structures. Principal among these were the related techniques of ring- and frequency-modulation, both of which engender complex timbres derived from summation and difference tones. This allows for a careful control of the degree of inharmonicity (i.e. the degree of deviation from the natural overtone series). The first large scale pieces written using these techniques were *Treize couleurs du soleil couchant* (1979) and *Gondwana* (1980). In the former, pairs of pitches forming a variety of intervals are used to generate the harmony for each section; it is interesting to compare the two versions of the work, because the second uses actual electronic ring modulation to clarify and confirm the instrumental harmonies derived from this procedure. In *Gondwana*, Murail's most ambitious piece from this time, every aspect of the work, whether harmonic, textural or formal, is derived from frequency modulation processes to form a large scale symphonic canvas of almost symphonic breadth. There is particular emphasis on the bell-like timbres for which frequency modulation is renowned in computer music.

In 1980 Murail, along with other composers of L'Itinéraire, attended the computer music courses at IRCAM, where he deepened his knowledge of computer programming and software. The outcome was *Désintégrations* (1982–3) for 15 instruments and computer-generated tape, in which Murail used computer analyses of instrumental spectra to generate both the harmonic syntax and the form. This work is the first in Murail's mature output to incorporate silences and breaks in continuity punctuating or disrupting the transformations. The orchestral works *Sillages* (1985) and *Time and Again* (1985) make further inroads into the realms of discontinuity and abbreviated processes in structures replete with 'flashbacks, premonitions, loops of time', as the composer has commented. *Time and Again* also confronts Murail's orchestrally simulated frequency modulation harmony with its computer model, as the work includes an important part for the DX7 synthesizer. As with *Désintégrations* the precision of Murail's spectral techniques results in an exact fusion of electronic and instrumental sound.

With *Allégories* (1989) Murail turned his attention away from spectra as such and towards working with what he calls 'complex objects'. In *Allégories* the object is the initial gesture of rise and fall, which is subjected to all manner of enlargements, expansions, contractions and paraphrases across a variety of spectra throughout the piece. In *L'esprit des dames* (1996) the spectra of instruments from folk and religious traditions (such as jew's harps or Tibetan trumpets) were analysed and provided the raw material for another mixed canvas blending electronic and instrumental sounds. Murail's most recent orchestral piece *Partage des eaux* (1997) derives all of its materials and forms from a sampled extract of the tide receding on a beach.

All of these works have a more elusive and ambiguous approach to form than Murail's earlier music, involving multiple layers of spectral processes rather than a single unidirectional one. In the early 1990s, in order to aid composing with these multi-dimensional objects and processes, Murail developed at IRCAM a sophisticated software package for composers entitled Patchwork, which he has used to compose much of his subsequent work. His remarkable ear for sonority and harmonic refinement, however, has remained his most noticeable stylistic trait regardless of the technology involved.

JULIAN ANDERSON

Muralter [Muralt, von]. *See* MORALT family.

Muramatsu. Japanese firm of flute and piccolo manufacturers. It was founded in 1923 by Koichi Muramatsu (*b* Tokyo, 12 April 1898; *d* 6 June 1960), then a member of a military band, who made the first Western-style flute in Japan in that year. About 1936 he collaborated with Baron Okura on a Boehm system vertical flute, named *Okraulos*, much like a mechanized *shakuhachi*. The factory closed during World War II but reopened, producing 10,000 flutes by 1957. In the mid-1970s Muramatsu entered the US market, making alterations in the flutes' scale and headjoint design as a result.

The firm manufactures both student-level and professional-grade flutes with a variety of options, including gold-bonded flutes and winged lip plates. Under the direction of Osamu Muramatsu (*b* 6 Jan 1942), son of the founder, it has a factory in Tokorozawa City, near Tokyo, employing about 60 craftsmen. By the 1980s it was turning out some 2,000 flutes a year, with worldwide distribution.

NANCY TOFF

Muratore, Lucien (*b* Marseilles, 29 Aug 1876; *d* Paris, 16 July 1954). French tenor. He began his career as an actor, then studied singing in Paris, making his début at the Opéra-Comique in 1902 as the King in the première of Hahn's *La Carmélite*. At the Opéra, where he first sang in 1905 as Renaud (Gluck's *Armide*), he created roles in two Massenet operas, Theseus in *Ariane* (1906) and the title role of *Bacchus*, and also Prinzivalle in Février's *Monna Vanna* (1909). At Monte Carlo he created Hercules in Saint-Saëns's *Déjanire* (1911) and Lentulus in Massenet's *Roma* (1912). His roles included Faust, Massenet's Des Grieux, Werther, Romeo, Don José, Wilhelm Meister, Samson, d'Indy's Fervaal, Reyer's Sigurd and Fauré's Ulysses, which he sang in the Paris première of *Pénélope* (1913, Théâtre des Champs-Elysées). He also sang Walther, Radames, the Duke, Canio and Herod. He appeared in Boston and Chicago (1913–22) and Buenos Aires. In 1931 he sang Ulysses at the Opéra-Comique, where he was manager for a few weeks in 1943. Though his voice was not of great intrinsic beauty, he used it with artistry, intensity of expression and skill, as his recordings demonstrate. From 1913 to 1927 he was married to the soprano Lina Cavalieri.

ALAN BLYTH

Murbach, Hans. *See* STORCK, KARL G(USTAV) L(UDWIG).

Murcia, Santiago de (*b* ?Madrid, *c*1682; *d* ?Mexico, *c*1740). Spanish composer, theorist and guitarist. He was almost certainly the son of Gabriel de Murcia (nephew of the composer Juan Hidalgo) and Juliana de León, both of whom belonged to a long line of instrument makers and composers. There is evidence to suggest that Murcia studied with Francisco Guerau, music master at the royal choir school from 1693 and at the royal chapel, 1696–1700. During the first decade of the 18th century he became guitar teacher to Queen María Luisa Gabriela, the young wife of Felipe V, who also employed Antonio de Murcia (probably Santiago's brother) as her personal guitar maker.

Murcia enjoyed the protection of several influential patrons, including a staunch supporter of Felipe V, Jácome Francisco Andriani, to whom Murcia dedicated his *Resumen de acompañar la parte con la guitarra*; the title-page and preface indicate that Murcia was under Andriani's protection and residing in his house. Another Madrid official linked with Murcia was the king's notary, Joseph Álvarez de Saavedra; Murcia dedicated to him his collection of *Passacalles y obras*. Several pieces in Murcia's guitar books suggest that he may have collaborated with dramatists and theatre composers such as Francisco de Castro, Pedro Lanini and Antonio Zamora, and that he was personally acquainted with other guitar composers, including François Le Cocq. Murcia's name disappears from court documents after 1717; he probably journeyed first to France, Belgium or Holland and arrived in Mexico some time between 1718 and 1731. It appears from an ambiguous burial record that Álvarez de Saavedra died in Puebla and was buried in the parish of Analco in 1737; possibly Murcia was living there as well.

Murcia is remembered for his treatise *Resumen de acompañar la parte con la guitarra* (engraved in Antwerp in 1714 and published in Madrid in 1717; see Hall, 1980; Russell, 1980; Hall, *The Guitar*, 1983; Arriaga, 1984) and for two manuscript anthologies of guitar music. The *Resumen* is the most comprehensive basso continuo treatise for the Baroque guitar. It explains how to realize a figured bass and touches on suspensions, cadences, clefs and implied clef transposition, modes and metres (both of the 'modern foreign style' and of the 'old Spanish style'). There follows an extensive collection of French dances; they bear no attributions, but are harmonized settings of *danses à deux*, *danses de bal* and *contredanses* from the press of Raoul-Auger Feuillet, Paris, arranged in chronological order of publication. The *Resumen* includes also 26 minuets, a series of variations on popular Spanish chord progressions and three virtuoso suites. The treatise's considerable influence on Murcia's Spanish colleagues and successors is evident from several manuscript copies and from extended excerpts from it quoted in later treatises.

The two anthologies are the Saldívar Codex no.4 (owned by the Saldívar family in Mexico City; see Lorimer, 1987; facs. and ed. C.H. Russell (Urbana, IL, 1995)) and the *Passacalles y obras de guitarra por todos los tonos naturales y acidentales* (*GB-Lbl* Add.31640; see Mackmeeken, 1979; ed. in Russell, 1980; Pennington,

1981; Hall, *The Guitar*, 1983). These are elegant, luxurious manuscripts dating from 1732 and originally grouped together as a single two-volume work. They contain some of the best music written for the Baroque guitar, and are valuable also for their left-hand fingerings, which were not usually shown in Baroque guitar tablatures. They represent the culmination of an era that favoured the treble-strung five-course guitar and used tablature as opposed to staff notation. Murcia was among the last to use re-entrant tunings, with the lowest string placed in the middle. The Saldívar Codex includes variations on Spanish dance tunes dating from the late 16th to the early 18th centuries, such as the *jácara*, *mariona*, *gallarda*, *villano* and *españoleta*, and it is the earliest musical source for the fandango, jota and *seguidilla*, which were to become an indispensable part of Spain's cultural landscape in the 19th century. Also of great interest are the *cumbés* and *zarambeques*, the earliest known examples of notated instrumental music of African American origin. The volume includes also a handful of French dances (some of them by André Campra or Louis Guillaume Pécour), 13 minuets and a three-movement sonata with a slow movement reminiscent of Corelli and a finale in full sonata form, with thematic differentiation and an extensive development section – a remarkable demonstration that in 1732, at the latest, Murcia was in the vanguard of developments leading to the Classical period.

The *Passacalles y obras* opens with a series of ambitious *passacalles* grouped in pairs (the first in quadruple, the second in triple metre) and arranged in key order according to the Italian *alfabeto* system. These are difficult and varied works, carefully composed and well constructed despite their improvisatory character. They are followed by an italianate Preludio and Allegro, a battle piece and 11 suites consisting of from six to 12 movements, including the standard allemande, courante, sarabande and gigue. Many of the suites are unified by recurring motifs, and some borrow sections from the works of contemporary guitar composers.

CRAIG H. RUSSELL

Murdoch, William (David) (*b* Bendigo, 10 Feb 1888; *d* Holmbury St Mary, Surrey, 9 Sept 1942). Australian pianist and writer. He studied music at Melbourne University, going to London in 1906 to the RCM with a Clerke scholarship. On leaving in 1910, he began a career as solo pianist, touring five continents. An exceptional sense of tonal values and responsibility made him an ideal member of chamber groups. In recitals the Chamber Music Players, a quartet including (besides Murdoch) Albert Sammons, Lionel Tertis and Lauri Kennedy, were noted for their rare balance as well as for the soundness of their interpretations. In May 1919 Murdoch took part in the first performance of Elgar's Piano Quintet. Among his recordings are Elgar's Violin Sonata, with Sammons, and Ireland's Second Violin Sonata, with Catterall. He taught at the RAM from 1930 to 1936.

Murdoch composed a few songs and piano pieces and published transcriptions from the works of Bach, Handel and Vivaldi. He was the author of *Brahms* (London, 1933) and *Chopin: his Life* (London, 1934) and wrote articles on modern piano music.

FERRUCCIO BONAVIA/ FRANK DAWES

Mure, Sir **William** (*b* Rowallan Castle, 1594; *d* Rowallan Castle, 1657). Scottish poet and amateur musician. He owned and added to two important manuscript music books. The manuscript *GB-Eu* La.III.487 is in all probability the earliest surviving source of Scottish lute music. The book, which may have originated with the daughters of the eighth Earl of Errol before 1609, was passed at some point to Mure who was probably responsible for the 28 arrangements and unfinished fragments of Scottish tunes in the later section of the book. These pieces, although they are simple, retain a uniquely Scottish flavour and are delightful to play (2 pieces ed. D. Lumsden, *Anthology of English Lute Music*, London, 1954; 1 piece ed. in MB, xv, 1957, 2/1964). Mure credits himself with two pieces, one of them 'for kissing, for Clapping, for Loving, for proveing Set to ye Lute by Mr Mure'. He also compiled a set of partbooks after 1627, arranged according to English, French or Scottish origin, of which only the cantus remains (*GB-Eu* La.III.488). Only one song has words but the remainder do have titles (6 pieces ed. in MB, xv, 1957, 2/1964). Among the Scottish titles are settings of words by Mure's great uncle, Alexander Montgomerie.

MATTHEW SPRING

Mureau [Muream], **Gilles** (*b* *c*1450; *d* July 1512). French singer and composer. He was mentioned in the records of Chartres Cathedral in 1462, when he was listed as an *heurier*, or singer of psalms for daily office services. By 1469 he had succeeded Simon Coignet as *maître des enfants* in the choir school there, a capacity in which Johannes Tinctoris may have also briefly served during the same period. Named a canon of the cathedral by 1472, Mureau held prebends at churches elsewhere in central France and received income from lands near Blois and Bourges. In 1483 he obtained permission for a journey to Jerusalem (his replacement at Chartres from March to November of that year was Antoine Brumel), and in 1484 he travelled to Santiago de Compostela. According to Pirro, the breviary *F-LM* 184 once belonged to Mureau himself.

That Mureau was acquainted with other composers active in the Ile-de-France seems likely. In addition to his Chartres colleagues Tinctoris and Brumel he is likely to have known musicians such as Ockeghem and Fresneau at St Martin, Tours, a church that had frequent dealings with the cathedral chapter. Indeed, Eloy d'Amerval's *Livre de la deablerie* (Paris, 1508/*R*) includes Mureau in a rhymed list of these and other composers, many of whom worked in central France during the late 15th century.

Mureau died in July 1512, when an *obit* in his memory was recorded in Chartres. He should not therefore be confused with the Gilles (or Gilet) Moreau who between 1501 and 1517 worked as a relatively low-ranking singer in the *grand* and *petite* chapels of the Habsburg courts of the Austrian Netherlands under Philip the Fair and Charles V.

Mureau's four surviving works are lyrical rondeau settings ascribed variously to 'G. Muream', 'Gil Mureau', or 'Murian', transmitted in French and Italian manuscript sources of the late 15th century and in one printed source of the early 16th, Petrucci's *Odhecaton*.

Stylistically these works share much with music by Busnoys, Tinctoris, Compère and Ockeghem preserved in the same books: flowing and gently syncopated rhythms, a balanced and clearly etched melodic sensibility in the cantus-part that corresponds neatly with poetic phrases, and hints of imitative writing between the tenor and cantus voices. Mureau's contratenors very occasionally use the comparatively antique 'octave leap' formula found in music of the first half of the 15th century, but his preference is clearly towards the movement by 4th or 5th favoured in the second half of the century.

Je ne fay plus is ascribed to Mureau in *I-Rvat* C.G.XIII.27, *Fn* Magl.XIX.176 and *F-Pn* fr.2245, but to Busnoys in *I-Bc* Q17 and *I-Fn* B.R.229; an ascription to Compère in *E-SE* has been dismissed as unreliable. This source situation therefore favours Mureau, the Busnoys ascriptions being confined to manuscripts at some distance from the main French corpus. Stylistic evidence, however, is ambiguous: Atlas has argued for Mureau, while Brown (i, 81) thought the work to be by Busnoys. No such doubts surround *Grace attendant*, whose poetic text incorporates the acrostic 'Gilles Mureue'. The text of *Tant fort me tarde ta venue* was also set by Basiron, but the two settings are musically unrelated.

WORKS

RICHARD FREEDMAN

Müren, Zeki (*b* Bursa, 6 Dec 1933; *d* 24 Sept 1996). Turkish composer, singer and film star. After completing his higher education at the Boğaziçi *lycée*, he took classes from Serif İçli and Refik Fersan and enrolled at the Fine Arts Academy in Istanbul. He first came to public attention through his radio concerts in the early 1950s as an interpreter of contemporary Turkish art music, although his repertory also covered Turkish versions of tango, chanson and the work of Arab singers such as Umm Kulthum and Farīd al Aṭrash (notably his version of the latter's *Zennübe*). His voice, with its dramatic expressive qualities, was initially likened to that of Müzeyyen Senar, but the clarity and somewhat elevated nature of his sung Turkish marked a distinct and exceptional vocal style, which was one of the first in Turkey to make full use of the expressive potential of the microphone. In recognition of these qualities Müren was quickly nicknamed Sanat Güneşi ('Sun of Art'), a title he bore until his death. His career was marked by his appearance in some 18 musical films, from *Beklenen şarkı* in 1953 to *Rüya gibi* in 1971, and by his live performances in Istanbul's *gazino* clubs, characterized by their elaborate décor and Müren's increasingly camp costumery. Müren's partnership with the composer Muzaffer Özpınar led him to embrace *arabesk*. His 1979 recording of *Kahır mektubu*, to music composed by Özpınar, filled an entire LP and was directly inspired by Umm Kulthum's later style.

MARTIN STOKES

Mureşianu, Iacob (*b* Braşov, 11 July 1857; *d* Blaj, 6 June 1917). Romanian composer, teacher and conductor. He was the son of a journalist, folklorist and music lover, and received his first musical instruction from his family; at the age of six he appeared as a concert pianist in a literary festival of the Astra, the association for Romanian culture, science and literature. While he was attending the Polytechnic School in Vienna he also appeared as a pianist and composer in amateur circles. Later he attended classes by Jadassohn, Weidenbach and Reinecke at the Leipzig Conservatory; his successes in Leipzig included a Mendelssohn prize (1883) and a concert appearance as accompanist to Joachim. On his return to Romania he settled in Blaj, one of the old centres of Romanian culture, where he became very active as a teacher and a school

and church choirmaster, conducting the musical society and the school orchestras. He also founded a music review, *Musa română* ('Romanian muse'), which appeared, with interruptions, from 1888 to 1907.

In his criticism and in his letters Mureşianu set out his aesthetic of music, which he always held to be part of a general culture and not merely a decoration to life. At the same time he worked for a national style in professional music, founding his idiom more on the authentic folklore of different regions than on the gypsy fiddlers' music. His review also published many of his own compositions and those of his contemporaries. His ideas and their expression greatly contributed to the development of a national style in Romanian music. In his seven ballads and poems he drew on oratorio style, the most important of them, *Mânăstirea Argeşului* ('The Monastery of Arges'), being performed both in the concert hall and on stage as an opera. His symphonic overture *Ştefan cel Mare* ('Stephen the Great') is one of the first Romanian pieces of programme music. As a forerunner of the school of Romanian piano music, he wrote miniatures in a Romantic style, a rhapsody and fantasies on folk themes and many dances collected in different regions of the country. His five vaudevilles and an operetta *Millo director*, all based on comedies by Vasile Alecsandri, were given by amateur theatre companies. His choruses and songs for schools, salons and musical societies were all composed according to the same ideals that motivated his 'professional' music.

WORKS

Edition: *Opere alese de Iacob Mureşianu* [Selected works of Mureşianu], ed. N. Parocescu (Bucharest, 1958) [P]

Principal MS collections: *RO-Ba*, Biblioteca Uniunii Compozitorilorşi Muzicologilor din România, Bucharest

STAGE

all texts after V. Alecsandri

Vaudevilles: Scara mîţei [Cat's Cradle]; Rusaliile [Pentecost]; Florin şi Florica; Cinel-cinel [Riddle-Me-Ree!]; Nunta ţărănească [Peasants' Wedding]

Millo director [Director Millo] (operetta, 1), 1910, orchd Iuliu Mureşianu

CHORAL WITH ORCHESTRA

All texts by Alecsandri; works are for solo voices and chorus with orchestra or piano accompaniment unless otherwise stated

Mânăstirea Argeşului [The Monastery of Arges], dramatic poem, 1884, rev. 1895

Erculeanul [Hercules], ballads, 1890, P

Năluca [The Phantom], poem, 1893

Brumărelul [The Frosty Boy], ballad, with narrator, 1897, P

Brâncoveanu Constantin, dramatic poem, 1905

Şoimul şi floarea fegului [The Falcon and the Beech-Flower], ballad, 1906

Muieruşca din Braşeu [The Woman of Braşov], ballad

OTHER VOCAL

published in Musa română, Blaj, 1888–1906, unless otherwise stated

[39] Cîntece corale [Choral Songs], unison vv (Bucharest, n.d.)

De la poarta badii-n sus [From the uncle's gate above] (folk text), mixed chorus (1906)

For male vv: Lume, lume [World, World] (folk text) (1888); Cheruvic [Cherubic Hymn] (1888); Responsorii (1888); Jelui-m-aş şi n-am cui [I shall lament, but I have nobody] (folk text), P; Cucuşor [Cuckoo] (folk text), P

Songs, for 1v, pf: Nu plînge [Do not cry] (I. Neniţescu) (1888); Flori de nufăr [Water-Lilies] (V. Alecsandri) (1888); Dor de mare [Sea Fever] (Neniţescu) (1888); Tu m-ai iubit [You Loved Me] (Neniţescu) (1888); Intoarcerea în ţară [Return to the Homeland] (Alecsandri), P

INSTRUMENTAL

printed works published in Musa română unless otherwise stated

Orch: Ştefan cel Mare [Stephen the Great], ov., 1882; Dorule, odorule [Dear, Darling], dance; O noapte pe Tîmpa [A Night on Tîmpa]; Elegie, str

La mormîntul unui amic [At the Grave of a Friend], vn, pf (1906)

For pf solo: Suvenir de Năsăud, op.24 (Bucharest, n.d.); Marşul lui Horia [Horia's march] (Braşov, n.d.); Cimpoiul [The Bagpipe], capriccio (1888); Cunună de flori române [A Garland of Romanian Flowers] (1888); Capriccio, f (1888); Jocuri din Banat [Dances from Banat] (1906); Caprice-étude (1906); Capriccio, f♯ (1906); Impromptu (1906); Scherzo (1907)

ROMEO GHIRCOIAŞIU

Mureşianu, Iuliu (*b* Blaj, 29 Jan 1900; *d* Cluj, 15 Feb 1956). Romanian composer, son of the composer Iacob Mureşianu. From a musical family, he studied the piano with his father before studying composition with Dima at the Cluj Conservatory, graduating in 1925; he also attended the Turin Conservatory (1923–4) and studied with Graener at the Leipzig Conservatory (1923–4). Mureşianu taught music in Blaj, Odorheiul Secuiesc, Dumbrăveni and Turda, where he also founded and conducted an orchestra. He settled in Cluj in 1937 after becoming a teacher there; in 1945 he became a member of staff at the Conservatory. Dedicated to Romanticism and to traditional Romanian music, Mureşianu produced a mass of richly melodic material steeped in folk themes. Though he made his reputation with chamber music, it was with his Suite No.1 'Românească' (1936) that he won the Enescu Prize. Further details are given in G. Merisescu: *Viaţa şi opera compozitorului Iuliu Mureşianu (1900–1956)* ('The life and works of Mureşianu', Cluj, 1957).

OCTAVIAN COSMA

Muret [Muretus], **Marc-Antoine de** (*b* Muret, Limoges, 12 April 1526; *d* Rome, 4 June 1585). French composer, writer, editor and humanist. His Latin poetry and commentaries on the classics were greatly admired; among his own works the *Juvenalia* (1552) were popular. After teaching at Auch (from 1544) and then Bordeaux (from 1547), where Montaigne was a pupil, he spent several years until 1552 in Paris as regent of the College of Cardinal Lemoine, where he worked with the young poets of the Pléiade and wrote a commentary explaining the mythological allusions of Ronsard's *Amours*. He also composed four-voice settings of an ode (in RISM 1552^{4-5}) and sonnet by Ronsard, the latter being included in the musical appendix of the first edition of the *Amours* (1552^{6}); a third chanson by Muret was printed by Attaingnant's widow (1553^{20}). All three pieces are in a

simple homophonic style and might be described as competent rather than inspired. According to the 16th-century bibliographer La Croix du Maine, Muret also wrote the texts of 19 *chansons spirituelles* set by Claude Goudimel and published by Nicolas du Chemin in 1555. Having been accused of being both a Huguenot and a Sodomite, the poet fled to Italy, where he spent the rest of his life, living in Venice, Padua and Ferrara before settling in Rome at the invitation of Cardinal Ippolito d'Este; in 1576 he took holy orders. In Rome he was frequently invited to give Latin orations marking important public occasions such as the death of Pope Pius V and the ceremonies at S Maria d'Aracoeli welcoming Marc'Antonio Colonna, the Papal commander, back into the city after the victory of the Holy League against the Turks in 1571. Among the publications from his Roman years is a book of Latin hymns, some of which were set by Wert for the exclusive use of the basilica of S Barbara in Mantua.

Murillo (Chapull), Emilio (*b* Bogotá, 9 April 1880; *d* Bogotá, 8 Aug 1942). Colombian composer. Between about 1910 and about 1940 he was the champion of Colombian nationalism, expressed through songs and character pieces for piano inspired by traditional Andean tunes such as the *danza*, *torbellino*, *bambuco* and *pasillo*. He led a bohemian life, and his music is associated with the world of the café and with the poetic gatherings of the *pidracelistas*, where he improvised on the piano and the flute and composed songs to the literary texts of his friends. A collection of 22 studies for piano, attractive elaborations on popular airs, is his most important musical achievement. Songs like *Canoíta*, *La cabaña*, *El trapiche* and *El guatecano* have become part of Colombian 20th-century lore. His songs and piano pieces, written for amateurs, appeared in well-known periodic publications.

WORKS
(*selective list*)

Songs (1v, pf): Canción de la tarde (J. Flórez); Canoíta (bambuco, J.N. Soto); Canta mis coplas (bambuco, F. Restrepo); De lejos (danza, F. Rivas); El boga, bambuco; El guatecano (bambuco, trad.); El trapiche (bambuco, I.E. Arciniegas); El vaquero (M.H. Cortés); Fiebres (J. Flórez); Hondos pesares (bambuco, J. ELLIE ANNE DUQUE

Murino, Egidius de. *See* EGIDIUS DE MURINO.

Muris, Johannes de [Des Murs, Jehan] (*b* diocese of Lisieux, *c*1290–95; *d* after 1344). French mathematician, astronomer and music theorist. His Latin writings on musical proportions and mensural notation were authoritative for some two centuries, constantly cited by other writers and – judging from extant manuscripts – more widely distributed than those of any other music theorist between 1200 and 1500.

1. Life. 2. Non-musical writings. 3. Writings on music. 4. Influence.

1. LIFE. Some recent discoveries, particularly a manuscript with notes by Muris himself (*E-E* O.II.10), permit unusual precision in dating some phases of his life, as well as revealing important personal acquaintances, e.g. with Philippe de Vitry. In addition, Muris inserted chronologically specific autobiographical notes into some of his writings, and there also exist letters-patent from the Avignon popes recording his ecclesiastical career. The biography of Muris is both more complete and more sure than that of any other musical personage of the 14th or 15th century. This summary will not cite the particular documents providing biographical data; all, however, are cited in the works listed in the bibliography.

Johannes de Muris was born in Normandy in the diocese of Lisieux and maintained associations with his native region throughout his life. He was probably related to Julian des Murs, a Master of the Children of the Sainte-Chapelle of Paris about 1350 and later secretary to Charles V of France; in some earlier studies the two men have been confused. Julian's notarial signatures have prompted the suggestion of 'Jehan des Murs' as the original French form behind 'Johannes de Muris', but in fact his name is always given in Latin in the sources of his writings and in documents.

The date of Muris's birth has usually been estimated at about 1300, but it has been learned that, together with his father Henri, he was involved in the murder of a cleric named Andriet on 7 September 1310. It may be presumed that he was older than 10 (probably at least 14, the age of responsibility) at the time, but since he had not yet matriculated at university he was probably under 20, and so he was most likely born in the early 1290s. On account of his conviction for the murder he was banished to Cyprus for seven years; the severity of his crime and punishment may help explain his restless and unsettled life and his slight official recognition.

On 13 March 1318, Muris was residing 'pro tempore' in Evreux, another Norman city with which he maintained a lifelong association, but his real centre of activities by that time was Paris (where in the same year he was a baccalaureate student in the Faculty of Arts), and remained so until about 1325. If we can rely on the *explicits* of writings composed in 1323 and 1324, we can state more precisely that he was working, if not also resident, in the Collège de Sorbonne in the rue Coupe-gueule. He was in the Norman town of Bernay to observe the solar eclipse of 1321, and there is no reason to think that he stayed in Paris all the time. Some of his most important writings in the various disciplines that he mastered date from this first Parisian period, particularly the one on music usually entitled *Notitia artis musicae* of 1319 or 1321 and the *Musica speculativa secundum Boetium* of 1323. He attained the academic degree of Magister in 1321.

By March 1326, Muris had moved to the renowned double monastery of Fontevrault (Maine-et-Loire), and he was also there in August 1327. From a fragmentary account roll of the abbey we know that Julian des Murs was also at Fontevrault as Johannes's *clerc*. In 1329 Muris was granted an expectative benefice from those nominally

controlled by the abbot of Le Bec-Hellouin in the diocese of Rouen. We should perhaps not assume that he had moved back to Normandy at this time; his designation as a cleric of the diocese of Lisieux in the letter granting the benefice refers not to his current residence but rather to where he first received clerical orders. It is certain, however, that he was residing in Evreux in 1332 and 1333, styling himself in the former year 'scolaris Ebroicensis, tunc rector'.

A series of rather obscure financial notes in Muris's own hand suggests that by 1336 he had returned to Paris, and was in fact living in the Collège de Sorbonne where he remained for much of 1337. From 1338 to 1342 a 'maître Jehan des Murs' is listed among the *clercs* of the household of Philippe d'Evreux, King of Navarre. It is not certain that this is the music theorist; conclusions as to his possible residence and functions require a closer knowledge of the activities of Philippe d'Evreux.

By March or September 1342 Muris was in Mézières-en-Brenne (Indre) as one of six canons of the collegiate church built in that small town in the 1330s by Alix de Brabant. He was there also in September 1344, at which time he was invited to Avignon by Pope Clement VI for a conference on calendar reform. The move to this out-of-the-way place seems odd, unless it was occasioned by the writing of his very extensive arithmetical work, the *Quadripartitum numerorum*, completed in 1343. That he really did go to Avignon is shown by his work on calendar reform (with Firmin de Beauval as collaborator) directed to the pope and dated 1345 from the papal city. This is the last firm date in his biography. Heinrich Besseler proposed, on the basis of an inscription to the verse dedication to Philippe de Vitry of the *Quadripartitum numerorum*, in which Vitry is designated Bishop of Meaux, that Muris must have been still living in 1351, the year of Vitry's elevation to the episcopacy. It may also be that two astronomical works of 1346–8 are by Muris, though further study of the authenticity of their inscriptions or colophons is called for. There are no records, however ambiguous, from after 1351.

Muris's career seems an atypical one; the motivation for his major moves is in no way clear. Other musical contemporaries, such as Guillaume de Machaut and Philippe de Vitry, travelled much, but in connection with their official posts. Muris appears much more of a free agent in the light of our present knowledge. Certainly, the idea that he was primarily a university lecturer on music in Paris for most of his life has received no substantiation. Muris neither knew the worldly success of Vitry nor achieved in his scientific work the profundity of Nicole Oresme (who knew Muris's work). The bulk of his writings appears to come from the early 1320s in a burst of intense activity, with a subsequent gap of some 15 or 20 years – during which, however, he continued his astronomical observations – and this may have much to do with both his apparent restlessness and his failure to attain sustained intellectual success.

2. Non-musical writings. Many uncertainties persist concerning Muris's work, as with that of many medieval writers on science. This is in part the result of far less bibliographical scholarship than with the major literary figures, in part due to the non-literary character of the writings themselves. A listing of all Muris's works is given by Michels, but it is far from definitive: serious problems exist with respect to correct titles, misattributions, unauthoritative revisions and so forth. There are well over 100 manuscripts involved, in every major collection in Europe as well as in North and South America. It does appear from Michels's survey that the mathematical, astronomical and related works were much less widely distributed than the two major musical treatises. This may simply reflect the relative abstruseness or popularity of the various disciplines.

Muris's astronomical writings, highly regarded then and now, deal mainly with planetary and solar cycles and eclipses, consequently involving the then current Alfonsine Tables of planetary motion, as well as the civil calendar. The most striking aspect of Muris's work in this area is his insistence on testing the tabular predictions of eclipses, equinoxes and conjunctions against careful observation by the naked eye (assisted by instruments). There are also a number of works of an astrological character, a normal offshoot of astronomical expertise. The arithmetical works are regarded as less original. His longest and most comprehensive book, the *Quadripartitum numerorum* of 1343, relies on a number of sources including Fibonacci. It involves geometry to some extent, as might be expected of an astronomer. Muris appears not to have written on physics or optics, or on alchemy and medicine, although his private library included works on those subjects.

3. Writings on music. In this area also, much doubt remains as to the authentic titles and versions of Muris's works, though the main outlines now seem clear. His representation in the standard anthologies of Gerbert and Coussemaker is exceptionally misleading and philologically unreliable, perhaps more so than with any other major medieval author, although this situation has been rectified by recent editions of the three best-attested treatises. The references to the published texts given below should be understood in that light.

According to Michels, Muris was the certain or probable author of five works on music. These are listed at the end of this article, and the dates given there are those suggested by Michels; they are susceptible to modification by a year or two in either direction. To that list may be added a treatise apparently referred to by Muris in a list of book loans from the Escorial Manuscript (*E-E*), beginning with the words 'omnes homines'. A musical work with this incipit has survived along with other works of Muris in only one manuscript, *F-Pn* lat.7378A. It consists of three books, the first on 'Theorica musice', the second on mensural music and the third on discant. There appear to be connections in vocabulary and point of view with the *Notitia artis musicae* as well as the *Compendium*, but the unique manuscript is extremely difficult to decipher and awaits detailed study. In any event, if it is indeed by Muris it probably belongs with the other works of his youth.

The evidence for Muris's authorship of the first three items in the list of writings is strong; that for the last two relatively weak. The *Libellus cantus mensurabilis*, for example, is found mostly in 15th-century manuscripts of Italian origin (39 out of 47 are apparently Italian), and mostly with the sub-title *secundum Johannes de Muris* ('according to Johannes de Muris'). The situation with the *Ars contrapuncti* is similar: of 14 manuscripts, none is known to have originated outside Italy and most are of the second half of the 15th century. The only manuscript claimed for the 14th century, presumably on palaeographical grounds, is not obviously that early. A supposed

'modernization' of both works by a certain Goscalcus of Paris in 1375, however, may be sufficient to show an authentic French origin for the works, which would then antedate 1375 by some years. Even this would not preclude the origin of both works as a disciple's reverent transmission of lessons propounded by Johannes de Muris in lectures towards the end of his career. None of these reflections, of course, permits the passing over of the two treatises in this discussion; they do require that the question of the geographical and temporal limits of their influence remain open.

All other works published under or associated with Muris's name by Gerbert and Coussemaker (such as the *Ars discantus*, *CoussemakerS*, iii, 68–113, or the *Summa magistri Johannis de Muris*, *GerbertS*, iii, 190–248) can be shown to be misattributed, although in most cases the true author is not known. They are, at least, evidence of the power of his reputation. The most famous misattribution to him, that of the *Speculum musice* by Jacobus of Liège, was rectified in 1924, after having given rise to much (now quite useless) scholarly discussion.

The *Notitia artis musicae* of 1321 – although part of it may date from 1319 – has survived in ten manuscripts (three fragmentary), of which the earliest appear to be *US-Cn* 54.1 and *F-Pn* lat.7378A. (Michels's title has become standard, although Muris's own was *Summa musice* – this must be avoided, as it is identical with that of the spurious work published by Gerbert, mentioned above – and *Ars nove musice* was formerly current in scholarly writing.) The quite brief preface (about 200 words) paraphrases Aristotle's *Metaphysics* – reversing its meaning at one important point – and stresses particularly that only the theorist has sufficient wisdom to teach. No matter how well versed one may be in the practice of an art, that does not make one a good teacher. Yet as far as the practitioner is concerned, experience is incomplete without theory. Book 1 is not a great deal longer; it deals with matters of vocabulary and definition (of sound in general, and musical proportions) in its first two sections. In the next section, Muris repeated the legend of Pythagoras's discovery of the musical proportions (6:8:9:12) in the blacksmiths' shop. The book then concludes with two brief proofs of a fundamental notion of Pythagorean tuning, namely that the whole tone cannot be divided into two equal semitones. The first presupposes no mathematical sophistication and is not really a proof; the second is for experts. At this point a table of the three hexachords is introduced, quite without reason. In fact, in some manuscripts it appears between the *explicit* of book 1 and the title of book 2.

The second book, *Musica practica*, is much longer, and it is expressly stated by the author to be his principal interest. Its general subject is musical time, its measurement and notation. We would still call it theoretical, in the sense that there is no discussion of specific works, merely of general principles. The reader will understandably look for those things which might be termed revolutionary, in accordance with the partly mythical musical revolution called Ars Nova. He must look carefully, however. The tact, one might almost say deviousness, with which Muris brought in the idea of fundamental binary relations between the four levels of note values is most striking. There is, perhaps oddly, no explicit statement of the system of mode, *tempus* and prolation. In fact, the traditional content is so great that it gives the impression of an inaugural lecture in which the new magister is most careful to display his intimate acquaintance with received doctrine along with respect for his masters.

According to this interpretation, book 1 would appear to fill some kind of conventional requirement, while book 2 represents, so to speak, the real meat of a master's thesis. This impression receives support from the specialized nature of the problem attacked in the second book once the philosophic preliminaries of the definition of time are passed, namely the question of the possibility of imperfecting the long with a semibreve, or the breve with a minim – *a parte remota*, to use the technical term. It is curious that this section comes after an *explicit* dated 1319 in *F-Pn* lat.7378A, and possibly represents the solution of a specialized problem needed for an inaugural lecture in 1321.

In book 2 of the *Notitia*, Muris addressed particular issues of mensural notation such as the limits of division and the exhaustive permutations of imperfecting triple note-values. Muris maintained the traditional (Franconian) view that perfection consists in ternary values and that the 'imperfect' binary has no place in art. He was able to justify the use of duple divisions and imperfect note-values in music, however, by showing them to be multiples of three minimae; for example an imperfect longa is made up of two breves, each of three semibreves, each of three minims. Thus the imperfect participates in the perfect, and order is brought out of disorder in a manner analogous to the debates of contemporaneous philosophers and mathematicians, placing Muris's treatment of music squarely in that context.

The evidence for considering the *Compendium musicae practicae* an authentic work of Johannes de Muris himself is its use in the *Speculum musice* of Jacobus of Liège, *c*1325, who clearly believed his quotations to be by the same author as the *Notitia artis musicae* (cf CSM, iii/7, 1973, p.26). The work is not, in any event, widely distributed. Cast in the form of a catechism, it agrees for the most part with the doctrine of the *Notitia artis musicae*, introducing certain novelties, for instance the term 'partes prolationis' for the five note values, interesting definitions of music, and the term 'cantus irregularis' to describe the combination of binary and ternary mensuration arising between two voice parts.

The major work of this time – transmitted to us by nearly 50 manuscripts – is the so-called *Musica speculativa secundum Boetium*, viewed explicitly by Muris as a brief treatise extracted from Boethius, in which the 'more beautiful and essential conclusions' are presented with clarity and evidence. It deals in a mathematically sophisticated way with the musical proportions of the consonances and the division of the monochord, but avoids all the confusion of Boethian octave species and Greek modes. (Nor do Christian ecclesiastical modes enter in; they belonged at this time to a different type of treatise, one on *musica plana*.) At the very end of the monochord division, Muris proposed a polychordal instrument with 19 strings. This interpretation has been challenged but probably incorrectly. Perhaps the most remarkable formal feature of the work – apart from its conciseness – is the use of so-called theorems or propositions. Indeed, similar reflections of Muris's mathematical interests and training may be found in other of his works on music. This treatise may have been used at the universities of Paris and

Oxford, and it was often prescribed as an obligatory text in the new eastern-European universities of the 14th and 15th centuries.

Whether or not we assume Muris's direct authorship, the *Libellus cantus mensurabilis* must be a considerably later work. In contrast to the works already mentioned, it gives a complete, if highly condensed, exposition of the developed mensural practice of the mid-14th century. In particular, it takes into account the theoretical work of Philippe de Vitry, the effect of which we might have expected but did not find in the earlier treatises, e.g. the uses of red notation and the 'time signatures' for perfect and imperfect *modus* and *tempus*. The work also shows, in its last two sections (on diminution in motets, and on color and talea) a greater interest in actual composition than before. Where *Musica speculativa* and *Notitia artis musicae* are clearly addressed to a university audience, the *Libellus* assumes no such liberal arts context but is aimed at practical musicians.

The extent of the work's influence is shown not only in the extremely large number of extant manuscripts, but in the existence of 15th-century translations into French and Italian, as well as a very extensive commentary of 1404 from the Paduan mathematician and writer on music, Prosdocimus de Beldemandis. The *Libellus* was still a matter of living concern in Gaffurius's *Practica musica* of 1496, but was not relevant for much longer. It can be said that what Franco did for the Ars Antiqua, Muris did for the Ars Nova, only his usefulness was of longer duration. In both cases other writers dealt with the same subjects, but none with the same clarity, comprehensiveness and logical rigour.

The *Ars contrapuncti* is a work of much less importance, consisting mostly of a mechanical exposition of all the possible ways of rhythmically subdividing a florid counterpoint to simple tenors in longs and breves. The preceding rules for two-part counterpoint are elementary but straightforward. The work shares with Muris's *Notitia artis musicae* a tendency to exhaust all possibilities within its frame of reference and an ideal of musical variety. Muris did not otherwise deal with counterpoint, however, and most scholars regard the *Ars contrapuncti* as the work of an anonymous writer.

One musical work by Johannes de Muris may survive: a fragmentary isorhythmic motet *Per grama protho paret/Valde honorandus est beatus Johannes* (*GB-Lbl* Add.41667/I). The attribution, though, depends on an illegible inscription.

4. Influence. Johannes de Muris's influence on the 14th- and 15th-century theory of measured music is so pervasive that it would be more feasible to deal with those writers who show no dependence on him than with those who do. That influence may be seen as comprising three sorts. The first is almost trivial, involving particularly the content of the *Libellus cantus mensurabilis*. Such a rule, for example, as 'the imperfect breve of major prolation cannot be imperfected in any way, because it is not divisible in three equal parts' (*CoussemakerS*, iii, 49*b*; probably a development of Muris's earlier position in the *Notitia artis musicae*, CSM, xvii, 1972, pp.102–3) was repeated by most subsequent writers on mensural notation, either in direct quotation or in much expanded discussions. Much as it may lack interest for us, it is in fact a major problem of mensural theory.

The second sort of influence is, by its very nature, less easy to identify, but perhaps more significant: that is, the form and the kind of language habitually employed by Muris. These reflect the norms of Scholastic academic discourse and the preoccupations of contemporaneous mathematicians and philosophers rather than practical musicians. The third sort is negative, involving the matters with which Muris did not deal, that is all things having to do with plainchant and the traditional lore (biblical and classical instances of the utility of music, classifications of music from Isidore of Seville, etc.) often found in earlier writers. It could be suggested that his precedent made it easier for subsequent writers at all levels to ignore traditional subject matter in favour of contemporary mensural problems.

Muris left untouched many matters of contemporary practical concern occasionally dealt with by other writers of the time, such as questions of tuning or chromaticism, and the genres of musical composition. Whether this is a reflection of the university situation or of Muris's lack of concern with the particulars of musical practice is not clear. It should be noted that in his astronomical work he was one of the very first to report precisely the results of his observations and to question received ideas in their light. In arithmetic as well he contributed to the breakdown of the separation between discrete and continuous quantities – in modern terms, rational and irrational numbers – that led to the rise of modern number theory in the late Renaissance. His complementary treatment of musical rhythm in terms of the exhaustion of theoretical possibility made him stand beside Boethius and Guido as one of the foremost *auctoritates* of medieval music theory.

WRITINGS

Notitia artis musicae, 1319/21, CSM, xvii (1972), 47–107; partial Eng. trans. in *StrunkSR2*, ii, 152–9; book 1, *Musica theorica*, *GerbertS*, iii, 312–15 [under the incorrect title *Ars discantus*], with 256–7; book 2 *Musica practica*, *GerbertS*, iii, 292–301

Compendium musicae practicae, *c*1322, CSM, xvii (1972), 119–46; *GerbertS*, iii, 301–6 [as *Quaestiones super partes musicae*]

Musica speculativa secundum Boetium, June 1323, ed. C. Falkenroth (Stuttgart, 1992); ed. in Witkowska-Zaremba (1992), 171–248; ed. S. Fast (Ottawa, 1994); *GerbertS*, iii, 249–83 [according to Michels extant in two authentic versions, the second from 1325, as well as an inauthentic 15th-century Austrian or south German abridgement (*GerbertS*, iii, 249–55); other reworkings, arrangements or conflations also exist]

Libellus cantus mensurabilis secundum Johannes de Muris, *c*1340, ed. in Katz, 266–88; *CoussemakerS*, iii, 46–58

Ars contrapuncti secundum Johannes de Muris, after 1340, *CoussemakerS*, iii, 59–68

LAWRENCE GUSHEE/C. MATTHEW BALENSUELA (with JEFFREY DEAN)

Muristus [Mūristus, Mīristus, Mūrtus]. Inventor of organ-like instruments. His name appears only in medieval Arabic sources, and he has been inconclusively identified with various Greek technical writers, notably with Ctesibius (by Farmer). Two devices were attributed to him: one had 12 pipes, their valves operated in an unspecified fashion and supplied with wind by the lung power of four men; the other was a primitive quasi-siren, with a hydraulic wind apparatus similar to that of the hydraulis, and therefore looked upon by some as its forerunner.

JAMES W. McKINNON

Murky [murki, murcki, mourki, mourqui, murqui]. A style of keyboard writing (or a piece in that style) in which the bass consists of an extended pattern of alternating octaves; the term 'murky bass' has been applied to any accompaniment pattern of the type. This style of composition flourished in Germany from the 1730s in works directed towards the growing public of dilettantes and amateurs. The murky bass most often appears in a musical texture of only one or two bass notes in each bar, thus generating rhythmic interest in what was essentially a slow harmonic rhythm. As continuo practices declined, the broken-octave pattern could also fill out the texture and sonority without taxing the skill of an amateur performer.

Most accounts of the origin of the murky derive from F.W. Marpurg's anecdote in his *Kritische Briefe* of 1759: Seedo (*d* 1754), a composer of ballad operas and later a chamber musician in Berlin, was asked in 1720 to set some jocular poems to music, and his attempts to reflect these whimsical texts in music led to the mildly redundant bass pattern which he called 'murky'. The style quickly became popular, and the murky was known as a dance type in southern Germany later in the 18th century. The term has generated a wide variety of etymological explanations, some of which infer English origins, while Halski has suggested that the murky was a Polish folkdance, named after the village of its origin, Murka.

References to the murky by C.P.E. Bach and Adlung indicate that it was a widespread keyboard genre, if not one highly esteemed by trained musicians. One of the earliest collections was *XII Murki fürs Klavier* (*c*1727) by Balthasar Schmid of Nuremberg; Sperontes' four-volume song collection *Singende Muse an der Pleisse* (1736–45; DDT, xxxv–xxxvi, 1909/*R*) contains nine works identified by the title 'Murky', but one of these shows no vestige of the usual trommel bass, implying that the term could refer to a musical characteristic broader than the simple accompaniment. One of C.P.E. Bach's character-pieces, *La Boehmer* (W117/26; H81) has been identified by the title 'Murky' in several manuscript copies, but the original print (1754) shows no reference to the term, suggesting that it was added by copyists for whom it represented a style or musical character not limited to the accompaniment alone. The murky bass frequently appears also in German songs of the later 18th century and in collections of miniature dance pieces. Perhaps the most famous example occurs in the first movement of Beethoven's Piano Sonata op.13, where it provides an agitated accompaniment for the main theme.

DOUGLAS A. LEE

Murphy, Dennis (*b* Plainfield, NJ, 19 Jan 1934). American composer. After gaining practical experience on many instruments he studied composition at the University of Wisconsin in Madison (BMus 1956, MMus 1961). In

1959 Murphy began to experiment with gamelan building, and was probably the first American to build gamelan instruments directly on Indonesian models. During his ethnomusicology studies at Wesleyan University in Middletown, Connecticut (PhD 1978), he studied gamelan with R.E. Brown. Murphy modified his gamelan designs, repertory and performing style after consulting experts including Prawatasaputra and Sumarsam. He continued developing and composing for his own gamelan at Goddard College in Plainfield, Vermont, where he taught gamelan, Irish music and South Indian music (1967–81). In 1968 he made a set of wooden shadow puppet characters on Javanese models; he began performing original plays in English and in a language of his own devising to the accompaniment of his gamelan ensemble. Remaining in Plainfield, Murphy founded and became director of the Plainfield Village Gamelan in 1981; he is active as a composer, performer and experimental instrument maker. His compositional influences range from medieval, Renaissance and mid-20th-century Western to Karnatak and Javanese music. His writings include articles on instrument building, African music and the South Indian *mrdangam* drum.

WORKS
(*selective list*)

Javanese gamelan: Ladrang Sulukala; Happy Mongoose; Bragodharma; many others

Other works: Wind Qnt, 1961; Pieces, prep pf, 1965; Missa brevis, 1985; A Perfect Day (cant.), SATB, insts, 1994, rev. 1998; incid music for plays and dances; music for lute; songs; didactic works

JODY DIAMOND

Murray, Ann (*b* Dublin, 27 Aug 1949). Irish mezzo-soprano. After studying at the RNCM and London Opera Centre, she made her stage début in the title role of Gluck's *Alceste* with Scottish Opera at Aldeburgh. After appearances at the Wexford Festival, she made a notable impression in the title role of *La Cenerentola* with English Music Theatre in 1976, the year she was also engaged by Covent Garden as Siebel (*Faust*). She has since been admired at Covent Garden in several Mozart roles – Cherubino, Idamante, Xiphares (*Mitridate*), Despina and Donna Elvira – and as the Composer and Octavian. At the ENO she scored notable successes as Handel's Xerxes and Ariodante, both exemplary performances vocally and dramatically (as can be seen on video). Her Handel was also admired at the Aix-en-Provence Festival when she undertook Bradamante (*Alcina*) in 1978 and at Munich, where she sang Julius Caesar in 1994. She has sung Sextus in *La clemenza di Tito* at both the New York City Opera (1979) and the Metropolitan (1984). Her successful Salzburg Festival début in 1981, as Niklausse (a role she has recorded), was followed by appearances as Cenerentola, Dorabella, Sextus and Octavian. She performed her first Wagner role, Brangäne, in Munich in 1996. Murray's other operatic recordings include Purcell's Dido, Sextus, Dorabella, Despina, Hänsel and Polly in Britten's edition of *The Beggar's Opera*. She is a natural performer with a gift of intense communication enhanced by her warm tone, incisive delivery and impeccable technique. These gifts have also been vividly displayed on the recital platform, where she is adept in lieder (as can be heard on a memorable Schubert disc with Graham Johnson), *mélodies*, English and, especially, Irish song, in which she reveals her delightful sense of humour. She is a founder-member of the Songmakers' Almanac, and is married to the tenor Philip Langridge.

ALAN BLYTH

Murray, David (*b* Berkeley, 19 Feb 1955). American jazz tenor saxophonist, composer and leader. He first took lessons in stride and ragtime piano, then from the age of nine played the alto saxophone, accompanying his mother, a renowned gospel pianist, in church. As a teenager he was one of the leaders of a soul group and emulated bop and swing tenor saxophonists, but while at Pomona College (1973–5) he was introduced to free jazz. After moving to New York (1975) he formed the WORLD SAXOPHONE QUARTET in late 1976 with Oliver Lake, Julius Hemphill and Hamiet Bluiett. Besides his activities with this group he has led a number of others, which have made international tours. As a sideman he formed lasting associations with Jack DeJohnette's group Special Edition (from 1979) and John Carter's quartet Clarinet Summit (1981–90), in which he played bass clarinet. In the 1990s he remains one of the most active and prolifically recorded jazz musicians.

Murray was at first compared with Albert Ayler, but whereas Ayler found the synthesis of different styles difficult Murray has succeeded in amalgamating soul jazz and free jazz in his playing without weakening either. Murray is not afraid to employ conventional bop formulas or to repeat and develop a tuneful, bluesy motif, but he effectively combines such elements with noise, wide leaps, harsh dissonances and other extreme devices to achieve contrasts and climaxes, as for example in his solo on the title track of the album *Murray's Steps* (1982, BS).

BARRY KERNFELD

Murray, Gregory [Anthony Murray] (*b* Fulham, London, 27 Feb 1905; *d* Downside, Somerset, 19 Jan 1992). English composer, organist and liturgist. A chorister at Westminster Cathedral under R.R. Terry, he showed precocious talent as an organist, gaining his FRCO at the age of 17. He became a Benedictine monk at Downside Abbey in 1923, taking the name of Gregory. In the 1930s he established a national reputation through his regular BBC broadcast recitals on the Compton organ at Downside. However, his duties as a priest and monk inhibited the further development of a performing career.

He made a significant musical contribution to Catholic liturgy in respect of the development of congregational participation (notably in the 1939 *Westminster Hymnal* and *A People's Mass*, *c*1950), and with music for the introduction of the vernacular following the Second Vatican Council (1962–5). Apart from compositions for the organ and the liturgy there are also some songs and other choral works. The *Homage to Delius* for string orchestra (1935) reflects a specific musical influence which could be discerned in Dom Gregory's prodigious facility for improvisation. He also composed and edited much

music for, and championed the revival of interest in, the recorder.

He was an important contributor to the controversial debate over the rhythmic interpretation of plainsong. In *Gregorian Chant According to the Manuscripts* (London, 1963) he diverged radically from the generally accepted Solesmes interpretation.

ANDREW MOORE

Murray, Sunny [James Marcellus Arthur] (*b* Idabel, OK, 21 Sept 1937). American jazz drummer. He grew up in Philadelphia and played the drums from the age of nine. In 1956 he moved to New York, where he worked with Henry 'Red' Allen, Willie 'the Lion' Smith, Jackie McLean and Ted Curson. In 1959 he made the acquaintance of Cecil Taylor, under whose influence his playing moved closer to free jazz, but it was only after he heard John Coltrane's quartet and played with it informally in 1963 that he developed his own style. He performed with Albert Ayler (at intervals from around 1964 to around 1967; notably *Spiritual Unity*, 1964, ESP) and made recordings as a leader from 1966. In the late 1970s, most notably on the LP *Apple Cores* (1978, Philly Jazz), he modified his style somewhat, moving towards bop in an attempt to reach a wider audience. In the 1980s he led quintets and various groups known as the Untouchable Factor. Later he recorded with the Reform Art Unit (1992–5) and the saxophonist Charles Gayle (1993, 1995), among others. Murray's playing, which is aggressive, fluid and characterized by waves of cymbal sound and heavy punctuation by the bass drum and tom-toms, has exerted a strong influence on younger musicians. More than anyone else Murray was responsible for the development of the colouristic, unmetred style of free-jazz drumming in which the player, rather than marking time, contributes to the collective improvisation by accentuating freely and by exploring the timbres and pitches of the various components of the drum kit.

MICHAEL ULLMAN

Murray, Thomas (Mantle) (*b* Los Angeles, 6 Oct 1943). American organist. He studied privately with John Stewart and then at Occidental College (BA 1965), where he studied the organ with Clarence Mader and choral conducting with Howard Swan. In 1966 he won the National Competition of the American Guild of Organists. He was organist of Immanuel Presbyterian Church, Los Angeles (1966–73), and organist and choirmaster at St Paul's Episcopal Cathedral, Boston (1975–80). In 1981 he joined the faculty of the Yale University School of Music, becoming a professor and university organist in 1990. A technically gifted and musically inspired performer, Murray has specialized in organ literature of the Romantic period and has a scholarly knowledge of the organ works of Elgar, Franck, Mendelssohn and Saint-Saëns, as well as of the 19th- and 20th-century American instruments best suited to this repertory. His periodical articles and recordings (made on historical American organs, and including Mendelssohn's complete organ sonatas, original works and transcriptions by Elgar and Mulet's *Equisses byzantines*, are a contribution to the documentation of the Romantic era. Murray is a commanding performer and a fine choral conductor.

VERNON GOTWALS/CHARLES KRIGBAUM

Murrill, Herbert (Henry John) (*b* London, 11 May 1909; *d* London, 25 July 1952). English composer and administrator. He studied at the RAM (1925–8) with Bowen, Marchant and Alan Bush. As organ scholar at Worcester College, Oxford (1928–31), he undertook further studies with Harris, Walker and Allen. While he was still at university his opera *Man in Cage* was produced for a run at the Grafton Theatre, London (1930). He worked as a school music teacher, organist and choirmaster until 1935, when he became musical director for the Group Theatre (Westminster Theatre, London). He joined the BBC in 1936, became music programme organizer in 1942, did war service in the intelligence corps (1942–6) and then returned to the BBC to become assistant head of music (1948) and finally head of music (1950). In addition, he was a professor of composition at the RAM from 1933 until his death. As a composer his affinities were Francophile and mildly middle-Stravinskian, both influences tempered by an English kind of neo-classicism. He wrote mainly in smaller forms, but his output includes a polished string quartet and two cello concertos, of which the second is a rhapsodic, one-movement work sub-titled 'El cant dels ocells', based on the Catalan folksong of that name and dedicated to Casals. Murrill was married to Vera Canning, the cellist.

WORKS

(*selective list*)

Murrin, Jacobus (*fl* early 15th century). French composer. He was a priest at Aix-en-Provence in 1423. His only known work is a three-part Credo (in *F-APT*; ed. in CMM, xxix, 1962) which like its counterpart from the same manuscript – a three-part Gloria by Susay – is strictly chordal except in the Amen where minims are introduced.

GILBERT REANEY

Murs, Jehan des. *See* MURIS, JOHANNNES DE.

Murschhauser, Franz Xaver (*b* Zabern, Alsace, bap. 1 July 1663; *d* Munich, 6 Jan 1738). German composer and theorist. His career can be traced first to Munich, where he was a singer and instrumentalist at St Peter's School in 1676. There he received music lessons initially from the Kantor Siegmund Auer and later, in 1683, from the composer and teacher Johann Caspar Kerll, with whom he studied until Kerll's death in 1693. In 1691 Murschhauser became music director at the parish church of Munich, the Frauenkirche, where he remained for the rest of his life.

His two published volumes of music exhibit south German characteristics of organ music written for use with the Catholic liturgy. Both the *Octi-tonium novum organicum* and the *Prototypon longo-breve organicum* include cyclic compositions of free toccata-like fantasies and fugues written to the psalm tones and based on plainchant melodies. They are important for their variety and the distinction of the fugal writing (see Frotscher). Murschhauser's treatise, *Academia musico-poetica bipartita*, although planned for teaching students composition, is an ultra-conservative manual primarily derived from 17th-century concepts of sacred vocal music. Perhaps the most noteworthy aspect of its contents, in four major sections (1. Von der Music insgemein und insonderheit von denen Intervallis Musicis; 2. Von denen Consonantibus; 3. Von denen Dissonantibus; 4. Von denen Tonis Choralibus, und Figuratis), is the remoteness of Murschhauser's method from 18th-century sacred and secular music. The treatise was attacked with devastating satire by Mattheson in the opening volume of his *Critica musica*, in the first section entitled 'Die melopoetische Licht-Scheere'. As a result, Murschhauser's insignificant treatise is important only as the catalyst for Mattheson's valuable testimony to the continuing conflict in the 18th century between 'old-fashioned' composers still pursuing the contrapuntal practice of late 16th-century sacred music and 'modern' composers largely influenced by the idiom of Italian opera.

WORKS

Octi-tonium novum organicum, octo tonis ecclesiasticis, ad Psalmos, & magnificat, org (Augsburg, 1696) [89 pieces]; DTB, xxx, Jg.xviii (1917)

Vespertinus latriae et hyperduliae cultus, vv, insts (Ulm, 1700) [10 pss and 1 Laudate]; as Psalmi vespertini (Augsburg, 1728)

Prototypon longo-breve organicum, org, pt.i (Nuremberg, 1703) [34 pieces], pt.ii (Nuremberg, 1707) [34 pieces]; DTB, xxx, Jg.xviii (1917)

GEORGE J. BUELOW

Murska, Ilma de [di] [Pukšec, Ema] (*b* Ogulin, 6 Feb 1834; *d* Munich, 14 Jan 1889). Croatian soprano. She studied with Vatroslav Lichtenegger in Zagreb, Joseph Netzer in Graz, and from 1860 with Mathilde Marchesi in Vienna and Paris. In 1862 she made her début in Florence as Marguerite de Valois in Meyerbeer's *Les Huguenots*. She subsequently toured Italy and Spain, and also appeared in Budapest, Paris, St Petersburg, Hamburg and Berlin. She sang at the Vienna Hofoper from 1864 to 1873, and appeared with great success in London, where she made her début as Lucia at Her Majesty's Theatre in 1865. She was a member of Mapleson's company until 1873, and in 1870 sang Senta in *Der fliegende Holländer*, the first Wagner opera to be heard in London. She toured the USA (1873–4) and sang in Australia in 1875. For a brief period she taught in the USA (1880), before retiring to Europe.

Murska's best roles were the Queen of Night and Lucia; she also sang Dinorah, Martha, Isabella (*Robert le diable*) and Ophelia (*Hamlet*). Her voice had a range of nearly three octaves, and in Vienna she was known as the 'Croatian nightingale' because of the brilliance of her coloratura. Her acting, which was sometimes extravagant, was nonetheless effective. Sutherland Edwards found her 'unrivalled in certain romantic and fantastic characters', which corresponded to her own eccentric life.

Mūrṭus. *See* MURISTUS.

Musa [West, Wesch], **Anthonius** (*b* Wiehe, *c*1490; *d* Merseburg, shortly before 22 June 1547). German composer. He was given the name Musa during his days in the Erfurt humanist circle around Helius Eobanus Hessus. He studied in Erfurt from 1506 and at Leipzig University in 1509, and obtained the master's degree in Erfurt in 1517. There he became a faithful supporter of Martin Luther and the Reformation. At that time he probably met Conrad Rein, who had moved to Erfurt from Nuremberg in 1515 and who may have taught him composition. Musa was a pastor in Erfurt from 1521 and was probably involved in producing the two *Erfurter echiridien* (1524), which are among the earliest hymn-

books of the Reformation. From 1524 to 1536 he was pastor and superintendent in Jena; he was appointed superintendent in Rochlitz in 1537 and finally, from 1544, he was a superintendent and member of the Merseburg consistory. In all these places he played a considerable part in furthering the cause of the Reformation. Melchior Graupitz composed a five-voice epitaph for him.

For a theologian who was not a professional composer Musa's surviving works are astonishingly numerous, and many other works are probably lost. His five-voice setting of Psalm i, in German, is particularly remarkable because the genre of the German psalm motet and the first settings of lengthy spiritual texts in the vernacular became established only after Stoltzer's setting of the German Psalter in 1524. Musa generally composed in a conservative style, but was forward-looking in his frequent use of the 6-5 chord at cadences (II_7b–V–I). It is not possible to make a final assessment of his works for most of them survive incomplete.

Musaeus. Legendary figure of Greek literature and religion. He is first mentioned by a tragic poet (possibly Euripides, in *Rhesus*, 945–7), in about 440 BCE, as a citizen of Athens who had been trained by the MUSES and APOLLO. The latter reference can only be to the art of singing to the lyre. Aristophanes (*Frogs*, 1038) named Musaeus among the most ancient poets and spoke of him as a healer and a source of oracles, while PLATO (*Republic*, ii, 364e3–4) mentioned liturgical handbooks by 'Musaeus and Orpheus, offspring of Selene and the Muses', used in the rites of the mysteries. His role as musician had no importance for either author. In the 2nd century CE, however, Pausanias (i.15.7) noted the belief that Musaeus sang on the hill of the Muses at Athens, and stressed his close relations with the city. Diogenes Laertius (*Lives*, i.3) identified Eumolpus, a pre-Homeric poet-musician, as the father of Musaeus, while other sources reverse the genealogy. Diogenes, as well, associated Musaeus with Athens.

These references touch upon the chief attributes of Musaeus: his place as a singer in the far-distant past, the strong local ties with Athens, his connection with the mysteries (those of Demeter at Eleusis) and Apollo, and the near-identification with Orpheus. Certain hymns in honour of the Eleusinian goddesses were attributed to him, and he has even been thought to be merely an eponymous representation of the mysteries. During the Hellenic period, Orphic writers and others actually claimed that Musaeus had invented the hexameter and that Homer later borrowed it, along with much poetry composed by Musaeus or Orpheus.

WARREN ANDERSON/THOMAS J. MATHIESEN

Musard, Philippe (Napoléon) (*b* Tours, 8 Nov 1792; *d* Auteuil, 31 March 1859). French composer and conductor. He came from a poor background. He learnt the horn and to some degree the violin, which enabled him to take his first steps as a musician in public balls and dance halls on the outskirts of Paris. His first compositions appear to date from this period. Pougin (*FétisB*) stated that Musard paid an early visit to London, where he co-directed court balls; one of his many London publications is entitled *Waltzes, performed at Almacks &c. by the Band of Messrs Collinet, Michau and Musard* (1821–5). Before 1830 Musard's works were played in Paris at the Vauxhall Ball, under Marchand; after the July Revolution he returned to France and conducted at masked balls at the Théâtre des Variétés. He then became artistic director of a series of popular open-air concerts and dances on the Champs-Elysées, which marked the beginning of the *Concerts-Musard*; these were an immediate and enormous success, and at first involved about 40 musicians. He established himself at the Jardin-Turc, then the Salle St Honoré (later the Salle Valentino) and finally the Salle Vivienne. He also conducted for masked balls at the Salle Ventadour and the Opéra-Comique, and eventually in 1835 and 1836 for the balls at the Opéra itself.

His reputation secure, Musard returned to England and appeared on 12 October 1840 as conductor of the Promenade concerts at the Drury Lane Theatre; the next season he appeared in a similar role at the Lyceum Theatre, where he remained until the end of 1841. He continued to be a popular conductor until 1845. In France he was considered the doyen of dance composers and popular conductors until 1852, but after he retired to Auteuil he was forgotten, and his death was little noticed by the musical press. From 1856 his son Alfred (*b* 1818) revived the concerts of the rue Vivienne (under different names), and made arrangements of some of his father's works for piano (four hands).

Musard's full scores (*F-Pn*) show that his standard instrumental ensemble consisted of a piano with accompanying violin, flute, flageolet and cornet, to which he sometimes added a trombone, ophicleide, string basses, woodwinds and horns. Pougin suggested that he was the first composer to use the trombone for anything other than a purely harmonic purpose. He wrote two types of quadrille: one for the concert hall and one for the ball, drawing on as many as 90 instrumentalists for the latter. If we believe Pougin, the orchestra available to Musard at the Opéra included 48 violins, 14 cornets and 12 trombones. With such forces he did not hesitate to employ sounds such as the crash of broken chairs, or pistol shots signalling the beginning of the final galop of the quadrilles.

Musard was necessarily a showman, but not as flamboyant as Jullien. Pierre Larousse (*Grand dictionnaire*) and an article in *Le ménestrel* (reproduced in *FétisB*) give a humorous glimpse of what his spectacles could be like. He wrote more than 150 waltzes, polkas and quadrilles, the majority based on operas in vogue, but each showing individual inspiration; they were described by the *Revue musicale* as functioning like a

'sample or prospectus' for new operas. His evident versatility was shown in two more serious projects of the early 1830s: a set of three string quartets and the beginnings of a *Nouvelle méthode de composition musicale*, of which four instalments were received by the *Revue musicale* by February 1833.

GUSTAVE CHOUQUET/DAVID CHARLTON/ GERARD STRELETSKI (text), GERARD STRELETSKI (work-list)

Muscadin. A dance similar to the allemande presumably named after the wine called muscadine. Settings of the melody associated with it and variations upon it occur in the Fitzwilliam Virginal Book (ed. J.A. Fuller Maitland and W.B. Squire, London, 1899/*R*) and other sources of English keyboard music. That by Giles Farnaby (ed. in MB, xxiv, 1965, no.38) is also found under the title *Kempes Moris*, which suggests that the tune was danced to by William Kemp, the well-known Elizabethan dancer and comic actor who performed in England and on the Continent.

MICHAEL TILMOUTH

Muscarini, Girolamo. *See* MONTESARDO, GIROLAMO.

Musculus, Balthasar (*b* ?Neustadt an der Orla, Thuringia, ?*c*1540; *d* ?1595–7). German music editor, composer and schoolmaster. He was most probably the 'Balthasar Meuslin a Neapoli ad Orlam' who matriculated at the University of Jena in the summer of 1557. He first worked in his native town, whence in 1575 he sent several songs (probably his lost print of that year) to the town councillors of Amberg and Nördlingen and in 1579 some partbooks to Naumburg an der Saale. Later, he was headmaster of the school at Ziegenrück, Thuringia, until 1595. Since his publication of 1597 was edited for him he was probably dead by then. The four-part songs that make up the *40 schöne geistliche Gesenglein*, which from 1597 always appeared alongside pieces by Jacob Meiland, Orazio Vecchi and other composers, are anonymous settings of German texts, partly in the expressive polyphonic style of the late Netherlands motet, partly in a simple homophonic song style that shows the influence of the Italian villanella and canzonetta. Since they exhibit such a variety of styles and are of such differing quality, it must be assumed that only a few were composed by Musculus himself; some indeed are known to be by Jacob Meiland, Georg Körber, Antonio Scandello and Gallus Dressler. The popularity of the collection and its widespread use in Protestant grammar schools is demonstrated by the large number of editions and by the frequency with which individual pieces were reprinted. Further work needs to be done on the sources; five editions have been established.

Musel, Corneille. *See* NERVIUS, LEONARDUS.

Muselar (Dutch). A term used by C. Douwes (*Grondig ondersoek van de toonen der musijk*, Franeker, 1699) and revived by modern writers to designate Flemish virginals which, having their keyboards placed off-centre to the right, consequently have strings that are centrally plucked for most of the instrument's range. This gives the muselar a distinctive flute-like tone of great beauty, quite unlike that produced by any of the registers of a harpsichord or by a virginal of any other design, and since the late 1960s several makers have constructed replicas of the 17th-century originals.

Muses (Gk. *Mousai, Moisai*; Lat. *Musae*, also *Camenae*, from *cano*). The Muses are of unknown origin. They have been explained as water-nymphs who frequented mountain springs or streams. None of the etymologies proposed for the singular *Mousa* has won general acceptance.

HOMER called upon one or more of the Muses at certain crucial points in his writings. In the *Odyssey* (xxiv.60), 'Muses nine in all' mourn Achilles. This ambiguous phrase probably generated the later belief in nine as the canonical number, observed everywhere except at Delphi and Sicyon. Homer remained imprecise, even omitting the distinctive name from the opening line ('Sing, goddess ...') of his *Iliad*. By way of genealogy, he offered only the phrase 'daughter of Zeus' (*Odyssey* i.10). His successor HESIOD, writing probably in the late 8th century BCE, provided the Muses with a mother as well: she is Mnemosyne or 'Memory', obviously an allegorical figure (*Theogony*, 915–18). More significantly, he described vividly how they visited him on Helicon and endowed him with the knowledge and command of words to be a rhapsode (22–34). For him, they numbered precisely nine and had individual names (75–9).

The Muses were worshipped at Pieria in Thessaly (near Mount Olympus) and Mount Helicon in Boeotia; similar cults were found elsewhere in Greece. They had particular fields of activity attributed to them principally in the literature and art of the later Roman Empire, although the distinctions among the fields are somewhat blurred: Clio (history, shown in representational art with the kithara), Euterpe (lyric, shown with the double aulos), Thalia (comedy, light poetry, the idyll), Melpomene (tragedy, Aeolic poetry and songs of mourning), Terpsichore (choral lyric and dance, shown with the lyre), Erato (song and the dance, and erotic lyric, sometimes shown with the lyre), Polymnia or Polyhymnia (hymns, dance and mime, shown with the barbitos), Urania (astronomy) and their chief, Calliope or Calliopea (heroic poetry and playing on string instruments) – the true leader of the Muses being of course Apollo Mousagētēs. In mythology, the Muses appear in various contexts: they act as judges in the contest between APOLLO and MARSYAS; in another contest they defeat the Sirens, who lose their wings and jump into the sea (Pausanias, *Description of Greece*, ix.34.3); and when the Thracian poet Thamyris is so audacious as to challenge the Muses, he is blinded and loses the power of song (*Iliad*, ii.594–600); Apollodorus, i.3.3).

The Muses eventually came to be linked with all the arts and sciences that later antiquity recognized as liberal pursuits. Originally their proper province included no more than the sung or chanted word with musical accompaniment and, secondarily, the dance. This had changed by the time of Hesiod, whose didactic epic was recited. By his time, however, Homeric poetry had established the Muses as an embodiment, collective or individual, of the forces of knowledge and inspiration within the singer. The dancer in Homer is an entertainer; the bard presents, by contrast, an august figure. As a follower of the Muses, instructed and inspired by them, he possesses an almost sacerdotal function. The vatic tradition thus begun survived as an aspect of European literary and musical Romanticism.

With reference to language, the most striking gift of the Muses is the term *mousikē*. Once descriptive of all that was thought to come within their varied domain, it underwent a reductive process to become the modern conception of 'music'. The Muses themselves remain quintessentially Hellenic, without true analogues in any other mythology, representations of the ideal of supreme bodily and intellectual grace.

WARREN ANDERSON/THOMAS J. MATHIESEN

Muset, Colin (*fl c*1200–50). French trouvère. Allusions in his works to people and places have led to the conclusion that he was probably active in the first half of the 13th century in and around Champagne and Lorraine. Not all the works with such references, however, have been definitely attributed to him. *Quant je voi le tens refroidier* is probably addressed to Gui de Joinville, seigneur of Sailly from 1206 to 1256; *Devers Chastelvilain* tells of two kings, probably Louis IX of France and Thibaut IV, King of Navarre from 1234, and praises the hospitality of the seigneur of Châteauvillain, probably Simon de Broyes (1199–1258): both songs are of doubtful authorship. On the other hand *Or voi le dous tens* is certainly Muset's work; it is addressed to a 'bone duchesse' – perhaps one of several duchesses of Lorraine from the first three-quarters of the century.

The definite works are of a considerable variety of types; they include lais (e.g. *Sospris sui*), a descort (*Or voi le dous tens*), a *tenso* (*Biaus Colins Musés*) and a number of songs which refer to eating and drinking (e.g. *Sire cuens*). Most interesting historically are the references to instruments and the playing of instruments (by which means Muset revealed his profession as a *jongleur*): he mentioned 'la viele et l'archet' (in *Volés öir muse Muset*), the 'flajoet' (*En mai*), 'flaihutel' and 'tabor' (*Encontre le tens novel*); the 'muse' (*Volés öir muse*) may refer to the cornemuse (as well as being a pun on his own name).

Over half of Muset's poems have survived without their melodies. A curious and very clear division exists: one group of songs is transmitted without music in one small group of sources, and a quite different repertory, with melodies, in another group. *Trop volentiers chanteroie* is the one exception in that it survives with melody in the first group. It is, therefore, difficult to determine the actual extent of Muset's work; the confusion of sources may be related to his presumed humble origin. The existing melodies are basically simple in style and form, with a great deal of repetition of smaller melodic elements, a limited compass and a prevalence of syllabic settings. This 'folksong' style is perhaps another indication of the composer's profession as a *jongleur*. In *Sire cuens* text

and music together present a clear picture of the wandering popular musician.

ROBERT FALCK

Musette (i) (Fr.). (1) A small bagpipe, especially one of aristocratic design which achieved popularity in France in the 17th and early 18th centuries. The air supply to the bag comes from a small bellows strapped under the arm. The earliest discussion of its use appears in Mersenne (1636–7). During the 17th century the instrument was used to play rustic dances, such as the bransles found in the first treatise on the instrument, by Borjon de Scellery (*Traité de la musette*, Lyons, 1672/*R*). The instrument described by Mersenne and Borjon had a range of ten notes (*f′–a″*) and drones in F and B♭.

In the early 18th century a second chanter was added, giving the instrument a range to *d‴* and allowing the possibility of double stops. The drones in C and G were the most frequently used, and most music for these instruments is in those tonalities, although D and A tunings were also possible. This instrument and its technique are described methodically in Jacques Martin

Gaspard de Gueidan playing the musette: portrait by Hyacinthe Rigaud, 1719 (Musée Granet, Aix-en-Provence)

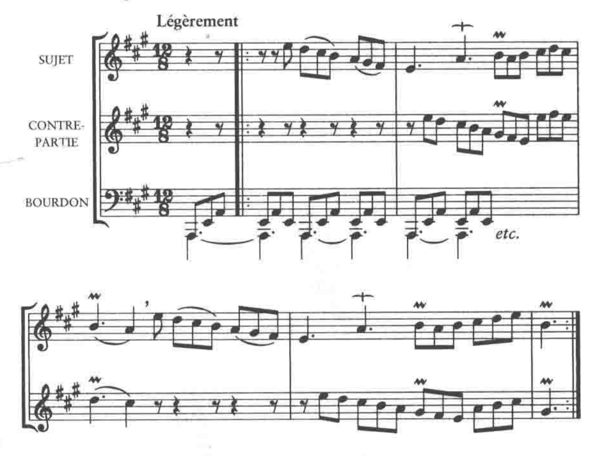
Hotteterre's *Méthode pour la musette* (Paris, 1737/*R*). The extension of the instrument coincided with its involvement with chamber music. Sonatas and suites for one or two musettes with or without continuo were published by Boismortier, Corrette, Lavigne, Aubert and others. By far the most prolific composers were the brothers Esprit-Philippe and Nicolas Chédeville; they also arranged works of Vivaldi, dall'Abaco and other Italians for the musette. Corrette wrote 22 concertos suitable for musette and strings. The instrument was assigned obbligato parts in cantatas by Montéclair, Corrette, Boismortier, Lemaire and Dupuits. It was used by Lully in stage works (among them *Isis* and *Thesée*), and later by Montéclair, Leclair, Rameau, Campra and others in operas and ballets. By 1760 the musette was in decline. For an account of the physical characteristics of this instrument *see* BAGPIPE, §6.

(2) The 'musette de Poitou' of the 17th century was a simple bagpipe, and like the *biniou* of Brittany was accompanied by an HAUTBOIS DE POITOU (a bagless chanter), or by a consort of such instruments including a bass. The consort was described and illustrated by Mersenne (in *Harmonicorum libri XII*, book 5, proposition 34) and is repeatedly mentioned in documents relating to musicians of the Grande Ecurie du Roi, which included a group called 'Les Musettes et Hautbois de Poitou'; among its members were Jean Hotteterre (1) and later the flautist Michel de La Barre (see Benoit). The 'hautbois de Poitou' had a wooden reed-cap, shown in the frontispiece of Borjon's *Traité de la musette*.

Many specimens of the 'hautbois de Poitou' in museum collections probably date from the 18th century, and it was following the same tradition that Paris woodwind makers began in the 1830s to produce the small oboe

without reed-cap which has since been called 'musette'. It supplied rural colour to the urban *bal musette* and was further popularized at concerts like those of Louis Jullien, who himself performed on it in England in imitation of the Scottish bagpipe. Pitched a 5th above the oboe and 31 to 36 cm in length, it is made in two joints and has seven finger-holes, a thumb-hole and two vents in the bell. The reed is shaped like that of an oboe, but is a little smaller. Later a simple keywork was added, and such models, usually made of blackwood, were still offered for sale in the 1930s for domestic amusement, along with similarly constructed flageolets. Another type with a wider bore, modelled on the Breton bombarde, was introduced about the middle of the 19th century by Frédéric Triébert: it was named in advertisements 'hautbois pastorale', and subsequently even fitted with a keywork of the Boehm system.

(3) A dance-like piece of pastoral character whose style is suggestive of the sound of the musette or bagpipe. The bass part generally has a drone (*bourdon*) on the tonic and the upper voice or voices consist of melodies in conjunct motion, sometimes but not always in quick note values. Various metric structures were used and the tempo is moderate.



The dance that bears the name and was performed to the music has a languid, fragile character. Three choreographies have survived in dance notation (see Little and Marsh, *La Danse Noble: an Inventory of Dances and Sources*, Williamstown, MA, 1992, nos.6160, 6140 and 2480). *La muszette a deux* is an entry for two ladies performed in Act 4 scene iii of Destouches' *Callirhoé* (1712); *La musette* (1724) is a duet for a gentleman and a lady; and *The Diana* (1725), also a duet for a gentleman and a lady, is in slow triple metre. Musettes appear as early as Campra's *Les muses* (1703), where the sound of the musette is imitated in a minuet of an entrée, *La pastorale*. Others occur in Campra's *Les âges* (1718), Lalande and Destouches' *Les éléments* (1721), Handel's overture to *Alcina* (1735) and his Concerto grosso op.6, and Mozart composed one for *Bastien und Bastienne* (1768) to announce the arrival of the Sorcerer.

Musettes were also composed for keyboard, the execution of which, according to Türk (*Clavierschule*, 1789, p.401), should be 'schmeichelnd und geschleift' ('coaxing and slurred'). Perhaps the most elegant examples are the *Muséte de Choisi* and *Muséte de Taverni* for two harpsichords by François Couperin (*Pièces de clavecin*, XVe ordre, 1722). These were written to be performed one after the other, and the imitative beginning of the *Muséte de Taverni* (ex.1) recalls the rustic sound of two bagpipes. J.S. Bach composed several pieces in musette style, including the 'Gavotte ou la musette' in the Third English Suite (BWV808) and the forlana of the Orchestral Suite in C major (BWV1066). In the 20th century the form has been used by Selim Palmgren in his *Country Dance* (*Musette*) (1922) and Schoenberg in the Suite for piano op.25 (1921–3).

(4) Two shawm-like double reed instruments used in some Swiss Protestant churches from about 1750 to 1810, called *basse de musette* and *dessus de musette* by later museum curators who found examples in their collections; *See* HAUTBOIS D'ÉGLISE.

(5) The name by which the button chromatic ACCORDION is known in France (in Russia it is called *bayan*). 'Musette tuning' is where each key or button on an accordion is coupled to three reed banks; the middle

Ex.1 Couperin: Muséte de Taverni, XVe ordre (*Troisième livre*, 1722)
Première partie

one is tuned 'pure' and the outer ones are tuned respectively sharp and flat to the main note, producing a characteristic wide tremolo.

(6) A small Conservertoire-system oboe in F created by Marigaux for Heinz Holliger (*see* OBOE, §II, 3(iii)).

Musette (ii). *See under* ORGAN STOP.

Musgrave, Thea (*b* Barnton, Midlothian, 27 May 1928). Scottish composer. She began her studies at the University of Edinburgh with Gál, whose teaching of counterpoint formed a firm foundation for her compositional technique. She was also influenced by Tovey (though she never knew him), and was in particular concerned with developing Tovey's sense of 'long-term harmony', i.e. implying a number of harmonic relationships over an extended period of time: 'the overall line of what a piece would be' (Musgrave); in her final year at Edinburgh, she was awarded the Donald Tovey Prize. In 1949, on the advice of Curzon, she went to the Paris Conservatoire to study with Boulanger. Whereas Gál had emphasized line,

Boulanger concentrated on minute details discussing, for example, the choice of a single instrument in a richly textured chord. Musgrave remained as a private pupil of Boulanger until 1954, winning the Paris Conservatoire's Lili Boulanger Memorial Prize. Her first commission, for the Scottish Festival in Braemar (*Suite o'Bairnsangs*, 1953), came while she was still in Paris.

In her final year the pianist Margaret Kitchin suggested Musgrave write to Glock to see if there might be a teaching position at the Dartington Summer School and she subsequently embarked on the first of four valuable years there. Concurrently, BBC Scotland commissioned *Cantata for a Summer's Day*, which brought her to public attention. Early reactions to her work (from her contemporaries John Warrack and Donald Mitchell among others) were largely positive if guarded, citing a conservative, clear approach with an emphasis on diatonic melodies and a natural facility for fusing music and language. During this time Musgrave travelled to the USA and studied at Tanglewood with Copland; she was also much influenced by the music of Ives and Babbitt. Returning to Britain, she took up, in 1959, an extramural lectureship for London University at Teddington. Increasingly she turned away from her earlier declamatory, often modal writing in favour of serialism; works from this period include the *Triptych* for tenor and orchestra (1959), the Trio for flute, oboe and piano (1960), *Perspectives* (1961), *Sir Patrick Spens* (1961) and *Sinfonia* (1963). Throughout, Musgrave's formative friendship with Glock resulted in a strong ally at the BBC.

In 1963 Musgrave wrote the incidental music to a BBC television play by Ken Taylor, *The Devil and John Brown*, based on a true story of a Scottish mining village, set around 1835. The story struck her forcibly, and she decided to accept no further commissions in order to concentrate on an operatic treatment of these events, entitled *The Decision* (1964–5). Working with the Scottish

Thea Musgrave

poet Maurice Lindsay (who had also written the libretto for her 1955 one-act opera, *The Abbot of Drimock*), Musgrave told the story of a miner trapped underground. She asked Lindsay to supply her with 'heightened, lyrical prose' to temper her forays into strict serialism. *The Decision* thus combines elements of Musgrave's early modal austerity with a use of tone rows, resulting in an eclectic lyricism. The opera reveals a complex, contrapuntal style replete with motifs associated with individual characters, intertwined with themes that underscore crucial events. As the plot unravels through a series of flashbacks – a dramatic device to which she would frequently return – musical gestures take on dramatic significance.

If *The Decision* proved a turning point in Musgrave's development, it was because it led her to understand that her musical creativity relied essentially on dramatic confrontation. In the Chamber Concerto no.2 (1966), she took inspiration from Ives and his way of juxtaposing different tempos. Unaware of Britten's 'curlew' sign or Lutosławski's 'controlled aleatorism', she wrote individual cadenzas for each instrument. At times, one player's cadenza acts as a cue for the following player, at others, the instruments rally to a specific point in the score. Elsewhere different players take full charge of the ensemble. Musgrave's consideration of these internecine tensions culminated in a dream in which, during an orchestral piece, the clarinet player stood up and led an orchestral mutiny. Within days, the CBSO commissioned her to write the Concerto for Orchestra (1967), in which the clarinettist does indeed interrupt the first orchestral tutti by suddenly standing up and delivering a defiant musical phrase. The clarinet subsequently 'gives' tailor-made themes to various members of the orchestra, each player in turn rising to become both a soloist and, briefly, leader. Though control is wrested away from the conductor and the players allowed a semblance of liberty, the work remains tightly notated without aleatory passages.

Musgrave further pursued the ramifications of freedom within form with the Clarinet Concerto (1968), commissioned by the BBC SO. Based on a concerto grosso model, the orchestra is divided into a series of concertante groups. The soloist walks from one section to another, visually underpinning the musical structure. In the Horn Concerto (1971) the brass section is instructed to spread across the concert hall while maintaining a dialogue with the on-stage soloist. The Viola Concerto (written for her husband Peter Mark in 1973), poses an egalitarian response to the musical inferiority historically accorded viola players. Incited by the solo player, the violas become increasingly agitated until the entire section stands and plays, eventually forcing the conductor to bring in the brass to silence them. The violas' civil disobedience is quashed by the conductor's totalitarian response, yet the soloist proves a cunning diplomat: joining the brass the soloist instructs them in the viola's theme. In an age that has witnessed a concerted attempt to demystify the orchestra through community and educational music schemes, Musgrave's orchestral works seem increasingly prescient. For her, the orchestra as simply an efficient corporate machine holds little inspiration. Instead, she focusses on the players themselves, the challenges and rewards of group activity, combined with the exhilaration and fear in literally taking a stand.

In 1973 Musgrave presented eight broadcasts for the BBC entitled *The New Sounds of Music: Why and How*. The main purpose of these talks was to make electronic music more accessible, for by the late 1960s, she herself had been experimenting with tape. Her ballet *Beauty and the Beast* (1968–9), the *Soliloquy* for guitar and tape (1969) and *From One to Another* for viola and tape (1970) each involve the combination of pre-recorded music with live performance, while in her chamber opera *The Voice of Ariadne* (1972–3) the tape part is put to a dramatic purpose. A count becomes obsessed with a lost statue of Ariadne, and her voice, which beckons to him throughout and which only he can hear, is an eerie siren song on pre-recorded tape. Eventually the voice of the count's wife joins with that of the taped voice, which gradually fades, restoring the count to the countess: the tape music represents beauteous, intransigent form among the malleable humans. In Musgrave's 1981 radio opera *An Occurrence at Owl Creek Bridge*, the accompanying tape provides what at first seems to be simple sound effects – rushing water, running footsteps, horses' hooves. Only at the end does the listener realize that the naturalistic sound effects are not real, but are the wearied imaginings of a dying man.

Musgrave has proven a prolific as well as highly regarded opera composer, accruing both critical and popular success for her full-length works for the stage, *Mary, Queen of Scots* (1975–7), *A Christmas Carol* (1978–9), *Harriet, the Woman Called Moses* (1984, commissioned jointly by Covent Garden and the Virginia Opera, but yet to be staged in the UK) and *Simón Bolívar* (1989–92). Her work in developing and promoting opera in Norfolk, Virginia (she moved to the USA in the late 1970s) has also been of great importance. Instrumentally she has been inspired to work for among others, Bream, Pears, Glennie, Tuckwell and Nicholas Daniel. The recent orchestral *Phoenix Rising* (1997), which includes a floor plan and stage directions within the score, reveals her continuing desire to reconcile individual idiosyncrasy with *esprit de corps*.

WORKS

DRAMATIC

A Tale for Thieves (ballet, 1, after G. Chaucer: *The Pardoner's Tale*), 1953

The Abbot of Drimock (comic op, 1, M. Lindsay), 1955, concert perf., Park Lane Opera Group, 1958; staged, London, Morley College, 15 March 1962

Marko the Miser (children's op, Musgrave and F. Samson, after A.N. Afanas'yev), 1962; Farnham Festival of Schools' Music, Surrey, 1963

The Devil and John Brown (TV score, K. Taylor), 1963

The Decision (op, 3, Lindsay), 1964–5; New Opera Company, cond. L. Lovett, Sadler's Wells, 30 Nov 1967

Beauty and the Beast (ballet, 2, C. Graham), 1968–9; Scottish Theatre Ballet, Sadler's Wells, 19 Nov 1969 (choreog. P. Darrell)

The Voice of Ariadne (chbr op, 3, A. Elguera, after H. James: *The Last of the Valerii*), 1972–3; English Opera Group, Snape, Maltings, 11 June 1974

Orfeo (ballet), dancer, fl, str ens/str orch tape, 1975, BBC TV, 17 March 1977

Mary, Queen of Scots (op, 3, Musgrave, after Elguera: *Moray*), 1975–7; Edinburgh, King's, 6 Sept 1977

A Christmas Carol (op, 2, Musgrave, after C. Dickens), 1978–9; Virginia Opera, Norfolk, VA, 7 Dec 1979

Last Twilight (theatre piece, D.H. Lawrence), 1980

An Occurrence at Owl Creek Bridge (radio op, Musgrave, after A. Bierce), 1981, BBC Radio, 14 Sept 1982; staged Bracknell, Wilde Theatre, 23 June 1988

Harriet, the Woman Called Moses (op, 2, Musgrave), 1984, rev. 1985; Virginia Opera, Norfolk, VA, 1 March 1985

The Story of Harriet Tubman (music drama, Musgrave), 1990 [based on op Harriet, the Woman called Moses], orchd J. Grout

Simón Bolívar (op, 2, Musgrave), 1989–92, Virginia Opera, Norfolk, VA, 20 Jan 1995

VOCAL-ORCHESTRAL

Triptych (Chaucer), T, orch, 1959; The Phoenix and the Turtle (W. Shakespeare), small chorus, orch, 1962; 2 Christmas Carols in Trad. Style (N. Nicholson), S, SA, opt. TB, ob/cl/vn, str, 1963; The Five Ages of Man (Hesiod, trans. R. Lattimore), chorus, orch, 1963; Monologues of Mary, Queen of Scots (Musgrave), S, orch, 1977–86; Songs for a Winter's Evening (R. Burns), S, orch, 1995

OTHER VOCAL

Choral: 4 Madrigals (T. Wyatt), chorus, 1953; Song of the Burn (Lindsay), SATB, 1954; Make ye merry for Him that is to come (15th-century), children's chorus, SA, opt. org, 1961; John Cook (anon.), SATB, 1963; Memento creatoris (J. Donne), chorus, opt. org, 1967; Rorate coeli (W. Dunbar), SATB, 1974, rev. 1976; O caro mé sonno (Michelangelo), chorus, 1978; The Lord's Prayer, chorus, org, 1983; Black Tambourine (H. Crane), SA, perc, pf, 1985; The Last Twilight (theatre piece, D.H. Lawrence), SATB, 3 hn, 4 tpt, 4 trbn, perc, 1980; For the Time Being: Advent (W.H. Auden), SATB, nar, 1986; Echoes Through Time (dramatic-choral work), SA, spoken chorus, orch, 3 dancers (opt.), 1988; Midnight (J. Keats: *To Sleep*), SATB, 1992; On the Underground, set no.1 'On Gratitude, Love and Madness' (J. Berry, S. Pugh, W.B. Yeats, S. Smith, A. Rich, E. Dickinson), SATB, 1994; On the Underground, set no.2 'The Strange and the Exotic' (R. Herrick, 17th-century, E. Morgan), SATB, 1994; On the Underground, set no.3 'A Medieval Summer' (anon., medieval texts, Chaucer), SATB, 1995

Solo vocal: 2 Songs (E. Pound), Bar, pf, 1951; A Suite o' Bairnsangs (Lindsay), 1v, pf, 1953; Cant. for a Summer's Day (Hume, Lindsay), spkr, S, A, T, B, fl, cl, str qt, db, 1954; 5 Love Songs (medieval Eng.), S, gui, 1955; 4 Portraits (Davies), Bar, cl, pf, 1956; A Song for Christmas (attrib. Dunbar), S/T, pf, 1958; Sir Patrick Spens (trad.), T, gui, 1961; Primavera, S, fl, 1971; Wild Winter (W. Owen, F. García Lorca, S. Crane, V. Hugo, Pushkin, Petrarch, G. Trakl), S, T, T, B, 5 viols, 1993

INSTRUMENTAL

JENNIFER BARNES

Mushāqa, Mīkhā'īl (*b* Rashmayyā, 1800; *d* Damascus, 1880). Lebanese physician and polemicist. Among his many writings is a treatise on music, the earliest manuscript of which is dated 1840. This is the most important Arabic work on the subject from the first half of the 19th century. It is always referred to as the first text in which, with an explicitly mathematical formulation resulting in precise string sections, the modern theory of a 24 quarter-tone octave is articulated. But his definitions, which presage much later inquiry on norms of intonation, are tucked away in a concluding section, so that the bulk of the work is generally ignored.

In fact, Mushāqa's treatise is concerned primarily with scale, instruments and mode, and forms part of a tradition of description and definition exemplified by the treatise of Cantemir and, in Arabic, the anonymous *Shajara dhāt al-akmām* ('The tree with calyxes'). All regard the theoretical octave as made up of a set of primary notes between which are intercalated secondary ones, and Mushāqa adds to their number by filling the gaps left by earlier writers. The ensuing account of instruments covers chordophones (including the violin) and aerophones, and gives a detailed account of lute tuning. But particularly important is the extensive catalogue of modes, both for its descriptive content, with each mode being defined in terms of a basic melodic matrix, and for its insight into the differentiation of Syrian practice from the Ottoman system of the day.

OWEN WRIGHT

Mushel′, Georgy Aleksandrovich (*b* Tambov, 29 July 1909; *d* Tashkent, 1989). Russian composer and pianist. He studied composition with A.N. Aleksandrov, Gnesin and Myaskovsky and the piano with L. Oborin at the Moscow Conservatory, graduating in 1936. He was a member of the Composers' Union. In 1936 he moved to Tashkent, where he taught at the conservatory, being appointed professor of composition in 1976.

Mushel′'s output embraces many formats; he laid the foundations for a number of genres hitherto non-existent in Uzbek music, including the piano concerto (of which he wrote six), the symphony and piano music. His style, based on deep study of the traditional music of many eastern countries, organically combines features of Western and Russian music with those of Uzbek folk music and oral tradition. Although Mushel′ frequently made direct use of folkmaterial, especially folksong, his work subtly embodies the main features of Uzbek folkmusic, not only in modal and textural terms – in his employment of diatonic collections and his imitation of the sounds of the *dutar* and *karnay* – but also in matters of rhythm (such as the virtuoso *ussul′* techniques played on the folk percussion instrument the *nagora*) and form (such as the climactic rising wave device, *audzhev*).

Mushel′ introduced the principles of imitative polyphony to Uzbek art music, and his many fugues on folk themes opened the way to the transformation and development of traditional monody in a polyphonic context (*24 Preludes and Fugues* for piano).

Mushel′ was a professional pianist, and created an original style in his compositions for the instrument, with sensitive feeling for texture and the colours of different registers and with a full exploitation of the whole range of contemporary pianism. In his *24 Preludes and Fugues* elegance, lyricism, a fondness for the contemplative and the picturesque, and an acute sense of genre are combined with impressive élan and dynamism, and concerto-like brilliance and scale. Mushel′ was also active as a painter, and his work was frequently shown at exhibitions in Tashkent, Moscow and other cities. He also had a keen interest in science, especially physics. His wide-ranging musical aesthetic was enriched and deepened by his responsiveness to literature and the plastic arts. As a teacher, Mushel′ influenced many other composers of Tajik, Kazakh, Kyrghyz and other nationalities as well as Uzbek. His music has often been performed outside Uzbekistan – in Russia, Germany, Czechoslovakia, Hungary, Austria and Britain.

Musi [Degli Antoni], **Maria Maddalena** ['La Mignatti', 'La Mignatta'] (*b* Bologna, 18 June 1669; *d* Bologna, 2 May 1751). Italian soprano. She was the daughter of Antonio Maria Musi and Lucrezia Mignati, from whom she perhaps inherited her equivocal nickname ('the Leech'), and was one of the most admired and highest-paid female singers of the day. In Reggio nell'Emilia in 1688 she sang Amore in the Prologue to the operatic tableau *Amor non inteso* (composer unknown). She was in the service of Duke Ferdinando Carlo Gonzaga of Mantua from 24 June 1689, who assigned her an annual salary, the privilege of a passport and the designation 'virtuosa', a title she kept until at least 1702. She performed in many Italian cities, including Piacenza, Genoa, Parma, Modena, Milan, Bologna and Naples. In 1703 she married the composer Pietro degli Antonii. Her last known public performance was in Ferrara in 1726, in *La fedeltà creduta tradimento* (composer unknown).

PAOLA BESUTTI

Music. The principal subject of the publication at hand, whose readers will almost certainly have strong ideas of the denotative and connotative meanings of the word. Presenting the word 'music' as an entry in a dictionary of music may imply either an authoritative definition or a properly comprehensive treatment of the concept of music, at all times, in all places and in all senses. That last would require discussion from many vantage points, including the linguistic, biological, psychological, philosophical, historical, anthropological, theological and even legal and medical, along with the musical in the widest sense. Imposing a single definition flies in the face of the broadly relativistic, intercultural and historically conscious nature of this dictionary.

Selecting from a number of alternative viewpoints, this article addresses issues and approaches to perspectives that exhibit the great variety of the world's musics and of the diversity of cultural attitudes and conceptions of music. The verbal definitions provided in standard linguistic and musicological reference works, even counting only those in English, differ substantially, and the *de facto* definitions as expressed in human description and activity provide even greater breadth. Different societies, subcultures, historical periods and individual musicians may have sharply differing ideas on what constitutes music and about its characteristics and essentials, its significance, function and meaning. Providing a universally acceptable definition and characterization of both word and concept is beyond the capacity of a single statement by one author, and this article is thus a modest compendium sampling the views found in the literature of historical musicology and ethnomusicology, perforce omitting detailed discussion of the viewpoints of a number of relevant disciplines including psychology, physics, aesthetics, pedagogy and music theory.

The following paragraphs thus consider, first, formal definitions and properties of the word 'music' in English and – to a smaller extent – its equivalents in some other European languages, including considerations of etymology, reference works of different kinds, European authorities of the past and local traditions; the fundamental ideas about music as a concepts and its characteristics, boundaries and relationships in a sampling of cultures; and third, the concept of music in its use by musicologists and as an issue in musicological thought, including consideration of definitions of the word and the concept in music dictionaries, its central characteristics, its relation to the other arts, human culture more generally and society, its classification, its existence as a universal phenomenon and the issue of approaching the art as the world of music or musics. For discussion of music from psychological and other relevant perspectives, and the concept in earlier periods of European music history, *see* (for example) PSYCHOLOGY OF MUSIC; PHILOSOPHY OF MUSIC; PHYSICS OF MUSIC; SOCIOLOGY OF MUSIC; SOUND; MEDIEVAL; and RENAISSANCE.

I. The word: etymology and formal definitions

1. ETYMOLOGY. The English word, 'music', whose first appearance in writing is set in the 13th century by the *Oxford English Dictionary* (*OED*), was adapted from the French *musique*, in turn an adaptation of the Latin *musica* which was taken from the classical Greek *mousikē*. Referring originally to works or products of all or any of the nine Muses, it began gradually to be restricted to the arts generally covered by the modern term. It may be argued that this suggests a conception of music as the quintessence of arts and sciences of which the Muses were

patrons, though none of these deities was explicitly associated with music in the modern sense. Although not a part of early Indo-European vocabulary, 'music', the word and its cognates are almost universally used in Indo-European languages spoken in Europe, having often been introduced as a loan word from Latin, French, Italian or Spanish. Thus, the German *Musik*, Norwegian *musikk*, Polish *muzyka*, Russian *muzïka* and Dutch *muziek* presumably came about through direct borrowing rather than through the gradual sound-shifts and spelling reforms that changed the Latin *musica* to the Spanish *música* and French *musique*. Some Indo-European languages, however, maintained older words for the concept of music: for example, Czech *hudba* and Croatian *glazba*, the latter related to the word for sound (although both languages also use the alternative *muzika*), and a large number of words used in Indo-Iranian languages. Cognates of 'music' were introduced to members of other language families. Most prominently, the Arabic *musiqi* was borrowed from Greek and further introduced to Persian (by the 17th century), Hebrew (by the 10th century) and Swahili (later). Modern Indonesian (*musik*) and Shona (*musakazo*) are examples of languages in which the word was recently introduced. In a number of these, the traditional language did not provide a word comprehensively encompassing the concept of music as it is maintained in modern Western culture.

At least three approaches are helpful in determining a society's definitions of components of its culture. First, one may consult the formal statements of authorities generally recognized, that is, dictionaries or reference books (in Western and certain other cultures), and perhaps sacred texts or wise elders (in certain smaller societies). Further, one may ask average members of a population; and finally, one may construct formulations of the system of ideas about a concept and even a word by observing relevant behaviour.

2. Language dictionaries. Most dictionaries of English and other European languages, as well as general encyclopedias – the general authorities on definition in culture – focus on one of two approaches. There may be a definition that attempts to specify all salient traits of music but clearly uses as its model Western music in the fine art tradition, seeing music principally as a series of sounds and a group of compositions, and on musical activity consisting mainly of composition, expressed as the combining of sounds. Or the definition itself may be taken for granted, and the work moves on to explanations, etymology and classification.

For example, the *OED* definition of music begins: 'That one of the fine arts which is concerned with the combination of sounds with a view to beauty of form and the experience of emotion; also, the science of the laws or principles (of melody, harmony, rhythm, etc.) by which this art is regulated'. *Webster's Third International Dictionary* (New York, 1981) begins: 'the science or art of incorporating pleasing, expressive, or intelligible combinations of vocal or instrumental tones into a composition having definite structure and continuity'. But both dictionaries also provide secondary definitions indicating the performing of music generally, and they include agreeable sounds such as the song of birds or running water.

A survey of older and recent dictionaries of some other European languages provides variations on those themes: *Brockhaus-Wallring deutsches Wörterbuch* (Wiesbaden, 1982) defines music: 'die Kunst, Töne in ästhetisch befriedigender Form nacheinander (Melodie) und nebeneinander (Harmonie) zu ordnen, rhythmisch zu gliedern, und zu einem geschlossenen Werk zusammenzufügen' ('the art of combining tones in aesthetically satisfying form in succession and simultaneously, organizing them rhythmically and integrating them into a completed work').

The *Grande dizionario della lingua italiana* (ed. S. Battaglia, Turin, 1981) moves in a similar direction: 'Arte di combinare e coordinare variamente nel tempo e nello spazio i suoni, prodotti per mezzo della voce o di strumenti e organizzati in strutture quantificate secondo l'altezza, la durata, l'intensità e il timbro; scienza dei suoni considerati sotto il profilo della melodia, dell'armonica a del ritmo' ('the art of combining sounds and coordinating them in time and space, produced by the medium of voice or instruments and organized in many structures according to pitch level, duration, intensity and timbre; science of sound subdivided into melody, harmony and rhythm').

E. Littré's *Dictionnaire de la language française* (Paris, 1873), one of the classic practical dictionaries of French, gives as its second definition: 'science ou emploi des sons qu'on nomme rationels, c'est-à-dire qui entrent dans une échelle dite gamme' ('science of using rationally derived sounds, that is, those based on scales'), indicating the dual presence of science and art, knowledge and activity, the rational basis and the primary importance of scales.

To the literate population of Western Europe, if major dictionaries reflect beliefs about language generally held and uses widely carried out, the word 'music' refers in the first instance to composing. Music is art and science, it involves the satisfactory combination of constituent materials – but mainly tones – and it is intended to be beautiful, expressive or (but not necessarily and) intelligible. The dictionary definitions suggest that music serves both aesthetic and communicative functions. The combining of tones is the main activity of the musical artist, whose purpose and aesthetic consideration are not emphasized but replaced by attention of elements of music and to music as a 'science'.

3. General encyclopedias. In contrast to language dictionaries, whose function is explicitly to define words with little analysis or discussion of cultural context, the task of general encyclopedias is providing an overview of human and natural facts from a particular cultural perspective. They must include information about music, and the variety of approaches they take to defining the word or providing a general conceptualization is greater than that of the dictionaries. In the case of some it seems that music, being one of the basic domains of human culture that may be taken for granted, need not be defined.

For example, *La grande encyclopédie Larousse* (Paris, 1975) gives one sentence: 'Language des sons qui permet au musicien de s'exprimer' ('language of sounds which permits the musician to express himself'), and then moves on to an account of music history. *Brockhaus Enzyklopädie* (Wiesbaden, 1971) defines music simply as 'die Tonkunst' (a synonym for 'Musik' connoting art music, or music specifically as an art) and then moves on to historical and theoretical specifics. The Dutch *Grote Winkler Prins encyclopedie* (Amsterdam, 1971) introduces its article on music by saying, simply: 'Kunstvorm

die berust op het ordenen van klankfenomenen' ('art form based on the ordering of sound phenomena').

Preparing the reader for a wide view but not explicitly defining, *The New Encyclopedia Britannica* (Chicago, 1974) offers in its *Micropedia*, under the article 'Music, Art of': 'expression in musical form, from the most simple to the most sophisticated, in any musical medium'. Its counterpart, the article titled 'Music, Art of' in the *Macropedia*, begins: 'Both the simple folk song and the complex electronic composition belong to the same activity, music'. Neither article begins with an explicit definition, assuming that readers know what music is, but both circumscribe, provide boundaries, and in doing so emphasize the breadth and intercultural nature of the subject. In characterizing this wide domain of culture, the *Macropedia* goes on immediately to point out that both extremes 'are humanly engineered, both are conceptual and auditory, and these factors have been present in music of all styles and in all periods of history, Eastern and Western'.

The human-specific character of music is also part of the explicit definition in the *Great Soviet Encyclopedia* (translated from the third edition, New York, 1974): 'An art form that reflects reality and affects man through sensible and specially organized sound sequences consisting chiefly of tones (sounds of definite pitch). Music is a specific variant of the sound made by people'.

A sampling of authoritative dictionaries and general encylopedias in Western nations shows substantial agreement within the élite literate culture of these societies. There may be disagreement on the need for explicit definition, but all these works maintain that music involves sounds and their combination, that it is both art and science – involving both talent and creativity as well as knowledge – and that its principal manifestation is composing music (with rational principles), rather than other activities and events that belong to the domain of music.

4. European musical authorities of the past. Formal definitions provide boundaries and encyclopedic commentary seeks out the essential, but in the case of music, at least, one must also consider a third kind of 'definition', the kind that determines the essential qualities of music from its most ideal manifestations. To illustrate: musicians in Western culture – particularly theorists and composers – have frequently been motivated to define music. In particular, theorists and composers from the 18th to the 20th centuries provide statements that give important insights into personal as well as societal attitudes and norms. They extend from the rational to the highly romantic, with the 20th century providing successors to both lines of thought. In each case, composers naturally direct the reader's thought to what they regard as the ideal of music-making.

A few examples must suffice as substitute for a comprehensive anthology. Thus, Johann Mattheson (1739), anticipating the *OED*, stresses the dual role of music as art and science devoted to the successful combination of sounds for the sake of God's honour and the support of all virtues: 'Musik ist eine Wissenschaft und Kunst, geschickte und angenehme Klänge klüglich zu stellen, richtig aneinander zu fügen und lieblich herauszubringen, damit durch ihren Wohllaut Gottes Ehre und alle Tugenden befördert werden'. Similarly, F.W. Marpurg (1750, p.2): 'Das Wort Musik bezeichnet die Wissenschaft oder die Kunst der Töne' ('the word "music" designates the science or the art of tones').

Theorists two centuries later are more abstract and require intuitive understanding, as Eduard Hanslick's famous description, 'tönend bewegte Form' ('form moved through sound': 1854, p.58), contrasts with Ernst Kurth's: 'Musik ist emporgeschleuderte Austrahlung weitaus mächtigerer Urvorgänge, deren Kräfte im Unhörbaren kreisen' ('music is merely the erupted radiations of far more powerful fundamental processes whose energies revolve in the inaudible': 1920, p.13). The composer Hans Pfitzner gives a statement also articulated by certain Amerindians: 'Musik ist das Abbild der Ansicht der Welt' ('music is the reflection of a world view': 1926, p.196). Two giants among composers of the 20th century naturally contrast: Arnold Schoenberg, 'Music is at its lowest stage simply imitation of nature. But soon it becomes imitation of nature in a broader sense, not just imitation of the surface of nature but also of its inner essence' (1922, p.14); Igor Stravinsky: 'Music is essentially unable to "express" anything, whether it be feeling, attitude, psychic state, a phenomenon of nature, etc. "Expression" has never been an intrinsic trait of music' (1935–6).

5. Looking to the vernacular and to behaviour. If the study of published authorities in the field of definition provides at least some agreement on the nature and attributes of music, less unanimity is provided by other approaches to determining the definition and essence of music. One such approach, the definition of music by the ordinary, non-literary and perhaps even non-literate member of society, would be carried out by the study of terminology in everyday usage. A second derives definition and conceptualization from observation and analysis of behaviour. The difference between relying on formal definitions and these approaches derived from vernacular considerations may be illustrated by the automatic response of most Western Europeans to the statement, 'I am a musician', which may most commonly be, 'you are? what do you play?', suggesting that, in thinking of music, most people do not consider composing, contemplating or even singing as the primary musical activity, but instrumental performance. Similarly, a particular sonic structure – Islamic religious chant, for example – may be regarded as 'music' in one society but not in another. And indeed, in a given society, a sound – 'concrete' music will serve as examples – may or may not be musical, depending on the social context in which it is presented.

The issue of definition is complicated further by the fact that each society uses its culture to structure and classify the world in its own way, based on its view of nature, the supernatural, the environment and society. It ought to be possible to define music in an interculturally valid way, but the fact that definers inevitably speak with the language and from the cultural viewpoint of their own societies is a major obstacle. Only a few societies have a word in their language whose meaning corresponds roughly to the English 'music'; and it is questionable whether the concept of music in the breadth it enjoys in Western cultures is present in the cognitive maps of all cultures. Nevertheless, musicologists generally regard music as a cultural universal.

II. The concept in a variety of cultures

The variety of conceptions of music held by different societies, European and non-European, may be illustrated

by a few selected examples providing some broad generalizations. These are presented with significant caveats: in no culture is there unanimity of thought or opinion on fundamental issues such as the nature of music. For any tendency that is broadly identified as a characteristic of a culture one can readily find others, less significant, that contrast and contradict. While it is helpful to compare cultures with the use of strong, unified characterizations, it is also important to bear in mind the rich complexity of contradictory ideas, conceptions and verbal and artistic expressions in each.

1. Contemporary Western culture. 2. East Asia. 3. Iran and the Middle East. 4. India. 5. Some African cultures. 6. Some Amerindian and Oceanian cultures.

1. Contemporary Western culture. In Western culture, generally, the word 'music' or its cognates denote or suggest a unitary concept, in the sense that all 'music' is to an equal degree music, and the term 'music' applies equally to art, popular, folk and other strata or genres. In the Western conception, however, not all music is equally valuable, and the shape of the concept tends to depend on the observer's social group. Adherents of art music usually see the classics as the pinnacle of a musical pyramid, below which are the other kinds of music – folk, musical comedy, ordinary popular, rock and country music (in the USA) – in an ordered hierarchy. The hierarchical principle is present also within the sphere of art music. On the other hand, those who identify themselves with other musical styles or genres such as jazz or popular music may see the world of music less as a hierarchy than as a group of musics of equal quality, among which certain styles or, even more, certain individual performers stand out.

More specific characteristics of individual Western societies may sometimes be apprehended through the study of terminology. For example, instrumental music may be more quintessentially 'musical' than vocal music. Thus, the Czech word for music, *hudba*, denotes primarily instrumental music and suggests vocal music in a secondary way. The word *muzika* suggests instrumental music specifically. Basic terminology may also incorporate concepts of the shape of the musical world. For one prominent example, the words *Musik* and *Tonkunst* in German are synonyms, although *Musik* is the more comprehensive. More explicitly, however, *Tonkunst* suggests Western art music and is hardly ever encountered in literature about popular, folk or any non-Western music. It is rarely found in German literature about music outside a given culture area. Terms such as 'populäre Tonkunst' or 'Tonkunst der Stämme' ('tribal musical art') are not found, and while the musicological and belletristic literature may frequently refer to 'deutsche' and possibly 'italienische Tonkunst', it rarely mentions 'die Tonkunst der Engländer' or 'amerikanische Tonkunst'. The term is used to suggest both quality and familiarity. The Dutch *toonkunst*, similarly used for 'art music', is less widely found.

Cultures that demonstrably (by terminology or behaviour) possess the concept of music may nevertheless vary in drawing its boundaries, in the degree to which term and concept coincide with sound-spectrum and in the acceptability of sounds within the spectrum of music. In contemporary Western cultures, the boundaries are firmly drawn, if individually and without unanimity; something either is music, or it is not. Everyone might accept Haydn and jazz as music, and not all would include John Cage's Imaginary Landscape no.4 (1951), for 12 radios, or perhaps music for *Sprechstimme*, yet a typical designation of the latter sounds would probably count it as 'almost, but not quite' music.

Although it associates music with the gamut of emotions and moods, assigning it a role in the expression of grief and branding some of it as dangerous, the Western world (and many but not all other cultures) most generally sees music as a positive phenomenon. In English, 'music' is used as a metaphor for beautiful, welcome or desirable sounds. Thus 'my heart sings' expresses happiness. The mewing of one's favourite cat or the barking of one's dog is 'music to my ears', as is the telephone voice of a long-lost friend or the jingling of coins. At the same time, various animal sounds are assigned musical quality. Birds 'sing', and the sounds of whales and porpoises are usually associated with music, as is the 'trumpeting' of elephants and the 'song' of swans – but not the barking of non-favourite dogs. The sounds of many species which, objectively, bear roughly equal similarity to some kinds or styles of music are relegated to noise. In part, this may reflect the standing of these animals in (traditional Western) human opinion; people view birds, whales and porpoises more favourably than cows, monkeys and wolves; the former are therefore capable of music-making, while the others, whose voices may be similar to certain conventional music sounds, are excluded. A person who is singing or whistling is assumed to be happy.

In Western culture, music is a good thing, and it is good people who are associated with music. Shakespeare: 'The man that hath no music in himself, nor is not moved with concord of sweet sounds, is fit for treason, stratagems, and spoils; . . . Let no such man be trusted' (*The Merchant of Venice*).

If metaphorical extensions to incorporate the 'good' characterize modern Western popular culture, incorporation of the powerful, essential and universal could characterize European thought of the ancients and of the Middle Ages. The Pythagorean concept of 'harmony of the spheres', associating musical harmony (in the most general sense of the word) with mathematical relationships among 'spheres', that is, bodies in the solar system, relates music to other domains of culture but at the same time gives it a position emblematic of natural cooperation and concord. Boethius's conception of music as signifying the concept of harmony in various senses of the word, as suggested by the division of music into the familiar three areas – *musica mundana* (harmony of the world and the universe), *musica humana* (harmony of the human body and soul) and *musica instrumentalis* (musical sound) – played a major role in medieval thought. The tendency in many treatises from Boethius (see *StrunkSR*) up to the 18th century (e.g. Johann Walther's *Musicalisches Lexicon*) to concentrate on complex classifications of music by function and genre shows a shape of the music concept contrastive with that generally held in the 20th century and the early 21st.

2. East Asia. Although no single word in Japanese encompasses the same ground as the English word 'music', Japanese culture accepts the broad definition of the music concepts used in the West, as suggested by the Japanese scholar Shigeo Kishibe (1984). Western music, traditional Japanese music and the music of other societies are all equally considered to be music. The shape of the concept,

however, emphasizes a firm classification of categories and genres, determined by function, instrument, and time and place of origin. Thus the *gagaku* repertory of the Imperial Court Orchestra includes 'music of the left', originating in China and India, and of the 'right', including pieces from Korea and Manchuria. Various works on Japanese music distinguish importantly between *biwa*, koto and *shakuhachi* and shamisen music, between concert, dance, theatre and folk music. Despite the significance of stylistic combinations and syncretism among various Japanese traditions and between Japanese and foreign, and eventually Western musics, the significance of boundaries, symbolized both by terminology and by the use of distinct notation systems, is an important characteristic.

The multiplicity of genres and intercultural combinations is even more pronounced in Chinese culture. But it is important to understand that the concept of music in the broad sense, *yue*, has had a consistent history. The same ideograph, according to Ming Liang (1985, p.11), may also be pronounced *le*, meaning enjoyment and happiness. The ancient form of the ideograph 'embodies all the arts: the performing arts of music and dance, literature, the fine arts, architecture and even the culinary arts as well'. This use of a term for the arts with gradually narrowing scope to music parallels the history of the term 'music' – the domain of the Muses – in European antiquity. In its shape, the music concept distinguishes importantly between Chinese and other music, separating not by style as much as by origin, regarding Western music by Chinese composers as intrinsically 'Chinese' and closer to traditional Chinese music than to European, and maintaining the Chinese essence supported only by Western musical techniques.

3. Iran and the Middle East. A system of nomenclature and conception in contrast with the Western is provided by the musical culture of Iran, which may be considered illustrative of Middle Eastern Islamic cultures in general (and is thus discussed in somewhat greater detail than others). On the surface, the concept of music exists as it does in the West, its shape dominated principally by the division between vocal and instrumental music, with other important distinctions between sacred and secular, composed and improvised. A major characteristic of the concept is its use of two contrasting terms to denote musical sounds: *musiqi* and *khandan*. *Musiqi*, borrowed from Arabic (and in turn from Greek), refers to the broad spectrum of music as does 'music' in Western culture, but it is used explicitly to designate instrumental music and less for vocal music; it refers to metric, composed sounds more than the non-metric and improvised. It is not used for sacred music but is reserved for secular social contexts. *Khandan*, on the other hand, is glossed in dictionaries as 'reading, reciting, singing' and is used most to indicate non-metric, improvised, sacred and serious genres (see also al-Faruqi, 1985).

In authoritative treatises (medieval and recent, in Arabic and Persian languages), the concept of music as denoted by *musiqi* is often the object of ambivalence and criticism. The more it departs from the principles of *khandan*, the more it should be eschewed by the devout Muslim. Moreover, such authorities as al-Kindi, al-Farabi and Safi-uddin deal with music as a collection of genres and types, each of which must be considered separately, and do not follow a holistic approach. In contemporary everyday life, the concept of music is ordinarily presented as a set of genres as well, *musiqi* being designated with adjectives such as *sonati* (traditional), *mahalli* ('regional', folk), *khoregi* (foreign) and so on.

The term *musiqi* is widely reserved for instrumental, metric and (most commonly) composed and not improvised music, and it is possible to rank genres and types of music in accordance with characteristics of style, text and social context, arriving at the conclusion that they have varying degrees of musicality. Singing (or chanting) the Koran is totally *khandan* and has (by the Persian terminology) no musical quality. Classical vocal improvised music has some, while composed, metric pieces with ceremonial implications, such as the *pishdaramad*, are definitely *musiqi* but lack the full range of undesirable implications suggested in pieces with a primarily virtuoso intent, such as the *chahar mezrab*, or of Westernized music, to say nothing of totally secular music such as night-club performances. All of this suggests that, in contemporary urban Iran, the sounds that might be considered to be music in Western culture would be regarded as music to varying degrees.

The positive metaphorical extensions of music in Western culture seem to be hardly prominent, or perhaps even absent, in Middle Eastern Islamic cultures. Indeed, the failure to designate as music some genres that are musical in the sense of structural identity with what is labelled as music may be the opposite of the metaphorical extension, a kind of metaphorical contraction. One might conclude that the concept of music as highly valued and greatly desired in many contexts correlates with a broad definition, and the opposite – ambivalence of hostility towards music – with a narrow one. But the context for all of this is the fact that, in both cultural systems, music (by the Western definition) is widely used in many contexts and is ubiquitous in worship, ceremony, entertainment of the élite, narrative, dance and much more. The actual uses of music in the two cultures are similar, but in their conception, definition and evaluation of music the two differ importantly.

4. India. It would be a mistake to assume that the various cultures of South Asia are united in their terminology and conception of music. The high culture of Northern India has concepts that parallel Western ones as well as those of China. According to Lewis Rowell (1992, pp.9–10), the word most closely equivalent to 'music' is *sangita*, which in early times encompassed music and dance (somewhat like the Chinese terminology) but which later came to mean something like 'music'. In modern-usage, it is the Indian vernacular word closest to 'music' but (being closer perhaps to *Tonkunst*) refers, most specifically, to classical or art music. The word *gita* or *git* in combination with other words designates different genres, such as *filmi git* (film music or film songs) and *lok git* (folk or people's songs).

Complex taxonomies are characteristic of Indian philosophy and cosmology. In the theoretical literature of Indian music, *sangita* is divided into categories involving stylistic traits, instruments and instrument types, association with religious categories, dance and drama; and is itself a subdivision of categories of thought and creation such as rhythm, emotion and ritual.

5. Some African cultures. Except in their adoption of Western terminology and concepts, many African

societies may not have a conception of music matching the holistic one in Western culture. On the one hand, a view widely expressed by African musicians and scholars explaining their cultural system to outsiders concerns the degree to which they regard music as a component of social life and culture. One often cannot speak about music outside its specific cultural context, and it may be difficult to consider musical events in totally different contexts to be part of the same cultural domain. On the other hand, the ease with which many African societies have adapted to the English or French conceptions of and terms for 'music' suggests that the domain exists, integrally, even where no term is available. A small sprinkling of examples follows.

The Hausa people of Nigeria, according to Ames and King (1971), have an extraordinarily rich vocabulary for discourse about music, but (p.viii) no single word for music. A loan word, *musika* (from Arabic), refers to 'a limited number of [Koranic scholars]'. There are terms for various kinds of performance, contexts and performers, but nothing that refers directly to organized sound. Ames and King conclude that the nearest equivalent to a generic word for 'music' is *rok'o* (specifically, 'begging'), but that it too does not cover all organization of sonorities, excluding, for example, amateur music-making, and is actually a reflection more of social attitudes towards the musician rather than a reference to his product.

Alan P. Merriam (1964, pp.64–6) showed that the Basongye of Zaire had a broad conception of what music is, but no corresponding term. Contrast between music and non-musical noise was presented to Merriam in aphoristic statements, such as 'when you are content, you sing; when you are angry, you make noise. A song is tranquil; a noise is not. When one shouts he is not thinking; when one sings, he is thinking'. To the Basongye music is a purely and specifically human product.

According to Charles Keil (1979), the Tiv people of Nigeria also have no word for music as a whole; but Keil questions the validity of using the presence or absence of a term for drawing conclusions about the existence and shape of the concept. Nevertheless, the close association of music with other activities suggests that the Tiv, like many of the world's peoples, have little occasion to talk about all the musical sounds made by humans as a unit, and in separation from their contexts.

Shona, the main language of Zimbabwe, has a word derived from the English 'music', *musakazo* (glossed as 'continuous instrumental music' in M. Hannan: *Standard Shona Dictionary*, Harare, 1984). But the most common Shona word associated with the concept of music is *tamba*, 'to play', which is also used for dance and for music and dance together.

In one of the few published syntheses of African music (1974), J.H. Nketia avoided dealing with the question of a comprehensive term in African languages, but, in the context of stressing the close association of music with social and communal events and dance, analysed the homology of music and speech in Africa. In contrast to other theoreticians who emphasize the contrast between these two modes of communication, Nketia wrote (1974, p.177) that 'African traditions deliberately treat songs as though they were speech utterance'. The distinction between speech and song, important in many societies for establishing the existence of a 'music concept', is blurred in some African societies, in which in heightened speech, spoken and sung solo and choral recitations, the use of 'rapid delivery of texts, explosive sounds . . . vocal grunts, and . . . whispers' is important.

Although it is dangerous to generalize about African musical cultures, it would seem that the African conception of music is similar to that of the West in its use for designating desirability and positive value; and that it may be related to that of the Middle East in the absence of a single concept with sharp boundaries and its use of a continuum extending from conventional speech to (by Western standards) typical music-making.

6. Some Amerindian and Oceanian cultures. In some (or perhaps many) North American Indian languages, there is no word for 'music' as distinct from the word for 'song', possibly because of the predominance of vocal music; flute melodies too are widely labelled as 'songs'. In some Amerindian societies – no information on the vast majority of cultures is available in publications – the concept of music nevertheless is substantially unified, resembling Western culture more than African and Middle Eastern ones.

The Blackfoot people of Montana may serve as an example. Their traditional culture distinguished sharply between songs, which had supernatural sources, and speech, of human provenance. Songs were not principally vehicles for conveying verbal meaning and had an existence outside the natural world. There were no expressive forms intermediate between speech and song. Music was human-specific; animals did not 'sing'. To the ethnomusicological observer music seems to have been, and to continue to be, a system that reflects or reproduces the social system, a kind of conceptual microcosm of society and culture. Songs varied in significance, but all, unlike the musical forms of Iran, were equally 'songs'. Normal music had percussion accompaniment but drumming alone was not covered by the term for song. Additionally, the Blackfoot language has a word, *passkan*, which applies to events including singing, dancing and ceremony – in English usually rendered as 'dance' even when dancing itself is not the most prominent component.

An attempt to define music in Blackfoot culture illustrates the different results from the three approaches mentioned. Using authorities such as myths and language dictionaries, one finds no specific word for 'music' but there is the less comprehensive 'song' and the more comprehensive 'dance-song-ceremony'. Asking the casual Blackfoot bystander did not yield definitions but produced indications of the positive value of music, its close relationship to the rest of Blackfoot culture and its categories, and its importance. Observations of behaviour, however, have suggested that music is a clearly defined and perceived domain of culture, distinct and integrated (Nettl, 1989).

In a detailed discussion of musical terminology of the Oglala Sioux, William K. Powers (1980, pp.26–8) suggests that the concept of music is definitely present but must be discovered by a different approach from those mentioned above. Although no single word to translate 'music' exists, two important linguistic morphemes (*ya*, relating to 'mouth', and *ho*, relating to 'sound') serve to integrate a large number of objects, ideas and processes involving music. Pointing out that the place of music may vary in the conceptual universe of various cultures, Powers suggests that 'where Euro-American music is conceived to be cultural and employs an analytical model for

purposes of description and analysis, the Oglala perceive their music to be natural [i.e. not man-made] and employ a synthetic model [i.e. displaying a tendency to combine two or more elements to form a unit] to describe and analyze it' (p.27).

The 'Are'are people of Malaita, in the Solomon Islands, also have no term uniting all kinds of music (Zemp, 1978, p.37), but they 'perceive twenty musical types with variants which they classify in four categories of unequal size': *'au* (bamboo), *'o'o* (a slit-drum), *nuuha* (song) and *kiroha* (referring to a sound game played under water, leading to specific glosses of stamping-tubes, panpipe ensemble and beating the slit-drum). The basic 'Are'are musical terminology is derived from these four morphemes, and the fact that the particle *kiro* is used for designations in all four categories suggests the existence of a unified conception of music.

According to Anthony Seeger (1987), the Suyá of Amazonian Brazil have a conception of music whose shape and area of emphasis differ from those of the modern Western conception. Song 'is the result of a particular relationship between humans and the rest of the universe, involving an unusually close relationship and merging of states of being into a single combined state of being expressed through music. When humans, birds, animals, and other aspects of the universe are conjoined, the result is sound. . . . The non-human order provides a model for music' (p.62). Seeger believes that this description would also be appropriate to certain other societies.

Contemplation of the concept of music and the term itself among the world's cultures indicates that in most cases, but especially in those cultures that have a broad concept of music and a term to accompany it, the derivation is from an even broader base – as music (*musica*) applied first to the occupations of all Muses and was later narrowed; as the Indian *sangita* originally meant music and dance; and the Chinese *yue/le* indicated music, well-being and happiness. Elsewhere too, however, the concept of music is often inseparable from other domains of culture, particularly dance and drama. Similarly, the concept of play (suggesting lack of seriousness as well as recreation) is in several societies closely associated with music, providing the word for instrumental performance.

The absence, in many small societies and tribal cultures, of a single term for 'music' has been amply illustrated. But everywhere – so it is usually claimed by the ethnomusicologists expert in the various areas – there is a conception of music whose boundaries do not differ too greatly from those of Western culture. The character and shape of the music concept within its boundaries, however, differs very greatly from culture to culture, and among the world's tribal cultures.

III. The concept in scholarship

Having surveyed definitions of the word and concept of music in a variety of cultures, we now enquire into the particular approaches to music maintained in the field of musicology – broadly defined – and into musicology's contribution to it. The question to be discussed is whether musicologists have developed, in their practice, definitions and conceptualizations of music that are unique to their profession, or whether they deal with issues that are ordinarily not addressed. Music dictionaries and encyclopedias, standard music histories and journals provide information on these topics.

Music is the principal subject of the work at hand, the revised edition of *The New Grove Dictionary of Music and Musicians* and of its predecessors. If the successive editions of this dictionary can be taken as reflections of the conception of music held by music scholars in the English-speaking world and in Western Europe, then it appears that musicology takes a broad view of the concept of music, one whose breadth was increased through its history as concentration on Western art music was gradually complemented by attention to American music, to folk music, to the music of non-Western societies, to popular music and to a variety of approaches to music – sociological and anthropological, physical and psychological, in addition to the traditionally central historical, theoretical, biographical, analytical and interpretative. Indeed, looking at the literature of musicology over the past century, one sees a trend of increasing inclusiveness, perhaps even a kind of gluttony, in which all conceivable kinds of sound from the most central (such as Beethoven) to the most peripheral (elevated speech, sounds of whales, birdsong, industrial noise, background sounds for mass-media advertising etc.) are all appropriate subjects for musicological study.

While Western music scholarship has *de facto* looked at everything (if not with equal emphasis) that could conceivably be regarded as music, musicologists have also, in their work and in their explicit statements, used certain basic assumptions about the nature of music, the 'shape' of the music concept and the character of the world of music.

1. Definitions of the word and concept. Verbal definitions written by and explicitly for musicologists are greatly varied, and discussions leave the question open, as indicated for example by a number of late 20th-century works devoted to fundamental issues in music scholarship such as the question of music's identity – the dialogue in *Was ist Musik?* by Carl Dahlhaus and Hans Heinrich Eggebrecht (1985), *What is Music?* edited by Philip Alperson (1987), *Contemplating Music* by Joseph Kerman (1985) and *Rethinking Music* edited by Nicholas Cook and Mark Everist (1999). Such works hardly provide definitive definitions and the question is rarely broached in papers at major conferences.

A study of the definitions of music in music dictionaries provides a clear contrast to those of language dictionaries, which generally agree and are obviously based on the values of Western art music. Some music dictionaries avoid the term entirely, on the assumption that no definition is needed, or perhaps because none would be totally satisfactory. Others provide detailed attempts to state the quintessence of music, or the character of music in its ideal form. When pressed to commit themselves, musicologists tend to provide a bewildering set of definitions and, even more, of views that suggest what in music is essential and important. The following excerpts illustrate the point:

A major Italian reference work, *Enciclopedia della musica* (ed. Claudio Sartori and Riccardo Allorto, Milan, 1963–4), simply says, 'l'arte dei suoni' ('the art of sounds'), which is followed by a short explanation.

The most widely used English-language reference book in the USA, Willi Apel's *Harvard Dictionary of Music* (Cambridge, MA, 2/1969), has an entry under 'music' devoted entirely to a discussion of the etymology of the term, and of classification of music in ancient and early medieval eras, but without a definition to which the author himself subscribes.

The most widely used German reference work, *Riemann Musik Lexikon.* (12th edn, *Sachteil*, Mainz 1967) provides in the first part of the article 'Musik' a very carefully circumscribed definition and characterization by Hans Heinrich Eggebrecht:

Musik ist – im Geltungsbereich dieses Wortes: im Abendland – die Künstlerische Gestaltung des Klingenden, das als Natur- und Emotionslaut die Welt und die Seele im Reich des Hörens in begriffsloser Konkretheit bedeutet, und das als Kunst in solchem Bedeuten vergeistigt 'zur Sprache' gelangt kraft einer durch Wissenschaft (Theorie) reflektierten und geordneten, daher auch in sich selbst sinnvollen und sinnstiftenden Materialität. Denn das Element der M[usik], der Ton, ist einerseits (vormusikalisch) Sinnträger als hörbares In-Erscheinung-Treten der Innerlichkeit eines Erzeugers, andererseits (innermusikalisch) Sinnträger als Nutzniesser einer Gesetzgebung (Tonordnung), die den Ton dem spezifisch musikalischen Gestalten, Bedeuten und Verstehen verfügbar macht und die dabei zugleich, in dem sie die Naturgegebenheit des Klingenden Rechnung trägt, Naturgesetzlichkeit ins Spiel bringt.

'Music is – in the area in which the concept is relevant, Western culture – the artistic formation of those sounds that represent the world and the spirit in the form of a voice of nature and emotion in the realm of hearing, concretely conceived, and which achieves significance as an art, becoming both meaningful and meaning-creating material through reflected and ordered cognition and theory. For the basic element of music, the tone, is on the one hand the bearer (pre-musically) of meaning as reification of the essence of creation, while on the other hand it is (intra-musically) the vehicle of meaning as the beneficiary of the canon (tonal order). These lend to the unit of music, tone, its specifically cultural forms, meanings and conceptions and at the same time, as a natural phenomenon, it remains accountable to the laws of nature.'

Ingmar Bengtsson, in *Sohlmans musiklexikon* (Stockholm, 1948–52), begins a medium-length general article, 'Musik', with emphasis on the relationship of the concept of music with dance and movement and with speech in many cultures, and continues:

How the concept of music is delineated and defined at different times and in different parts of the world depends mostly upon which criteria one applies, that is upon the norms the conditions for which must be met before something is considered music in contrast to 'non-music', or 'no-longer music', or 'good' or 'correct [acceptable]' music in contrast to 'bad'. These criteria and norms have varied enormously, while at the same time they have seldom been consistently or even distinctly formulated.

In the Russian music encyclopedia *Muzïkal'naya entsiklopediya* (Moscow, 1973–82), the editor himself, Yuri Keldïsh, provides an article under 'Music':

A form of art that reflects reality and has an effect on the listener through the intellectual response and sound combinations. . . . By expressing mental images and emotions in aural form, music can be identified as a form of human communication and as an influence on the psychological state of mind. This influence is possible because of the physical and biological harmony of the musical sensitivity of human beings (as many other living beings) and human psychology, especially emotions, and of sound as a stimulus and signal for activity. In some ways, there is an analogy between music and human speech, especially speech intonation, where the intrapersonal feelings and emotional attitudes towards the outer world are expressed by alterations of pitch and by other characteristic expressive vocal sounds. This analogy makes it possible to identify the nature of music according to intonation.

Die Musik in Geschichte und Gegenwart (1st edn, ix, Kassel, 1961) provides a major article on 'Musik' whose first part deals with its psychological and acoustic properties. The second part, concerned with definitions, by Heinrich Hüschen, begins:

Die Musik ist diejenige unter den Kunstdisziplinen, deren Material aus Tönen besteht. Von dem in der Natur vorkommenden Tonmaterial, gelangt in der Musik nur ein verhältnismässig geringer Teil zur Verwendung. Die aus der unendlichen Zahl von Naturtönen ausgewählte endliche Zahl von musikalischen Tönen wird durch bestimmte Rationalisierungsprozesse zu bestimmten Tonsystemen zusammengeschlossen.

'Music, among the artistic disciplines, is the one whose material consists of tones. Of the raw material available in nature, only a small proportion is actually used in music. The finite number of tones selected for musical use from the infinity available in nature is organized into specific tone systems through defined rational processes.'

A further section, devoted to the question of definition, points out the many historical attempts to define music but concludes quickly:

Gleichwohl gibt es bis zur Gegenwart keine vollkommene und letztgültige Definition der Musik und also keine Patentlösung für die Frage, was die Musik in ihrem Wesens- und Seinsgrund nach sei. Vielmehr lassen alle Begriffsbestimmungen, wie sie im Musikschrifttum vorkommen, immer nur eine ganz bestimmte Seite des Gesamtphänomens in den Vordergrund treten.

'For all that, there is to the present time no complete and definitive definition of music, and thus no absolute solution to the question of what music is, in its essence. Rather, the various definitions of the concept that appear in literature always emphasize a particular aspect of the total phenomenon.'

While largely agreeing that music is an art combining sounds, these definitions suggest a variety of opinions. Sartori regards arts that consist of sound as intrinsically music, avoiding, for example, the dilemma posed by arts involving speech. Bengtsson and Hüschen imply that a variety of non-congruent definitions from different periods and cultures may all be equally valid, while Eggebrecht maintains that music, in the sense that he wishes to present it, is a Western phenomenon; or, perhaps more correctly, that the definition he presents refers only to music in Western culture and, indeed, to art music – which, the argument reversed, means that for his purposes the only true or proper music is Western art music. Implying a basis in nature, Eggebrecht's unicultural approach contrasts with that of A.J. Ellis and his successors who became ethnomusicologists, and for whom music in its cultural variation was explicitly not a natural phenomenon. Keldïsh implies an intercultural view informed by psychology and biology. Throughout, the definitions are narrower than the cultural usage of music would require, indicating perhaps that the musicologist's shape of the music concept includes a centre of which each definer is certain, a quintessence, along with fluid and arguable boundaries.

2. Some central characteristics. From the time when musicology was set forth as a formal discipline by Guido Adler (1885), musicologists have taken a broad view of music. Adler's article specifies the inclusion of various strata of music, all cultures and periods. Since Adler, musicologists have introduced hierarchies and made decisions as to what musics are in fact worthy of study, but they have not shrunk from these broad boundaries. Some definitions have been unreasonably

broad. Thus, Paul Henry Lang defined musicology as the science that 'unites in its domains all the sciences which deal with the production, appearance, and application of the physical phenomenon called sound' (Harap, 1938), suggesting that the analysis of all sound, including speech, is the field's purview and thus, by extension, capable of being understood as music.

The question of boundaries has been addressed by ethnomusicologists. Along lines related to Lang's, John Blacking (1973, p.12) defined music as 'humanly organized sound', in a statement perhaps not intended seriously as definition but widely used and influential. It is important to note the implication that music must be organized, is principally 'sound', is human-specific. Whether Blacking intended all human-made sounds to be included is unclear, but he does not address the point that his definition also applies to speech. In contrast to the emphasis on sound, Alan P.Merriam (1964, pp.32–3) proposed a model for the understanding of music that separates three sectors, sound, behaviour and concept – equally components of music which affect each other constantly – but avoids the idea that music is principally sound. Among many scholars, George Herzog, in the title of an article, asked the serious question, 'Do Animals have Music?' (1941) and replied tentatively in the affirmative; the present dictionary includes an entry ANIMAL MUSIC. And ethnomusicologists have included analytical consideration of whale and porpoise sounds among the papers at their conventions. Furthermore, musicologists have participated (with linguists, psychologists and physiologists) in the study of sounds produced in early childhood, sounds that could be considered to be either pre-linguistic or pre-musical.

If musicologists have in important respects used broad definitions of music and have sought to expand its boundaries, they have sometimes also been concerned to narrow these boundaries, at least in determining what music may be worthy of musicological concern. When Kenneth Levy asserted that 'there are, at bottom, just two tests for the worthiness of a musicological undertaking . . . (1) that it be concerned with first-class music; and (2) that it be concerned with a first-class problem' (quoted in Kerman, 1985, p.45), he avoided suggesting other possible defining criteria such as the excellence of the system of ideas that leads to the music or the high quality of the social context of its performance.

One may define music as an art, that is, an activity whose practice requires special knowledge and ability, analogous to painting, sculpture, literary and verbal art; as a form of communication in which all humans participate, analogous to language or speech; and as a set a of distinct physiological processes. Its status as an art requires that its aesthetic aspects be considered among its essentials and that therefore music be seen as a system whose components have varying degrees of beauty or value. The rhetoric of musicology is filled with explicit and implied comparisons, with statements setting off master composers from others, concerning the search for 'masterworks', valuing the concepts of genius and talent and distinguishing the true art from the functional. The musicological concept of music is dominated by a contradiction. On the one hand, musicologists have brought to the world of performers and listeners a vast quantity of previously unknown music and in the course of this search have given their attention to much music considered inferior or irrelevant by others. On the other hand, they have found it necessary to justify their work by claims of hitherto unexpected aesthetic value in the music with which they deal. In the musicological profession there is an opposition between the tenet that musicologists study all music (or even all sound) and the insistence that musical works, performances or even entire systems or cultures do not have equal value.

3. MUSIC AMONG THE ARTS. Contemplation of music as a unified concept leads to the consideration of creativity in music in comparison to other arts. Among professional musicians and music-lovers, musical creation is customarily divided into composition and performance, with improvisation perhaps an intermediate stage. But in musical scholarship, far more attention has been given to composition than to the others, and the notion of music as a group of finished works dominates; this has been noted already in the examination of language-dictionary definitions. The importance of innovation in content (e.g. the nature of themes) but even more in style (e.g. the abstract style characteristics or 'rules' by which one composes) is essential in modern Western culture. (For an extreme statement of the position: one must not only compose something not previously heard, but also something in a style not previously known.) Performance, though appreciated and rewarded, is not as respected as composition, and members of Western society do not think of music as a large conglomeration of performances. The world's greatest musicians are composers far more often than performers. Improvisation in art music has generally been regarded more as a craft than as an art.

It is true that all public or social activities may be interpreted as 'cultural productions' and are in a sense performances that are interpreted by their 'audiences'. But in the conceptions of many societies, the visual arts and literature differ from music in the significance and nature, and perhaps even in the presence, of their performance component. In the case of dance, performance plays a much greater role, and while set pieces, choreographies, are important, the amount of creative work in the contribution of the dancer is substantial. And, to be sure, in their relationship to choreographers, performing dancers are more distinguished than is the case in the musical analogue.

Music has been one of the 'arts' in Western and musicological conception for millennia, from before the development of the term suggesting the quintessence of the Muses' domain to the modern terminology in dictionary definitions and educational curricula. Yet there may be obstacles to the complete inclusion of music in the realm of art, and differences in the degree and nature of artistic quality between music and other recognized arts, literature and visual arts. Two should be identified:

(*a*) Music is an art, but, in a number of the world's cultures, not all music is equally 'art'. We speak of 'art music' or *Kunstmusik*, fashioned by composers who are artists, but do not admit popular songs or the songs of tribal societies into the same circle. One may maintain that literary scholars make the same kind of distinction between, say, a novel of Dostoyevsky and popular romance, but the term 'art' is not especially applied to the former, and both are 'novels'. In music, however, all symphonies would be equally, though not equally good, works of 'art'. The boundaries within music are different from those in other arts.

(*b*) More serious, intellectually, is the lack of parallel between music and literature in the relationships between the source materials and the art works. In literature, the source is language. Not all uses of language are works of art, but the literary artist selects from everyday speech and fashions artistic products. Language has the function of providing material for both art and everyday speech. It is tempting to argue that the basic 'vocabulary' of a music – pitches, rhythms, harmonies – is used to create both vernacular music (popular and folk music and perhaps improvisations), paralleling everyday speech, and works of art music (paralleling literary works). But the distinction between vernacular and art music, even where culturally recognized, is of a totally different order from the difference between everyday speech and literature. In musicological discourse, music is sometimes referred to as a 'language', and musical works have been analysed by semioticians as if they were the analogue of speech rather than of literary art.

The questions in the musicological conception then remain: is all music art; is some of it art and some something else, presently undefined; or should music as a whole be viewed as a system of communication analogous to language? what are the musical analogues to Saussure's distinction between 'parole' and 'language'? Such issues have much to do with the ways in which the musicological conceptions of 'music' have developed.

4. Music among the domains of culture. The world's societies have greatly differing conceptions of music and its place in life and culture, assigning it broad or narrow scope, placing it high or low among the domains, some associating it mainly with dance and drama, others with speech, or with the arts as a whole, or again with religion and ceremonial, or yet with undesirable activities such as drinking and trance-like behaviour. The way in which musicologists in Western culture view the relationship of music to other cultural domains is a counterpart to these associations.

In certain segments of Western culture and its history, music has been regarded as dangerous and to be avoided, and musicians have been considered inferior and the object of discrimination. Music has been relegated to foreigners and to members of minorities, including, in much of European music history, Jews; and in American history, successively to Germans, Italians, Jews and African Americans. And thus, too, in European academic life, music has been the last of the arts to be taken seriously. At the same time, music has been the field that is considered most esoteric, about which only specialists can have discourse and make judgments. The concept of musicality has played a greater role than have its equivalents in other arts. On the other hand, music has sometimes been considered the pinnacle of human accomplishment. Hermann Hesse's *Glasperlenspiel* shows the composer to be a kind of superman, and Hildesheimer greets Mozart as 'perhaps the greatest genius in recorded human history'. Music is alternately the vile work of villains and the expression of greatest cultural heroism.

Musicologists have naturally emphasized the latter, trying to associate music in each culture or period they study with the most desirable and developed of its cultural domains. And so it is not surprising that scholars of Renaissance music have given special attention to the relationship of music to visual arts, and that for 19th-century music, the closest domain is literature. For the 20th century, musicologists have been prone to see music in its relationship to the social sciences, and for the Middle Ages, to theology. Students of non-Western music have most frequently looked at music in its relationships to language and to social organization.

5. The function of music. An important approach of musicology to the conceptualization of music is the study of the function of music in culture. Musicologists have not often been explicitly concerned with the question of function in the basic conceptualization of music. A traditional view separates art music, often presumed to be essentially 'l'art pour l'art', from functional music that included folksongs (narratives, or life-cycle rituals etc.), popular music for entertainment, 'vernacular' music such as marches and dance music and congregational church music such as hymns. The distinction between 'art' and other musics has come under attack and is in any event often difficult to apply. The question of function also plays an important role in the significance of the distinction between secular and sacred music, often used by musicologists as a touchstone.

In a universalist sense, the question has been approached by ethnomusicologists, whose conclusions extend from the enumeration of uses of music in one society or all of the world's cultures, to attempts to see music as having only one unique function, or a cluster of related ones. It has thus been argued (for summary see Nettl, 1983) that, whatever the many uses of music in the world's societies, all cultures use music to integrate and unify a society and to draw boundaries among societies and their subdivisions, which may include subcultures, age groups and socio-economic classes. As the world's cultures have become globalized and countries, cities, and even neighbourhoods increasingly heterogeneous, music as a kind of weapon for confronting the cultural 'other' becomes more significant.

Amerindian pow-wows, for example, are explicitly designed to permit intertribal communication as well as impressing non-Indians with the power and vitality of Amerindian cultures. 19th-century Czech nationalists used the excellence of Czech art music and its roots in folk traditions – founding a national opera theatre and developing traditional nationalist motifs as emotional tropes to stimulate an audience – much more than physical force as a weapon in the struggle for cultural revitalization. In Nazi Germany, the exclusion of foreign as well as 'Jewish' and 'degenerate' music (*entartete Musik*) served to unify society and confront the 'other'. Similar techniques were used to accomplish political and social goals in communist societies, and the use of choruses and military bands as important weapons in the colonial enterprises from the 16th century to the 20th is certainly a related process. The close association of music with society, and its role in the interactions of ethnic groups and nations, may be a survival of the function of pre-musical sounds in early human times in which social groups may have impressed (and frightened?) each other with the use of powerful organized sound. Music appears, universally, to be used for communicating with the supernatural world, also a kind of 'other'. The fact that all human societies use music in the course of religious worship, from a shamanic trance to concert-like anthem-singing, suggests a second, related single main function of music applicable to all cultures.

On the other hand, ten principal functions of music have been itemized, from the individualistic 'aesthetic enjoyment' and 'emotional expression' to the communal 'contribution to the integration of society' and 'validation of social institutions and religious rituals' (Merriam, 1964, pp.219–27). Ethnomusicologists in general take for granted that whatever universals exist in the sphere of function; each society has a unique configuration of musical functions and uses.

6. Classification. Statements by musicologists defining music often move quickly to an accounting of types of music, and classifications subdividing music seem often to be part of basic musicological definitions and conceptualizations. Far too numerous for an accounting here, they are of interest in a fundamental consideration of the concept of music because they indicate the importance of hierarchical classifications in Western culture and because they are often based on abstract categories that artificially distinguish human musical activities. They are concerned less with the division of the musical repertory into stylistic groups than with the division of the musical process into categories of thought and cultural function.

A brief sampling: the division of music into natural, human and sonic kinds of harmony by Boethius, already mentioned, was the starting-point for a large number of classifications in European culture. Others include the division into theoretical and practical music, introduced by Aristoxenus about 300 BCE and reintroduced about 1500. Isidore of Seville (*c*559–636) included *musica harmonica* (vocal music), *musica ex flatu* (music of wind instruments) and *musica rhythmica ex pulses digitorum* (music produced by striking, e.g. percussion and plucked strings). In the 14th century, Theodoricus de Campo used the categories of *musica mundana* and *humana*, like those of Boethius, adding *musica vocalis* (animal sounds) and *artificialis* (music as we know it), which was again subdivided into vocal music with a section of rhythmic declamation, and instrumental music (with subdivisions of strings, wind and percussion). Music scholarship during the Renaissance made use of these groupings; in contrast, musicologists in the 20th century divided music by period of composition, by culture and subculture and by social function – separating sacred from secular, folk music from art music, vernacular from serious music.

The classifications of music in other cultures are complex, often following social and ceremonial functions, and from the 20th century onwards, often taking into account intercultural differences. In India, for example, emphasis is placed on distinction between art and folk music, between North and South Indian traditions and between Indian and Western music (the music of other cultures often being regarded as of little account). In the Islamic Middle East, as already suggested, classes of music reflect the degrees of social acceptability.

In the late 20th century, the parallel or contrastive role of the sexes in the world's musical cultures, and contributions of women, long neglected in scholarship, came to receive substantial attention. Contrary to widespread beliefs promulgated in the past, there is no evidence to suggest that either men or women are innately more 'musical'. In most societies, however, a substantial difference in the nature of men's and women's participation in music as performers, composers and audience, in actual music-making and in the realms of musical behaviour and ideas, is maintained (Koskoff, 1989). In many societies the distinctions are so pronounced that the terms 'women's music' and 'men's music' are appropriate.

Taxonomies of major components of the world of music are also of interest in general considerations of musical conceptualization: for example, instrument classifications. The traditional Western classification by orchestral instrument groups (which indicate functions of instruments in a particular musical style) and the India-derived system of Hornbostel and Sachs (1914), based on instruments as museum artefacts, inform importantly about Western attitudes towards music. The same may be said of a traditional Chinese classification system, by raw material, which is dominated by the number eight; and of instrument classifications developed in other societies (see Kartomi, 1990).

7. Music as a universal phenomenon. Whether music is human-specific or whether other species have music has been an issue for musicologists; and so also is the question whether the works of certain 20th-century composers may be included on equal terms with music based on common practice (see, for example, Blume, 1960). But that music is found in all human societies, that it is a cultural universal, seems never to have been seriously opposed among musicologists. Ethnomusicologists, in particular, regard music as a human universal and have argued widely about its universal characteristics. Among these are the ubiquity of singing and the virtual ubiquity of instruments; the widespread use of tones with consistent pitch (partially justifying the definition, 'the art of combining tones'), of tone systems using from five to seven tones, of duple and triple metres, the universal use of something that (quoting Wachsmann, 1971, p.384) seems 'to me to resemble the phenomena which I am in the habit of calling music' in religious contexts.

If one were, however, to make a comprehensive census of all human cultures or culture-units, one would probably find exceptions to all characteristics proposed as universals. Instead, then, it seems reasonable to speak of statistical universals, which are present virtually everywhere, with the exception of two. The first is abstract: if there is a definition of music agreeable to the readers of this work, and if all cultures 'have' music, then all cultures must *ipso facto* partake of this definition. In other words, if we are to accept that all cultures do have music, then all the world's music(s) must minimally conform to that definition. Second, more practically, all societies, including those that use a term like 'music' or seem to have a unified conception of it, and those that do not, have a type or kind of stylized vocal expression distinguished from ordinary speech. Most commonly it is something readily called or associated with singing, but 'chanting', elevated speech, stylized utterances consisting of vocables, screaming, howling, weeping or keening may all be included. Possibly that is as far as one can go in projecting a humanity totally unified in having a music.

But if all societies have music, is music a property of all human individuals, or – like language – of all normally developed humans? Psychologists have long assumed that there is such a thing as musicality, possessed by individuals to varying degrees, and in Western societies it is common to distinguish between 'musical' and 'unmusical' persons. At the same time, it is widely assumed that all normal humans have the capacity of participating in some sense – performing, understanding, perceiving if not performing or composing – in a complex of related activities labelled

as 'musicking' (Small, 1998). Someone unable to engage in 'musicking' (which in itself probably cannot be measured) is marked as not quite normal. In English, the way to characterize a totally unmusical person is with the term 'tone deaf', which suggests absence of sensitivity to pitch distinctions, indicating again the primacy of the melodic aspects of music to the Western conception of music. The suggestion (for example by Gardner, 1999) that musical processes in the nervous system can be distinguished from others – for example, that there is such a thing as 'musical intelligence' in contrast to and alongside others – is relevant to these considerations.

Scientists contemplating music theoretically and experimentally from psychological and physiological viewpoints have overwhelmingly limited themselves to the Western conception of music and to human subjects in Western societies. The beliefs resulting from the studies that have been carried out should be tested in other musical cultures, a procedure that would inevitably collide with the intercultural variety in the definitions of conceptions of music and the difficulty of finding any universals of music. Nevertheless, the question of musicality as part of the equipment of the normal human, broached by John Blacking in *How Musical is Man?*, is answered by the suggestion that humans are basically musical, that music in a human universal, and that there is sufficient unity to justify thinking of all musics as part of a single system.

8. The world of music or musics. The language dictionaries, general encyclopedias and music dictionaries appear to agree that there is such a thing as music, and that (at least by implication) it is found in all cultures. Despite the fact that few cultures actually have a term that encompasses everything that is included in the English 'music', and the absence of traits that can be identified as cultural universals, and further, despite the absence of studies that test the presence of musicality-proving characteristics on an intercultural basis, musicologists generally believe that they are justified in speaking of 'music' as a unitary concept, basically human-specific.

If this were so, one would assume that music has a single origin, was invented once by humans and then perhaps gradually diffused and thus changed, each culture adapting traits to its own needs. Indeed, one issue in the musicological profession concerns its view of the world of music: is the world of music a single world, and are we justified in saying that humans 'have' 'music', or does the world of music instead consist of musics, each an individual, internally consistent system, somewhat like a language? Linguists have no difficulty speaking of both 'language' and 'languages', and maintaining the distinction between these concepts; musicians are more likely to think of music at large as 'a language'.

The suggestion that music, to be a unitary concept, must have a single origin leads us to consider briefly the question of musical origins. The 19th and early 20th centuries produced several theories, often loosely associated with prominent individuals: music originated as the human version of animal mating cries (Darwin, 1871); as the stylization of elevated or emotional speech (a view widely attributed to Wagner); as rhythmic accompaniment to group labour (Bücher, 1896); as a derivative of long-distance vocal communication (Stumpf, 1911); as a human invention for addressing the supernatural (Nadel, 1930). Sachs (1943) distinguished two kinds of origin – from speech (logogenic) and from emotional expression (pathogenic), and since some cultures appear to have participated in only one of these, one would expect that Sachs believed that music had at least two separate origins. The later idea that music comes about because of specific social needs in different societies on different routes of multilateral cultural evolution suggests that different societies might have individually 'invented' music on separate occasions. This might be the reason for the enormous stylistic variety in the world's music, and for the virtual absence of true universals, but it would not explain the significance of certain statistical universals, those found in a great many, though not absolutely all, musics. Yet again, separate origins might account for the absence of universal conceptions of and terms for music. Whether the human nervous system has built into it a kind of musicality somewhat like the imprinting of potential for linguistic competence is very much open to investigation. After several decades of neglect (borne no doubt of frustration with the inevitably speculative nature of the enterprise), scholarly interest in the origins of music was revived in the 1990s (see Wallin and others, 2000). Biologists, psychologists and semioticians have inclined to the Darwinian view of music as an adaptation involving fitness to mate, and representing essential qualities such as energy, flexibility and innovativeness. The discovery and analysis of sounds produced by certain animal species in which ordinary communicative sounds and mating calls and 'songs' carry a distinction paralleling that of speech and song suggests that music may have originated simultaneously with language or possibly before.

The publication of significant musicological works during the second half of the 20th century questioning the boundaries of music and discussing the nature of the world of music indicates the degree to which fundamental questions about the definition, character, shape and conceptualization of music are constantly being debated, and the way in which the positions held towards these questions are constantly shifting. Thus, one may argue whether the sounds of an orchestra tuning up are music; or John Cage's work, *4′33″*, in which no sound is heard; or the sounds produced by computer programs, any more than the 'singing' of birds.

In developing a definition and conceptualization of music, it is difficult to choose among the approaches mentioned. The purpose of this article is, indeed, to show that, in its conception of music, the world is a pastiche of diversity, and thus the author is obliged to avoid commitment to a single position. There is little doubt that each reader of this work believes firmly in the existence of music and subscribes to a specific conception of it, yet one ventures to assert that there is none who can imagine life without it.

BRUNO NETTL

Musica Antiqua. The original name of the Ensemble Musica Antiqua, founded in 1958 by RENÉ CLEMENCIC.

Musica Antiqua Köln. German period-instrument orchestra, founded by REINHARD GOEBEL in 1973. The orchestra quickly acquired a reputation for disciplined ensemble and clearly defined articulation. With Goebel as violinist and director it has made recordings of Bach's Brandenburg Concertos, orchestral suites and chamber music. Its recordings of sacred vocal music by members of the Bach family and of Telemann's *Musique de table* have been widely acclaimed. More recently, it has performed and recorded music by early 18th-century Dresden composers including Heinichen, Pisendel and Hasse. The orchestra has appeared in many of the world's leading festivals.

NICHOLAS ANDERSON

Musica da camera (It.). *See* CHAMBER MUSIC.

Musica enchiriadis, Scolica enchiriadis. Anonymous 9th-century Latin music treatises of signal importance for the early history of modal theory and of polyphony. They are generally transmitted together in the manuscript tradition, frequently with other contemporary tracts (ed. in Schmid, 1981) but most of all with Boethius's *De institutione musica*. Though best known for containing the earliest extant discussions of (improvised) polyphonic singing (organum), they are equally notable for transmitting the first chant melodies preserved in a precise pitch notation and for drawing upon a wide range of late Latin literary and philosophical sources; they thus document the intellectual environment as well as the state of musical theory and practice of the Carolingian Renaissance. Although the origins of the treatises are still wrapped in mystery, major advances in the understanding of *Musica enchiriadis* and *Scolica enchiriadis* have been possible following the completion of Schmid's critical edition (1981), the dissertation by Phillips (1985) and the first complete published translation of both treatises (Erickson, 1995) since Schlect's German translation (1874–6) based on Gerbert's edition of 1784. (Unless otherwise stated, the edition and translation of *Musica enchiriadis* and *Scolica enchiriadis* referred to in this article are those by Schmid, 1981, and Erickson, 1995.)

1. CONTENT. *Musica enchiriadis* [*ME*], which has no title in the earliest sources, is a succinct, well-argued account of the theory and practice of ecclesiastical music of the time. The first nine of its 19 chapters are concerned with monophonic chant, a notational system for representing melodies (dasian notation), a description of the modes based on both final and ambitus (but not of modal octave species), vocal exercises for practising different modal characteristics (determined by the placement of the semitone), and basic musical and mathematical terminology. Chapters 10–18 take up the 'symphonies' (consonances of octave, 5th and 4th) and their use in simultaneous (*in unum*) singing, whether in octave doublings or in improvised polyphony (*diaphonia*, organum) in which the chant is generally replicated at the 4th or consistently replicated throughout at the 5th, with octave doublings possible in both cases. Chapter 18 closes with philosophical musings concerning the mysterious fact that some tones when combined produce harmony and others do not, that 'the same principle that controls the concord of pitches regulates the natures of mortals' and that the harmony of the world is due to the mathematical relationships that regulate and unite all things in it. Chapter 19, which addresses essentially the same issues in different terms, notably by an interpretation of the Orpheus myth in a unique version largely based on Fulgentius, could therefore be considered as superfluous and may well be the misplaced prologue to *Scolica enchiriadis* [*SE*], to which it apparently refers in a concluding reference to 'the little work following' (Phillips, 1985).

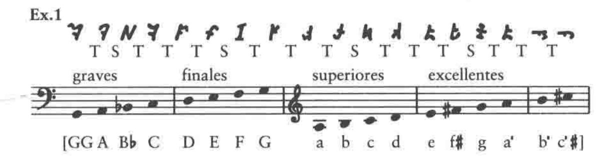
SE, on the other hand, is a dialogue in three unequal parts, the total being three times as long as *ME*. Its title, probably original, may have been modelled on the rhetorical treatise in dialogue form of Fortunatianus (see Spitta, 1889; Phillips, 1985) entitled *Scolica* (i.e. 'excerpts') *enchiriadis* (possibly a corruption of the Greek

encheiridios, 'handbook'). Part i defines music in Augustinian terms as 'bene modulandi scientia' and states that the skilled or learned singer (*cantor peritus*) must know the properties of the individual pitches, the rhythmical aspects of chant performance, and other things beyond these (*extrinsecus occurrentibus*) that are never clearly defined but might refer to polyphony or possibly (as one 11th-century gloss suggests) even singing ability (*bona vox*). In addition to describing piecemeal the dasian pitch set of 18 notes and their correlative symbols and tetrachords, *SE* discusses at length common errors in singing chants, caused by misplacing the semitone in a melody, all of which are represented graphically as well as in words. These examples also emphasize the pentachordal structure characteristic of the dasian system (which also produces modal identity at that interval). Part i closes with a discussion of how chants may be adorned by varying the lengths of notes; the description is not precise but does indicate that the ratio of long to short notes is 2:1, that lengthening of notes would be especially appropriate at the ends of phrases and verses, and that entire text units (such as a psalm verse) could be doubled or halved in tempo. Nonetheless, the oldest manuscripts are lacking clearly legible examples, so any reconstruction of the illustrations is speculative.

Part ii of *SE* is itself subdivided into (1) a discussion of the symphonies and organal singing, and (2) an introduction to quadrivial thinking which asserts the importance of number and mathematics for music and which adduces an extended passage from Augustine's *De ordine* (ii.4f) to underscore how number is the foundation of all the disciplines of the quadrivium. This discussion prepares the way for part iii, which is almost as large as the previous two parts combined and consists primarily of a systematic but selective account of number theory drawn mainly from Boethius and Cassiodorus. Topics include definitions of numerical and spatial (continuous) quantity (multitude and magnitude, respectively) and how 'in likeness to both kinds of quantity, arithmetic brings forth out of itself music' so that 'when the differences of pitches are based on quantity in this way, the pitches sound together in a sweet mixture according to the contrary natures of the two types of quantity' (Schmid, 116.12f; Erickson, 70). Moreover, because music treats non-movable quantities not in terms of themselves (*per se*) but in relation to other such quantities (*ad alium*), an investigation of inequalities is necessary. There thus follows a detailed exposition of types of inequality (multiple, superparticular, superpartient, multiple superparticular, multiple superpartient) and why only two types of inequality – multiple and superparticular – are suitable for music. The intervals of music are matched with multiple (i.e. duple – 2:1, triple – 3:1, quadruple – 4:1) or superparticular (sesquialter – 3:2, sesquitertian – 4:3, sesquioctaval – 9:8) ratios. Then, beginning from the integer 192 and using these ratios as multipliers, an octave scale is constructed with the resulting numbers 192 216 243 256 288 324 364½ 384 representing the pitches (Schmid, 142.477–144.510, 145.*descr*.4; Erickson, 86f, fig.43). Although uncommented upon, this series is not congruent with any pair of tetrachords in the dasian system but matches rather the modern C major scale, which is the basis for most of the diagrams in part iii, and is possibly connected with the scale given by Hucbald that he associates with the organ (*GerbertS*, i, 110*b*–111*a*). There then follows a monochord division to produce the same scale. Finally, in the treatise's closing paragraphs, the discussion reverts to the different intervallic arrangements of tetrachords and their relationship to the modes by the placement of the semitone, reasserting that, in the dasian scale, modal identity is to be found at the 5th degree but not at the 8th. This means that when an octave consonance is desired with a given tone in the scale, the octave must be made perfect, even if this means going outside the pitches of the dasian scale. The treatise closes non-climactically with the statement that such application of the duple proportion 'both preserves the symphony [of the octave] and retains the category of trope [i.e. mode]' in the two voices.

2. Sources, dating, authorship, dissemination. If the number of extant sources (46 listed in Schmid, 1981; plus one more described by Lochner, 1988) is any indication, the *Enchiriadis* treatises must be considered among the most widely read musico-theoretic texts of the Middle Ages. Only Boethius's *De institutione musica*, the dialogue attributed to Odo (*see* Odo, §3), and Guido of Arezzo's *Micrologus* survive in more sources than *ME* and *SE*. Moreover, other medieval treatises much valued today, such as Hucbald's *De harmonica institutione*, had very little currency in the Middle Ages, whereas Guido of Arezzo, Berno of Reichenau, Hermannus Contractus, and the author of the *Quaestiones in musica* all draw on (or criticize) the terminology and teachings of *ME* and *SE*.

Regarding the origins of *ME* and *SE*, recent research suggests that the oldest extant source, *D-DÜl* H 3, may have been copied from the non-extant original of *SE*. Surviving only as a fragment, *D-DÜl* H 3 was most likely written at the Benedictine abbey of Werden (near Essen) in the last years of the 9th century, possibly during the rule of Abbot Hoger (*d* 906), to whom authorship is ascribed in some of the earliest sources (see Torkewitz, 1997, and 1999). The oldest more or less complete source of both treatises, from 10th-century St Amand, is *F-VAL* 337. There are also five later sources that transmit the so-called *Inchiriadon* (ed. in Schmid, 1981), a compilation of an apparently earlier version of part of *ME* mixed with aspects more advanced than *ME*. More primitive in this work is the less technical and less sophisticated use of Boethius's *De institutione musica* than that found in *ME* (see Duchez, 1980); more advanced is the incorporation into its modal theory of the notion of modal octave species and, associated with them, the Greek tribal names Dorian, Phrygian, Lydian and Mixolydian (Schmid, 204.462–4), although the last name occurs only in the associated diagram and not the text (204.*descr*.14). In any event, the complete texts of *ME* and *SE* as they are found in the early sources are probably not in their original form: as mentioned above (§1) chapter 19 of *ME* would serve more appropriately as an introduction to *SE*; nothing prepares the reader in the opening passages of *SE* for the enormous emphasis on number theory that dominates more than half of the treatise; and as a practical handbook, part i and the first half of part ii can be seen as roughly equivalent to *ME* and satisfy quite adequately the practical information needed by the 'skilled singer'. These and other features suggest that both *ME* and *SE* have complicated histories involving several stages of evolution – of addition, replacement and of shuffling of materials – ultimately resulting in the texts that have been transmitted. It is therefore possible that at least parts of



the texts date from the first half of the 9th century; but it also seems likely that the standard versions of *ME* and *SE* known today are from much later in the century.

Specific similarities in content (dasian notation, discussion of organum etc.), as well as dissimilarities to other treatises of roughly the same period (Aurelian of Réôme, Hucbald of St Amand), clearly suggest that *ME* and *SE* came from the same intellectual and musical environment. However, there are also indications that *ME* and *SE* did not have the same authors. (It is also possible that both had more than one author, and that, especially in the case of *SE*, a compiler rather than an author might have played some role.) Sometimes this is revealed in small differences in locution: *ME* refers to 'the tetrachord of the *graves* [notes]' but *SE* to 'the grave tetrachord'; similarly, *neuma regularis* in *SE* is simply *neuma* in *ME*. Sometimes there are more substantial differences: a change of locus for the organal voice when the chant melody has a wide range is discussed in *ME* (chap.18) but not in *SE*. Moreover, the term 'organum' is not used identically in both: whereas both use it to designate the organal voice, only *ME* equates it with the two-voice musical texture also called *diaphonia*.

Finally, *ME*'s author (chap.16) is very aware of the necessity of justifying the 11th as a consonance (as does Ptolemy, *Harmonics*, i.6, translated by Boethius, *De institutione musica*, v.9) to rationalize octave doublings of organum at the 4th, but *SE* presents the 11th (in different places) variously as a consonance and as a dissonance and lays great stress on the principle of commensurality or connumerality (Schmid, 109.198f, pp.125–8, passim; Erickson, 67, 76–8), which does not apply to the ratio 8:3 (the 11th). Thus the theoretical justification for octave doubling of organum at the 4th illustrated elsewhere in *SE* is undermined (Schmid, 96.*descr*. and 100.*descr*.36; Erickson, 59, figs.32 and 62, fig.36). This inconsistency contrasts markedly with *ME*, which strongly argues that the 11th is a consonance.

3. THE DASIAN SCALE AND NOTATION. One of the most characteristic features of *ME* and *SE* is the use of a notation that is found only in a small number of theoretical writings (a rare, partial use in a practical source occurs in *F-Pn* 9488; see Santosuosso, 1989, p.35); it is one of the few precise pitch notations used before the development of the staff in the second half of the 11th century. Therefore, the melodies represented by this notation – mostly from the Office Hours and none from the Mass – in the *Enchiriadis* treatises are among the oldest examples of melodies whose precise pitch content is known. (*See* NOTATION, §III, 1(v)(a).)

Dasian notation is so called because it is based on the use of the Greek grammatical accent for rough breathing known as the *daseia*: ʽ. By combining it with the letters 'C' and 'S' and rotating the symbols (*notae*, *figurae*, *karacteres*) in various ways, the symbols for the 1st, 2nd and 4th pitches (protus, deuterus, tetrardus) of each tetrachord are generated; the 3rd pitch (tritus), which marks the semitone – 'the very heart and soul of music' (Schmid, 151.590f; Erickson, 90) – has an anomalous set of signs to signal its distinctiveness. The entire scale of 18 pitches, made up of four named tetrachords and two additional pitches 'added at the top' is illustrated in ex.1. Although the authors of *ME* and *SE* both refer to the 'dasia' in connection with the notation, presumably because of the familiarity with the grammatical sign, the same graphic form is also a note form of Greek vocal notation transmitted by Boethius in his *De institutione musica* (iv.3).

Although this arrangement has elements in common with ancient Greek theory (tetrachords, 18 pitches etc.), it is different from all other tetrachord-based systems. Generations of scholars have been puzzled by the inconsistency of intervals at the 4th and especially 8th degree, since *ME* and *SE* both discuss octave doublings and (essentially) parallel organum at the 4th. It is possible that the pitch series actually corresponds to the melodic content of 9th-century melodies, which were later modified when an octave-based modal theory was imposed on the chant repertory (see Phillips, 1985).

4. THEORY OF THE MODES. The eight 'modes' or 'tones' (cf Atkinson, 1987) are described in the *Enchiriadis* treatises with greater precision than in Aurelian's (presumably) earlier *Musica disciplina* (*c*840), using both final and ambitus as criteria. Each mode has an authentic and plagal form, sharing a final but having different ranges: the lower boundary for both is said to be the 5th below the final, while the upper boundaries are a 9th and a 5th above the final respectively for authentic and plagal modes.

SE also recognizes that transposition at the 5th degree does not change the mode. Tones a 5th apart have the same name, hence the same function; therefore, *SE* asserts, they are 'concordant with each other because of a certain natural kinship [*socialitas*]' (Schmid, 73.161f; Erickson, 43); however, tones a 4th away (*compares*, 'compeers'; Schmid, 82.320; Erickson, 48) are also said to enjoy a similar relationship (although the term *compar* is also used for a note a 5th away; Schmid, 173.159, Erickson, 42). *SE* also finds these notes 'associated with the final' used as the last notes of phrases (*comma*, *colon*; Schmid, 82.321–3, Erickson, 48f).

The modes in *ME*/*SE* are named from their finals and qualified by their ranges, e.g. *protus authentus*, *protus plagis*, although other terms are used (e.g. *minor*, *subiugalis* and *lateralis* for plagal). The tribal names Dorian, Phrygian, and Lydian (a trio that frequently appears in Greek music theory as well as in Boethius) also occur (in *ME* only), but they are not associated with specific modes until the *Alia musica* and, as mentioned above, *Inchiriadon*.

5. THEORY AND PRACTICE OF ORGANUM. Although a discussion of singing in parts was new in the theoretical literature, the practice was apparently not a novelty when the *Enchiriadis* treatises were written: *ME* refers to it as 'diaphony, that is, two-voiced song, or, customarily, organum'; *SE* does not, in fact, give this practice a name. (However, in both treatises organum is a term for the organal voice.) Organum properly refers to singing in 4ths and 5ths. In the *Enchiriadis* treatises, the organal voice (*vox organalis*) is below the principal voice (*vox principalis*) in a basic two-voice texture.

Within the dasian system complete parallelism is possible in organum at the 5th (ex.2), but not at the 4th

Ex.2

(ex.3), because the interval between a deuterus pitch and the tritus below it is a tritone, not a perfect 4th, thus

Ex.3

prohibiting the organal voice moving below tetrardus, especially at the beginnings and endings of phrases. In ex.3, therefore, the two voices begin in unison to avoid the tritone E–B♭ that would occur on the third and last syllables. According to *SE*: 'at the symphony of the diatessaron an organal voice does not so simply and consistently accompany a principal voice as at the diapente but, by some natural law of its own, it stands still in certain places and is not able to proceed further consonantly' (Schmid, 102.87–90, Erickson, 61).

In chapter 18 of *ME*, it is further shown that when the chant melody shifts into different tetrachords it may be necessary for the organal voice to do likewise, the new lower limit being the tetrardus of the new tetrachord (ex.4).

Ex.4

Octave doubling is not regarded as organum, but rather as a natural phenomenon produced, for example, when men and boys sing the same melody. Although octave, 5th and 4th are all considered 'symphonies' (Schmid, 23.6–8; Erickson, 13), the octave is singled out as an *equisonus* ('equal-sounding') interval, 'for in this symphony a pitch is revealed anew' (Schmid, 26.27f; Erickson, 15). Nonetheless, octaves may be employed in the performance of plainchant or of organum. In organum, principal and organal voices are subject to octave doubling both above and below such that each voice could sound in three octaves, the highest being sung by boys; *SE* even gives examples of doublings at one or two octaves above the basic organal voice, which itself, however, is omitted, suggesting that virtually any combination of up to six parts might be employed (Schmid, 96.*descr.*6 and 101.*descr.*11; Erickson, 59, figs.32 and 63, fig.37). Moreover, the use of instruments was also apparently sanctioned: 'For human voices can be mixed with one another and with some musical instruments, not only two and two but also three and three' (Schmid, 40.10–12; Erickson, 22).

It should be noted that in the manuscript sources examples illustrating organal practice more often than not dispense with dasian notation for voices other than the chant melody; the notation was designed to represent the plainchant melodies only and is therefore generally incapable of representing all the pitches used in an organal performance, especially at the 4th and/or with octave doublings. Nowhere in the treatises is it suggested that the notation was invented to accommodate multi-voice textures.

6. Literary sources. One of the most interesting and impressive aspects of the *Enchiriadis* treatises, distinguishing them from all other medieval writings on music theory, is the wide range of classical, patristic and other late Latin sources that they draw upon. There are terminological borrowings, direct quotations and/or paraphrases of passages from Virgil's *Aeneid*, Censorinus's *De die natali*, Calcidius's translation and commentary on Plato's *Timaeus*, Augustine's *De musica* and *De ordine*, St Jerome's Vulgate (*Romans*), Boethius's *De arithmetica*, *De institutione musica*, and *Consolatio philosophiae*, and Cassiodorus's *Institutiones*. By far the most influential author is Boethius, not only in terms of the number of works utilized but as regards the extent of the borrowings. Boethius's name is also invoked more than any other author; he is referred to as the 'doctor magnificus' (Schmid, 44.11; Erickson, 25) and 'praestantissimus auctor' (Schmid, 59.39; Erickson, 32; see also Cohen, 'Metaphysics', 1993). Second in importance is Augustine (a direct source for *SE* only), whose *De musica* probably provides a model for the dialogue form and opening of *SE* and also for the brief discussion of rhythm found at the end of part i *SE*, and whose reflections on the origin of the various arts and disciplines in *De ordine* is quoted at some length in part ii. Cassiodorus also figures prominently as a source for the introduction to quadrivial studies in *SE*, part ii, and in the discussion of inequality in part iii, although mixed in with Boethian and other materials.

The name of the 9th-century philosopher Johannes Scottus Eriugena has, since the time of Coussemaker, been associated with *ME*. Although certain Neoplatonic elements in both *ME* and *SE* have been attributed to Scottus (Phillips, 1985), there is really no direct evidence that he influenced or was influenced by the two treatises; in fact the Neoplatonic and neo-Pythagorean aspects can be shown to have a more likely origin in Boethius (Erickson, 1992).

7. Byzantine elements. *ME* and *SE* contain many features that recall Aurelian's presumably earlier tract *Musica disciplina* and which may well reflect Byzantine-Frankish contacts in the 8th and 9th centuries: eight categories of mode (suggestive of but not identical with the Byzantine *oktōēchoi*) divided into two groups of four, although the modes themselves are different; a basic scale system made up of tetrachords; the Greek-derived terms protus, deuterus, tritus, tetrardus; the *noenoeane* formulas (used in *ME* and *SE* to exemplify different modes) that recall the Byzantine *enēchēmata*.

RAYMOND ERICKSON

Musica ficta [musica falsa] (Lat.: 'false, feigned or contrived music'; synonymous with *falsa mutatio, coniuncta*). These terms were used by theorists from the late 12th century to the 16th, at first in opposition to *musica recta* or *musica vera*, to designate 'feigned' extensions of the hexachord system contained in the so-called Guidonian hand. Most scholars accept that notated polyphony of this period required performers to interpret under-prescriptive notation in accordance with their training (by contrapuntal and melodic criteria about which scholars disagree), ensuring the perfection of consonances, and approaching cadences correctly. These requirements could often be met within the *recta* system, but *musica ficta* was used 'where necessary' – in modern terms only, by 'adding accidentals'; in medieval terms, by 'operating *musica ficta*'.

In modern usage, the term *musica ficta* is often loosely applied to all unnotated inflections inferred from the context, for editorial or 'performers'' accidentals rather than notated ones (whether properly *recta* or *ficta*). Editors usually place accidentals that they have supplied, on behalf of performers, above the affected note or in brackets or small type, to distinguish them from those having manuscript authority. (On the placing of editorial accidentals, see especially Anglès, 1954; Hewitt, 1942; Jeppesen, 1927; Lowinsky, 1964 and 1967; J. Caldwell, *Editing Early Music*, Oxford, 1985.)

1. Introduction. 2. Theory. 3. Practical application. 4. Rules for inflection and adjustment. 5. After 1600.

1. INTRODUCTION.

(i) Basis in solmization. The hexachords of *musica recta* built on G, *c* and *f* (and their upper octaves, *g, c′, f′, g′*) comprise the 'white' notes of the modern diatonic scale from G to *e″* with the addition of *b*♭, and *b*♭′; each letter name has tagged to it the solmization syllables of its *recta* hexachords, which define the default interval arrangement of the gamut, the 'normal' relationships of syllables to letters (*see* SOLMIZATION, §I, Table 2). The internal arrangement of each hexachord was identical (tone–tone–semitone–tone–tone, identified by the syllables *ut–re–mi–fa–sol–la*). These were the hexachords of *musica vera* or *recta* (La Fage, 1864, Anonymus 1) and their constituent pitches those of *musica vera* or *recta* (*see* SOLMIZATION, §I, 2) in the system attributed to Guido of Arezzo (1025–6 or 1028–32). *Mi–fa* or *fa–mi* was always a diatonic semitone, and a semitone was always either *mi–fa* or *fa–mi*. The singer moved up and down the overlapping hexachords as the music required, making transitions (mutations or *coniuncte*) on notes common to two hexachords, in order to get into position to solmize the next semitone step as *mi–fa* or *fa–mi*, without mutating between its boundary notes. These transitions were practical and local means of negotiating and teaching semitone locations, but they have no prescriptive status; the singer must know where he wishes to place the semitone before selecting a hexachord; it is functional, a vocal analogy to fingering. The purpose of the system was to contextualize and demonstrate the position of semitones deemed necessary. Solmization was the practical language in which intervals were expressed; it was originally devised as a pedagogical tool for melodic chant, providing the vocabulary for interval specification.

The system was extended to cope with the growing demands of polyphony, where simultaneities often needed correction at the expense of line, by accommodating the extra notes thus required. Semitone steps other than B–C, E–F, A–B♭ were provided from *ficta* hexachords beginning

in 'unusual' places, on notes other than G, C and F; these were sometimes conceived as the transposition of *recta* hexachords to alien pitches. The F♯ needed for an approach to G, for example, is contrived by a 'fictitious' D hexachord, making the F♯–G semitone *mi–fa*; the E♭ to make a perfect 5th below a B♭ might be *fa* in a B♭ hexachord. In such cases not only the F♯ and the E♭ had *ficta* status but also the G *fa* and the D *mi*, since the hexachordal status affected context, not just individual pitches. The hexachord beginning on low F, and therefore B♭, had *ficta* status. The close relationship of *ficta* to solmization is confirmed by the synonym *falsa mutatio*.

The range of available *ficta* hexachords was increased and rationalized until, in the 1430s, Ugolino of Orvieto (*Declaratio musice discipline*) recognized a complete system including *recta* and *ficta* hexachords whose sole purpose was to accommodate the pitches needed for interval correction in polyphony, and to give them a place within the extended solmization system. When melodic integrity had to yield to the higher priority of simultaneous consonance, legitimate progressions in polyphony could no longer be confined to intervals acceptable in chant. Solmization is essential to understanding what the theorists say about interval correction, but does not itself provide solutions or determine what the sounds should be, since any melodic progression, even one illegal in chant, could be solmized by an extension to the system. A few theorists allow disjunct hexachordal change, for an awkward interval without a common note on which to mutate, by means of the *disiuncta*. Until the late 15th century, when keyboard-influenced attempts at reconciling the separate systems were made, Johannes Boen (*Musica*, 1357) was virtually alone in attempting to conflate the monochord and the gamut in a single exposition, as distinct from the normal practice of using independent letters to label the monochord, and separately tagging hexachord syllables to the letter names of notes in the gamut. Boen resorted to some unusual vocabulary in so doing, such as *mansio* (perhaps as in lunar mansion), and *extorquere*, for the removal of sounds from those proper places.

Some earlier scholars took for granted that modes were an *a priori* assumption for polyphony (Apel, *Accidentien und Tonalität*, 1937, tailored accidentals to fit the mode; Aldrich, 1969); more recent work has rejected modal interval species as binding for *ficta*, in favour of more neutral and flexible tonal typings. But Christian Berger has argued (1992) that 14th-century composition has an *a priori* modal basis closely linked to Allaire's controversial theory of hexachords (1972), even overriding many notated accidentals (challenged by Fuller, 1998). Both modes and solmization were originally designed for the classification and teaching of plainchant, which require little use of extraneous notes except for the correction of melodic tritones. Before it was stretched by the extra demands of polyphony, the *recta* gamut as devised for plainchant was also not incompatible with modal interval species, but the introduction of fictive adjustments led most theorists from the 13th century onwards (e.g. Johannes de Grocheio) to repudiate the application of modes to polyphony. Isolated brief mentions before the 16th century link them; but the Berkeley Manuscript treatise (*c*1375; *US-BEm* 744) and Tinctoris in the 1470s, and even 16th-century successors such as Aaron and Glarean, confine their classifications to the tenor, and these classifications are apparently not undermined by the need for tenor inflections. (*See* MODE, §III.)

(ii) Diatonicism and chromaticism. *Musica ficta* has often been defined in terms of 'chromatic' notes that by modern standards are non-diatonic. But 'chromatic' properly refers only to melodic progressions involving the chromatic semitone (Haar, 1977). F♯–G–A♭ are two adjacent diatonic semitones; F–F♯ is a chromatic semitone. The word was used in Greek theory and transmitted to the Latin West only to designate one of the tuning systems that could be applied to a standard arrangement of tetrachords, and indeed many 16th-century debates about chromaticism were dominated by considerations of tuning (see Berger, 1980). Zarlino (*Le istitutioni harmoniche*, 1558) characterized individual fictive notes as borrowed from the chromatic genus; he preferred a classicizing explanation over the medieval hexachord system.

Each tetrachord or hexachord is a diatonic entity, containing one diatonic semitone; but the tight overlapping of hexachordal segments – some as small as an isolated *coniuncta* – to produce successive or closely adjacent semitones did not necessarily compromise their diatonic status. The tenor of Willaert's so-called chromatic duo is entirely diatonic in its progressions (Bent, 1984), as are Lowinsky's examples of 'secret chromatic art' (Lowinsky, 1946) and indeed almost the entire repertory. True chromatic progressions (e.g. F–F♯–G) are occasionally allowed in theory (Marchetto, *GerbertS*, iii, 82–3) and prescribed in manuscript sources. Except where a melodic chromatic interval is introduced in the interests of vertical perfection (e.g. Old Hall, no.101; see ex.2*d*), *musica ficta* is by nature diatonic.

Even music liberally provided with notated sharps is not necessarily chromatic; this has been called 'accidentalism'. Increasingly explicit use of accidentals and explicit degree-inflection culminates in the madrigals of Marenzio and Gesualdo, which are remote from medieval traditions of unspecified inflection, and co-exists in the 16th century both with older hexachordal practices and with occasional true melodic chromaticism. It is the small number of chromatic intervals in Lassus's Sibylline Prophecies (*Carmina chromatica*), for example, that determine its chromatic status, not the large number of sharps that give it 'chromatic' colouring according to looser modern usage.

Vicentino (*L'antica musica ridotta alla moderna prattica*, 1555) employed chromatic and enharmonic tone systems for composition, and tuning in imitation of the ancient genera. Such experiments, as well as those originating in a fresh use of chordal chromaticism of a colouristic type, are less indebted to the tradition of *musica ficta*. In one of the most remarkable experiments of the century, Guillaume Costeley's extraordinary chromatic chanson *Seigneur Dieu* (Levy, 1955; Dahlhaus, 1963), hexachordal solmization (♭ = *fa*) co-exists with non-hexachordal degree inflection.

2. THEORY.

(i) Antecedents, 9th–12th centuries. The *Enchiriadis* treatises of about 900 give the earliest explicit and extensive theoretical account of the additional semitones that we would call chromatic alteration. The anonymous author of the *Scolica enchiriadis* defined *absonia* (elsewhere *dissonantia*) as the lowering or raising of a note from its normal pitch. The word *vitium*, used in this context, seems to imply no more than a disturbance of

the normal scale, the force being very similar to that of the later *falsa* (indeed, the term *falsus sonus* appears in this treatise; *GerbertS*, i, 177). The *absonia* arises from faulty intonation (a 'vice' of the human voice to which instruments are less subject) or, more important, from the nature of the music, where it has the effect of transplanting or restoring the mode. A fusion of the Greek Greater and Lesser Perfect Systems (*see* GREECE, §I, 6(iii) and Table 1) allowed for two different positions for the note B through the former's disjunct *diezeugmenōn* tetrachord (providing B♮) and the conjunct *synēmmenōn* tetrachord of the latter (providing B♭). This rationalization of the two positions of B is applied by Hucbald in *De harmonica institutione* (*c*900; *GerbertS*, i, and trans. in Palisca, 1978, pp.29–31) to specific chant formulae.

Using dasian signs the author of the *Scolica* set up tetrachords (disjunctly, with a central semitone flanked by two tones) yielding the remarkable scale *G–A–B♭–c–d–e–f–g–a–b♮–c′–d′–e′–f♯′–g′–a′–b♭′–c♯″* (Spitta, 1889; Jacobsthal, 1897; Spiess, 1959). This is proposed in addition to the more normal scale as specially suited to organum at the 5th: the early use of such extreme alterations seems to be occasioned by polyphony. For plainchant the author was more conservative but no less ingenious. He evolved a system of pentachords involving *recta* forms as well as the *absonia*. The pitches of *e♭* and *f♯* are introduced by changing the dasian name on one note – in effect a mutation. By extending the tetrachord system to cover the legitimate transpositions of the pentachords with *absonie*, Jacobsthal further advanced the possibility that the *Enchiriadis* treatises also allow for c♯, g♯, d♯ and A♭. Thus B♭ was recognized even by some early theorists as part of the regular (*recta*) system of available notes, with further allowance for alterations other than the alternative inflections of B, although the terms *musica ficta* or *falsa* were not yet used.

The usual reason given for melodic alterations to chant is avoidance of the melodic tritone. The anonymous author of the 10th-century *Dialogus de musica* (Huglo, 1969, 1971) referred to the 'vice' of additional semitones outside the 'prefixed rule' (*GerbertS*, i, 272) and cited chants in which *b♭*, *e♭*, *c♯* and *f♯* were required, but he no longer explained them by tetrachords. The accommodation of such notes by modal transposition (*see* MODE, §II, 1(i)) is clearly specified by some 11th-century theorists. Guido of Arezzo discussed the AFFINITAS or relationship between a modal final and the note a 5th above, whereby a shared configuration of tones and semitones for each pair of pitches makes it possible for either pitch to begin or end the same piece (Pesce, 1987; *see also* PROPRIETAS, HEXACHORD and MODE, §II, 3(ii) (*B*)). Berno of Reichenau recognized transposition of *f* and *f♯* and *e* and *e♭* to the theoretically acceptable double position on *b* and *b♭*, where they become *recta* locations for chromatic notes found elsewhere in untransposed chant (*GerbertS*, ii, 75). Johannes Cotto gave more detail and accepted transpositions up a 5th for some modes (*GerbertS*, ii, 248; ed. J. Smits van Waesberghe, 1950, p.101; for Guido and Johannes see Palisca, 1978). Johannes also provided for a process of 'emendation' in a few places where the notes can be neither notated at original pitch nor transposed. The author of the *Dialogus* allowed 'emendation' where necessary – that is, where the piece could not be sung in another mode. Such prescriptions already anticipate later warnings against using *ficta* when the situation could be corrected by other means. The development of a system of modal transpositions coincided with the rise of a clearer pitch notation which, however, had very little capacity as yet to cope with the additional notes required for the necessary perfection of simultaneous intervals in polyphony: *f♯* and *c♯* appear besides *B♭* and *B♮* to permit perfect intervals in parallel organum at the 5th. Notes outside the system are recognized, usually as undesirable distortions in chant, and hence false, although they are useful for modal transposition.

The tetrachordal mapping developed in these early treatises allowed alternative diatonic routes but no direct access from one kind of B to the other. By the 12th century, most theorists extended tetrachords to overlapping hexachords in the system atttributed to Guido, with the same function of defining and containing the semitone step. The status of B♭ was much debated, sometimes described as 'added' (*adiunctum*) or irregular (even by Guido), although B♭ and B♮ were given equal status by several early writers, from Hucbald (*c*900) to the author of the *Summa musice* (*c*1200; ed. Page, 1991, pp.89, 171).

Although there is as yet no use of the term *musica ficta*, there is a direct terminological link. The *synēmmenōn* was translated into Latin as *coniuncta*, which came to be a commonly given synonym for *falsa mutatio* or *musica ficta*.

(ii) 13th century. The earliest known use of the term *musica falsa* is in a late 12th-century didactic poem, describing variable hexachord steps (*I-Rvat* pal.lat.1346; an unpublished edition by Smits van Waesberghe is cited in Sydow-Saak, 1990). 13th-century theorists at first continued the negative definition of *musica falsa* as a contamination of the chant; Elias Salomo refers to the false bellowing ('mugiens') of a false musician (*GerbertS*, iii, 19, 42–3, 61ff). Falsity implied transpositions associated with irregular intervals; the melodic tritone was to be avoided, a vice analogous to a false proposition in logic (*Summa*, *c*1200; ed. Page, 1991, p.122, and *GerbertS*, iii, 238*a*). At this time it was often the fault, not its remedy, that was considered 'false'. Theorists qualified and excused the negative term and definition, before shifting from denoting the fault to be cured to the means of correcting it.

Opinions were divided about the use of *falsa* or *ficta* to avoid melodic tritones in plainchant, but all who declared themselves on the subject recognized its essential role in correcting simultaneities in polyphony. Jacobus of Liège asserted its importance in plainchant (CSM, vi/lxvi); Hieronymus de Moravia, however, allowed it in polyphony but excluded it from plainchant (*CoussemakerS*, i, 86). Johannes de Garlandia, in his treatise on plainchant and measured music, specified that much was necessary on instruments, especially in polyphony (or organs: 'organis'; *CoussemakerS*, i, 166). Hieronymus's addition to Garlandia gives priority to the correction of concords over maintaining melodic integrity (ed. Reimer, 1972, i, 95). The St Emmeram Anonymus (1279) also affirmed the role of *musica falsa* (equated with *ficta*) in polyphony as a helping hand for the essential correction of consonance (*De musica mensurata*, ed. J. Yudkin, Bloomington, IN, 1990, pp.274–5). Lambertus likewise expressed dissatisfaction with designating as *falsa* something necessary for achieving good consonance (*CoussemakerS*, i, 258); 'it is not so much false as unusual [*inusitata*]'

(Anonymus [after Lambertus], ed. Gilles, 1989, p.48). Modern scholars' misreadings of this word as 'mutata' derive from a mistranscription by Coussemaker and have no basis in the manuscripts (e.g. Russo and Bonge, 1999). Anonymus 2 may be the earliest to distinguish the two often-cited reasons for using *musica falsa*: necessity (*causa necessitatis*), for correcting consonances, and beauty (*causa pulchritudinis*), apparently for melodic reasons (*CoussemakerS*, i, 312; ed. Seay, 1978, p.28; see also Vatican organum treatise, ed. in CSM, ix, 47).

Hieronymus de Moravia equated *musica falsa* with the *synēmmenōn* (*coniuncta*) and accordingly based his exposition not on hexachords but on tetrachords. Walter Odington wrote of 'movable solmization names' (*CoussemakerS*, i, 216, and CSM, xiv, 1970), Lambertus and Anonymus 2 of 'false mutation, or *falsa musica*' (*CoussemakerS*, i, 258*a*, 310; Anonymus 2 also in Seay, 1978). The idea of false mutation came to be applied to hexachords with a term originally derived from tetrachords, and by the later Middle Ages developed into a full-blown system of infinitely transposable places. Johannes de Garlandia, Anonymus 2, Lambertus and many others defined *musica falsa* as 'when we make a tone of a semitone or vice versa' (*CoussemakerS*, i, 166, 258, 310; Anonymus 2 also in Seay, 1978), a widely used definition also for *musica ficta* and the *coniuncta*.

(iii) 14th–15th centuries. Increasing acknowledgment of its necessity in the growing art of polyphony prompted a change to the less pejorative term *musica ficta* ('not false but true and necessary, because no motet or rondellus could be sung without it': Vitry, *Ars nova*, 23) or the even more neutral *coniuncta* (Berkeley MS, *c*1375, ed. Ellsworth, 1984). This theorist defined the problem in terms of 'imaginary transposition' of hexachords and, explicitly dealing with plainchant and specific categories of polyphony, exemplified the *coniuncta* from chant, contrary to some 13th-century usage. The mid-15th-century Anonymus 11 (*CoussemakerS*, iii, 429) said that *coniuncte* were necessary in both plainchant and polyphony.

The transition from 13th-century discant to 14th-century counterpoint teaching laid greater stress on contrary motion and the controlled succession of perfect and imperfect intervals; perfect intervals had indeed to be adjusted so that they were intervallically correct, and they were to be correctly approached from a 3rd or a 6th by a semitone step in one part. The few theorists who devote a sentence or two, or even a separate chapter, to *musica ficta* usually append discussion of it to counterpoint precepts, and link it to producing correct interval successions. The rules may not be called *ficta* rules; the counterpoint should be adjusted anyway, and if necessary by *musica ficta*.

Strict counterpoint theory dealt in consonances (some dissonances were permitted in florid counterpoint and in composition), and was dyadically based until the late 15th century and beyond. The common objection, that such simple theory helps us little with composed part-music using dissonance, can be met by treating strict counterpoint as the background skeleton of which a piece is implicitly a composing out. Theorists identify such counterpoint as the basis both of florid counterpoint and of (implicitly multi-voice) composition.

14th-century counterpoint teaching stressed not only correct perfect intervals but that they should be approached correctly from an imperfect interval, with a semitone step in one or other part, whether ascending or descending (e.g. Johannes de Muris; and see ex.1). In the

Ex.1

definition of Prosdocimus (early 15th century), *musica ficta* was devised solely in order to 'colour' consonances that could not otherwise be coloured (ed. Herlinger, 1984, pp.70–95). That he here includes the approach to perfect consonances becomes clear when he extends the principle of proximity also to the antepenultimate. Ugolino invokes such inflections not only for sweeter harmony, but in order to give the imperfect interval even 'closer adhesion' to the perfect interval to which it resolves (ed. in CSM, vii/2, p.48).

Many theorists reserve *ficta* for situations that cannot be corrected by *recta* (e.g. Johannes de Muris, *Ars nove musice*, 1321, *GerbertS*, iii, 307: 'if we can discant by *vera*, then it is illicit to discant by *ficta*'), giving rise to a proposal that *recta* should be used in cases of equal choice; this would mean that a cadence on octave A should normally be approached from a 6th with *recta* B♭ in the lower rather than *ficta* G♯ in the upper part. In practice, however, this does not always seem to apply. Prosdocimus appeals, unusually, to the judgment of the (trained) ear, recommending whichever sounds best: if the signs sound better in the tenor they should be applied there, if in the discantus, there (Herlinger, 94–5). This makes it less likely that he (and perhaps others) imply *recta* preference when saying that *ficta* should not be used except where necessary. He cannot mean 'avoid it, even if bad intervals result that go against strong contrapuntal precepts'. But he could mean 'do not use it unless necessary, but if it is necessary, you must use it'; or, addressing the composer, 'avoid situations that will require the performer to use it'. Differing interpretations of theorists' rules arise according to whether they are taken as instructions to the notator or to the singer.

In his dictionary (*Diffinitorium*, 1472) Tinctoris defined *musica ficta* as 'cantus praeter regularem manus traditionem editus' ('a way of singing outside the regular ordering of the [Guidonian] hand'). In 12 treatises (*c*1472–85) he set out the concepts of gamut, hexachord system, proportions, mode and counterpoint, but giving only brief mention to the needs of musical practice or elements outside the system. His few important observations on interval correction have again received opposing readings according to different assumptions.

(iv) 16th century. The term *musica ficta* was still used by German theorists (including Wollick, *Opus aureum musicae*, 1501; Rhau, *Enchiridion*, 1517; Heyden, *De arte canendi*, 1540; Listenius, *Musica*, 1537; Finck, *Practica musica*, 1556) but declined after the middle of the century; the latest appearance (except to refer to obsolete practices) seems to be with Walther (*Musicalisches Lexicon*, 1708). Otherwise, in the 16th century, the term was largely replaced by *coniuncta*, especially by humanist theorists, and by new ways of explaining inflections.

There are scattered references to some standard older definitions, such as tone-semitone substitution, and a marked return to explanations involving transposition (e.g. Adam von Fulda, *De musica*, 1490, and

Cochlaeus, *Tetrachordum musices*, 1511, for whom transposition down a 5th is equated with *musica ficta*). Vernacular forms include 'fained musicke' (Dowland's English translation, 1609, of Ornithoparchus's *Musicae activae micrologus*), 'fremde Stimmen' (M. Agricola, *Musica figuralis deudsch*, 1532) and 'musica finta' (Vicentino, *L'antica musica ridotta alla moderna prattica*, 1555). Examples of *cantus fictus*, melodies with flatward spiral accomplished by leaps of 4ths and 5ths, are found in Listenius and Ornithoparchus.

The 16th century saw the breakdown of late-medieval solmization and of the hegemony of the three-hexachord system. Instead of (or at least, in addition to) presenting the full *recta* gamut with F, G and C hexachords, theorists (especially in Germany) gave the scalar equivalents as two distinct forms, each representing only two and not three hexachord-types, and in some cases recognizing octave equivalence. The *scala ♮ duralis* on Γ gave equal access to the members of the hard and natural hexachords but a lower priority to the soft hexachord. In the absence of a signature, B♭ and B♮ thus lost their previously equal status and written B began to express a priority of B♮ over B♭. The *scala ♭ mollis* on low F (with one-flat signature) included the natural and soft but not the hard hexachords. Depending on the absence or presence of a signature, B♭ or B♮ gained priority over the alternative if not excluding it. A third scale signed with two flats, segregated as the *scala ficta* or *cantus fictus*, transposed whole scales by a two-flat displacement (*see* SOLMIZATION, §I, 5). Full solmization atrophied in favour of a 'lazy' short-cut solmization, allowing *fa super la* to be sung without mutation. This meant, in effect, that the entire rationale of medieval solmization, namely to identify the semitone (as *mi–fa*) and give surrounding context to it, was eroded. Once it was no longer interval-specific and hence functional, solmization became a mere pious anachronism (F♯ is *fa* for example in Morley, *A Plaine and Easie Introduction*, 1597). There is some evidence that the efficacy of the *mi contra fa* prohibition was undermined by a growing habit of not changing solmization to accommodate semitone cadential inflections. The underpinnings of the tonal system shifted partly in response to humanistic changes in music theory, which restored the status of the modes (Tinctoris; Glarean, *Dodecachordon*, 1547).

The new models were not only octave-based but keyboard-anchored (Ramis de Pareia, *Musica practica*, 1482), sometimes with fixed 'three-position' designations for ♭, ♮ and ♯ degrees (Hothby, *Calliopea legale*, ed. in CSM, xlii, 1997). It was above all the rise of the keyboard and associated treatises that challenged traditional vocally based explanations of musical rudiments; Schlick (*Spiegel der Orgelmacher und Organisten*, 1511) refers negatively to 'alien notes' in the context of the keyboard. Pressure to accommodate to the exigencies and compromises of the keyboard prompted change in the status of B♭. When theorists from Ramis onwards sought to give B♭ accidental status in accordance with its keyboard position, they appealed for authority back to Guido, for whom that note had 'added' status. Aaron used the hexachord terminology of *mi contra fa* to describe collisions and their rectification (exceptions are mentioned: see *SpataroC*, 66.20); but he also used the keyboard-based terms *proprio* or *naturale* and *accidentale* not only for *musica recta* versus *ficta*, but also for white and black notes.

Musical developments from the last quarter of the 15th century onwards prompted significant changes in the treatment of inflections. They include a gradual increase in the normal number of voice parts for vocal polyphony, the multiplication of variant versions of works and self-help indications (including more explicit notation) as a result of the invention of music printing and its markets, a tightening of the theory and practice of dissonance treatment, and compositional control of the relationship of all voices to each other, hence between voices outside the dyadic core. But despite these changes and their different formulation, Zarlino still affirms (citing Gaffurius and common practice) that octaves are approached from major 6ths.

Rich documentary evidence about specific problems in composition, notation and performance is available from testimony of 16th-century musicians and theorists, in formal debates and correspondence (notably involving Spataro, Del Lago and Aaron: see *SpataroC*). In the 1550s the Roman singer and writer Ghiselin Danckerts illustrated the problem citing a dispute between two singers which must have occurred between 1538 and 1544 over the proper way to inflect a composition by the papal singer Juan Escribano. Danckerts was asked to judge the matter, and explained his decision in substantial detail (Lockwood, 1965).

Downward hexachordal spirals by 5ths occur in some incontrovertible cases, such as the essential duo of Willaert's originally four-part *Quid non ebrietas* (see above, §1(ii)). This exercised contemporary theorists because of the tuning implications of a piece in which the tenor ends on a notated 7th sounding an octave with the discantus (Lowinsky, 1943, 1956; Bent, 1984). Other cases are Greiter's *Passibus ambiguis* (Lowinsky, 1956–7), and Costeley's *Seigneur Dieu* (see above, §1(ii)), both clearly set up to end lower than they began. This may also apply to the repertory of 'secret chromatic' motets (Lowinsky, 1946), a hypothesis that has generated controversy on grounds of modern ideals of tonal stability and minimal intervention. Often convincing on purely musical grounds, many of Lowinsky's solutions were supported by extra-musical theory and considerations of textual content which led him to disqualify some musically similar compositions (for an example by Obrecht see, among others, Lowinsky, 1972, Bent, 1984, and Berger, 1987).

For the period from the mid-15th century onwards, lute and other instrumental tablatures are in principle interval-specific, and have been applied to support views of the intended musical results in vocal models (Apel, 1942; Brown, 1971; Toft, 1992; Newcomb, 1997). This extremely rich evidence needs to be used with some caution. Chronological and geographical lag between original and arrangement may restrain a literal application, not to mention varying competence by intabulators that sometimes yields incompletely edited results. Intabulators may apply eccentric performers' licence but, above all, chordally conceived instrumental solutions cannot necessarily be carried over into vocal practice, approached by singers with a linear-hexachordal training accustomed to making contrapuntally-based adjustments. The sometimes necessary sacrifice of line to chord in contrapuntal polyphony is often exaggerated on a chordal instrument.

3. Practical application.

(i) Notated signs. The accidental signs that found their way on to the pages of manuscripts and prints include pitches that fall within the system of *musica recta* as well as many that lie outside it. Additional inflections required in performance similarly include both *recta* and *ficta* notes. It is therefore not correct to equate *musica ficta* simply with added accidentals.

Most scholars accept that inflections were and should be applied according to partly or largely unnotated tradition, but this view is challenged by some scholars (Harden, 1983; Brothers, 1997) who observe that theorists often notate inflections in their treatise examples and say nothing about an unwritten tradition. Slight support for such a tradition might be drawn from quotations such as the following, from Arnulf of St Ghislain's *Tractatulus* (*c*1400; trans. C. Page, *JRMA*, cvii, 1992, pp.1–21), f.67*v*: 'Who will not marvel to see with what expertise in performance some musical relationship, dissonant at first hearing, sweetens by means of their skilful performance and is brought back to the pleasantness of consonance?' Another interpretation of Prosdocimus's rule against using *ficta* except where necessary (see above, §2(iii)) is: 'do not usually write it in but leave it to the performer's initiative'. This reading has some confirmation from his explicit abhorrence that over-notation might incur as many signs as notes (ed. Herlinger, 1984, pp.78–9). An often-quoted and mistranslated passage can now be invoked (as translated by Leofranc Holford-Strevens, cited in Blackburn, 1998, p.635) to support unnotated inflection: 'But these are frequently present virtually in B *fa* B *mi* although not always notated' (Berkeley MS, I.1, ed. Ellsworth, 1984, p.45). Tinctoris (*Liber de natura et proprietate tonorum*, 1476) brands as asinine the unnecessary notation of flats to correct melodic tritones (see above, §2(iii)), and his own examples do not always notate the inflections called for by his text. Aaron (*Toscanello in musica*, 1529) endorses the role of performers as divining the 'secret intent of the composer'. Although it is commonly alleged that he advocates the full notation of accidentals in general, the polyphonic contexts of his examples, cited as single parts from known pieces, show that he has chosen situations where, as he says, arrivals on simultaneities cannot be anticipated, and where without the help of the signs the singers might first commit error by not perfecting the intervals, clearly implying that the help he recommends was not always forthcoming (Bent, *JM*, 1994). But by 1600 full notation was largely in place.

13th-century theorists already defined signs for notating *musica ficta* on the staff. Johannes de Garlandia said that each tone is divisible into two semitones, which can be notated by the 'signs of semitones' (*CoussemakerS*, i, 166). Lambertus prescribed ♭ and ♮ for the points at which mutations are to be made (*CoussemakerS*, i, 258). The 'signs of *musica ficta*' are called neither chromatic nor (until the 16th century) accidentals. For most of our period, they are simply the signs of 'hard' B (♮) and 'soft' B (♭), the signs of *mi* and *fa* – in other words, semitone boundaries, not indeed confined to fictive notes outside the *recta* gamut. Theorists up to and including Prosdocimus and Ugolino (first half of the 15th century) admitted only these two signs, to distinguish the soft and hard forms of B. The exception is Marchetto (*Lucidarium*, 1317 or 1318), who used a ♯ sign to distinguish the semitone step F–F♯ from the smaller *mi-fa* semitone F♯–G. Although scribes used either ♯ or ♮ for the hard B, the distinction seems rarely to have been meaningful. Occasionally the letters F, C and G are used instead of the ♭ sign to indicate the soft forms of those pitches. The 14th century saw an increase in marked accidentals until, around 1400, D♯, D♭, G♯, A♭ and G♭ are specifically notated and intended in certain sophisticated repertories such as those of the Chantilly and Old Hall manuscripts. Other sources remained very sparing in their indications, and there is a general decline in the number and range indicated from about 1400 onwards.

Before 1450, few theorists directly admit that ♭ or ♮ necessarily cause individual pitch inflection. Those who do include Petrus frater dictus Palma ociosa (ed. J. Wolf, *SIMG*, xv, 1913–14, pp.504–34) and the author of the Berkeley treatise. But for most theorists ♮ simply denotes *mi*, and ♭ *fa*; that is, they indicate where the semitone lies in relation to the sign. The signs express a relationship, not absolute pitches within a system. Most theorists explain the alteration of tone and semitone in the melodic context of its hexachordal access, and avoid saying that ♮ raises or that ♭ lowers an individual note from a fixed place. (♭ on F or ♮ on B, for example, rarely do anyway.) Rather, the sign increases or diminishes the (linear) ascent or descent ('♭ lessens the ascent and ♮ augments it': Prosdocimus, ed. Herlinger, 76–7; 'on *la sol la* [A G A] the *sol* should be raised and sung as *fa mi fa*': Johannes de Muris, *CoussemakerS*, iii, 73). The *coniuncta* is simply the moment of change at which the singer sings a semitone for a tone, or vice versa.

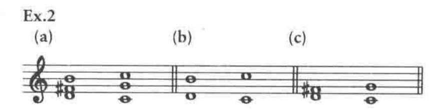
In rare cases (Ugolino's treatise and some practical examples), notated *mi* or *fa* may be used to bring not the signed note but its neighbour to a semitone distance from it and not vice versa. A *mi* sign on F will usually mean that F is to be pronounced *mi* and that the interval F–G, instead of being a tone as in *musica recta*, will be sung as a semitone. Nearly always this means that F will be construed and sung as F♯, but occasionally the semitone interval, though notated in the same way, may have to be F–G♭, more normally notated with the *fa* sign on G, which could in some circumstances produce the same result as a *mi* sign on F (Bent, 1972; Hughes, 1972; Memelsdorff, 1999). Lebertoul's *O mortalis homo* (*GB-Ob* Can.misc. 213, f.41*v*) has a G♭ *fa* signature producing F♯s (Brothers, 1997, pp.40ff). In the more rarely used signs further round the spiral in either direction, the signs on G or D may mean either flat/natural or natural/sharp, depending on context. Since any note is mutable in this way, a 'two-position' rather than a 'three-position' system is in operation. Any note may be *mi* or *fa* in relation to its neighbour, but which semitone is not necessarily defined. F *fa* can be in our terms F♮, F♭, or even F𝄫.

Although means of notation existed throughout the period, the usage of accidentals and signatures in musical manuscripts bears little relationship to modern notions of consistency; the placing of signs often seems casual or capricious. Some scribes placed the sign near, above or below the affected note, without regard for its alignment on the staff: this is particularly common in some late 14th- and early 15th-century Italian and south German sources. Other scribes placed it well in advance of – or even after or simply near – the note to which it applied. In view of the close connection between the 'signs' of *musica ficta* and the practice of solmization, such pre-

placing may serve as an advance warning of mutation. Thus the progression *fa–mi* (between which no mutation can take place) is very often preceded, rather than divided, by the ♮ sign indicating *mi*. A consequence of this (solmization) function of a sign is that it does not necessarily have longer validity than for the note to which it most directly refers. In some situations a larger context will be affected, but an accidental, written or not, may easily be overruled (for the sake of contrapuntal propriety) on subsequent appearances of the affected note. Tinctoris (*Liber de natura et proprietate tonorum*, 1476) says that the 'signature flat' at the beginning of the staff affects the whole segment for which it is given, but does not make it clear whether he means a segment of music or of staff; the 'accidental' flat, however, lasts as long as the hexachord segment (the *deductio*) before which it is placed – this indeed could be a very small local segment. Inconsistencies within pieces and between sources abound, from the Notre Dame manuscripts (ed. E.H. Roesner, *Les quadrupla et tripla de Paris*, Monaco, 1993, p.xc) to the 16th century. Most scholars see this as a consequence of their inessential notational status, early notation not being considered imperfect by its own standards; rather, that composers and notators expected singers to complement it on the basis of shared internalized contrapuntal training, as a literate reader can construe an unpunctuated text; and that the results of this process are largely recoverable as part of the implicit text and the intended sounding results (e.g. Bent, *EMc*, 1994, 1998; Cross, 1990). Others treat early notation as approaching the prescriptive force of modern notation, and the notated manuscript accidentals as (almost) self-sufficient; they therefore keep editorial 'intervention' to a minimum. Such face-value readings of notation, or the belief that singers were capable of applying only melodic rules, often conflicts with elementary counterpoint precepts, requiring the construction of a partly independent theoretical tradition to account for the resulting eccentricities (Harden, 1983; Hirshberg, 1996; Brothers, 1997).

Different versions of the same piece often notate different, though rarely conflicting, signs; proponents of an unnotated performing tradition usually seek to reconcile these as largely complementary explicit testimony to implicit practice; others see variants as indicators of different intended sounding results. Dahlhaus even believed that the notated counterpoint is largely abstract, and that the composer may have been indifferent to the actual sound (1969). At the other extreme, Cross believes that recoverable composers' intentions fully determine a single intended result, to the extent that she does not distinguish manuscript-authorized from editorial accidentals in the musical text of her edition of Machaut's *Messe de Nostre Dame* (New York, 1998). From a position closer to the latter, Bent (passim) holds that some intentions are largely recoverable from theorists' own prioritization of rules, while leaving other inflections elective, dependent (as in the punctuation and rhetorical delivery of a text) on some latitude of interpretation and articulation by performers. If the notation of 'accidentals' was optional ('accidental'), performers were expected to apply their training and knowledge of conventions to the realization of the under-notated music. By a combination of compositional and notational indicators, the composer could tease the performer to fulfil, sidestep or frustrate expectations. As in all repertories, there are cases where composers seem to defy standard contrapuntal precepts, but the number of such anomalies can be considerably reduced by situating them in relation to norms. Despite different emphases, scholars strive to reconcile theoretical, musical and source evidence. There is general agreement on the need to prioritize rules that frequently conflict, but disagreement remains as to how this should be done.

(ii) Signatures. Where flats are indicated at the beginning of the staves, the number often differs between voice parts of the same piece, the lower part or parts having, usually, one flat more than the upper (partial signatures, sometimes called conflicting or contrasting). From the top downwards, a three-part piece might have parts with signatures of —, —, B♭; —, B♭, B♭; B♭, B♭, B♭ + E♭; B♭, B♭ + E♭, B♭ + E♭. They may come and go within a copy, or vary between sources, and their interpretation has been hotly debated. Apel claimed that they implied bitonality (1938); Hoppin proposed modal transposition, since they affect pitch levels about a 5th apart (1953, 1956). Lowinsky saw them as practical reflections of cadence structures in voices lying a 5th apart, the signature being omitted when no note of that pitch was required (1954). But this would suggest that the fear of a vertical imperfect octave was less than of an imperfect 5th (Berger, 1987, p.66); some theorists say the opposite. All these views accord the signature its modern significance of inflecting all notes written at that pitch level and perhaps of octave equivalents. But if B♭ is available by *recta* in an unsignatured part, what is the purpose of flat signatures? The possibility remains that they denote the transposition of hexachord systems, especially since hexachords rather than modes form the basis of medieval discussions of *ficta* in polyphony (Lockwood, *Grove6*; Bent, 1972). If the hexachords on G, C and F are transposed one degree flatwards, in the case of a single flat in the signature the hexachords for that part will be on C, F and B♭, leaving two hexachords common to both a signatured and an unsignatured part, and thus a considerable range of *recta* notes, including B♭, which a simultaneous unsignatured part is perfectly free to use. If the whole part is in *ficta*, there would be no *recta/ficta* orientation to govern performers' choices. Such flatward transpositions of the hexachord system (with hexachords on B♭, F and C, making E♭ readily available) may have been counted as transposed *recta* (not all agree), as distinct from the individual transpositions of *ficta* hexachords. Where there is a signature, the transposed *recta* priorities would be established for the duration of the signature, leaving the singer of a signatured part equally free to raise B for a leading note as to sing F♯ in an unsignatured part. The distinction between applying chromatic alteration by means of transposition and by means of individual emendation does, after all, go back to the 11th-century theorists. The idea that a flat signature might effect downward transposition by a 5th of a combined *recta* and *ficta* system of hexachords was tentatively deduced from Ugolino (ii.48–50) by Bent (1972), extended with cognizance of the ambiguity by Hughes (1972), and dismissed without explanation of the abiding anomaly by Berger (1987). Aaron (*Toscanello in musica*, 1529) rejects the practice of partial signatures, along with the allegation that they help to avoid false 5ths, on the grounds that it confounds the interval species and the octaves.



One example of a piece involving sectional transposition by clef and flats is Pycard's Credo (Old Hall MS,

no.76). There are occasional examples of signatures of E♭ alone, and some progressively flattening pieces only sign the more extreme flats. There also exist about a dozen pieces, mostly from the 15th century, whose only clefs are flat signatures (*fa* signs) detached from letter names (the 'less principal clefs'). The relationship between the parts is easily inferred; such pieces (preserved alongside 'normal' pieces) can be performed without the need to name the pitches, even though two flats a 5th apart might notionally be thought of as B and F (or E and B) in an upper part and E and B (or A and E) in a lower. Similar problems arise in canons notated on a single staff such as Ockeghem's *Prenez sur moi*, and in his *Missa cuiusvis toni*, notated without letter-clefs and capable of more than one resolution (for bibliography on these works *see* OCKEGHEM, JEAN DE).

A few rare cases of sharp signatures date mostly from the 14th century, and sharps occur frequently as accidentals. By the late 15th century notated sharp signs, on the other hand, become quite rare. Sharp signatures are used for rare examples of canon at the 5th, as in Ockeghem's *Prenez sur moi* and in Willaert's *Musica nova* (1559). From 1540 on, especially in Italian prints, the sharp sign becomes more frequent, but its placing is still free and sometimes ambiguous. Harrán (1976, 1978, following Kroyer, 1902; see also Ficker, 1914) proposed an ingenious but flawed interpretation of sharps as 'cautionary signs' with the opposite of their normal meaning, in order to overcome certain types of false relations in *note nere* Venetian madrigals of the 1540s. Instead of confirming an expected inflection, the signs are alleged to warn the singer not to inflect. Godt (1978, 1979: see under Harrán, 1976) challenged this view on logical, historical and musical grounds. Some of the problems which his hypothesis addressed can be overcome by recognizing verbal boundaries and permitting F♮ to follow F♯ after a sense break; the same is true of the problems in Willaert discussed (also without text) by Lockwood (1968).

The normal sign for the sharp is ✕, but variants of this sign appear. The sign ♮, which was the traditional sign for B *quadratum* in contradistinction to B *rotundum*, returned around 1540 as a distinctive symbol and attained its modern meaning; Einstein (*The Italian Madrigal*, 1949, i, 412) noted its use in a Vicentino madrigal collection of 1542.

4. RULES FOR INFLECTION AND ADJUSTMENT. 13th-century theorists gave reasons both of consonance and melody, stressing perfect vertical consonances on 5ths, octaves and other perfect intervals (Lambertus, *CoussemakerS*, i, 258) and requiring 'leading notes' to be a semitone from their destination (Garlandia, *CoussemakerS*, i, 115). These principles were more fully expounded in the 14th century, most clearly by Johannes de Muris, who stated that, for melodic progressions, lower returning notes (e.g. in the progression G–F–G) should be raised (G–F♯–G); and that leading notes approached by any other means (e.g. by leap) should be raised (e.g. D–F♯–G; *CoussemakerS*, iii, 71–3). This is also implied by the author of the *Quatuor principalia* (*CoussemakerS*, iv, 250), who gave the widespread prohibition of *mi* against *fa* in vertical perfect intervals and stated that a perfect interval should be approached by the nearest imperfect interval: a major 3rd will expand to a 5th, a major 6th to an octave, a minor 3rd will contract to a unison, and so on; where one part proceeds by step, it will be a semitone (ex.1*a–b*). The so-called double leading-note cadence of ex.2*a* results from the superimposition of the two-part progressions exx.2*b* and

2*c*; it has nothing to do with perfecting the vertical 4th, which was not during this period considered a perfect interval for purposes of counterpoint, despite its acoustical status. As the 15th century progressed, composers cultivated different cadence forms; not to sharpen the third in ex.2*a* may avoid angularity but evades real issues of cadence structure (Dahlhaus, Untersuchungen, 1968, pp.75–6; Eng. trans., 340–41).

Theorists of the 13th to 15th centuries said surprisingly little about the melodic interval of the tritone, although it was disqualified in earlier chant treatises. Prosdocimus's music examples observe the leading-note principle even when the leap preceding it has to be a tritone. An anonymous 15th-century theorist from Seville (Gallo, 1968) did state explicitly that melodic tritones should be avoided when they return within their own confines, that is, when they are not ancillary to an upward-resolving leading note; this rule became common from then on. In his treatise on the modes, *Liber de natura et proprietate tonorum* (1476; chap.8, on the 6th tone), Tinctoris made clear that in practice the F modes, properly formed with B♭, often require singers to use B♭ to mollify such tritone outlines. But in order to establish priority between conflicting rules of correction he introduced into this treatise on modes in chant a surprising and isolated detour into considerations of polyphony, showing that in two-part writing the correction of simultaneous 5ths must take a higher priority than tritone correction. The melodic tritone should be corrected, except where this would result in a false simultaneity. The tritone is suffered only for such intervallic correction, not for modal integrity. His famous comment that notation of obvious B♭s for tritone avoidance is asinine should not be applied incautiously to the notation of all accidentals. He corroborates the priority of vertical correction over tritone avoidance also for other modes, and his examples use naturals to confirm that. The tritone is easier to sing mediated than as a direct leap.

Two commonly cited rules of *musica ficta* originate from the 16th century or even later. Although both are expressed in solmization syllables, they betray internally the decay of that tradition. The jingle 'una nota super la semper est canendum fa' ('a note above *la* is always to be sung *fa*'; not attested in that form before Praetorius, *Syntagma musicum*, iii, 1618) itself denies the medieval semitone definition of *mi–fa*. It is understood to mean that the top of a phrase bounded by a 6th or a 4th or even a tone which descends within itself (D, F or A up to B and down again) should be rounded off so that the boundary interval is a minor 6th, a perfect 4th or a semitone; earlier theorists expressed it more precisely in terms of melodic tritone avoidance.

The other famous jingle, 'mi contra fa est diabolus in musica' ('*mi* against *fa* is the devil in music'), short-circuits to a sobriquet for the diabolic tritone (properly the augmented 4th, which was not, at that time, synonymous with the diminished 5th), and lacks essential qualifiers. Both of the above are anachronistic, even for

the 16th century, and need to be replaced by more careful formulations. For example, the widespread prohibition of sounding *mi* against *fa* (*mi contra fa*) is often quoted without two qualifications which alone make sense of it, given to its older formulation by medieval writers from the fully functioning hexachordal tradition: the rule applies only in perfect intervals (i.e. 5ths and octaves, understood as arrival points) and in counterpoint (i.e. between parts that are in dyadic contrapuntal relationship, not just anywhere in the texture).

Many attempts have been made to compile theorists' rules for *musica ficta*; these have naturally varied according to the priorities observed by individual scholars and their different readings of various theorists.

For many years, the most thorough account was by Lowinsky (1964), who equated with necessity (*causa necessitatis*): I.1, the prohibition of the simultaneous sounding of *mi* against *fa*, interpreted as diminished octaves and 5ths between (any) two simultaneously sounding voices; I.2, the 'una nota super la' rule (see above) to prevent a linear tritone when a line ascends above the syllable *la* (Aaron, *Lucidario*, 1545, showed that this was by no means a universally applicable doctrine); and I.3, the prohibition of false relations. Under the heading *causa pulchritudinis* Lowinsky included: II.1, the raising of the leading note at cadential formulae; II.2, the rule of propinquity, that is, approaching a perfect consonance in two voices by the nearest imperfect consonance; and II.3, the rule of ending on a complete triad (according to Lowinsky this was known only in the 16th century).

However, this classification represents a conflation and does not prioritize the rules to address their frequent conflicts. Necessity interpreted as the correction of consonances was indeed historically associated with I.1, but also with II.1 and II.2, because the approach (e.g. from 6th to octave) encapsulates the defining *mi–fa* or *fa–mi* progression (e.g. G♯–A or B♭–A) by which the perfect interval is reached (Bent, 1972). I.2 was not so formulated by theorists until the solmization system (whose raison d'être was the *mi-fa* semitone) had atrophied; irrespective of the solmization in which it is expressed, this formulation does not address how it should be reconciled with I.1 when, as often happens, they conflict. I.3 has been understood to apply not only to simultaneous but also oblique false relations, which are not explicitly discouraged until Zarlino and are often artfully exploited in earlier music; this rule can be subsumed under a more precise formulation of I.1, but it cannot be avoided all the time.

Aaron referred to 'ordinary and special rules devised by musicians'; his prioritization of rules in the supplement to *Toscanello in musica* can be inferred from his examples and commentary (Bent, *JM*, 1994, pp.324–5). He indeed, like Tinctoris, adjusts the melodic tritone when it returns within itself, but will tolerate it in the interests of achieving a simultaneous perfect 5th or octave, which, especially between lower parts and on strong beats, always takes priority over melodic correction. Quoting a passage from the bass part of the third Agnus Dei of Josquin's *Missa 'L'homme armé' super voces musicales* (ex.3), Aaron explains that the tritone *f–b* cannot be changed to *f–b♭* since that in turn would cause a diminished 5th *b♭–e*: 'thus the singer will be obliged to sing the harsh tritone for the sake of that interval [a 5th] or rather that syllable which occurs in the position of *hypatē mesōn*, called *E la mi*; because in order to accommodate the interval in the most convenient way, he is forced to break the rule'.

Ex.3

There remains considerable disagreement as to how the theoretical and musical evidence should be calibrated and interpreted. Urquhart argues (passim) that rules affecting simultaneities, such as the *mi contra fa* prohibition, are directed at composers, and that singers were able only to apply melodic principles. Bent suggests that performers could, by contrapuntal training, rehearsal and aural anticipation (aided by lateral displacement and suspension in composed music), balance and prioritize the claims of (1) simultaneous combinations and (2) melodic smoothness (Bent, 1984, *EMc*, 1994, 1996). Both accept false relations caused by cadential collisions (see also, for example, Boorman, 1990; Bray, 1970–71, 1978), Bent on grounds that in earlier music they usually arise between parts not governed by the prohibition, and in later music were sometimes excepted by theorists; Urquhart shows a wider tolerance for other kinds of contrapuntal dissonance. The quest for viable solutions that meet both theoretical and practical criteria continues; it will always be hampered by our unavoidable oral and aural disconnection with the music as heard and intended in its own time.

5. After 1600. By the early 17th century the practice of *musica ficta* in the current sense, that is, the introduction during performance of unnotated chromatic alterations according to a set of commonly accepted principles, had largely become obsolete, except occasionally among certain circles of musicians, such as Roman church choirs, whose repertories also continued to include earlier, 16th-century polyphony (see S.R. Miller: *Music for the Mass in Seventeenth-Century Rome*, diss., U. of Chicago, 1998, p.448). In spite of that, scores continued to include many notes that lacked accidental signs but nevertheless required alteration. Until the later 18th century, when modern conventions fell more or less into place (for instance, an accidental remains in force to the end of the bar), notational practices were far from uniform and often show an unpredictable mixture of older and newer habits, but the most common circumstances in which accidentals were omitted are described below.

To begin with, there remained as legacy from the Renaissance a somewhat casual attitude towards the notation of accidentals, which may in part be responsible for the current misapprehension that *musica ficta* continued to be practised well after 1600. When working under pressure, copyists are more likely to commit errors of omission than errors of commission, and during the early 17th century they were more likely to omit a sharp or a flat sign than an entire note. This did not represent a *musica ficta* practice, as the omissions follow no systematic or consistent pattern and largely correlate with the overall lack of accuracy of the text. In carefully prepared autographs, presentation copies or engraved prints, omissions of clearly necessary accidentals tend to be rare; they are much more frequent in manuscripts that show other signs of hasty copying or in prints using movable type (which often harbour errors of all kinds). The editorial procedure for supplying unintentionally omitted

accidentals is, nevertheless, to some extent similar to the guidelines followed for adding *musica ficta*, including the 'correction' of certain diminished or augmented intervals and cadential chord progressions, although, even more than with the earlier practice, caution must be exerted not to subvert intended expressive effects.

The casual attitude towards the notation of accidentals extended to their positioning. During the Middle Ages and the Renaissance an accidental had often appeared well ahead (i.e. to the left) of the note that was supposed to be altered, and was understood to indicate a shift in the hexachord governing the entire passage rather than the raising or lowering of an individual pitch. By the early 17th century such distant placement had become rare, but accidentals were sometimes positioned above, below or somewhere else in the general vicinity, particularly when there was insufficient space immediately to the left of the note. Certain scholars have pointed to situations where accidentals even appear to have been placed after (to the right of) a note, and dubbed these seemingly backward-acting signs 'retrospective accidentals'. Most often the accidental is followed by another note at the same pitch (ex.4 presents a typical situation) and, since

Ex.4

these omissions are not consistent, it might make more sense to regard them as instances of the casual practice described earlier than of a curious, backward-reading convention.

The question that arises most frequently with early scores is whether a notated accidental applies only to the note that immediately follows or also to subsequent notes of the same pitch. In this regard a fairly wide range of practices is encountered, and the editor or performer is challenged to determine which is applicable. At one extreme, the accidental applies only to the note that follows; every note that needs to be inflected is given its own appropriate accidental, including repeated notes. Under this policy cancellation signs are superfluous and generally not supplied; as a result there is a danger of misreading chromatic passages such as shown in ex.5.

Ex.5 Frescobaldi: *Fantasia seconda* (1608), mm.80–82

This extreme practice is rarely encountered after the very early 1600s. Usually, an accidental remains in force for notes that are immediately repeated, sometimes also during ornamental subdivisions of a beat such as written-out trills, or even over a more extended passage, possibly continuing across a bar-line. Cancellation signs (still most often in the form of sharps to cancel flats and flats to cancel sharps: ex.6) continued to be rarely used except to cancel accidentals prescribed by key signatures, and editors or performers thus need to judge the range of

Ex.6 Monteverdi: *Orfeo*, Act 2

action of an accidental on the basis of musical context, relevant stylistic practice, and notational habits followed elsewhere in the score.

Modern editions often include far more editorial accidentals than 17th-century taste would have demanded. This may be due in part to the aforementioned misguided application of *musica ficta* practice, but sometimes also to an attempt to make the work conform to later principles of major/minor tonality. In early 17th-century music (as in 20th-century jazz practice) degree inflections are usually determined by the local harmony (that is, the underlying chord and sometimes the chord that follows) rather than by the key or mode of the entire passage. Close juxtaposition of major and minor forms of a chord and various types of cross-relation – not excluding vertical major–minor clashes – were favoured expressive devices; they were to become much rarer towards the end of the century without, however, vanishing altogether. Still in the 1660s a composer such as Matthias Weckmann liked to exploit such devices, which by this time had become unusual enough that he felt a need to confirm his intentions with special warning signs (see the '+' signs as well as 'NB' by the two conflicting pitches in ex.7); despite these signs, a 20th-century editor of the work changed the A♮ in the second violin part to an A♭.

Unnotated accidentals often do need to be added by the performer when executing ornaments such as trills and mordents, and also when realizing figured basses. The notating of degree inflection in bass figures was ruled by conventions that varied strongly with time and place, and

Ex.7 Weckmann: *Wie liegt die Stadt so Wüste*, mm.252–5

the modern principle that the realization must observe the key signature unless the figures prescribe otherwise does not always apply. For example, in many 17th-century continuo basses the 5th is always to be played perfect, regardless of the key signature, unless the figure 5 with a sharp or a flat (or a slash across the figure) appears above the bass, even if in those same basses the 3rd is to be played major or minor according to the key signature (unless contradicted by a figure). Another almost universal convention is that the final chord of a movement or a section should be played as a major chord, regardless of what is implied by the signature; the required alteration is almost never noted in the figures, although it may be indicated in the other parts when those include the 3rd of the chord.

Musical [musical comedy, musical play]. The principal form of Western popular musical theatre in the 20th century, in which sung and danced musical numbers in popular and pop music styles are combined within a dramatic structure. Although first associated with light romantic content, the form has increasingly drawn on a significantly wider range of subject matter. It is primarily identified with the USA and, especially in its formative years, England, and these centres provide the focus for this article. Musical theatre influenced by American and British models exists in other countries; but the global repertory of the musical has been almost exclusively informed by Broadway and the West End. Other centres (notably Germany in the latter quarter of the century and Italy more recently) have increasingly shown an interest in the presentation of musicals from the USA-UK canon, and the global spread of the musical as a principal world theatre form emphasizes both its important role within Western popular culture and its increasing links with international commerce. The organization of the canon has retrospectively been interpreted in ways such as by thematic sub-genre (fairytale musical; folk musical; show musical; initially applied to film musicals in Altman, B1987), or in chronological periods (as in Mordden, B1998, pp.37–8, 78–9). A chronological approach is used here to highlight the mainstream names and shows, while parallel discussions of themes and styles provide considerations of changing features of and approaches to the genre.

1. INTRODUCTION. The origins of the musical have been attributed to many different sources, all involving drama interspersed with different styles of either American or European popular song or light music. There are problems in identifying a specific origin for musical comedy (Borroff,C1984), but in general it has roots in comic opera and operetta, music hall, minstrel shows, vaudeville and burlesque, and its evolution was further influenced by early popular styles such as ragtime and jazz. The more mature musical has incorporated elements of developing pop music, innovations in theatrical presentation and an expansion in the range of its dramatic themes. Indicative of the coalescence of disparate forces into an identifiable genre has been the changing nature of its terminology. 'Musical comedy' has been variously attributed to American and English shows in the 1880s and 90s; through the first half of the 20th century variants can be found, most commonly 'musical romance' and 'musical play', although the latter term is primarily associated with post-*Oklahoma!* shows (1943 onwards) in which music, drama and dance aspired to an integrated dramatic whole. The abbreviation to 'musical' happened within about 20 years from around 1940, suggesting that the dramatic qualities shown by such qualifiers as 'comedy', 'play', 'romance' and 'farce' were subsumed within an increasingly established and identifiable genre of the 'musical'.

The character of the musical also shifted from a light diversion (usually with a domestic narrative) as in 'musical comedy', to something that may include overt analysis and social comment, often encompassing psychological and symbolic focusses. The process through the century has been one of expansion of the genre, establishment of a repertory and concommitant conventions, and innovation from a core repertory that is itself constantly being re-evaluated. From a position of 'musical comedies' being considered transient – often representing an idealized, fashionable contemporary life – the 'musical' has become less transient, with many shows now reaching runs of over a decade. There is an implicit dialogue across historical periods and stylistic facets of the various sub-genres of the musical as new shows, shows in long initial runs and revivals are performed alongside each other. The establishment of a canon has been further validated by the expansion of writing on the subject from that of narrative histories to detailed analyses of key works and the publishing of critical editions. By the end of the 20th century, a growth in the academic study of the musical (primarily of American works) had begun the critical reconsideration of contributors to the canon and even the nature of the canon itself.

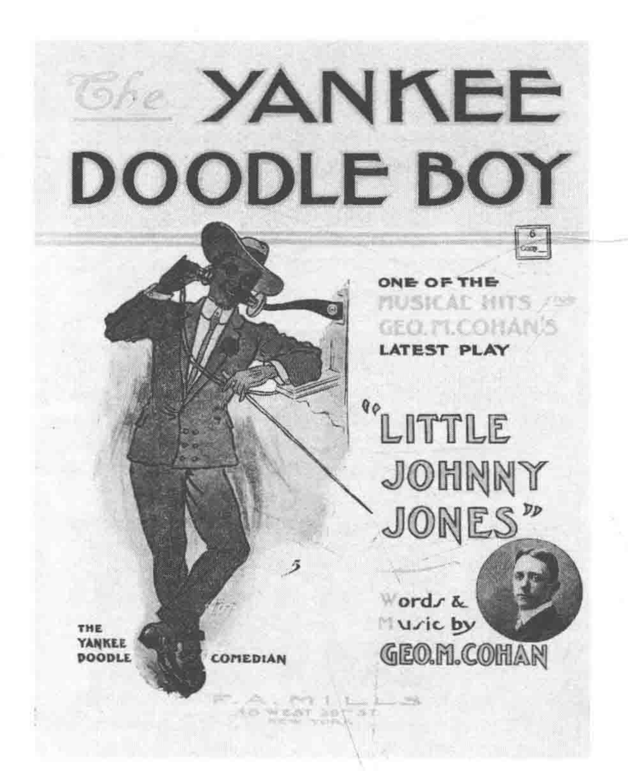
The status of the musical as a theatrical force has also changed. While early musical comedy of the 1890s onwards principally interpolated popular songs into light plots, a century later almost any subject is thought suitable for the musical, which is often presented as through-sung with extensive use of musical motif. In the latter form it is difficult to draw a clear boundary with that of opera, and shows including Kern's *Showboat*, Loesser's *The*

Most Happy Fella, Bernstein's *West Side Story* and Sondheim's *Sweeney Todd* have been presented as part of the operatic repertory. The dissemination of the largest of the through-sung shows of the 1980s and 90s, particularly those associated with Andrew Lloyd Webber, has led to the term 'mega-musical' to describe their lavish stagings, simultaneous multiple productions around the world and their commercial importance. The assumption that the through-sung form of the musical is that most readily identified with the genre at the end of the 20th century – an impression reinforced by such long-playing shows as *Les misérables*, *Cats* and *The Phantom of the Opera* – has led to the occasional reintroduction of the term 'musical comedy' (for example *The Witches of Eastwick*, London, 2000) to denote a show which is not through-sung.

Many musicals are now so well established in the active repertory that their reinterpretations by different directors have opened up debate and comparisons similar to those of opera and drama productions; Rodgers and Hammerstein have been particularly prone to such re-presentation and re-evaluation, with revivals including such directorial impositions as that of, for example, the staging of *South Pacific* as though performed by the inmates of a mental asylum.

2. To 1918.

(i) History. The immediate ancestors of musical comedy on both sides of the Atlantic are the comic operas, burlesques and extravaganzas of the second half of the 19th century. The term 'musical comedy' was used in a general sense to describe certain British and American works in the 1870s and 80s, but the credit for establishing musical comedy as a genre belongs to the London theatre manager George Edwardes. In 1892 at the Gaiety Theatre he produced the 'musical farce' *In Town*, composed by F. Osmond Carr, with a loose and vaguely topical plot, plentiful song-and-dance numbers, and featuring popular performers of the comic opera stage and a galaxy of female beauty. A year later at the same theatre Edwardes staged *A Gaiety Girl* with music by Sidney Jones, and for the first time a work was described simply as 'musical comedy'. A contemporary press report described it as 'one of the most curious examples of dramatic architecture that we have for some time seen. It is sometimes sentimental drama, sometimes comedy, sometimes almost light opera, and sometimes downright "variety show"', and this evidently popular formula was adapted by Edwardes for his other theatres.



With the 'musical farce' *The Shop Girl* in November 1894, Edwardes took care to maintain continuity with earlier burlesque by stressing its 'variety show' aspect. With its sumptuous contemporary dresses, youthful cast, romantic plot and catchy tunes, *The Shop Girl* established the formula for the Gaiety musical comedy. Its score was by the Belgian Ivan Caryll, with additional numbers provided by Lionel Monckton; between 1894 and 1909 the pair collaborated on ten more musical comedies for the Gaiety. The emphasis on the chorus of 'Gaiety Girls' and on leading ladies such as Ellaline Terriss and later Gertie Millar was reflected in titles such as *The Circus Girl* (1896) and *The Runaway Girl* (1898).

Meanwhile, at Daly's Theatre, Edwardes developed a variant formula with a more consistent romantic plot, with comic relief restricted to secondary characters, and with a more substantial musical score, which was closer to traditional English light or comic opera. *An Artist's Model* (1895), with music by Sidney Jones, was first announced as a 'comedy opera' (a common alternative to 'comic opera'), while *The Geisha* (1896, music also by Jones) finally bore the designation 'musical play', a description which continued to be used for works with a more consistent plot. At a time when French operettas and the comic operas of Gilbert and Sullivan had, like burlesque, lost much of their appeal, musical comedies at the Gaiety and musical plays at Daly's became the fashionable forms of popular musical theatre in London.

Other managers copied Edwardes's formula in shows such as *Florodora* (1899; music by Leslie Stuart) and *A Chinese Honeymoon* (1899; music by Howard Talbot). Musical comedy spread round Britain and reached the Commonwealth and the USA. As early as 1894 an Edwardes company took *A Gaiety Girl* to New York and it was followed by a steady flow of later works. On the Continent many British musical comedies were staged in operetta theatres; around the turn of the century, for example, *The Runaway Girl* was at the Theater an der Wien and *Florodora* at the Bouffes Parisiens. The success of Jones's *The Geisha* surpassed even that of a earlier Japanese subject, *The Mikado*, and on German stages exceeded that of any current native work.

Edwardian musical comedy reached its zenith with *Miss Hook of Holland* by Paul A. Rubens (1907), *Our Miss Gibbs* by Caryll and Monckton (1909), *The Arcadians* by Monckton and Talbot (1909) and *The Quaker Girl* by Monckton (1910). Thereafter its appeal declined in favour of Viennese operetta and ragtime-inspired revue. Only in the special conditions of wartime did Edwardian-style musical comedy enjoy its last big successes with Rubens's *To-Night's the Night* (1915) and particularly *The Maid of the Mountains* (1916) with a score by Harold Fraser-Simson and additional numbers by James W. Tate. The latter achieved a run of 1352 performances, a record for a musical play exceeded only by the 2238 performances of *Chu Chin Chow* (1916), a 'musical tale of the east', with music by Frederic Norton.

The early history of American musical comedy was dominated by European works and styles. Besides the successful productions of British musical comedies by visiting British companies, many Edwardian shows were adapted for performance by American casts. There were also a number of European composers active in New York, among them Kerker, Luders, Victor Herbert, Ludwig Englander, Rudolf Friml and Sigmund Romberg. The works of George M. Cohan were the immediate forerunners of an essentially American musical comedy style. His earliest shows were little more than extensions of vaudeville routines, but *Little Johnny Jones* (1904) had all the main elements of American musical comedy (fig.1). In contrast to the romanticized subjects, idealized characters and more extended writing of European and British works, it was a simple show with American characters and a story line linking dances and songs such as 'Give my regards to Broadway'. Cohan's popularity began to fade around 1914, and the native successes of the following years showed that no individual style of musical comedy had yet been firmly established. *Going Up* (1917) was a successful work by the ragtime composer Louis A. Hirsch (1887–1924), while *Irene* (1919), with a score by Harry Tierney, was still highly dependent on European escapism and musical style. However, it was also during

1. Sheet music cover of George M. Cohan's song 'The Yankee Doodle Boy' from his 'Little Johnny Jones' (New York: F.A. Mills, 1904)

these years that the acknowledged founding father of American musical comedy, Jerome Kern, was attracting attention with his first complete musical comedy scores.

Kern received his early training in London as a songwriter for British musical comedies, and in the USA provided extra numbers for adaptations of European shows, such as 'How'd you like to spoon with me?' for Caryll's *The Earl and the Girl* (1905) and 'They didn't believe me' for Jones and Rubens's *The Girl from Utah* (1914). Then, with Guy Bolton and P.G. Wodehouse, Kern created a series of intimate shows at the 299-seat Princess Theatre using a small orchestra and chorus and functionally simple sets and costumes; the first show, *Nobody Home* (1915), an adaptation of Rubens's book for his British musical comedy *Mr. Popple (of Ippleton)* (1905), was a moderate success. Two ensuing productions, *Very Good, Eddie* (1916) and *Oh Boy!* (1917), were outstanding situation comedies with catchy songs that not only possessed witty lyrics and rhymes but also contributed to the action.

(ii) Approaches. The musical comedy arose from a variety of attempts to introduce contemporary music and dramatic material into comic opera forms and from the introduction of drama to link the disparate elements of vaudeville and music hall. The gradual claiming of the comic opera ground by the vernacular and contemporary was first expressed through approaches to plot, character and costume. For example Edward Harrigan and Tony Hart used working class Americans as characters in the Mulligan Guard series, notably *The Mulligan Guard Ball* (1879). Similar uses of more contemporary and 'ordinary' characters were brought into early British musical comedy, amplified by, for example, the use of the new White City Stadium as a dramatic location and contemporary fashions in the costuming of *Our Miss Gibbs* (fig.2). In America on the one hand was the modernization of the comic opera through Reginald De Koven in *Robin Hood* (New York, 1891; London, 1891, as *Maid Marian*) and on the other the crude dramatic linking of vaudeville styles in the works of George M. Cohan. Both were aiming at some new accommodation between existing musical theatre forms, popular music style and dramatic coherence. Comic opera provided the dramatic context to hold the work together, while the individual songs provided an injection of the contemporary.

Changes in popular music styles also provided the material to update the sound of comic opera, and operetta forms. Early examples of British musical comedy from the Gaiety and Daly's juxtaposed rather than integrated comic opera and popular song styles. Often these shows were collaborative, exploiting the more sophisticated ensemble writing and classical lyricism of composers such as Ivan Caryll and Howard Talbot alongside the popular songwriting of others such as Lionel Monckton, Leslie Stuart and Paul Rubens. By the time of the late example of *The Arcadians* the sense of old style versus new has become explicit in a plot which places Arcadians in contemporary London. The contrasts of the innocent and honest Arcadians with the dishonest city dwellers is portrayed musically in the comparisons of such operatic numbers for the Arcadians as 'The Joy of Life', 'The Merry Pipes of Pan' and 'Arcady is ever young' with popular songs for the Londoners on gambling ('Back your fancy'), suggestive flirtations ('All Down Piccadilly' and 'Half-past Two'), the music hall character number ('My Motter'), the regional number ('The Girl with the Brogue') and the comically cynical ('Truth is beautiful').

It required the rise of new popular song styles, led by black music developments such as ragtime, to provide a new impetus to the music itself. For example, the cakewalk – an advertised feature of *In Dahomey* (New York 1902; London 1903) – spread through such shows to Europe and into operetta. However, while shows such as *In Dahomey* were hugely important in disseminating new dance styles, black performers remained more prominent in revue for much of the first part of the century. A second strand of contemporary popular music was developed by Kern in establishing a distinctive American idiomatic popular song style, first through interpolations into European shows for Broadway and after 1912 in his own works. His 'They didn't believe me' has often been described as a significant moment for this development. Kern's pivotal role in the ascendance of an American identity for the musical is also shown through many innovations associated with his shows, such as the use of the saxophone in the orchestra (*Oh! I Say*, 1912), and the introduction of his shows and interpolated songs into the West End through to the 1930s. The small scale 'Princess' shows of Kern with P.G. Wodehouse and Guy Bolton drew on contemporary characters and fashions much as *Our Miss Gibbs* had in London but importantly established an American identity for the shows rather than a borrowed European one.

3. 1919–42.

(i) History. Although ragtime and jazz were to have more impact on revue than on musical comedy, American composers and styles increasingly influenced the British musical stage. *To-Night's the Night* had included two

2. 'Our Miss Gibbs' by Caryll and Monckton, Gaiety Theatre, London ('Play Pictorial', 22 January 1909): Mr Amalfy, Director General of the White City, receiving the Earl of St Ives

numbers by Jerome Kern, and the reversal of British and American dominance was symbolized by the importation of several works with scores by Ivan Caryll, by then settled in America. The romantic Ruritanian musical play was disappearing in favour of American song-and-dance musicals with their added emphasis on chorus dancing.

By the mid-1920s various teams of American writers were establishing themselves. Prominent among the composers was George Gershwin, who, after composing for several spectacular revues, wrote the score of *Lady, be Good!* (1924) with his brother Ira Gershwin as lyricist. Besides the title song and 'Fascinating Rhythm', it featured the singing and dancing of Fred and Adele Astaire, who helped to make tap-dancing a popular feature of musical comedies of the 1920s. The Gershwins continued with *Tip Toes* (1925), *Oh Kay!* (1926) and *Funny Face* (1927); their *Girl Crazy* (1930) introduced two new stars in Ethel Merman, who sang 'I got rhythm', and Ginger Rogers with 'Embraceable You'. Another composer who made a significant (though brief) contribution was Vincent Youmans, whose *No, No, Nanette* (1924) and *Hit the Deck* (1927) contained songs such as 'Tea for Two' which for many people epitomize the spirit of the decade. Other teams who turned to musical comedy from the world of revue included that of the lyricists B.G. DeSylva and Lew Brown and the composer Ray Henderson, whose *Good News!* (1927) featured the song 'The best things in life are free'. The following year the New York theatre was introduced to the highly sophisticated and often risqué songs of the lyricist and composer Cole Porter, whose *Paris* (1928) contained the song 'Let's do it'.

Despite successful individual songs and routines, these shows were often little more than vehicles for individual stars with contrived boy-meets-girl situations and happy endings, songs that for the most part were just catchy tunes with lyrics tagged on, and occasional spectacular 'production numbers'. A more creative approach characterized the works of the composer Richard Rodgers and the lyricist Lorenz Hart: such shows as *The Girl Friend* (1926) produced songs with a more inventive matching of lilting tunes and adult wit and sentiment (together with ingenious rhyme schemes), and other shows experimented with musical comedy conventions and subject matter. *Dearest Enemy* (1925) was concerned with American history and *Peggy-Ann* (1926) with dream psychology. In 1927 New York first saw *Show Boat* with book and lyrics by Oscar Hammerstein II and music by Kern, a work that firmly pointed the way to the Broadway musical play of the 1940s. By contrast with the usual procedure of building a show around songs and performers, *Show Boat* boasted a cohesive story into which were integrated songs that contributed to the action by creating mood, revealing character or advancing the plot.

In *The Cat and the Fiddle* (1931) and *Music in the Air* (1932) Kern made further breaks with conventional precedents; like *Show Boat*, the former revolved around a 'show within a show', a procedure whereby the internal show, integral to the story, provided an excuse for introducing a big set number. Thereafter Kern concentrated on films in Hollywood. Cole Porter continued the song-and-dance tradition of the 1920s musical with *Gay Divorce* (1932, film 1934), in which Fred Astaire sang 'Night and Day', and followed it with *Anything Goes* (1934, film 1936) and others, while the Gershwins wrote works of increasing seriousness. Their *Strike Up the Band* (1927, rev. 1930) was a satirical look at war and big

business, and *Of Thee I Sing* (1931) ridiculed the American presidential system and became the first musical play to win a Pulitzer Prize for drama. In their final Broadway collaboration, *Porgy and Bess* (1935), the Gershwins raised the musical to the level of opera. Other important American songwriters for musical comedies in the 1930s included Irving Berlin (*Face the Music*, 1932) and Arthur Schwartz (*Revenge with Music*, 1934; lyrics by Howard Dietz), Harold Arlen (*Hooray for What?*, 1938) and Vernon Duke, who composed the commercially unsuccessful but artistically highly regarded black folk musical *Cabin in the Sky* (1940, film 1943).

Among British composers Noël Coward was exceptional in capturing some of the sophistication of American songwriting, although he often relied more on European influences, as in *Bitter Sweet* (1929, films 1933 and 1941) and *Operette* (1938). One of the most prolific British theatre composers between the wars was Vivian Ellis, who produced many light musical comedies for London, including *Mr Cinders* (with Richard Myers, 1929), *Jill Darling* (1934) and *Under Your Hat* (1938). Another successful British composer of songs in the light, syncopated style of the time was Noel Gay, whose biggest musical comedy success was *Me and My Girl* (1937, film 1939, as *The Lambeth Walk*) which included 'The Lambeth Walk' and ran for 1646 performances. Other musical plays followed the romantic Ruritanian style of continental operetta, for example *Balalaïka* (1936, film 1939) with music by George Posford and Bernard Grün (1901–72), and above all such works of Ivor Novello as *Glamorous Night* (1935; fig.3), *Careless Rapture* (1936) and *The Dancing Years* (1939, film 1950).

With origins in European serious music, Kurt Weill began his American career with *Johnny Johnson* (1936), a bitter yet amusing antiwar piece. His *Knickerbocker Holiday* (1938, film 1944) had a historical subject that drew analogies with Fascist oppression and a score that included Weill's most celebrated American number, 'September Song', while the subject of *Lady in the Dark* (1941, film 1944) was psychoanalysis. Weill's works did a good deal to further the idea of the American musical play, with set numbers played down in the interests of integration of plot and music. At a time when the use of professional harmonizers, arrangers and orchestrators was standard practice, Weill was exceptional in completing his own scores.

The most significant works of the late 1930s, in terms of both their song content and their development of the musical comedy formula, came from Rodgers and Hart. In *On your Toes* (1936, film 1939) the subject was ballet, and the score featured a quasi-jazz ballet sequence 'Slaughter on Tenth Avenue' as well as such hit numbers as 'There's a small hotel'. *I'd Rather be Right* (1937) was another political satire, featuring George M. Cohan as a US president with a striking resemblance to Franklin D. Roosevelt, while *The Boys from Syracuse* (1938, film 1940) was based on Shakespeare's *The Comedy of Errors*. *Pal Joey* (1940, film 1957) featured a cast of thoroughly disreputable characters and a story of blackmail, illicit love affairs and various types of skulduggery.

(ii) Approaches. By 1919, there were two main strands contributing towards the establishment of the musical. From music hall and vaudeville came song-and-dance numbers, and from operetta and comic opera came a sense of musical and dramatic integration in structured musical scenes. Operetta, given a new prominence by the international success of Franz Lehár's *Die lustige Witwe* (Vienna, 1905; London, 1906; New York, 1907; Melbourne, 1908; France, 1909), had established conventions that did not naturally accommodate contemporary popular music. Conversely, musical comedy gained its distinctive musical motivation from vernacular song and new trends in dance music but had not established its own dramatic conventions. There is, however, no clear defining line between operetta and the musical at this time; the term 'musical play' was often applied to works which bridge the two genres, and included Sigmund Romberg's

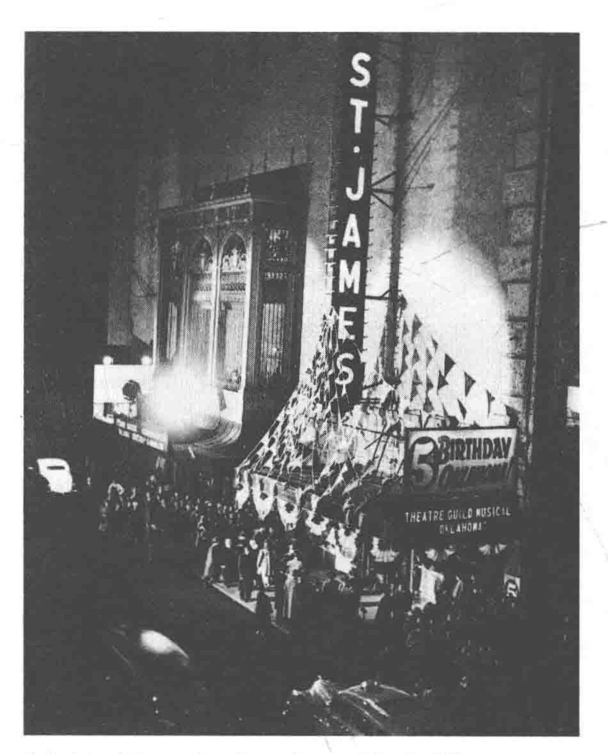
3. Gypsy wedding from Ivor Novello's musical comedy 'Glamorous Night', Theatre Royal, Drury Lane, 1935, with Novello (Anthony Allen) and Mary Ellis (Militza Hajós)

The Student Prince in Heidelberg (1924, later as *The Student Prince*; silent film 1926, film 1954), *The Desert Song* (1926, films 1929, 1943, 1953) and *The New Moon* (1928, film 1940) and Kern's *Show Boat* (1927, films 1929, 1936, 1951); similar hybrids include the 'musical romances' of Ivor Novello, such as *Glamorous Night*, *Careless Rapture*, *Crest of the Wave* (1937) and *The Dancing Years*. George Gershwin's shows were of two types; both used contemporary popular songs as their musical focal points but presented them in different settings. In the first, the songs were generally presented as discrete numbers, from the 'song-and-dance' heritage of musical comedy, and such shows included *Oh! Kay*, *Funny Face*, *Rosalie* (1928) and *Girl Crazy*. In the second, the songs were set within the longer musical scenes characteristic of operetta, as in *Strike Up the Band*, *Of Thee I Sing* and *Let 'em Eat Cake* (1933). Kern similarly integrated popular song into scenes in *Show Boat*, for example with his use of the ragtime number 'Can't help lovin' dat man of mine' within an extended scene, so creating a flow akin to that of an operetta finale.

Such cross-fertilizations are typical of the 1920s and 30s, and even became themselves the subject of operetta as in Kálmán's *Die Herzogin von Chicago* (1928), and of musical comedy as in Kern's *The Cat and the Fiddle* and – through dance – Rodgers and Hart's *On Your Toes*. Beyond this, operetta was associated with older European culture and 19th-century dance styles, particularly the waltz. The effects of World War I and the growing assertiveness of an American culture increasingly distinct from its European roots further led musical theatre away from operetta. In *Die Herzogin von Chicago*, the rich American, Mary Lloyd, literally and symbolically replaces 19th-century operetta with the 1920s jazz band and the waltz with the charleston, explaining 'Sehen Sie, das ist Tempo, das ist Rhythmus, das ist business, das ist Amerika!!' (Act 1).

The influence of popular dance styles on musical comedy went beyond that of just songs. While the operetta had appropriated such dances as the waltz, polka, and march for song, it had never fully exploited dance for its own sake. Musical comedy, however, featured dance as a major element, shown in the choice of starring performers (e.g. Fred and Adele Astaire or Jessie Matthews) and in the presence of the dancing chorus of girls, something associated with the origins of musical comedy and a continuing major feature of revue. The increased prominence of dance was also shown in the need for specialist music arrangers for dance numbers, and *On Your Toes* can be seen as the culmination of the growing ascendancy of dance in this period.

Vigorous and syncopated popular dance styles along with the instrumentation and voicings of the dance band were gradually incorporated into pit orchestra textures, especially for dance numbers. This was brought about in part through the occasional involvement of band leaders and their orchestras in the pit, but most importantly through work of specialist orchestrators such as Robert Russell Bennett from around 1920 onwards and Hans Spialek in the 1930s. Changes can be heard in the growing prominence of the saxophone and the close voicings of the brass, often employing mutes. The featured role of piano duos in several Gershwin shows including *Oh! Kay* and of a piano trio in Bennett's orchestrations for Kern's *The Cat and the Fiddle* displayed that instrument's potential in the pit as an exciting solo timbre, while its suitability for jazz rhythms and unobtrusive harmonic and rhythmic support led to it gradually replacing the harp.



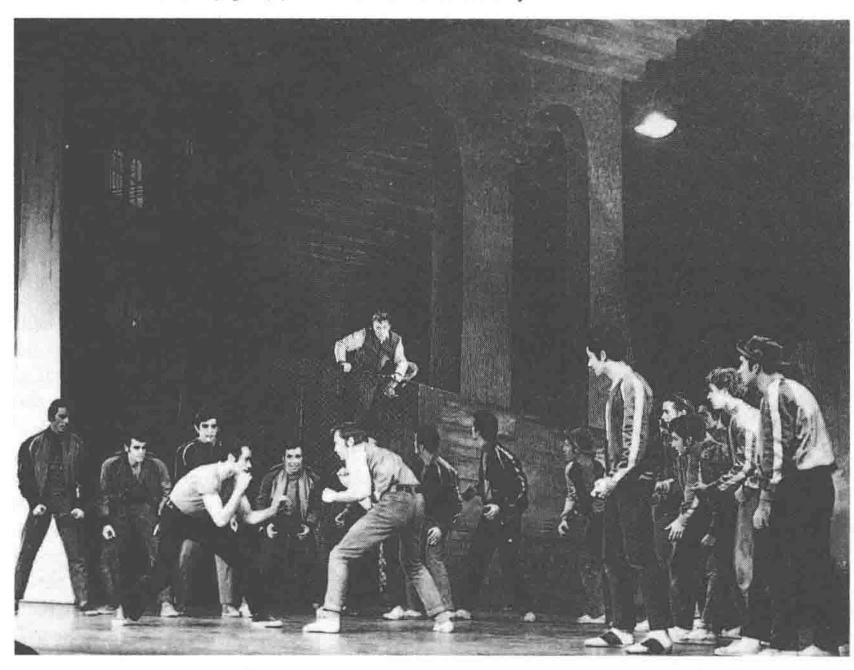
Shows at this time are generally remembered more for leading performers and for individual songs than as whole shows. Particularly in the 1920s, many shows were designed as star vehicles for such names as Marilyn Miller, Eddie Cantor, Fred and Adele Astaire, Gertrude Lawrence and Ethel Merman. Closer in spirit to revue or pantomime, these shows easily allowed performers to interpolate dramatically irrelevant routines and songs to show off their trademark idiosyncracies. Examples include Al Jolson in *Sinbad* (1918), *Bombo* (1921) and *Big Boy* (1925), Ed Wynn in *The Perfect Fool* (1921) and W.C. Fields in *Poppy* (1923; silent film 1925 as *Sally of the Sawdust*, film 1936). The songs of Jerome Kern, Rodgers and Hart and of Cole Porter in the USA and, to a lesser degree, Vivian Ellis in England, are still remembered where the original show has fallen from the repertory, as with Kern's 'Smoke gets in your eyes' (*Roberta*, 1933), Rodgers and Hart's 'My heart stood still' (*A Connecticut Yankee*, 1927) and 'Dancing on the Ceiling' (*Evergreen*), Porter's 'Begin the Beguine' (*Jubilee*, 1935) and Ellis's 'Spread a little happiness' (*Mr Cinders*, 1929) and 'She's my lovely' (*Hide and Seek*, 1937). The notion of a show as a complete score was more associated at this time with operetta-derived forms and with exceptions such as Youmans's *No, No Nanette* (Chicago, 1924; London and New York, 1925).

While such individual numbers are standards and contemporary recordings have documented elements of their original performance style, restoration of whole shows has been necessary to put the music into its forgotten dramatic context. Consequently, the move towards establishing original performing versions of musical comedies has focussed on this period. Such interest has been fuelled by the discovery of material previously unknown or thought lost – notably that found in Secaucus, New Jersey (1982) – and through such resultant recordings as that of *Show Boat* under John McGlinn (EMI, 1988) and *Girl Crazy* under John Mauceri (Elek., 1990).

4. 1943–59.

(i) History. The musical underwent a far-reaching exploration and expansion in the USA through works which form the basis of the mainstream canon today, written by such established figures as Rodgers and Hammerstein (previously writing, however, with different partners), Cole Porter and Irving Berlin, and newer ones such as Frank Loesser, Alan Jay Lerner and Frederick Loewe and Leonard Bernstein. British musical theatre equally drew on established theatre writers, notably Vivian Ellis, Noël Coward and – most importantly for the West End – Ivor Novello, but there were no significant newer writers until well into the period, and the influences from British musical theatre were consequently limited.

Oklahoma! (1943, film 1955) has been considered pivotal in the rise of the musical play over the musical comedy. It was the first collaboration between Richard Rodgers and Oscar Hammerstein II, and was also distinguished by stylized movement from the choreographer Agnes DeMille which further added to its significance as a seminal work. *Oklahoma!*'s impact was great (fig.4), and although the nature of its importance is increasingly



4. St. James Theatre, Broadway, decorated for the fifth anniversary of the original production of 'Oklahoma!' by Richard Rodgers and Oscar Hammerstein II, March 1948

being reconsidered, the serious contemporary attention paid to the work is indicative of a maturity in the musical. However, the diversity of the form can be seen in other works of the time. Hammerstein's updated reworking of Meilhac and Halevy's libretto for Bizet as *Carmen Jones* (1943, film 1954) showed classical aspirations that were followed through by Robert Wright and George Forrest in their adaptation of Grieg for their biographical musical of him, *Song of Norway* (1944, film 1970). 1944 saw Porter's latin-tinged score for *Mexican Hayride* (1944, film 1948), the last work by Romberg, *Up in Central Park* (1945, film 1948), and the start of the long Broadway careers of Leonard Bernstein, the writers Betty Comden and Adolph Green and the choreographer Jerome Robbins, in *On the Town* (1944, film 1949). With *Carousel* (1945, film 1956) Rodgers and Hammerstein further established their own dominance in musical theatre through a dramatically driven approach to the musical play that continued through the successes of *South Pacific* (1949, film 1958) and *The King and I* (1951, film 1956). Alongside these were the continuing works of Cole Porter, especially *Kiss Me, Kate* (1948, film 1953), with its clever plotting and consistently memorable score, and the less effective *Can-Can* (1953, film 1960). From Irving Berlin came the more resolutely musical-comedy style in the star vehicles for Ethel Merman, *Annie Get Your Gun* (1946, film 1950) and *Call Me Madam* (1950, film 1953).

In 1943, the West End musical was more directly related to World War II through the provision of diverting entertainments alongside reflections of the war in the few new works. In this latter category were the spy story of Harry Parr Davies's *The Lisbon Story* (1943, film 1946), and Novello's *Arc de triomphe* (1943). In 1945, Manning Sherwin's *Under the Counter* reflected wartime rationing in a successful comedy for Cicely Courtneidge. The war prevented any new American shows being produced in London for seven years, and so the opening of the much-heralded *Oklahoma!* (1947) became a major theatrical force. A.P. Herbert and Vivian Ellis's *Bless the Bride* (1947) dealt with the consequences of war and national identity, distanced by time – it was set around the outbreak of the Franco-Prussian war in 1870–71 – and with an operetta style appropriate to its European setting. Its opening, just a few days apart from that of *Annie Get Your Gun* on top of the success of *Oklahoma!*, provoked comparisons between British and American musical theatre styles that affected the confidence of the West End for well over a decade. Yet those few long-running American shows of the late 1940s were matched by the hugely successful works of Ivor Novello. Through *Perchance to Dream* (1945) and *King's Rhapsody* (1949, film 1955) he retained links with a more European comic opera and operetta heritage that has persisted at an almost sub-conscious level in British musicals, and in *Gay's the Word* (1951) represented the ongoing American ('new') versus British ('old') musical theatre debate of the time. Ellis and Novello had been leading forces in British musical theatre of the 1930s, as had Noël Coward: Novello died in 1951, and by the mid-1950s Ellis and Coward had been eclipsed by shows from American writers. From *Bless the Bride* through to *The Water Gipsies* (1955) Ellis showed a growing tendency towards a more lyrical and serious style. Coward's musical theatre reputation never recovered from the disaster, despite much musical merit, of *Pacific 1860* (1946) and changes of direction as with the shades of Frank Loesser's *Guys and Dolls* in his *Ace of Clubs* (1950) followed by the drawn-out operetta of *After the Ball* (1954).

The period 1943–59 encompasses most of the musicals by Loesser, a well-established popular song lyricist, especially for Hollywood, who had also begun to compose his own music. His Broadway shows from *Where's Charley?* (1948) through to the Pulitzer prize-winning *How to Succeed in Business Without Really Trying* (1961, film 1967) display a constant reinvention of style and approach that encompasses the extremes of Broadway of the time, from the concentrated musical-comedy writing of *Guys and Dolls* (1950, film 1955) to the expansive operatic writing of *The Most Happy Fella* (1956). This dynamism of approach to the musical is further borne out by the works of Bernstein which included the experimentation of *Candide* (1956, initially unsuccessful and subsequently revised many times) and the canonic *West Side Story* (1957, film 1961). The latter work, although not as long-running as many other key works of the period, was nonetheless hugely influential through its rich and vivacious score and its culmination for the 1950s of the gradual elevation of dance to a central narrative role (fig.5). It also brought its co-lyricist, Stephen Sondheim, to wider attention. Harold Rome moved from the striking popular styles of *Wish You Were Here* (1952) to the broader emotional canvas of *Fanny* (1954). Jule Styne had a light musical comedy success with *Bells are Ringing* (1956, film 1960), but with *Gypsy* (1959, film 1962) produced one of the great dramatically charged and psychologically complex musicals of the canon.

Kurt Weill continued to be active on Broadway during the 1940s with innovative works whose value has only more recently been understood. His operatic tendencies

5. The Rumble (closing scene of Act 1) from Bernstein and Sondheim's 'West Side Story', Her Majesty's Theatre, London, 1958: Tony (Don McKay) arrives to break up the fight between Bernardo (Ken LeRoy) and Riff (George Chakiris)

came through in both *Street Scene* (1947), set in a New York City tenement, and *Lost in the Stars* (1949), an adaptation of Paton's *Cry the Beloved Country*, whose story of racial prejudice in South Africa gave an opportunity for black performers to gain wider exposure. In particular, he collaborated with Lerner on *Love Life* (1948), a 'vaudeville' about marriage through the centuries in America, presented in self-contained scenes rather than a continuous narrative. Lerner had already collaborated with the composer Frederick Loewe to write *Brigadoon* (1947, film 1954), and later wrote with him *Paint Your Wagon* (1951, film 1969), *My Fair Lady* (1956, film 1964) and *Camelot* (1960, film 1967). The decade finished on Broadway with the last collaboration of Rodgers and Hammerstein (who by now signified an older mainstream) on the song score to *The Sound of Music* (1959, film 1965). Far from the perceived revolution of realism in *Oklahoma!*, this last work has become – somewhat unjustly – a symbol for the most sentimental aspects of the musical. In the same year, further contrast was found with a parody of Romberg and Friml's operetta in Besoyan's *Little Mary Sunshine* (1959), and with Bock and Harnick's political satire *Fiorello!* (1959) which won the Pulitzer prize for drama.

Most of the 1950s in London's West End was marked by productions of recent new American shows, notably *Love from Judy* (1952) by the American composer Hugh Martin but written for London, and by two small-scale shows that surprisingly achieved long runs. Julian Slade's *Salad Days* remained a quaint English piece whose charm was gained through a naivety of musical and dramatic style. Although it ran for over five years in London, it has never spread seriously into an international repertory. But with *The Boy Friend* (1953, film 1971), Sandy Wilson wrote a work based on the characteristics of earlier 1920s musicals that went beyond pastiche, introduced Julie Andrews to Broadway in its first US production and became a work of the international repertory. Both of these works are retrospective in style and set apart from the mainstream, gaining their success by contrast with contemporary large-scale shows of more serious dramatic intent; a more original impetus to take the British musical into the 1960s came with a swing towards 'realism' in Bart's *Fings ain't wot they used to be* (1959) and the early pop styles and dramatic cynicism of *Expresso Bongo* (1958, film 1959), that in turn built on some of the 'youth' orientation of Julian More and James Gilbert's *Grab me a Gondola* (1956).

(ii) Approaches. This period saw the rise of the 'integrated' musical play as a development of the musical comedy. In the musical play, music and dance were intended to support the drama by providing advancements in the plot or characterization; consequently the songs and other music had to fulfil a more specific function than before. Through the 1940s and 50s, elements of both the entertaining diversions of musical comedy and the more serious intent of musical plays are found alongside each other, often within a single show. Although it has been common to pinpoint *Oklahoma!* as the pivotal moment of change towards the musical play, it was not so much a cause as a symptom. All of its supposed innovations – opening with a solo voice rather than a chorus, the use of ballet for psychological revelation, the advancement of character through song – have earlier precedents. However, *Oklahoma!* provided a focus for all of these, further aided by its creation of an American mythic folk history and an assertion of 'American-ness' at a time of war, and its wide dissemination through broadcasting and recordings both nationally and internationally.

Developments in recording, broadcasting and film helped many shows of the 1940s and 50s to become classics of the canon. While individual songs from shows of the 1920s and 30s have lived on as 'standards' in the jazz and popular singer repertories, many 40s and 50s shows have become known in their original versions, often as near-complete song scores. Although partly encouraged by the placing of numbers more clearly and memorably within an obvious dramatic context, most importantly by 1948 the LP had been introduced and so

allowed show scores to be recorded almost complete on a single disc. It was thus possible to be well acquainted with the numbers from, for example, *My Fair Lady* through its landmark high-selling Broadway cast album without seeing the show. By raising the prominence of musical theatre in general and in providing publicity for an individual show, original cast recordings contributed greatly to the increasing length of initial runs of musicals (*My Fair Lady* achieved 2717 performances on Broadway) and to their viability and longevity as touring productions. Additional exposure through radio and through relatively faithful screen adaptations in the 1950s also increased audiences for musicals, in turn creating a wider base for stage revivals and the basis of a mature performing repertory.

Dance became increasingly important in this period as a part of dramatic advancement; there are important ballet scenes in, for example, *Oklahoma!*, *On the Town*, *Carousel*, *The King and I* and *A Tree Grows in Brooklyn* (1951), while the use of stylized movement as in Michael Kidd's choreography for *Guys and Dolls* and *Lil' Abner* (1956, film 1959) further brought the roles of choreographer and director together. In such a combined role, Agnes DeMille broke new ground in Rodgers and Hammerstein's *Allegro* (1947), while Jerome Robbins's extensive influence is most remembered through *West Side Story* in this period and seven years later through *Fiddler on the Roof* (1964). The two Adler and Ross hits, *The Pajama Game* (1954, film 1957) and *Damn Yankees* (1955, film 1958), provided early choreographic opportunities for Bob Fosse who was to become important as a director-choreographer in the following decade, firmly establishing the 'concept musical'.

The essential constitution of the theatre orchestra stayed relatively constant in the 1940s and early 50s, although the textures themselves increasingly relied more on reeds and brass than on strings, as in Don Walker's orchestrations for *Kiss Me, Kate*. The voicings of the big band and its interplay of brass and reeds becomes more noticeable and woodwind doublings of clarinet and saxophone enabled the orchestration to cover both big-band styles and more lyric orchestral textures as in Walker's orchestration of *Call Me Madam*. The symphonic aspirations of the pit orchestra can be heard in Walker's orchestrations of *The Most Happy Fella* and most famously in those of Sid Ramin and Irwin Kostal for *West Side Story*. Amplification was still at a relatively unsophisticated level for most of this period – *Annie Get Your Gun* was presented in one of London's largest theatres in 1947 with only three microphones to provide general cover – and orchestrations needed to allow for this. It is only towards the end of the 1950s that developments from the emerging pop scene entered the theatre with greater use of amplification on stage and electric guitars in the pit.

Along with the increasing strength of the developing orchestral sound, voices further developed a popular-vernacular rather than operatic style. Such performers as Ethel Merman and Judy Holliday established the dominance of the strong female belt voices (with limited mezzo rather than soprano registers) that also mark the leading ladies of the 1960s such as Liza Minnelli and Carol Burnett, who first made her mark in 1959 with Mary Rodgers's *Once Upon a Mattress*. The leading romantic male voice was baritone, as with the 'operatic' Alfred Drake in *Oklahoma!*, *Kiss Me, Kate* and *Kismet* (1953, film 1955), and the more youthful, popular music sound of Jack Cassidy in *Wish You Were Here*. The romantic tenor associated with operetta had become sufficiently dated by this time so that Novello could use one in *Gay's the Word* as a symbol of obsolescence and a figure of fun, although the emerging styles of contemporary pop performance were also parodied at an early stage in America (*Bye Bye Birdie*, 1960) and England (*Expresso Bongo*).

Although there had been occasional mainstream shows both by black writers and with black performers, Broadway was predominantly white. Works by the white composer Harold Arlen addressed this by using racially integrated casts: with the lyricist E.Y. Harburg for *Finian's Rainbow* (1947, film 1968) and *Jamaica* (1957), and with Truman Capote for *House of Flowers* (1954). Rodgers and Hammerstein's *The Flower Drum Song* (1958) also made use of a racially disparate cast. A revival and international tour of *Porgy and Bess* that began in 1953 brought black performers significant exposure in musical theatre, although it was with the rise of pop music in subsequent decades and its integration into musical theatre that black performers and writers became more integrated into the mainstream.

5. 1960–2000.

(i) History. There was a substantial generational shift in musical theatre writers in the 1960s. The last Broadway work from Frank Loesser was *How to Succeed in Business Without Really Trying* (1961, film 1967), whose satire on big business won a Pulitzer prize and maintained Loesser's reputation for an ever-adaptable style. The successful partnership of Adler and Ross – protégés of Loesser – was abruptly curtailed by Ross's early death in 1955. The last major success for Richard Rodgers was *The Sound of Music* (1959, film 1965) and his later works without Hammerstein, who died in 1960, did not achieve mainstream popularity. The most notable of these works was *Do I Hear a Waltz* (1964) with lyrics by Stephen Sondheim, who had already established his abilities as a lyricist in collaboration with Bernstein (*West Side Story*). Cole Porter died in 1965, and although Irving Berlin was to live for most of the rest of the century, his last work was the indifferent *Mr. President* (1962). One of the few composers from before 1960 to carry over successfully into the new decade and beyond was Jule Styne, and two of his biggest successes border this period: *Gypsy* (with lyrics by Sondheim, 1959) and *Funny Girl* (1961, film 1968).

New composers built upon and developed the musical from the basis of a now-established repertory. They included Charles Strouse, Cy Coleman, Jerry Herman and John Kander, all of whose works informed the main canon of the genre almost to the end of the century. Strouse had established himself as a popular songwriter before writing the music for *Bye Bye Birdie* (1960, film 1963), a musical that drew on the contemporary rock and roll scene both for its plot and some of its musical style. This was followed by *Golden Boy* (1964) for Sammy Davis jr, and the now perennial *Annie* (1977, film 1982), whimsically adapted from the cartoon strip, 'Little Orphan Annie'. Coleman had his first big success with *Wildcat* (1959), but produced his most vibrant score for *Sweet Charity* (1966, film 1969) which strikingly drew on contemporary pop and jazz for its distinctive sound.

Such inventive use of a wide range of styles has become a hallmark of his best work, from the 'comic operetta' set pieces of *On the Twentieth Century* (1978) and the jaunty vaudeville and ragtime of *Barnum* (1980) to the big-band and swing styles of the stylishly clever *City of Angels* (1989). Less wide-ranging in style, but with its own strong sense of theatricality, is the work of Jerry Herman, whose ability to encapsulate a particular strain of Broadway optimism in shows such as *Hello, Dolly!* (1964, film 1966), *Mame* (1966, film 1974), *Mack and Mabel* (1974) and *La cage aux folles* (1983) has put him at the fore of characterizing the genre in the USA. John Kander's work has been more sporadic in its success, but no less significant; of his shows with the lyricist Fred Ebb, *Cabaret* (1966, film 1972) and *Chicago* (1975) have both extended the ability of the musical to comment as well as narrate. This role of the musical for commentary through the elevation of its dramatic subtext has played an increasing part in the musical post-1970.

Continual stylistic searching has been uniquely shown by Stephen Sondheim, whose work has moved from the status of cult failure to the core of the repertory. He has adapted popular song forms as commentary (*Follies*, 1971), for thematic transmutation (*Merrily We Roll Along*, 1981) and even broken them down for a more overtly motivic-based use (*A Little Night Music*, 1973, and *Sunday in the Park with George*, 1984). His shows have ranged from the book musical *A Funny Thing Happened on the Way to the Forum* (1962, film 1966), through the quasi-operatic *Sweeney Todd* (1979) to revue in *Assassins* (1991). Through his constant musical reinventions, complex lyric writing and profile as both composer and lyricist, he has significantly shaped the contents of and approaches to the musical, particularly from the 1980s onwards.

Others have influenced the form in more limited ways. Lionel Bart's *Oliver!* (1960, film 1968) established a new record for the West End, running for over 2600 performances; David Heneker's *Half a Sixpence* (1963, film 1967) combined the direct style of *Oliver!* with a more American format and provided a showcase for the pop singer Tommy Steele. Both shows found ways of combining English music hall and contemporary popular ballad styles effectively in scores that suggested something of their period settings, but also owed much to affectionate caricature. Although both transferred successfully to Broadway, only *Oliver!* has been continually revived. The reworking of older forms also characterized other successful British shows of the time. Anthony Newley and Leslie Bricusse's *Stop the World – I Want to Get Off* (London, 1961; Broadway, 1962) used revue with an allegorical story. More surprising was the bold operetta of Ron Grainer's *Robert and Elizabeth* (1964), which also reminded British musical theatre of its strong operetta links that have periodically come to the fore, from Novello to Lloyd Webber, and so perhaps delineate a difference between British and American musical theatre at a fundamental level.

The growing split between pop music and musical theatre became clearest in the 1960s. In 1958, pop had already successfully been used in a witty and ironic setting in the English show *Expresso Bongo*, a neglected early use of true pop style. However, the most radical change came through Galt McDermott's 'American tribal love-rock musical' *Hair* (1968, film 1979) which brought the 'summer of love' philosophy, fashions and music on to the Broadway stage. Indeed, even in the creation of the work, its approach was more to do with an overt sense of 'community' rather than 'cast'. Although not the first musical to address political concerns, its timing and profile place it as the most significant. In contrast, Burt Bacharach and Hal David's *Promises, Promises* (1968) had a pop score that became equally iconic, but of the 1960s commercial mainstream. With the established 'theatrical' styles invigorated with newer 'pop' styles, the musical language available for use in stage works rapidly and widely increased. The range of styles taken into the musical is well shown in the juxtapositions of the 1970s: in 1975 there was the self-referential theatre setting of *A Chorus Line* (1975, film 1985) and 1920s pastiche in *Chicago*; in 1978 the 'overblown, bravura comic-operetta' of *On the Twentieth Century* was set against the country music styles of *The Best Little Whorehouse in Texas* (film 1982) and the soft rock of *I'm Getting my Act Together and Taking It on the Road*. By 1981, Broadway contrasted an updating of Gilbert and Sullivan's *The Pirates of Penzance* (film 1983) with a more conventional 'show-tune' style in *Woman of the Year* and girl-group pop in *Dreamgirls*. The musical palette and dramatic forms encompassed most pop music styles, mediated by the Broadway derivatives of the Tin Pan Alley popular song.

Sometimes viewed as in opposition to Sondheim's explicitly cerebral and intellectual approach are the so called mega-musicals that began in the late 1970s. Particularly associated with the works of Andrew Lloyd Webber, such quasi-operatic works characteristically integrate story lines of high drama with impassioned music that uses fusions of contemporary pop and rock rhythms and accompaniments, often filtered through a broader 19th-century Romantic sensibility. Unlike that of most of the British composers of this period, Lloyd Webber's work has found an international audience. In collaboration with the lyricist Tim Rice, he had huge international success first with *Jesus Christ Superstar* (recording 1970; Broadway stage 1971; London stage 1972; film 1973) which established a new confidence in using pop and rock in musicals. Such mega-musicals have also tended towards being completely sung or with minimal spoken interludes, often an effect achieved by implying narrative through a non-continuous episodic line as with *Evita* (1978, film 1996) and most notably Boublil and Schoenberg's *Les misérables* (1985) after Victor Hugo's novel. Later examples include Lloyd Webber's more overtly operatic *Phantom of the Opera* (1986), and Boublil and Schoenberg's *Miss Saigon* (1989), a reworking of *Madame Butterfly* set against the backdrop of the Vietnam war. These shows, primarily from London, gradually began to dominate the Broadway repertory in lengthy runs, leading to the use of the term 'British invasion', paralleling the supposed 'American invasion' of the West End immediately after World War II.

One antidote to the increasing intellectual or emotional weight that the musical has been expected to bear through the mega-musical is found in the increasing number of revivals, which both reaffirm the canon and by comparison shape the value judgments of the active repertory. But alongside the regular reinterpretations of classic 'post-*Oklahoma!*' book musicals, by such writers as Rodgers and Hammerstein and Frank Loesser, there has been an increasing interest in pre-World War II shows. *On Your*

Toes (Broadway, 1983) was followed by the hugely successful *Me and My Girl* (London 1984; Broadway 1986), a light concoction for 1939 by the English composer Noel Gay, revised with a new book; 1992 saw a major rewriting and revival of Gershwin's *Girl Crazy* (1930) as *Crazy for You* (1992).

Not all influential shows were large scale. With the high cost of mounting major productions set alongside the growth of fringe theatre activity, small-scale productions have also played a role in extending the range of the musical. One of the most notable of such productions is the 'Falsetto' trilogy of William Finn. In the first of the series, *March of the Falsettos* (1981), the four characters chart a plot of domestic relationships centred on sexual orientation and psychoanalysis. There has also been a more recent move to use the term 'musical' to describe any presentation involving substantial pop or popular music elements that takes place in the theatre; accordingly, the designation has become interchangeable in publicity material with what would formerly have been considered 'revue'. The compilation show, drawing on the work of a particular person or musical style, has long been a popular small-scale format. Following the success of the London revue *Cowardy Custard* (1973; *Oh! Coward* on Broadway) later shows have adopted the format, most notably *Side by Side by Sondheim* (1977) which also substantially raised the profile internationally of that composer. Most major figures have now had revue compilations, Jerry Herman scoring twice with *Jerry's Girls* and *The Best of Times*. The pop world has been represented by bio-musicals of such figures as Buddy Holly and revue compilations such as *Smokey Joe's Cafe* for the work of Leiber and Stoller. These shows inevitably use the personae of a well-established pop past, but effective musicals drawing on current pop styles have been few, partly reflecting the shifts in pop music towards on the one hand a predominant soul-derivative ballad style and on the other repetitive and non-vocal club dance music. *Rent* (1996) was unusual in its effective use of contemporary musical styles, and its modern approach was further emphasized by a visual presentation in which performers used head-microphones such as those used in stadium rock concerts and by stage direction that drew on both the extrovert postures of a rock concert and the acting of a drama with a 'fourth-wall' integrity.

(ii) Approaches. The major innovation of the 1960s and early 70s is the 'concept musical', in which ideas of how the show will be staged affect the content and construction of the drama. It came to the fore mainly through the rise of the director-choreographer towards the end of the 1950s, and particularly through Bob Fosse (*Sweet Charity*, *Pippin*, 1972, *Chicago*) and Michael Bennett (*A Chorus Line*). Notably the director Hal Prince (associated with many shows by Sondheim) has been innovative in the presentational style of the musical through such diverse key works as *Cabaret*, *Pacific Overtures* (1976), *Evita* and *The Phantom of the Opera*. These musicals also demonstrate a widening base of musical styles, including respectively 1960s jazz, rock, ragtime, popular ballad, Weimar cabaret, far-eastern influences, symphonic rock and opera.

The historical links between popular music and musical theatre were increasingly strained as pop styles became more diverse; from the late 1960s onwards it has been rare for a show song to enter the pop charts unless distanced from its theatrical origins by different arrangements, lyrics and singers. Dramatic narrative was not well served by aspects of developing pop, such as repetitive lyrics, loud and heavy instrumentation and a strong emphasis on the rhythmic rather than lyric element: the successful rock works *Jesus Christ Superstar* and *Evita* notably began as studio recordings rather than being first conceived for the stage. Musical theatre in part adapted to the growing rift with pop music by drawing on a wider range of existing musical styles of popular resonance. These included those styles listed above along with those representing a wider cultural diversity. In the 1960s this resulted in such musical borrowings as the Jewish sounds of *Fiddler on the Roof* (1964) and the Spanish rhythms of *Man of la Mancha* (1965, film 1972). Later came the 1950s doo-wop of *Grease* (1972, film 1978), the classic Hollywood film score of the 1940s in *Sunset Boulevard* (1993) and Eastern ethnic colorations in *Miss Saigon*. By the late 1990s, almost any musical style of the century had become acceptable for use in a musical.

The effective dramatization of large-scale themes became a major characteristic of musicals in the 1980s and 90s. Such works include Maury Yeston's *Titanic* (1997), which describes the events of the sinking of the liner in 1912, and puts characterization above narrative, using an eclectic range of musical styles and approaches from sung-through montage to period pastiche. Stephen Flaherty and Lynn Ahrens's *Ragtime* (1998), based on the novel by E.L. Doctorow, whose broad themes include black civil rights and immigrant life in America in the first years of the 20th century, is set to the music of ragtime and its derivatives. In both of these examples, the musical has adopted a greater awareness of its ability to interpret history, using characters as signifiers of an underlying philosophical discourse. This has been an implicit feature of musicals from early times (as in the important but exceptional *Showboat* some 70 years previously) but has become one of the leading explicit features of the mainstream musical at the start of the 21st century.

The growing heritage of the musical has been asserted and referenced, resulting in the pastiche work and theatrical settings of, for example, *Cabaret*, *Follies*, *Chicago*, *Barnum*, *On the Twentieth Century* and *Phantom of the Opera*. More recent works have also shown the establishment of a distinct and consciously intellectualized style of music for theatre, independent of contemporary pop music, and drawing on overt thematic development and juxtaposition to highlight strong psychological and analytic elements in the drama. Such an approach, characteristic of the through-sung musical of the 1980s or 90s, is at the root of both Sondheim's style and his influence on later composers. Even the work of composers with distinct individual voices, such as that of Yeston in *Titanic*, is inevitably heard against a background of Sondheim's stylistic traits. The through-sung musical also exhibits aspects of its operetta forerunners and perennial operatic aspirations, while its lack of distinction between the dramatic registers of speech when all set to music, as in *Aspects of Love* (1989), has been viewed as a weakening of the musical (Steyn, B1997, p.278).

More flexibility of instrumentation and scale was needed as the music encompassed a wider base of genres. Early 1960s shows shifted from a more traditional sound based on conventional string, woodwind and brass divisions to something more akin to a big band, centred

on reeds and brass, supported by drum kit and (often electric) bass. This has created the archetypal 'Broadway' sound of scores by composers such as Coleman and Herman through orchestrators such as Philip J. Lang and William Brohn, while the increasing diversity of orchestrational approaches is shown by Jonathan Tunick – especially in his work on Sondheim's shows – and has considerably increased a general awareness of the importance of the orchestrator's role. Such changes were also facilitated by the greater sophistication of microphones, allowing at first better general stage coverage with float microphones, then individual and invisible radio microphones. With the balance between voice and orchestra in the hands of a sound engineer, the orchestrator has been able to explore a wider range of accompanimental sounds and the use of rock ensembles was possible. Rock groups and the use of electric, then electronic, keyboards have become the basis of such shows as *The Rocky Horror Show* (1973, film 1976; primarily rock and roll styles) and *Little Shop of Horrors* (1982, film 1986; 1960s girl-group pop), while the 'mega-musical' style of *Jesus Christ Superstar* and *Evita* encompasses the wide instrumentation of symphonic rock and pop. Synthesizers were first used to add unusual sounds, an early example being for *Company* (1970), but are now ubiquitous, often replacing string sections or boosting the effect of a limited number of players. Common features of show sound systems include: additional singers offstage in an amplified booth who boost the chorus sound onstage; pre-recorded vocal lines for soloists to facilitate special stage effects or retain, paradoxically, a consistent standard of 'live' performance; pre-recorded chorus lines to strengthen the vocal level, particularly during strenuous dancing or difficult staging; pre-recorded backing tracks that broaden the textures produced by the live players or help to reproduce in live performance arrangements more familiar through recordings that rely on special studio techniques. Soloists have also been able to exploit the individual amplification afforded by body microphones, especially with intimate and breathy vocal tones which would otherwise be inaudible in a theatre, so bringing vocal interpretations in theatre closer to those of pop.

Whereas the source material for musicals up to the 1950s that did not use original plots had generally been found in novels and plays, from the 1960s onwards the sources expanded to include the staging of successful film musicals (*42nd Street*, 1980 and *Meet Me in St. Louis*, 1960, rev.1989) and the musicalization of successful films (*Applause*, 1970, the notorious disaster of *Carrie*, 1988 and *The Witches of Eastwick*, 2000). This represents a reverse on the tendency of the 1930s–50s to transfer primarily from stage to screen. The films of stage musicals have also had an effect on revivals on stage where the films – increasingly after the 1950s with rewritten scores and plot lines – have led to the inclusion in stage productions of film material. A good example is found in *Cabaret*: for the film, much of the score was rewritten, and the numbers 'Mein Herr' and 'Money, Money, Money' replaced their respective stage numbers, 'Don't tell Mama' and 'Sitting Pretty'; in new stage productions the film songs often replace the original show songs, reflecting the wider dissemination available through film and consequent expectations of the audience. By the 1990s, the screen to stage transfers had extended to include cartoons, Disney having major successes first with a stage re-creation of its *Beauty and the Beast* (1994) and then with an innovative adaptation of *The Lion King* (1998). Such shows also provided material more suitable for a family audience, not previously widely addressed by the repertory.

Subject matter has become more representative of wide social concerns and interests and explicitly representative of certain key groups of writers, performers and audience. Thus the 1960s saw mainstream shows representing Jewish culture, such as *Milk and Honey* (1961), *I Can Get It For You Wholesale* (1962) and *Fiddler on the Roof* (1964). The self-referencing of the world of theatre was portrayed in *Applause* and even more cynically in *A Chorus Line* than in the stock 'backstage' musicals of earlier periods. Gay themes in particular, formerly an important but implicit and covert element of the musical, are now explicit in the mainstream, such as in *La cage aux folles*, *Kiss of the Spider Woman* (1992) and *Rent*. The deconstruction of Miller (C1998) is indicative of both this and the increasingly serious academic approach to the musical, here from a literary and dramatic standpoint. From earlier narratives of such noted chroniclers as Gerald Bordman and Stanley Green, the range of musicological writings now extends to the intense analysis of Sondheim (Banfield, C1993) or popular song construction (Forte, C1995). Block (C1997), produced as a study guide for key texts, indicates the extent to which the musical has developed a history and social importance to warrant its serious study.

Musical Antiquarian Society. Organization founded in London by William Chappell in 1840. It was the first society dedicated to publishing early English music, and between 1841 and 1848 it produced 19 volumes of music from Byrd to Purcell. At its peak it boasted members throughout the United Kingdom and abroad, supported by a network of local secretaries from Aberdeen to Plymouth, Dublin and Neath. The society began with 674 members; this rose to 950 by 1842. Thereafter a decline set in, and by 1846 numbers were down to 415. The society's last reported Council was in office until the end of October 1847, and the introduction to the final publication was dated December 1848. The society published its own volumes. These were printed by the firm of Chappell, which also published volumes of keyboard accompaniments, by George Macfarren, to all but two of the society's volumes. Mainstays of the society's Council included Chappell, Edward Rimbault, William Horsley, Macfarren, Edward Hopkins and Edward Taylor, all of whom also edited volumes for the society, while Moscheles, William Dyce, Maria Hackett and T.A. Walmisley were among the more prominent members. The society took a leading role in the revival of practical interest in Tudor music.

Musical bow [harp bow] (Fr. *arc musical, arc sonore*; Ger. *Musikbogen*; It. *arco sonore*; Sp. *arco musical*). A bow-shaped chordophone consisting solely of a flexible stave, curved by the tension of a string (or strings) stretched between its ends, any associated resonator being either unattached, or detachable without destroying the sound-producing apparatus (*see* KHOIKHOI MUSIC, fig.3 and SOUTH AFRICA, fig.3). Hornbostel and Sachs classified both the musical bow and the 'stick zither' (which has a rigid stave) as types of bar zither (*see* CHORDOPHONE).

1. History. 2. Structure. 3. Resonators. 4. Technique.

1. History. The musical bow, in various forms, is widely distributed in Africa, America, Oceania, parts of Asia and formerly to a small extent in Europe (East Prussia, the Netherlands, Italy, Latvia and Lithuania). It is frequently played recreationally as a solo instrument or (with a resonator) for song accompaniment, and in some areas is important in magic or religion. In the cave Les Trois Frères in south-western France a rock painting from *c*15,000 BCE shows musical use of a bow in a religious ceremony.

Whether the archer's bow or the musical bow came first has long provoked conjecture and contention. Apollo was both an archer and the god of music; Homer and Euripides refer to the musical note emitted by the archer's bowstring and the delight it gave to the ear. Legend in North India names the simple *pināka* musical bow as the prototype of all string instruments and ascribes its invention to the god Śiva. In Japan legend traces the origin of the *koto* (fretted long zither) to the god Ameno Kamato, who placed six archers' longbows close together with their strings uppermost. A southern African Khoisan rock painting reported by G.W. Stow depicts similar use of seven shooting bows (see frontispiece in *KirbyMISA*).

The notion that all string instruments evolved from the musical bow was dismissed by Balfour in the late 19th century, but he firmly believed that the musical bow had evolved from the shooting bow. Montandon (1919), however, asserted that the weapon evolved from the musical bow, after the musical bow had changed from an original idiochord form (in which the string is a partially detached strip from the same piece of cane as the stave, lifted on bridges) to heterochord form (with a tied-on string). Hornbostel (1933) objected that the shooting bow was already known in the earliest cultures. He favoured Sachs's claim that weapon and instrument originated independently but had later become similar in shape.

According to Sachs the earliest musical bow had a separate resonator (the stick being pressed against a vessel placed on the ground) and this had developed via an intermediate form (the ground zither) from the percussion beam (a pole suspended in two nooses above a pit, and struck with two sticks). Sachs (1940) held that 'those forms of bow which we have good reason to believe are the oldest have nothing to do with a hunters' bow' (being generally too long for shooting, and some of them idiochords, with bridges) and that they were not associated with hunters' beliefs and ceremonies: in many cases only women play them, and they may serve variously to induce meditation, invoke the spirits or accompany initiation.

Some peoples who play musical bows hunt without bows and arrows (as was true of the Zulu in former times), while others (such as the Dan of Côte d'Ivoire) use a different form of bow for their hunting. The Dan ascribe their musical bow to a genie who used to play it to warn animals of approaching hunters; absentmindedly he once left it on an ant heap, and a hunter appropriated it. On the other hand, there is clear evidence that the Khoisan of southern Africa have long played tunes on their hunting bows and continue this practice in modern times. In this instance at least, elaborate origin theories have seemed superfluous to some scholars: Kirby in his extensive Khoisan studies chose to adopt Balfour's practical view that 'the idea of adapting the shooting bow to musical purposes ... might well arise in more than one centre, since it involves little more than the appreciation of the musical qualities in the twang of the bow-string, a thing which is almost forced upon the attention of the archer' (Balfour, p.86). The only native string instrument of the Amerindians (apart from the Apache fiddle) was the *ma'wo*, a musical bow of the Californian tribes. This was often a hunting bow adapted as a musical instrument, though quite elaborate bows were also made specifically for music.

Musical bows are usually played singly, but a few instances of multiple use are known. The pluriarc (which is really a bow lute) resembles a series of bows with a common resonator. The terms 'ground bow' or 'earth bow' are misnomers (*see* Ground harp). The arched harp of Sumeria (depicted on a vase from *c*3000 BCE) has some bow-like features and is regarded by Sachs (1940, p.80) as a descendant of the musical bow, hence the occasional use of the term 'Bow harp'. Similar arched harps survive in many parts of Africa north of the equator (*see* Harp, §III).

2. Structure. The stave varies from about 50 cm to 3 metres in length with different varieties. It may be of round, semicircular or flat section, and often tapers towards the ends. The dividing line between musical bows and stick zithers (with a rigid stave) is often uncertain, especially with idiochord varieties. Bow staves are usually made from a single length of wood or cane, but a few types have two or three sections (Xhosa *umrhubhe*; Sotho *setolotolo*). 'Scraped bows' (Ger. *Schrapbogen*), found in India, central and southern Africa and South America, have serrations along one side of the stave (the instrument being sounded by scraping across these with a stick or rattle-stick). With other types of bow, the string may be set in vibration by plucking it with fingertip or plectrum, by tapping it with a small stick or grass stalk, by stroking it with a friction stick (in Colombia, South Africa, Loango and Marquesas) or with a subsidiary bow (in Patagonia), which, among the Araucano and Chaco in South America, is interlinked with the main bow.

Some Afro-Colombians and Amerindians of the Atlantic coastal region of Colombia play a type of mouth-resonated musical bow known as the *marimba*. The bow used by Afro-Colombians is stopped by a short wooden rod held in the left hand, thus producing two fundamentals, and the cord is struck near the mouth with a thin piece of bamboo. The Motilón and Guajiro Indians obtain several fundamentals by stopping the cord with the fingers of the left hand; a thin piece of bamboo, moistened by the mouth to create the required friction, is used somewhat like a violin bow to produce the tone. Both types of bow are now rare.

The Aeolian bow, sounded by the force of wind or breath, is exemplified by the tiny 'whizzing bow' swung round like a bullroarer (and thus qualifying as a 'free aerophone') which is found sporadically in West Africa (Liberia), China, Indonesia and eastern Brazil. It is also used, attached to large kites, in Indonesia and eastern Asia (Java: *sundari*; Laos: *tamoo*). Bows sounded with the breath are confined to the South African *gora* and its derivatives.

Both idiochord and heterochord musical bows may have one or more strings. The string of the heterochord bow may be made from rattan, vegetable fibre, sinew, twisted animal hairs or wire. It may either vibrate as a whole, or be divided into unequal segments (usually two) by a bridge (*see* Mvet) or by a 'brace' (also called 'tuning

noose' or 'tension noose') – a loop, passing round both stave and string, which keeps the string pulled inwards, towards the stave. Some braced bows, such as the *egoboli* of Uganda, have an additional smaller noose near each end for making finer adjustments of the string tension. In rare cases a single bowstring may be laced more than once across the curved frame of the stave, as in the *adungu* of the Acholi in Uganda. The breath-sounded *gora* is exceptional in that a piece of quill connects the string with the stave at one end.

3. RESONATORS. As far as supplementary resonance is concerned, bows may be subdivided into two broad categories: those without and those with an attached resonator. The first of these may be further divided between bows played entirely without a resonator and others played with a separate resonator. The first of these two types is rare, the North Indian *pināka* being a reported example (Balfour, p.54). Whizzing bows perhaps qualify but are usually considered aerophones. The bow shown in KHOIKHOI MUSIC, fig.3, appears to have no resonator, but apparently that instrument was often pressed against a wooden dish, dry skin bag or some other vessel which could serve as a temporary independent resonator. Similar use of a calabash, bowl, pot, basket, tin can etc, has been widely reported in India, North America and Borneo as well as in Africa. Bows with a separate resonator also include the mouth bow, in which the player's mouth cavity supplies resonance: this type is widespread in Africa, South America and Oceania. The stave may be held against the player's mouth, or the string may vibrate freely between the lips.

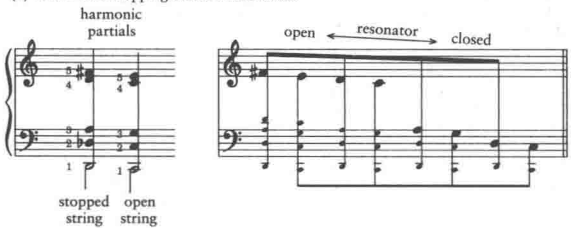
Bows with an attached resonator usually have an open-ended gourd attached in some way to the stave on the opposite side to the string; these, known as gourd bows, are common in equatorial and southern Africa and among African Americans in South America. The bow is usually held vertically, with the opening in the gourd facing the player's chest (*see* SOUTH AFRICA, fig.3). *The belembau-tuyan* of the Chamorro people of the Mariana Islands, Micronesia, is played by a seated or reclining player, the gourd against the stomach. The Indian *ṭuila* and instruments like the *nenjenje* of the Meje in central Africa have similar features but, having rigid flat bars, are really stick zithers. In southern Africa two typical mono-heterochord gourd bows are the Zulu *ugubhu* (unbraced, with resonator near the bottom of the stave) and *umakhweyana* (braced, with the resonator near the centre, attached to the brace; *see* SOUTH AFRICA, fig.3). The opening in the gourd resonators of the Zulu instruments is mostly between 5 and 7 cm in diameter, but in those of most other ethnic groups the hole is larger, or a hemispherical half gourd may be used. In some areas supplementary rattles, bells or jingles are attached to the stave, or used with the beater, and the *kalumbu* of the Valley Tonga (Zambia) may have a mirliton attached to the gourd. In the case of another smaller variety of mono-heterochord gourd bow found in East, Central and West Africa, the half-gourd resonator is placed over the player's mouth (e.g. the *ekitulenge* of the Konjo in Uganda. A polyheterochord U-shaped gourd bow with five to seven strings (known as the forked harp and sometimes nicknamed the bellyharp) is used in the savanna region of West Africa.

4. TECHNIQUE. The fundamental pitch of a musical bow is often varied by the performer. In bows with a bridge or brace the two unequal segments of the string yield different pitches. Additional pitches may be produced on braced and unbraced bows by stopping the string at one or more points with a finger, thimble, small stick or (as on the Brazilian BERIMBAU) the edge of a coin; harmonics are also often played. On some varieties with an unattached resonator harmonics are produced by touching the string at a nodal point with a finger or with the chin. With many other types the resonance frequency of the resonator is continually altered while playing to amplify one or other of the higher harmonics. The fundamental then serves only as a drone (or provides a simple ground bass if its pitch is varied) while selectively resonated upper partials are used for the melody. With mouth bows the volume of the player's mouth cavity is varied, as in the case of the jew's harp, to produce music as in ex.1.

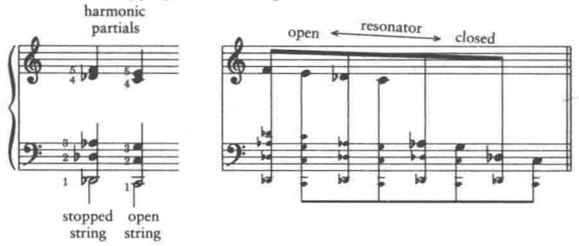
Pitch on mono-heterochord gourd bows is varied by finger-stopping (as with the unbraced Zulu *ugubhu*), and also, in the case of braced bows like the *umakhweyana*, through striking alternate segments of the string. Harmonic partials above each fundamental may be selectively amplified through covering the opening of the gourd to a varying extent, thereby altering its resonance frequency, as inex.2. This is achieved by moving it closer to, or further from, the chest while playing. The musical purpose of such movements was misunderstood by earlier investigators, including Kirby (p.198) and Sachs (1940, p.57). A few instances have been reported of players expanding and contracting their stomach muscles instead of moving the instrument. A !Kung Bushman was observed by England doing this with a tin can (in lieu of a gourd) held against his shooting bow to serve as an unattached resonator; it seems likely, however, that he was imitating the gourd-bow technique of some neighbouring peoples. Gourd bows are generally used for self-accompaniment while singing and, certainly among the Nguni, the instrumental ostinato serves as a substitute chorus part, against which the performer takes the antiphonal role of the leading singer.

Ex.1 Music for *umqunge* (mouth bow), Mpondo, Xhosa, South Africa, sounded by stroking the string with a friction stick (Rycroft, 1966)

The classical Nguni instruments are the Zulu *ugubhu* (*see* SOUTH AFRICA, fig.3), Swazi *ligubhu* and Xhosa *uhadi*. These are large musical bows, about 1·5 metres long, with a gourd-resonator attached near the lower end, and a single undivided string struck with a piece of thatching grass. The instrument is held vertically in front of the player, so that the circular hole in the gourd faces his left breast or shoulder and can be moved closer or farther away for the selective resonation of harmonics, usually 2nd to 5th partials. Besides the fundamental note yielded by the open string, a second note is obtained by pinching the string near its lower end between the left thumbnail and forefinger, the remaining three fingers gripping the stave. The interval between the open and stopped notes produced by Xhosa players is usually roughly a whole tone; the outstanding Zulu musician, Princess Constance Magogo kaDinuzulu, uses a semitone varying from 90 to 150 cents on different occasions; both sizes of interval have been noted among Swazi players. Selectively resonated harmonics from the two fundamentals, though relatively faint, are used melodically as a vocal accompaniment (ex.2). The resultant hexatonic scales obtained from whole-tone and semitone stopping are shown in ex.3; though the open-string fundamental is shown as C, the tuning is often as much as a 5th lower, and the entire series is transposed accordingly.

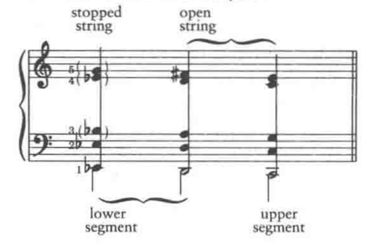


Ex.2 Zulu *ugubhu* (unbraced gourd bow), sounded by striking the string with a piece of thatching grass (Rycroft, 1976)



o unstopped
• stopped between left thumb-nail and forefinger

Ex.3 Selectively resonated harmonics on Nguni unbraced gourd bows (see Rycroft, 1969)



(a) Whole-tone stopping on the Xhosa *uhadi*

(b) Semitone stopping on the Zulu *ugubhu*

Ex.4 Notes obtainable on the braced gourd bow: the Zulu *umakhweyana* and the Swazi *makhweyane*.

A second type of gourd bow, the Zulu *umakhweyana* and the Swazi *makhweyane*, reputedly borrowed from the Tsonga people of Mozambique early in the 19th century, largely displaced the Zulu *ugubhu* and the Swazi *ligubhu* but was not adopted by the Xhosa. This instrument, shown in SOUTH AFRICA, fig.3*b*, differs from the earlier type in that the gourd-resonator is slightly smaller and mounted near the centre of the stave instead of at the bottom. In addition the string is tied back by a wire loop or brace attached to the resonator, so that two open notes are obtainable, one from each segment of the string. These notes are tuned anything from a whole tone to a minor 3rd apart, and a third fundamental, usually a semitone higher, can be produced by stopping with a knuckle the lower segment of the string below the restraining loop. This stopped note has a duller sound however and is not always used. Selectively resonated harmonics are used melodically in the same way as on unbraced gourd bows. The notes available from the braced gourd bow, when the two segments of the string are tuned a whole tone apart, are shown inex.4. Some players may transpose the entire series as much as a minor 3rd higher.

The largest collection of recordings of African musical bows is housed at the International Library of African Music, Rhodes University, Grahamstown, South Africa.

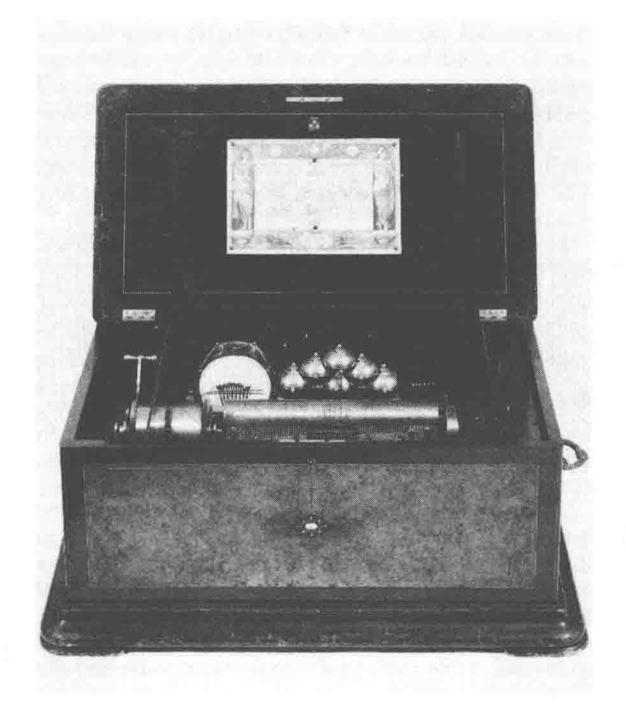
DAVID K. RYCROFT

Musical box [music box] (Fr. *boîte à musique*; Ger. *Spieldose*; It. *scatola armonica*; Sp. *caja de música*). A MECHANICAL INSTRUMENT in which tuned steel prongs (lamellae) are made to vibrate by contact with moving parts driven by a clockwork mechanism. Probably several French, German and Swiss watch-makers discovered that tuned steel strips could replace flat bells in musical watches (*see* MUSICAL CLOCK); but it was their application in 1796 by Antoine Favre of Geneva that started the development of larger brass cylinders with steel pins playing, firstly, a line of separate tuned teeth, and, later, a one-piece tuned steel comb (*see* MECHANICAL INSTRUMENT, fig.3), with the essential refinement of steel dampers. Small musical movements were first made in quantity for snuff-boxes (Fr. *tabatières*) and were known by the French term. Similarly, large movements, known as *cartels*, took their name from the wall and bracket clocks for which they were first made. These two descriptive names replaced the early term *carillons à musique*.



By about 1825 the musical box was well established in its standard form, with combs having as many as 250 teeth covering a range of about six octaves, and generally tuned to an unequal temperament. Cylinder sizes ranged from those designed for snuff-box miniatures (less than 10 mm in diameter) through the common type with diameters of 54 mm, playing one minute per tune, to 100 mm and sometimes even larger, giving playing times of three minutes per tune. Cylinder lengths range from as little as 20 mm to more than 500 mm; a typical good quality box playing eight airs of one minute each with a comb of 96 teeth would have a cylinder of 330 mm. Those with larger diameters were often pinned to play operatic overtures; the tune arrangers became very accomplished, and most effects in an orchestral score were skilfully imitated.

Musical box manufacture grew up mainly in Switzerland (particularly in the Geneva to St Croix region), long famous for precision horology; makers who soon became renowned include Brémond, Ducommun Girod, Junod, Langdorff, Lecoultre, Mermod, Nicole and Paillard. Those working elsewhere included such makers as Řebíček in Prague, Olbrich in Vienna and L'Epée near Montbéliard in France. L'Epée also produced the 'manivelle', a small hand-cranked musical box for children, generally with tinplate body and playing only one tune.

The combined technical and musical skills of these makers led to various refinements and additions. These included the Mandolin, in which the comb had groups of up to eight teeth tuned to the same pitch and capable of being sounded in rapid succession like a mandolin or for sustained note effect; the Piccolo, in which the comb had additional treble teeth to decorate the melody; and the Forte-Piano, which had a second, shorter comb to permit better dynamic contrast. In 1874 Paillard patented the Sublime Harmonie, which had two or more combs with teeth tuned to within about 4 Hz of the same pitch and thus offering both a beat effect and different harmonics which together enhance the performance. The harp-like accompaniment of the Harp Eolienne was effected by a short second comb with a tissue-paper 'zither' below (such tissue rolls could also be applied above the comb). Tuned bells (three to 12), drum (with vellum or brass head, normally with eight strikers) and castanet (hollow wooden block with six or eight strikers) were occasionally added, generally with separate provision to disconnect them. These were operated from untuned teeth on additional combs, which meant longer cylinders or fewer tunes or fewer notes. In the organ attachment, paired reeds (12 to 30) were fitted, tuned to differ in frequency by about 8 Hz, giving the beat effect described as 'Flûte voix célestes'. Only the bells and organ were generally regarded as attractive additions.

Most manufacturers produced most of these varieties under numerous descriptive names (e.g. Flutina, Harpe Harmonique, Expression Extra, Symphonie) that appeared on the tune sheets. But of the thousands of cylinder musical boxes (Nicole Frères alone made about 50,000), the vast majority were of the unadorned single-comb type. Besides sacred and popular music, arias and overtures from most operas popular between 1830 and 1890 were faithfully reproduced.

The small, plain cases of early musical boxes gave way about 1840 to cases of high quality, the lid and front embellished with fine marquetry and sometimes metal and mother-of-pearl inlays. Larger cases also improved the radiation efficiency of the bass notes. Lever winding displaced the separate winding keys about 1860. Longer playing time for one winding was provided on some boxes by double and occasionally quadruple springs. Longer compositions were usually handled by allowing them two or more turns of the cylinder; other devices invented for

Orchestral cylinder musical box by Paillard, Swiss, c1888 (private collection)

continuous long-playing were too complex for commercial success.

The basic shortcoming of the cylinder musical box was its limitation to the tunes on its one cylinder. The introduction of interchangeable cylinders left two remaining problems: vulnerability of the comb teeth during the change, and storage of spare cylinders. The latter was sometimes solved by building the box into a piece of furniture with storage drawers. Continued experiments to replace the cylinder by a simple steel disc with projections or slots to play one tune succeeded in about 1889 when Paul Lochmann set up his Symphonion factory in Leipzig. Soon two of his staff left and set up the rival Polyphon factory, also in Leipzig, and in 1892 they started production in New Jersey, USA, under the name Regina. Mermod and other Swiss manufacturers joined in, and by about 1900 disc machines were available in tremendous numbers and varieties, with discs up to 850 mm in diameter and including such effects as Sublime Harmonie and bells. Slot machines were made for use in public places, some fitted with automatic disc change. The disc machines were mostly mass-produced; their almost unlimited tune variety resulted in their soon eclipsing the cylinder musical box, being themselves duly eclipsed by the gramophone.

Manufacture of musical boxes survived to a limited degree in Switzerland and a strong revival of interest from the 1950s onward prompted the growth of a new industry in Japan and the USA.

Musical clock (Ger. *Flötenuhr*, *Wälzenuhr*, *Hackbrettuhr*, *Harfenuhr*, *Spieluhr*, *Spielklok*). A clock combined with one or more forms of MECHANICAL INSTRUMENT which plays music at regular time-intervals. Unlike the chiming clock (*see* CHIMES, §2), with which it is frequently confused, the musical clock's performance is normally separate from the hourly chiming sequence, and can be selected automatically or manually (sometimes a choice is offered) from a repertory of tunes provided on a pinned wooden or metal barrel or cylinder as in the BARREL ORGAN or MUSICAL BOX.

The five principal types of musical clock are those fitted with: a carillon (with bells made of glass or metal); an organ (with either wood or metal flue pipes, and occasionally reeds); strings (struck like a dulcimer or plucked); a glockenspiel (of wood or metal bars on metal tubes); or a comb or combs of tuned steel teeth (as in a musical box). The 'compound' musical clock takes two of these types (very rarely three) and unites them into one mechanism. Compound clocks most frequently combine the carillon and the organ, or the organ and strings.

The earliest musical clocks were an extension of the CARILLON, connected with tower clocks in the 13th and 14th centuries. The first application of a music-producing mechanism to time-indicating clockwork is unknown, but in 1321 the abbey of Ste Catherine near Rouen possessed 'an iron time-keeping mechanism with a musical train' which could play the hymn *Conditor alme siderum*. Strasbourg Cathedral possessed a musical, astronomical and automaton clock by 1352. A similar musical clock at the cathedral of St Jean in Lyon (restored 1992–3) was described in 1379. It plays the hymn *Un queant laxis* on a carillon of six bells.

By the 16th century, smaller carillon clocks were being made for domestic use: the oldest of these to survive was made in London in 1598 by Nicholas Vallin, and the brothers Isaac and Josiah Habrecht (who made parts for the second clock at Strasbourg Cathedral) were making examples by the last decades of the 16th century (one is in the British Museum). Augsburg was an early centre for the making of extraordinary musical automata, usually associated with clocks. At the end of the 16th century, under the encouragement of patronage from the nobility and royalty of the Holy Roman Empire, makers such as the Bidermanns, Langenbucher, Runggells and Schlottheim produced exotic musical clocks. One surviving

compound table clock by Veit Langenbucher and the younger Samuel Bidermann plays a choice of three melodies on a 16-note pipe organ combined with a spinet (Time Museum, Rockford, Illinois). The Thirty Years War brought an end to sponsorship, and Augsburg declined in musico-horological significance.

In the 18th century the manufacture of clocks was concentrated in London. There these instruments were made by outstanding clockmakers, including Barbot, William Carpenter, James Cox, R. Fleetwood, Fox & Sons, Fromanteel & Clark, Henderson, George Higginson, Thomas Larrymore, Marriott, Eardley Norton, Robert Philip, Robert Sellers, Tomlin, and Williamson; musical clocks built by all these clockmakers are now in the largest collection of musical clocks, in the Palace Museum in Beijing.

Organ-playing clocks are more complex in construction and musical programme, and in London there were only a small number of makers, including Cox, J.J. Merlin and Charles Clay (for whose clocks Handel composed a number of pieces). If London favoured bells, Vienna concentrated on pipes: very few carillon clocks were made in Austria, but Vienna became the manufacturing centre of an organ-playing clock called the *Flötenuhr* ('flute-playing clock'). This used a special form of wooden pipe, the so-called 'Vienna flute', which had a reversed embouchure and a circular mouth. Some of the most important makers of the *Flötenuhr* were Christian Möllinger, Roentgen & Kintzing, Johann Elffroth, Kleemeyer, I.C. Knoop, D.N. Winkel, Pehr Strand and Joseph Niemecz (for a full list of makers see Ord-Hume, 1995). During the 'golden century' of the Viennese musical clock (*c*1720–*c*1820), the instrument underwent dramatic improvement. Flute-playing clocks played arrangements of music (overtures, arias, parts of the flute concertos and sonatas, marches and dance music), but also compositions written exclusively for them. There are 32 compositions and adaptations attributed to Haydn, which he wrote for flute-playing clocks constructed by Joseph Niemecz, Prince Esterházy's librarian. Four instruments by Niemecz with the 'Haydn' barrels are extant; these were discovered between 1948 and 1996. There are also three compositions for clocks by Mozart and three by Beethoven. The London carillon clock industry was eventually overtaken by the Swiss. In the 1760s Frederick the Great invited watchmakers from Switzerland to establish the manufacture of musical clocks in Berlin. Among well-known Berlin manufacturers are Konrad Ehrbar, Möllinger, Elffroth and the court watchmaker Pohlmann; the cylinders were pinned by the musician Kummer.

Two forms of string-playing clock (also called dulcimer- or harp-playing clocks) were also made in Germany. The smaller, less sophisticated *Hackbrettuhr*, made in the Black Forest, had a compass of about 18 notes (*c′–d‴* with the addition of two *b*♭s), while the *Harfenuhr*, from Berlin, had a fully chromatic compass of up to 50 notes). C.P.E. Bach composed at least two minuets for the *Harfenuhr*, and W.F. Bach wrote music for a *Harfenuhr* in Köthen Castle, which was destroyed during World War II.

A small but rich musical clock industry also existed in Stockholm (nurtured by King Gustaf III), and organ-playing clocks by Pehr Strand and also I.C. Knoop are of the highest order. Makers in the Low Countries produced a significant number of carillon-playing musical clocks, often with changeable cylinders, and generally playing a longer melody on the hour and a shorter one on the half-hour.

The era of the musical clock had closed by the end of the first quarter of the 19th century, although there was a brief revival at the end of the century and during the first decade of the 20th, when disc-playing MUSICAL BOX movements were incorporated in some clocks. These, however, were novelties rather than serious musical interpreters.

The musical watch is a variety of musical clock, invariably in the form of a pocket watch. In the earliest form only very simple tunes could be played using five or seven small saucer-shaped bells nested together. The case was necessarily bulky and the sound high-pitched. Antoine Favre of Switzerland was probably the first to apply the tuned steel tooth of the musical box mechanism to the musical watch (1796), making it possible to build much smaller watches with a greater musical compass. Flat disc musicwork enabled elaborate music to be set on a mechanism nor more than 5–6 mm thick. Later watches had tiny pinned-cylinder musicwork.

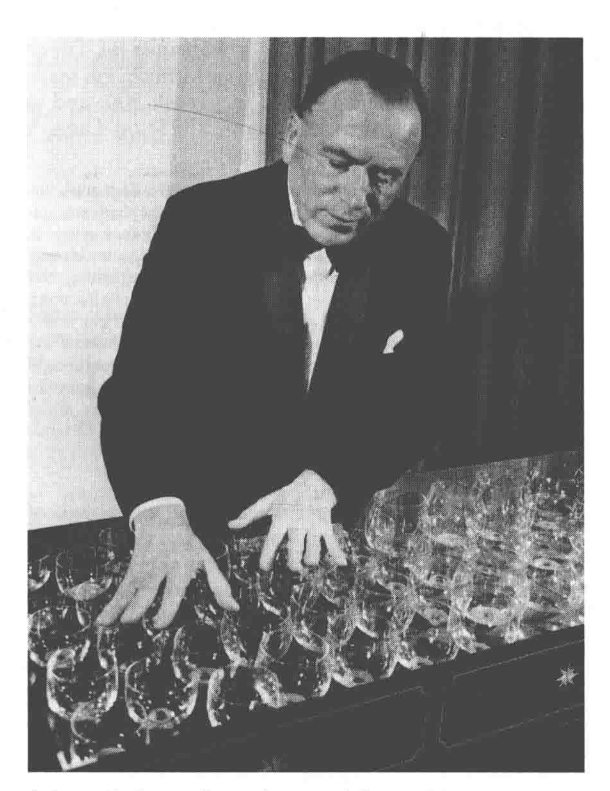
Musical glasses [armonica; harmonica; glass harmonica]. Bell-type instruments made of glass or other brittle material that if rubbed in a certain fashion will respond like the strings of a bowed instrument, though with less capacity for nuance. They may also be struck, with moderate force, for quasi-plucking and melodic tremolo effects as on a xylophone, a method that prevails in Asia.

While it is not always possible to distinguish various types of bell or gong-chime among descriptions of ancient instruments, musical glasses in the West were evidently derived from Asian antecedents, particularly in Persia

1. Musical glasses used in a 'Pythagorean experiment': woodcut from Gaffurius, 'Theorica musicae' (1492)

from the 11th century onwards. The earliest known European allusion to musical glasses occurs in Gaffurius's *Theorica musicae* (Milan, 1492), which contains a woodcut showing the musical use of vessels in a 'Pythagorean experiment' (fig.1). An inventory made in 1596 of the Ambras collection (now in the Kunsthistorisches Museum, Vienna) describes 'Ain Instrument von Glaswerck', three and a third octaves in compass (see Primisser, 1819). These and similar phenomena, such as 'making a cheerful wine-music', described by Harsdörffer, may well have grown up independently of oriental influences, which seem however to have been fairly strong. Diderot referred to the use of musical glasses in ancient Persia; such musical practices had doubtless become known to western Europe through reports of early travellers.

It was apparently during the early 18th century that the glasses came into serious musical use, having been previously regarded in Europe as only a quasi-scientific toy or novel amusement for social gatherings. The sound was produced by striking the sides of the glasses with a stick, which was sometimes muffled. In England the more refined technique of stroking the rims with the fingertips seems to have been first used in 1744 by an Irishman, Richard Pockrich, whose glasses were graded by size and tuned by the addition of water where required to raise their natural pitch. In a concert at the Haymarket Theatre, London (23 April 1746; reported in the *General Advertiser*), Gluck played a concerto on 26 glasses; he gave another in Copenhagen in 1749. In London, newspaper announcements testify to the growing popularity of musical glasses in the 1750s. One particularly notable performer was Ann Ford, who married Philip Thicknesse, Gainsborough's friend and biographer. She published the first known method for the instrument in 1761 (unique copy now in *US-CA*) and gave explicit instructions for the use of the moistened pads of the fingers – with precise application of varying degrees of pressure – on the sides and rims of the glasses. Meanwhile, in spring 1761 Benjamin Franklin, then on a visit to England, heard Edmund Delaval, a fellow of Pembroke Hall, Cambridge, play on the glasses. Franklin was so impressed with the instrument that he decided to improve it. He took the bowls of the glasses and fitted them concentrically (the largest on the left) on a horizontal rod, which was actuated by a crank attached to a pedal (fig.2). Careful gradation of size ensured a more consistently accurate scale than was possible with water tuning, while the close proximity of the rims (which would be well moistened before use) enabled the player to produce chords and runs with far greater ease than had been possible when each glass stood separate on its base. In a letter (see Sparks) to an Italian scientist named Beccaria, Franklin proposed to call his instrument the 'armonica', as a compliment to the musical Italian language. (The intrusive 'h', of German origin, has no original authority, and only serves to confuse this instrument with the modern harmonica proper, i.e. the mouth organ.) Sonneck has shown that the date of Franklin's invention, also popularly known as the 'glassychord', cannot be later than autumn 1761. The name of the earliest known maker of the armonica is given in Jackson's *Oxford Journal* (29 May 1762) as Charles James of Purpool Lane, near Gray's Inn, London, who stated that he manufactured expressly for Franklin from the beginning. In a slightly later development of the armonica, the rims of the glasses (at least for half the



2. Benjamin Franklin playing the musical glasses: portrait by Alan Foster (b 1892) (private collection)

length of the spindle) were moistened automatically by means of a shallow trough of water through which they could pass as the spindle revolved. It is not known to whom the credit for this innovation belongs.

Franklin's invention achieved a certain popularity in America, but exercised far more influence in Europe, where it seems to have been introduced by Marianne Davies, a virtuoso who is thought to have received her own armonica from Franklin. She began to tour Europe in 1768, moving in the highest society. In 1773 she became known to the Mozart family, and caused Leopold Mozart to express an interest in owning an armonica himself. She also met Anton Mesmer, the originator of 'magnetism', who developed an enduring devotion to the instrument and used it to induce a receptive state in his hypnotic subjects. As on the glasses (i.e. the instrument in its original form), some of the finest armonica players were women, for instance Marianne Kirchgessner, the remarkable blind performer who became famous throughout Europe between 1790 and her death in 1808; Mozart composed his exquisite Quintet K617 for armonica, flute, oboe, viola and cello for her in 1791.

There is ample testimony that the practice of eliciting sounds from the revolving bowls of the glasses was apt to have a deranging effect on the nerves of the player. Sachs attributed this to 'the irritating permanence of extremely high partials and the continuous contact of the sensitive fingers with the vibrating bowls'. In some German towns the armonica was banned by the police. Various improvements were attempted, aiming to eliminate the fingers as the means of contact: several types of keyboard were devised, by Hessel at St Petersburg (1782), by H. Klein at Pressburg, by Röllig and by D.J. Nicolai at Görlitz (all 1784), and by Francis Hopkinson in America in 1787; P.J. Frick, a virtuoso armonica player, had introduced pads as early as 1769; and in 1779 Mazzucchi applied a form of violin bow to the instrument. But direct hand contact could not be rivalled for natural tone quality, whatever the gain might otherwise be in facility and speed of execution.

3. Bruno Hoffmann playing the musical glasses, 1971

The heyday of the armonica in Europe lasted until about 1830. Its distinctive tone of vibrant, piercing sweetness caught the imagination of various French and German Romantic writers; Goethe, for instance, wrote that in the sustained chords of this music he could detect 'Die Herzblut der Welt'. Even while the armonica was at the height of its popularity, the earlier form never quite lost its appeal; Ann Ford, for instance, was still playing the musical glasses in 1790. After the armonica had become a museum piece, the glasses lingered, at least in Britain, throughout the 19th century, and were often heard in music halls and sometimes at evangelical meetings. In the 20th century they have been revived by the German virtuoso Bruno Hoffmann (fig.3), whose playing of the Mozart quintet has been recorded.

ALEC HYATT KING

Musical Heritage Society. American mail-order record label. It was founded in New York in 1962 by Dr Michael Naida after he left Westminster. After a small initial group of pseudonymous issues licensed from the Telemann Society and Philips, MHS began to issue large numbers of recordings licensed from Erato. Eventually the label issued most of the Erato catalogue, including discs previously issued on several US retail labels. MHS also drew on such catalogues as Library of Recorded Masterpieces, Hispavox, Somerset, Amadeo, Expériences Anonymes, Boston, Angelicum, Muza, Arcophon, Lyrichord, Da Camera, Supraphon, Pelca, Iramac, Unicorn, Christophorus, Valois and Harmonia Mundi. From the first year the firm also made a smaller number of its own recordings in New York. Frederick Renz recorded with the New York Ensemble for Early Music, notably making

the first complete recording of the St Nicholas plays from Fleury. Robert Craft recorded a systematic programme of Stravinsky's music with the Orchestra of St Luke's and the Philharmonia. Julius Rudel, too, conducted the Orchestra of St Luke's, and Marilyn Mason and Ann Labounsky recorded on the organ. In 1976 Naida sold the firm to Albert Nissim, and the offices moved to New Jersey. From May 1981 until 1999 the firm offered its own productions on the retail market using the label Musicmasters. More recently the firm has licensed standard repertory from EMI and Polygram.

JEROME F. WEBER

Musical Institute of London. English organization. It was founded on 22 November 1851 'for the cultivation of the art and science of music ... for the holding of conversazioni, for the reading of papers upon musical subjects, and the performance of music in illustration'. Its membership ultimately comprised 180 Fellows, including a good representation of the most outstanding scholars, editors, executants, collectors and publishers of the time, 42 associates, and an honorary Fellow (Spohr). The first president was John Hullah, and the first vice-presidents were Sterndale Bennett, Charles Lucas and Ouseley. The institute maintained premises at 34 Sackville Street, Piccadilly, with a reading room and a fine library; the plan for a museum of musical instruments did not materialize. Although the institute was dissolved in the summer of 1853, and the promised volume of transactions was probably never printed, its work – however limited in achievement – anticipated that of the Musical Association by over 20 years. The institute may therefore be regarded as the earliest organization of its kind devoted to the scholarly study of music. (*See also* ROYAL MUSICAL ASSOCIATION.)

Musica reservata (i). Musical term found with various definitions and implications in sources from 1552 to 1625.

1. Original uses of the term. 2. Modern interpretations.

1. ORIGINAL USES OF THE TERM. Ever since the term 'musica reservata' was discovered at the end of the 19th century, its interpretation has been of major concern to musicologists. It is generally assumed to refer to a central aspect of the style or performance of music in the second half of the 16th century. Since the term appears relatively rarely, and explanations are sometimes obscure or altogether contradictory, great care is needed when attempting a clearcut definition. The sources that mention the term are as follows:

1552	A.P. Coclico: *Compendium musices* and *Consolationes piae*
1555	Two letters from G.S. Seld to Duke Albrecht V of Bavaria N. Vicentino: *L'antica musica ridotta alla moderna prattica*
	P. de Tyard: *Solitaire second*
1559	J. Taisnier: *Astrologiae iudiciariae isagogica*
*c*1560	Samuel Quickelberg's comments on Lassus's penitential psalms
1571	Anonymous treatise from the Synod of Besançon
1582	E. Hoffmann: *Doctrina de tonis*
1610	A. Brunelli: *Regole et dichiarationi de alcuni contrappunti doppii*
	P. Maillart: *Les tons, ou Discours sur les modes*, a copy of Tyard
1611	R. Ballestra: *Sacrae symphoniae*
*c*1623	Reference to Biagio Marini at the Neuburg court
1625	J. Thuringus: *Opusculum bipartitum*, a copy of Hoffmann

Those sources that do more than mention the term, and include details that could help to achieve an understanding of it, suggest that four aspects of music may be involved: musical expression of the meaning of the text; rhythm; chromaticism or the use of chromatic notes; performing practice.

The best-known description of *musica reservata* is that given by Samuel Quickelberg, a humanist of Dutch extraction living at the ducal court in Munich. He made the following comment (printed in Crevel, 300, and in vol.xxvi of the new Lassus edition, 1995) on Lassus's penitential psalms (composed *c*1560):

> Thus the illustrious prince commissioned his most excellent musician, Orlande de Lassus, more distinguished and polished than any our century has produced, to compose these psalms, mostly for five voices. Lassus expressed these psalms so appropriately in accommodating, according to necessity, thoughts and words with lamenting and plaintive tones, in expressing the force of the individual affections, and in placing the object almost alive before the eyes, that one is at a loss to say whether the sweetness of the affections enhanced the lamenting tones more greatly, or whether the lamenting tones brought greater ornament to the sweetness of the affections. This genre of music they call *musica reservata*. In it, whether in other songs [*carminibus*], which are virtually innumerable, or in these, Orlande has wonderfully demonstrated to posterity the outstanding quality of his genius.

Here *musica reservata* is presented as the expression of the affect and meaning of the words. However, the frequency and intensity of these features appear to be no greater in Lassus's penitential psalms than in the rest of his works. The value of Quickelberg's definition of *musica reservata* is reduced for two reasons: first, such musical word-painting and portrayal of affect were precisely the central characteristics of most music written around 1560; second, he omitted any mention of the specific compositional techniques used in this period. Moreover, it has been pointed out that Quickelberg's description has much in common with musical ideals which for some time had

been widely held in such humanist circles as that around Thomas More.

A short anonymous treatise in the acts of the Synod of Besançon from 1559 to 1571 (see Bäumker) seems to imply that *musica reservata* was concerned with rhythm; part of the text suggests that a characteristic was the practice of 'fuggir la cadenza'. The pupil is given the following rule:

One should tend to make voices progressing in diverse and (as far as possible) contrary motion unite at last in perfect consonances and return to a certain mode. However, in a continuous rhythm you will avoid the cadence [*clausulam*] so that there might result what is called *musica reservata*.

Musica reservata was used in three sources to mean the use of the *genus chromaticum*. It first occurs in this sense in a treatise by the astrologer and mathematician Jean Taisnier, who had travelled widely and was also active as a musician at the court of Charles V and elsewhere. In his treatise, *Astrologiae iudiciariae isagogica* (Cologne, 1559), he listed alongside other classifications of music a category of music both 'ancient and modern – called new or "reservata" by some who have held that the application of one or the other *diesis* or *diaschisma* in a secular song or motet turns the diatonic genre into the chromatic'. The second source is Eucharius Hoffmann's *Doctrina de tonis* (Greifswald, 1582), which was copied word for word by Joachim Thuringus in his *Opusculum bipartitum* (Berlin, 2/1625). The relevant passage runs as follows: 'Today, however, it [the chromatic genre] is being restored to singing by certain people and by them this is called *musica reservata*, since it is almost entirely reserved for certain musical instruments and has not been accepted or practised in singing'. Although the source of Hoffmann's description of the chromatic genre was clearly Nicola Vicentino's *L'antica musica ridotta alla moderna prattica* (Rome, 1555/*R*), Hoffmann stands alone in his distinctly questionable etymological explanation of the word *reservata*. There has been much controversy about the correct interpretation of a phrase in this passage from Vicentino's *L'antica musica*:

...they understand that (as the ancient authors prove) the chromatic and enharmonic music was fittingly reserved [*reservata*] for another purpose than [was] the diatonic, for the latter was sung, for the benefit of ordinary ears, at public festivals in places for the community: the former was used for the benefit of trained ears at private entertainments of lords and princes, in praising great personages and heroes.

Some scholars (Jeppesen and Lowinsky) have suggested translations of the critical section in the following manner: 'the chromatic and enharmonic *musica reservata* deservedly had a different application from that of the diatonic'. However, well-founded grammatical objections have been raised to this translation by Schrade, Palisca and others. Vicentino was certainly indicating that the use of diatonic as opposed to chromatic and enharmonic music was determined sociologically. His works are echoed in a passage on the genera from the *Solitaire second, ou Prose de la musique* (Lyons, 1555) of Pontus de Tyard, who stated that the diatonic was generally current, whereas application of the enharmonic required such exquisite skill as to seem to be reserved for the learned. Tyard was later quoted verbatim by Pierre Maillart in *Les tons, ou Discours sur les modes de musique* (Tournai, 1610/*R*).

Two statements in documents have been brought forward as evidence for the view that *musica reservata* means performance by soloists. In 1611 Reimundo Ballestra's *Sacrae symphoniae* appeared in Venice; in a document (see Federhofer, 1952) the pieces are described as *Musicalische Symphonien und Harmonien, ausser etlicher reservata*. As well as works written in the concertato style (*Symphonien*) and others in the *a cappella* and the polychoral (*Harmonien*) styles, there are some in which sections for soloists with organ continuo alternate with passages for the full ensemble. It is these last works that some musicologists identify as the 'etlicher reservata' group. The second piece of possible evidence for this interpretation is the title 'musico riservato', given about 1619 to Biagio Marini when he was a violinist at the Neuburg court. In a document described by Clark it is decreed that 'Marino ... will be "musico riservato" and with his violin should not be in the midst of the concerti grandi where he cannot be heard well'. From this it would appear that Marini was a soloist, not one of the ripieno players. 'Musico riservato' may, however, mean no more than a special musician, that is, one who is 'reserved' for special purposes, and it is unlikely to have any connection with *musica reservata*.

On the other occasions when the words *musica reservata* appear in contemporary documents the texts explain no more than do those discussed above, either about the technical character of compositions or about their performance. According to some of these sources *musica reservata* was in the 1550s both a new and a controversial kind of music, clearly distinguishable from other contemporary repertories. Georg Sigmund Seld, an imperial vice-chancellor resident in Brussels, was commissioned to find musicians in the Netherlands for the chapel of Duke Albrecht V of Bavaria, his former sovereign. In a letter of 22 September 1555 (Crevel, 295) Seld recommended to him Philippe de Monte, describing him as 'incontrovertibly the best composer in the whole land, especially in the new manner and "musica reservata"'. Even though the terms 'new manner' and 'musica reservata' cannot necessarily be equated, Seld's remark on the replacement of Cornelius Canis by Nicolas Payen as imperial Kapellmeister seems to indicate the relative novelty of the fashion: 'and so "musica reservata" will become still more the fashion than heretofore'. Seld's statement that 'Canis could not well reconcile himself to it' provides sufficient grounds for thinking that *musica reservata* was not greeted with universal approval. Novelty and controversy are also apparent in Taisnier's comments: in the passage quoted above, the terms *musica moderna*, *musica nova* and *musica reservata* are all used to mean the same thing. Taisnier's objection to this new music becomes clear in the course of his declarations. He sharply attacked the way the 'moderns' contravened the rules of traditional modality, their disregard for the intricacies of mensural theory, their use of certain figures (*semiminima* runs, canons and repetitions) to express the sense of the text and their new notational techniques. What Taisnier missed in the way of complex mensural practice in modern compositions and what he complained about in part-writing were precisely what Coclico praised in his *Compendium musices* of 1552 as the new musical ideals: the rejection of mensural subtleties and the rise of a text-setting style that laid greater emphasis on the content of the text. There are, however, difficulties about Coclico's declaration in the *Compendium musices* that he wrote his treatise 'in order to call to light again [*in lucem revocare*] this music that they ordinarily refer to as *reservata*'. This passage suggests a revival of an ancient

musical practice that had fallen into disuse, but such an interpretation is highly suspect in view of the humanists' fondness for images of revival and restoration. The words *musica reservata* also appear on the title-page of Coclico's *Consolationes piae*, a collection of motets dating from 1552 (ed. in EDM, 1st ser., xlii, 1958). The pieces reveal in fact a tendency to extreme word-painting, and some of the motets, with their extensive use of accidentals, have links with the similar chromatic experiments in some of Josquin's work. Coclico claimed to have been taught by Josquin and to be handing on his compositional practice and thinking.

Seld had mentioned *musica reservata* earlier in 1555 (letter of 28 April; Crevel, 294), reporting that he had invited a singer named Fux to his home with others after an audition: 'As we sang all sorts of "reservata" and music unknown to him, I consider that he is secure enough in all of them so that he, as all the others say, can compare favourably with any alto of the imperial chapel'.

An explanation of the word *riservato* to mean a complicated manner of composition seems to be suggested by a passage from Antonio Brunelli's *Regole et dichiarationi de alcuni contrappunti doppii* (Florence, 1610), in which he referred to 'regole piu riservate e recondite'. Although additional confirmation of this interpretation of *reservata* can be inferred if one includes among Ballestra's 'etlicher reservata' the elaborate, two-text homage motets in his *Sacrae symphoniae* (Federhofer, 1952, 1957) it is quite possible that, by associating *riservato* with *recondito*, Brunelli was using the word in a different, more general, sense. Whether it is possible to equate 'osservata', which occasionally occurs, with *reservata* remains questionable (see Sandberger, Crevel, Meier in *MGG1* and *ReeseMR*). It is perhaps misleading to mention here the words 'reservato ordine' found in Vincenzo Ruffo's *Opera nova di musica intitolata Armonia celeste* (Venice, 1556); they may mean no more than 'restrained orderliness' (see Osthoff, *EinsteinIM*, Palisca).

2. Modern interpretations. As they have gradually become known in musicological circles, these sources have given rise to various contradictory interpretations. Many musicologists, accepting Quickelberg's definition, have been of the opinion that *musica reservata* is music with heightened expressiveness, presenting the text to the listener with a greater intensity, although they have been unable to agree on any specific devices that might have been cultivated to this end (Sandberger). In this connection, the relationship between *musica reservata* and rhetorical figures has been examined in various ways (Brandes, Unger, Meier, Leuchtmann). Others have understood *musica reservata* as music that is restrained in its expression (Bernet Kempers), as music that is characterized by its restraint in the use of figuration (Ursprung) or as a musical style with improvised ornamentation (Huber). It has also been linked occasionally with what is known as mannerism in music (Palisca, Hucke). Later research (e.g. that of Meier, *HMT*) has stressed sociological aspects that had already been considered occasionally by Lowinsky and others. These authors agreed that *musica reservata* was reserved for a particular section of the public, whose members regarded themselves as connoisseurs. Lowinsky held that view because of his interpretation of the passage from Vicentino discussed above, Federhofer (1952, 1957) did so on the grounds of the description of works in *reservata* style in Ballestra's publication, while Meier (*MGG1*) stressed the musical education of that particular class.

Thus *musica reservata* does not appear to be characterized by a single musical technique, but rather by many factors, namely by 'the use of unusual means, by striking modulations, lavish use of chromaticism, enharmonic changes, *musica ficta*, affected artistic counterpoint or mannerist and eccentric traits' (Federhofer in *RiemannL12*), or else by 'special refinements in its musical structure, such as the intensive portrayal of the imagery and affect of words, the use of chromaticism or else just complex contrapuntal structures' (Meier in *MGG1*). This interpretation of the term *musica reservata* has the advantage that contemporary statements that may appear contradictory can be related to a single (if somewhat unspecific) concept of a relatively exaggerated means of expression. The question whether *musica reservata* is 'a term whose significance has been overestimated' (Federhofer in *RiemannL12*) is one that can be answered satisfactorily only when a definitive interpretation of the term is reached. Recent research accepts that this is a problem which is still open-ended and which will perhaps never be finally resolved.

ALBERT DUNNING

Musica Reservata (ii). British early music ensemble. It was founded in the mid-1950s by the writer and broadcaster Michael Morrow, the conductor and harpsichordist John Beckett, the recorder player John Sothcott and the countertenor Grayston Burgess, and was directed by Morrow. His own preference was for a harsh-toned and stark approach, modelled to some extent on eastern European folksingers and embodied most strikingly in the singing of Jantina Noorman. Musica Reservata gave its first public concert at Fenton House, London, in 1960, but its greatest influence was perhaps not felt until 1967 on the occasion of its first South Bank concert: this was at a time when performers of early music were beginning to draw large audiences but favoured a more gentle and romantic sound, and the impact of Musica Reservata in the following years led to a widespread preference for a more direct and aggressive manner of performance. This resulted largely from Morrow's extreme approach – at least in the early stages – and over the next ten years Musica Reservata remained at the centre of substantial controversy while continuing its innovatory approach to historical authenticity. The group made many records, among which particular mention should be made of two containing French and Italian dance music of the 16th century; they reflect Morrow's own intensive research into that repertory and the nature of its transmission.

DAVID FALLOWS

Music Association of Ireland. An organization founded in 1948 to promote the performing arts in Ireland through lectures, workshops and concerts, and to encourage composers and performers. It has arranged several commemorative festivals and organizes the Dublin Festival of 20th-Century Music (from 1969). It has formed several affiliated organizations: chamber music groups, the Composers' Group, the Irish Youth Orchestra and a programme of school concerts. The *MAI Music Diary* (originally called *Counterpoint*) is published monthly.

Musica Viva Australia. Australian chamber music network. Unrivalled in the thoroughness with which it serves a single country (with more than 2000 concerts annually), the network presents ensembles in subscription seasons in Australian capital cities and elsewhere and in regional and school touring. It was founded in Sydney in 1945 and initially funded by a Romanian-born Viennese-educated emigrant musician and inventor, Richard Goldner, as a consortium of string quartets (modelled on the rehearsal practices of Simon Pullman in Vienna), later comprising a core membership of piano (Maureen Jones) and four strings (with Robert Pikler as first violin). The organization then ran into financial difficulties, suspended its activities in 1951 and was revived in 1955 as an touring vehicle for established and independent ensembles, beginning with the Pascal and Koeckert quartets. Its subscription seasons in Sydney, drawing on much voluntary support, prospered and extended to other capital cities under the honorary stewardship of Charles Berg and Kenneth W. Tribe, with Goldner continuing as artistic director for nearly two decades and Regina Ridge as its dedicated manager. It has taken most of the leading international chamber ensembles to Australia for well-organized and extended tours, sponsored inter-state tours by groups based in Australia, and organized tours abroad for many Australian ensembles, often with support from the Federal Department of Foreign Affairs and Trade and the Australia Council, as well as commissioning new works from Australian composers. A number of the most capable of Australian music administrators have filled the office of general manager. Musica Viva Australia has continued to assemble large audiences for major concerts by instrumental and vocal ensembles of many types, including early music groups and modern ensembles led by Reich and Glass, and has supported extensive patterns of regional touring. Since 1981 Musica Viva has developed a remarkable programme of touring in schools, reaching all states and territories by 1997. In that year this programme toured 27 groups (often working in styles far removed from the traditional chamber music repertory), who gave 1929 performances in 1101 schools (where visits were prepared in collaboration with teachers) to audiences estimated at more than 320,000. (M. Shmith, ed.: *Musica Viva Australia: the First Fifty Years*, Sydney, 1996)

Music Corporation of America. *See* UNIVERSAL MUSIC GROUP.

Music Critics Association of North America. An association of music critics in the USA and Canada who review for newspapers, magazines and broadcast media. An outgrowth of discussions between critics and conductors during an American Symphony Orchestra League symposium in 1952, the association was inaugurated by a three-year series of workshops funded by the Rockefeller Foundation and sponsored by the New York Music Critics Circle, the New York PO and the ASOL. Since its incorporation in 1957 it has sponsored annual courses for younger professionals and senior critics in an effort to promote high standards of music criticism, encourage educational opportunities and increase general interest in music. Past presidents Miles Kastendieck and Irving Lowens as well as Paul Henry Lang, Virgil Thomson, Paul Hume and Harold Schoenberg have been elected to life membership. The association publishes a quarterly newsletter.

RITA H. MEAD/R

Music dealers and antiquarians. The study of the retail distribution of music, both in and out of print, has been largely untouched by the music historian. Few of the

major studies on important music publishers have mentioned the methods used to distribute their publications to the public.

1. Music dealers and collectors to 1800. 2. Auction and trade catalogues to 1800. 3. Music dealers and antiquarians after 1800.

1. MUSIC DEALERS AND COLLECTORS TO 1800. From the beginning, music dealers were inseparably linked with the music publishers. The manuscript scriptorium and the early printing house each served as the distributor for the goods that it produced. By the early 16th century an international web united the book trade of Europe, so that many of the publisher-dealers in the major centres strove to have an international selection subject to the vagaries of politics and the difficulties of transport. Moreover, in order to sell the average impression of 1000 copies, it was necessary for the 16th-century printer to arrange for the export of his publications. The international book fairs held first at Lyons and Frankfurt and later at Leipzig provided opportunities for this. The fair catalogues, the earliest trade bibliographies, were doubtless as useful to dealers then as such catalogues are today. In addition many publishers must have issued their own lists in an effort to distribute their publications. Unfortunately none survives earlier than the two catalogues of GIACOMO VINCENTI and Gardano issued in Venice in 1591.

If the printer and the publisher were but rarely separable in the first century of printing, the publisher and the dealer never were. The 17th century maintained this tradition. The one important development was an ever-increasing stock of other publishers' issues available for sale at any publisher-dealer's shop. Foreign imprints on sale often reflected political alliances; for instance, the great book fairs of Leipzig and Frankfurt did not have as much influence on the music available in the London shop of JOHN WALSH (i) as the strong English trade ties with Amsterdam. One method used for financing publication was to sell shares in the enterprise; this also served as an aid for the distribution of books to dealers, although usually on a fairly local level. Several publisher-dealers would subscribe and on publication receive a proportional number of copies. Music was also sold on subscription to private individuals. This method of distribution also served as a means of financing the publication. The benefit to the subscriber lay in the lower price he paid. This marketing method was fairly common in England in the early 1700s and in Germany in the latter part of the 18th century.

Generally speaking, until the end of the 17th century dealers had only new publications for sale. Little antiquarian interest was expressed by music collectors. One should not, however, discount the role collectors played in influencing the direction of publishing and selling. Surely such avaricious acquisitors as Fernando Colón, João IV of Portugal, Johann Heinrich Herwart and later Samuel Pepys could not have amassed such rich collections without the assistance of music dealers. But they usually collected contemporary music. A few retrospective bibliographies were issued. *La libraria* (1550/51) by Antonfrancesco Doni and Andrew Maunsell's *Seconde Parte of the Catalogue of English Printed Books* (1595) both contain lists of music publications. In 1592 Georg Willer published a list of the music publications of the preceding 28 years. GEORG DRAUDIUS issued two similar catalogues in 1611 and 1625 in which all of the titles have been translated into Latin, causing considerable confusion to successive generations of bibliographers. In 1653 John Playford (i) (*see* PLAYFORD (1)) published *A Catalogue of All the Musick Bookes ... Printed in England*, a list which contains most of the major publications of the first half of the century.

Evidence of interest in antiquarian music, that is, out-of-print or generally unavailable items, can be observed among collectors of the 18th century. Charles Burney, the intrepid traveller and music historian, often commented in the diary of his journey on the problems of seeking out the rare and unusual publication. Burney also admitted to a book collector's vice: 'I went into la rue St Jacques (a long street filled with booksellers) not so much to purchase books as to collect catalogues to examine at my leisure'. He also remarked on the lack of specialized music dealers in towns that had no music publishers, a confirmation of the link between these two trades. But specialists in music were certainly not the only suppliers with whom Burney dealt, for he found 'old authors on the subject of music ... and as to the new, I met with many that I was unable to find elsewhere', in the shops of the general booksellers of Venice.

Burney also found in Italy another collector who shared his interest in the historical: Padre GIOVANNI BATTISTA MARTINI. Documents in Martini's library reveal many of the problems and practices of the collector in the 18th century. His friends were always on the lookout for items that might interest him, even those who lived in other countries, such as the German music historian and collector MARTIN GERBERT. On one occasion Martini exchanged copies of his own publications for a collection of some now invaluable Petrucci prints.

2. AUCTION AND TRADE CATALOGUES TO 1800. Begun in its modern form in Holland in the late 16th century, the book auction had spread to France, England and northern Germany by the end of the 17th century. It is one of the earliest indications of a developing historical awareness of books. Auction sales devoted exclusively to musical items have always been very rare, but those that have occurred have often been important. One of the earliest was an anonymous sale held at Dewing's Coffee-House, London, on 17 December 1691. The catalogue (*GB-Lbl*) contains a listing of an astonishing anonymously assembled collection of music, much of it Italian and mostly dating from the early decades of the 17th century.

Auction sales were not popular with all dealers. Henry Playford had already abandoned this method by the time of the Dewing sale, for he remarked on the title-page of his 1690 catalogue that this collection was:

> formerly designed to have been sold by way of Auction but the Reason of its being put off was, That several Gentlemen, Lovers of Musick living remote from London, having a desire for some of this Collection and could not be there, they are here set down in Order, with the Rates, being lower than could be afforded otherwise.

Playford's reasons are rather curious; many of his contemporaries dealt with the problem of out-of-town clients by providing bidding agents in the manner still employed in the sales room today. Furthermore, increased prices could only benefit the seller. Playford did not entirely divorce himself from the auction room. An advertisement for one of his new publications appeared at the end of the Dewing sale catalogue and his name was often among those dealers from whom copies of catalogues were available before an auction sale.

Burney's compatriot, collector and rival historian John Hawkins preserved several other catalogues; for example, in the *General History* he reproduced the contents of the catalogue for the THOMAS BRITTON sale (6–8 December 1714; the original catalogue was presumably destroyed in the fire in Hawkins's library in 1785). Britton was considered an extraordinary man by his contemporaries. According to Hawkins, he was a friend of John Bagford, the 17th-century amasser of an important collection of materials on the history of printing (now in *GB-Lbl*). Together they agreed to try to salvage any old manuscripts that they found. Britton's large music collection reflects very clearly the programmes of chamber music performed at the musical concerts that he sponsored.

The music retail trade also developed. Publishers recognized a growing market for tunes from operas and for chamber music and keyboard works of various kinds which could be played in the home. The selling of this material remained largely in the domain of the publisher-dealer, but he expanded his shop and improved his catalogues to assist the prospective buyer in making his selection. The justly famous Breitkopf catalogues underscore the vastness of some publisher-dealers' undertakings. The attention that Breitkopf paid to publication details and the large stock of scores available in manuscript copies indicate his intention to reach a larger clientèle than just the musically inclined population of Leipzig. A foreign audience may also help to explain his introduction of thematic incipits into these lists.

Breitkopf was not alone in issuing catalogues. Most of those issued by other dealers are not thematic and many reflect an appeal to a local clientèle. The Leuckart catalogues are excellent examples. They contain a repertory consisting mainly of printed chamber music published in northern and central Europe, in contrast to the Breitkopf lists, which often include imprints from more distant English and Parisian publishers. In German-speaking lands in the late 18th century there is evidence, particularly in newspaper advertisements and subscription lists, of musicians functioning as part-time music dealers: for example, some subscription lists in works by C.P.E. Bach indicate composers purchasing multiple copies, which usually means that they intended to resell them. Another example is the catalogue of the composer, publisher and dealer J.J. Hummel.

Trade relationships between publishers expanded the availability of music publications throughout Europe and into North America. Lack of international copyright conventions meant that in order to protect works from piracy they had to be published simultaneously in each country. Agents, such as Probst, in other cities often worked on behalf of publishers to identify promising new works they might wish to add to their catalogues.

The non-thematic catalogues, whether French, English or German, often closely resemble the Leipzig book fair catalogues of the time. The musical contents of these later Leipzig trade lists have not been adequately investigated, nor has the role of these fairs in the dissemination of music been studied. Clearly they are the direct forerunners of the important Whistling–Hofmeister series of classified trade publications which served to alert dealers to new publications and today aid in the identification of 19th-century music publications.

Another means of making music available to the public was the circulating library. Catalogues of their collections began to appear in the late 18th century. Many of these enterprises were run by publishers, some of whom charged an annual subscription fee which allowed the member to borrow a set amount of material during the course of a year. There were penalties for overdue and damaged items and sometimes rewards for fastidious borrowers. The catalogues tempted the subscribers with promises of new additions to the stocks, some of which were quite substantial: one catalogue advertised upwards of 65,000 items. This practice seems to have been fairly widespread and lasted into the early 20th century.

In mid-18th-century London, several firms of booksellers dealt largely in out-of-print materials. These dealers, Osborne, Payne, Wagstaff and Evans, issued numerous long catalogues notable mostly for the quantity of material amassed and for the uniformity and low level of the prices. Doubtless these sales enriched the music collections of Pepusch, William Boyce and many others. The lack of specialized catalogues and the evenness of the prices indicates that no true antiquarian market yet existed.

3. MUSIC DEALERS AND ANTIQUARIANS AFTER 1800. The 19th century witnessed a developing interest in music both newly published and of earlier times. Sales of pianos rose. Antiquarian interest manifested itself in the production of bibliographies and the rise of the scientific study of music. It is hardly surprising that the period that witnessed the publication of the works of Forkel, Coussemaker, Eitner and Fétis should have required specialized dealers. As the Romantic movement found its first roots in Germany, so too did the first specific music antiquarian lists come from there.

In the mid-19th century the character of auction and antiquarian bookdealers' catalogues underwent a transformation. The descriptions of items to be sold became more historical, and much more attention was paid to detail. A number of German antiquarian dealers began to issue catalogues of music. Some of these were published in conjunction with the dispersal of specific collections. The catalogue of the music collection of A. Westrow compiled by the Berlin bookseller R. Friedländer & Sohn in 1853 is but one example. Other dealers were issuing catalogues of composite collections: for instance, L.E. Lanz of Weilberg issued a catalogue in 1854 entitled *Verzeichnis einer Sammlung antiquarischer Musikwerke*.

One of the most active firms was the house of List & Franke in Leipzig. Shortly after its founding it offered for sale no fewer than five important German collections of music. The descriptive notes are in French rather than German, highlighting the international attention paid to such sales. The use of French was not unique to these German catalogues; indeed, many of the 18th-century English catalogues had French or Latin prefaces. The same period witnessed the establishment of one of the most influential of all music antiquarians, LEO LIEPMANNSSOHN. His firm, founded first in Paris in 1866, reopened in Berlin in 1874 and under his successor, Otto Haas, ultimately moved to London where it still flourishes.

In the early 19th century American music dealers opened their shops with a stock consisting mainly of musical instruments and domestically published music. As in Europe most music dealers were also publishers and some, instead of relying on postal orders, bravely opened retail outlets in several cities. The Board of Music Trade of the USA, founded in 1855 and a precursor of the Music Publishers' Association of America, was an organization

dedicated to protecting the interests of American music publishing. It issued a catalogue of publications (1870), intended as a tool for the teacher and the amateur as well as the dealer. Music could also be found printed in the popular press and as inserts in magazines.

Most American music antiquarian firms were founded after World War II when the rapid growth of music departments made university libraries a ready market for out-of-print materials. But the demand for some titles soon exhausted the supply and today a dealer who formerly sold exclusively antiquarian material will also stock reprints and current imprints; some have also entered the reprint field themselves. As in Europe not all dealers having rare music materials restrict their trade exclusively to music.

The music trade continues to flourish, although the sale of both printed music and musical instruments has been profoundly affected by the omnipresence of the sound recording. Where music played at the piano used to provide access to favourite tunes and popular music, today this access is provided by recordings. Publishing house outlets (some selling works issued by many publishers beside their own imprints) and independent music shops co-exist. Imprints, published in one country but to be sold in another, are often assigned to one publisher or dealer who functions as the distributor. Confusion is caused by a rapid turnover in assignees. The implementation of the recently developed International Standard Music Number may help the music trade to distribute music publications more efficiently.

LENORE CORAL

Music [musical] **drama.** Term used frequently throughout the history of music for a dramatic work with music, and particularly one in which the music plays a primary role. 'DRAMMA PER MUSICA' (or 'dramma in musica') is a designation used in Italy from the early 17th century and also in Germany during the 18th; Handel, in 1744, described *Hercules* as a 'musical drama'. The term has been found convenient by composers and others anxious to escape the more specific term 'opera'.

The term is generally used to distinguish Wagner's works from *Das Rheingold* onwards, both from his own earlier operas and from those of other composers, though it was not Wagner's own designation. In his theoretical essays of 1849–51, where the projected new genre is outlined, he used terms such as 'drama', 'drama of the future', 'the complete work of art of the future' ('das vollendete Kunstwerk der Zukunft'), 'the universal drama' ('das *allgemeinsame* Drama') and, of course, *Gesamtkunstwerk*. Wagner himself continued to use various terms: *Tristan* and *Meistersinger* are often called simply 'operas' in his writings (though the former was formally designated 'Handlung', i.e. 'drama'), while the *Ring* and *Parsifal* were called respectively 'Bühnenfestspiel' ('stage festival play') and 'Bühnenweihfestspiel' ('sacred stage festival play'). Wagner further used the expression 'musikalisches Drama', and in the essay *Über die Benennung 'Musikdrama'* (1872) suggested that it was this term that had been corrupted into 'music drama'. The latter, however, he rejected, on the grounds that it attempts to fuse disparate entities: music is an art while drama is an 'artistic act'. Hence the formulation 'acts of music made visible' ('ersichtlich gewordene Taten der Musik') proposed (only semi-seriously) for the new genre. Wagner ended the essay by inviting suggestions for an appropriate designation.

BARRY MILLINGTON

Music education, classical.

1. Greece. 2. Rome.

1. GREECE. The earliest evidence concerning music instruction is in the Homeric poems and is both scanty and puzzling. In the *Odyssey*, HOMER used two bards as characters: Phemius of Ithaca, who claimed to be 'self-taught' and then added 'but a god has inspired ways of song of every kind in my heart' (xxii.347–8), and the Phaeacian Demodocus of whom Alcinous remarked that 'the god bestowed song on him'. Later in the poem Odysseus compliments Demodocus with the conjecture that either the Muse or Apollo had taught him (viii.44, 488). Such references may have provided Homer with a way of contrasting the individual judgment evident in his compositional skill with the mere reconstituting of traditional narratives by bards of his own time, men who depended heavily on techniques acquired from training. Yet there must have been a professional tradition that enabled men to perform a great variety of heroic songs accurately, with expert knowledge (viii.489, 496; xi.368), and instruction must have been a highly important part of tradition. Although Homer did not acknowledge these antecedents, his own poetry testifies to their existence.

Only one passage in the *Iliad* bears on the question of music instruction. When the envoys of Agamemnon seek out Achilles, they find him playing a lyre and singing of the exploits of past heroes (ix.186–9). The splendidly ornamented instrument belongs to him only as part of the spoils of war, but he can play it and sing to its accompaniment. Although Homer offered no explanation of how such abilities, which are not treated as exceptional,

may have been acquired, he related that Achilles had been entrusted as a child to the tutelage of Phoenix, an exile befriended by his father Peleus (ix.438ff), and such associations of a younger man with an older one were to characterize Greek society and education for as long as these remained aristocratic. There is a mythical counterpart in the tradition, frequent in sources after Homer (e.g. Pseudo-Plutarch, *On Music*, 1145e, 1146a), that Achilles learnt music from the centaur Chiron, who is named in the *Iliad* (xi.832) as Achilles' teacher in the use of healing drugs, and it was for a knowledge of these *pharmaka* and of music that he was especially celebrated in later literature. Hesiod, writing probably in the last part of the 8th century BCE, already described the young Achilles as being in the centaur's care (*Catalogue of Women*, ii.100–03 [the attribution of this work to Hesiod is, however, doubtful]; cf *Iliad* xvi.140–44, on the spear of Achilles as Chiron's gift), and Homeric and Hesiodic references to Chiron combine to give a clear impression of his teaching methods whereby pupils spent the whole of their childhood and youth with him, and he was responsible for their total education including music. Although for the sake of the story of the Wrath he was replaced by Phoenix, both figures foreshadow that of the later *paidagōgos*, or 'tutor' in the literal sense of protector, and both represent an acceptance of the idea of sending young children away from home for their education. The way had been made less difficult for the eventual establishment of schools.

During the 7th and 6th centuries BCE, when choral lyric developed and monody appeared, composer-poets brought new techniques from Asia Minor to the Greek mainland and particularly to Sparta, for a time the cultural centre of the Mediterranean world. The one approximation to education in a modern sense was the training of choruses for the many religious festivals. Usually this would have been done afresh for each occasion. Instances of special training, which may have been continuous, are also known, and these involved choruses of young girls who had been schooled in singing and dancing by such master teachers as Alcman, who had come to Sparta from Sardis, and Sappho of Lesbos. Choric instruction given to groups of young citizens must have been still another factor in the development of schools, which incorporated the old aristocratic scheme of individual relationships but were also compelled to go beyond it. The rehearsal instrument was probably the lyra, as confirmed by vase paintings in the later period. During the central classical age, after Sparta had again become a barracks state, children still received training in singing, lyra playing and dance. The Spartan educational system was militaristic like that of Crete, and aesthetic considerations were unimportant compared with the demands imposed by the city-state.

The master-pupil relationship of individual instruction in instrumental techniques may, as musicographers claimed, have existed from very early times. It had attained great eminence by the 5th century BCE, when the Theban school of aulos playing introduced the profoundly influential element of virtuoso performance. In a wider context Pindar said, 'Famous Thebes taught [*epaideusan*] me to be no stranger to the Muses' (Maehler, frag.198a**1). Here the verb suggests a central concept, that of *paideia*, which is broader and far less formal in meaning than 'education', and which may be best translated as 'culture' (*see* Paideia). It parallels *mousikē*, which denoted a unity of sung text and instrumental accompaniment considered as the accomplishment of freeborn men. A third term, which was to become important as a connection between the other two, is *ēthos* (*see* Ethos). Belief in 'character' formed by mode and rhythm working together with text (*logos*) provided the central rationale for musical training throughout the Hellenic period.

During the early decades of the 5th century BCE, signs of strain and division had begun to appear and are evident in Pindar's poetry. Although thoroughly professional, Pindar believed in the old aristocratic tradition so strongly that he could honour what men (his reference is clearly to lyric poets) knew through their nature, what was 'in their blood', and not simply because others had taught it to them (*Olympian*, ii.86–7). That tradition lost its force as the nobility increasingly gave way to a rising and ambitious middle class, and by the first half of the century Athenian families had begun to send their young sons to schoolmasters. For one of the three divisions of the elementary curriculum pupils would go *eis kitharistou* (Aristophanes, *Clouds*, 964), 'to the kithara teacher'. Although the aulos became popular for a time after the Persian wars, it disappeared from the curriculum in about 440 BCE. In some instances at least, girls received a training comparable to that of boys. Thus for the first time something like systematic schooling in music was instituted, although the arrangements were voluntary and probably received no state support. A passage in Plato's *Crito* (50d–e) may indicate that attendance had become compulsory by the end of the century, but this is far from certain. More is known about the nature of the instruction itself. The *kitharistēs* taught lyric poetry in addition to the techniques of lyra playing. It is probable that originally he was the only teacher, the *grammatistēs* and *paidotribēs* being added later to teach 'letters' and to provide physical training respectively. The former taught epic and gnomic poetry, which was performed without musical accompaniment but involved a good deal of expressive gesture; the latter had an aulete in attendance for correct timing in the exercises.

Attic vase paintings provide the best and almost the only substantial evidence of the kithara teacher's methods. Apparently instruction was always individual, although other pupils were often present at another's lesson. Both teacher and pupil had a lyra and played simultaneously (see illustration). In depictions of aulos playing, sometimes only the pupil is shown with the double pipes, while the

Linos and Iphikles playing the lyre at a music lesson: detail from a Greek skyphos by the Pistoxenos Painter, c470 BCE (Archäologisches Landesmuseum, Schwerin)

teacher accompanies him on a BARBITOS and apparently sings as well. Neither singing nor dancing was taught as a separate subject. The methods of imitation and repetition that characterized ancient education must have provided the fundamentals of procedure, and the use of mnemonic techniques is likely. Systems of notation seem to have had no importance for music education during the Hellenic age.

It was this system that Aristophanes (see his lively description in the *Clouds*, 961–83) and later Plato (*Protagoras*, 329a4–b6) described as *hē archaia paideia* – 'the good old-fashioned training'. It is incorporated, with adjustments, into the educational system of Plato's ideal state (cf *Republic*, iii, 401d5–8), and individual warnings in both the *Republic* and the *Laws* (most notably vii, 812d1–e6) bear witness to the importing of virtuoso techniques even into school exercises. The problem was no longer merely one of displays on the aulos, since the former supremacy of chanted or sung text had been overturned by a group of radically innovatory composer-poets, the most famous of whom was TIMOTHEUS. This so-called 'new music' proved intolerable to conservatives such as Aristophanes and PLATO, who were concerned with paying tribute to the past. It is in the preoccupations of Aristotle and Isocrates that the shape of things to come can be discerned: the one gave a new respectability to pursuing musical and literary studies for the sake of cultured diversion (*Politics*, viii.5/1339a21–6, b14–15); the other made them secondary to the persuasive power of prose, using the term *philosophia* in place of *mousikē* and giving it the meaning 'rhetoric' (*Antidosis*, 181). Rhetorical studies, which had first gained prominence through the efforts of Sophists, now became the basis of Hellenic education. Nevertheless, practical training in music continued to be given at every level, and inscriptional evidence has survived from the Greek islands and the coastal cities of Asia Minor, especially Teos. Much less is known, even indirectly (as in Terence's grouping from the *Eunuchus*, 476–7), about Athens. The Teians had two types of lyre teacher, one for 'plectrum style' and the other for 'finger style', and yearly examinations in music. The curriculum included notation exercises (*rhuthmographia* and *melographia*, the latter also used in Magnesia), which were apparently a Hellenistic innovation. The twofold method of lyre teaching also appears in inscriptions from Chios and Cos. Civic performances, often competitive, of choruses or soloists continued to be held at Athens and elsewhere as late as the 1st century BCE. In general, however, music study during the Greco-Roman period was nothing more than a minor part of the curriculum of training colleges for ephebes, young men of 18 or older. Thus Plutarch (*Quaestiones conviviales*, ix.1.1) described it as taught at an Athenian gymnasium. There are isolated instances of ephebic choruses specially trained to sing in praise of a Tiberius or a Trajan, but the time when music had been a central cultural force had passed.

2. ROME. Livy (iii.44.6; v.27.1; vi.25.9) spoke of schools established at Rome, Tusculum and Falerii in the middle and at the end of the 5th century BCE, but if they existed, it is most unlikely that their curriculum included music. In spite of the example of the Greek city-states in southern Italy, Hellenic culture made no serious inroads into the Roman aristocratic way of life until the 3rd and 2nd centuries BCE, when elementary and secondary schools were set up on Greek models. Although little is known about them or the 'Latin' secondary schools added during the same period, scattered references (e.g. Cicero, *De oratore*, iii.23.87) indicate some teaching of singing, dancing and instrumental performance. The fact that Varro ranked music among the liberal arts (*see* VARRO, MARCUS TERENTIUS) does not (*pace* Hug, 890) constitute evidence that at the close of the Republic it was part of a rounded education, and so far as general schooling was concerned, it seems never to have been more than one of many optional subjects offered, in what can only have been a hasty and superficial manner, by the *grammaticus latinus*. Well-bred Romans of the Republic looked on music with more suspicion than pleasure. A highly developed sense of decorum made dancing particularly offensive, and a markedly practical approach to education allowed little place for vocal or instrumental training, although Cicero spoke with sincere admiration of skill in lyre playing as a mark of the Greek gentleman (*Tusculan Disputations*, i.2.4). Among the Romans of Cicero's period, a woman who valued her reputation could risk showing a certain measure of such skill, but not too much (Sallust, *Catiline*, xxv.2). The ability to perform remained, at best, at the modest level necessary for passive enjoyment in adult life. Such exceptional occasions as the public performance in 17 BCE of Horace's *Carmen saeculare* required the training of a chorus of freeborn singers, very much in the Hellenic manner. According to Livy (xxvii.37.7), choral performances of this kind went back to the year 207 BCE. Moreover, since about the end of the 1st century BCE various Roman men of letters, including Caesar and Cicero, had studied at the centres of higher education in Greece; since Rome had begun to acquire provinces within the Greek cultural sphere (Sicily, added in 227 BCE, was the first), cultivated young men had spent tours of duty in them. A number would have gone out already trained to some extent in writing poetry, and for some these experiences as students or aides-de-camp may have brought, or perhaps refined, the ability to make skilled musical settings of their lyrics.

Just as there appears to be no evidence that musical studies constituted a regular and important part of a Roman's schooling during the closing decades of the Republic, no broad pedagogical base is evident for the startling popularity of music as a cultivated skill among wealthy Romans of the empire, particularly among the emperors themselves. From Nero to the pseudonymous figures observed dispassionately or scornfully by the poets, these men and women required teachers, and the case of Pliny's wife, who set his verses to the lyre 'non artifice aliquo docente' ('without being taught by a professional'; *Epistles*, iv.19.4), is exceptional. Indeed some were willing to pay fees, rousing the notice of Martial (iii.4.8; v.56.8–9) and Juvenal (*Satires*, vii.175–7), and this cultivation of music, ranging from dilettantism to mania (Juvenal, vi.76–7, 380–97), had nothing to do with an educational system. Educators of the early empire came to value a practical knowledge of melody and rhythm principally for the contribution it could make to a mastery of rhetoric. Their attitudes are documented at length in Quintilian's famous treatise *Institutio oratoria*.

Thus the 'music' that patristic and medieval educators inherited as part of the Quadrivium bore the stamp of much Roman theorizing, but had mostly originated in the

harmonic ratios and music of the spheres of Plato's *Timaeus*: it was an abstraction wholly divorced from aural reality. The legacy of Roman educational theory was not musical, but literary and rhetorical. By the time of Alexander, the Greek *kitharistēs* had become unimportant in comparison with the *grammatistēs* and the *grammatikos*, who were responsible for primary and secondary training in literature, or with the *rhētor* who taught oratory. The duties of the secondary-school teachers of literature were duplicated by those of the *grammatici latini*, whose system of instruction set a pattern that was to prevail for 2000 years.

WARREN ANDERSON

Music Educators National Conference. Organization of music teachers and college students in the USA with members engaged in teaching at all educational levels. Founded in 1907 as a group of school music supervisors, it adopted its present name in 1934 and became affiliated with the National Education Association in 1940. The federation of MENC includes eight associated organizations representing band and choral directors, string, wind and percussion instructors, jazz educators, band and orchestra associations and black American music. Its programme includes conferences, commissions and projects to further music education. It sponsors the Historical Research Center at the University of Maryland, publishes a wide range of books, videotapes and other material about music education and produces the quarterly *Journal of Research in Music Education* (1953–) and its official monthly magazine, *Music Educators Journal* (1914–). In 1999 the MENC had about 88,000 members.

RITA H. MEAD/R

Musicescu, Gavriil (*b* Ismail, 1 April 1847; *d* Iaşi, 20 Dec 1903). Romanian composer, teacher and choirmaster. He began his musical instruction at the Theological Seminary of Huşi, and in the first years of the new Iaşi Conservatory of Music and Declamation he attended its viola, singing and theory classes. Having made his mark as choirmaster in Ismail, he received a bursary to study in St Petersburg at the conservatory and at the Imperial Chapel as a pupil of Huncke and N.I. Backmet'yev. On returning home he became professor and later director of the Iaşi Conservatory and conductor of the Metropolitan Choir, where he had sung as a student. He built up a new repertory of European religious and secular pieces and of his own music, and in his travels through the Romanian provinces he fostered a tradition of choral culture – with some difficulty, as he had to contend with critics who opposed the performance of folk music in public concerts. Other academic critics objected to his modal harmony, inspired as it was by folksong; and the church authorities criticized his palaeography of the old psalms and monodies and their harmonization. Musicescu may be regarded as a founder of the Romanian choral school and an early practitioner of modal harmony. His compositions make use of the variety of folksong – lyrical melodies, ballads, patriotic songs and romances – for chorus or solo voices. He also wrote two liturgies, some works for choir and cherubic hymns, which, as major choral forms, aroused new interest in music in Romania.

WORKS

Edition: *Opere alese de Gavriil Musicescu* [Selected works of Musicescu], ed. G. Breazul (Bucharest, 1958) [B]

SACRED CHORAL

Liturgical hymns: Imnele dumnezeescei liturghii [Hymns for the Divine Liturgy], op.1 (Bucharest, 1869); Imnurile dumnezeescei liturghii [Hymnal for the Divine Liturgy], op.3 (Bucharest, 1870); Imnele sfintei liturghii [Hymns for the Holy Liturgy], chorus, pf (Leipzig, 1900)

Psalms: Rînduiala vecerniei de sîmbătă seara [Saturday evening vespers], 1883 (Leipzig, *c*1883); Anastasimatariu (Leipzig, 1884–9); Rînduiala sfintei liturghii [Service of the Holy Liturgy] (Leipzig, 1885); 17 axioane intrebuinţate în serviciul Bisericii Ortodoxe [17 axions for the Orthodox service] (Leipzig, 1897); Catavasiile serbătorilor de peste an prelucrate [The katabasiōas of the feasts of the year] (Leipzig, 1899)

Înnoieşte-te noule Ierusalime [Renew thyself, Jerusalem], 1887 (Leipzig, 1900), B; 4 sacred concs., 2 in B; 3 cherubic hymns, 2 in B; other works in B

SECULAR VOCAL

12 melodii naţionale, arr. chorus, pf, op.31, 1889 (Leipzig, 1889); 25 cînturi [25 songs], unison vv, 1898 (Leipzig, 1898)

For 1v, pf: Rîndunica [The swallow], B; O, dacă n-ai nimic a-mi spune [Oh, if you have nothing to say to me], B; Hora de la Plevna [Plevna's round dance] (V. Alecsandri), op.17 (Vienna, n.d.), B; În grădină [In the garden] (I. Neniţescu), with vn, op.26, 1884, in *Arta*, ii/2 (1884)

INSTRUMENTAL

7 melodii, arr. pf, 1884, B; songs and romances, vn, pf

WRITINGS

Curs practic de muzică vocală (Leipzig, 1877)

'Cîteva cuvinte despre muzică' [Some words on music], *Lyra română*, ii/5–8 (1880)

'5000 lei noi' [5000 new lei], *Arta*, ii/11 (1884)

ROMEO GHIRCOIAŞIU

Music hall. A type of entertainment place which flourished in Britain during the late 19th century and early 20th, where drinking might be enjoyed together with musical

1. Weston's Music Hall, Holborn, opened 1857: unsigned lithograph, c1860

acts, in particular popular songs. Thus the term is also applied to the form of entertainment itself, and 'music hall' was the main source of popular song of its time. Similar forms of entertainment flourished in other countries, for example in the USA as 'vaudeville'. The term 'music hall' entered the French language to describe such night spots as the Moulin Rouge and Casino de Paris which flourished from the end of the 19th century as successors to the *cafés-chantants* and *cafés-concerts* (*see* CABARET).

1. Rise and decline of British music hall. 2. The music of the halls.

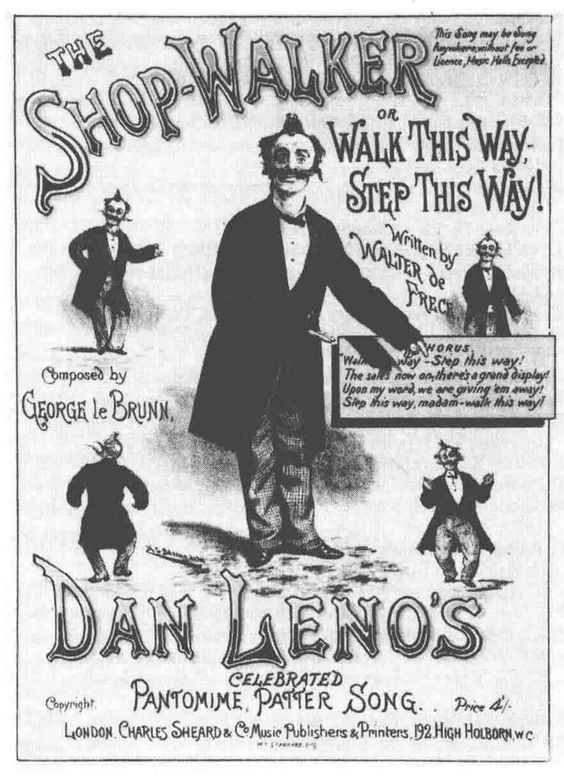
1. RISE AND DECLINE OF BRITISH MUSIC HALL. Convivial drinking and music-making have long been associated, and the ancestry of music hall may be found in the catch clubs which flourished widely in England from the mid-17th century and particularly during the late 18th. During the 1830s and 40s, London taverns with a music licence (such as the Mogul, Drury Lane) offered the working classes an evening of communal singing while they drank; in more Bohemian, all-male song and supper rooms (such as the Coal Hole, Strand, or 'Evans's late Joy's', Covent Garden) supper could be enjoyed to the accompaniment of singing which ranged as the evening progressed from popular ballads to coarse songs. The proprietor acted as host and chairman, and the clientèle joined in the entertainment. In the expanding suburbs there were also taverns offering entertainment for the local working class, such as the Eagle or Grecian Rooms in the City Road immortalized in the song *Pop goes the Weasel*:

> Up and down the City Road,
> In and out the Eagle,
> That's the way the money goes ...

With the taverns there grew up character singers who travelled from one establishment to another giving their acts several times in an evening, and the public taste for the entertainment they provided steadily developed. The term 'music hall' seems to have been first used in 1848 when the Surrey Music Hall opened in Westminster Bridge Road; the following year Charles Morton (1819–1904), later dubbed 'father of the halls', took over the Canterbury Arms in Lambeth and built a hall large enough for 700 people with a platform at one end. In 1851 the Mogul Saloon itself was refurbished as the Middlesex Music Hall, and other halls opened, such as Wilton's in Whitechapel, Collins's in Islington and Weston's in Holborn (fig.1). In 1856 Morton further enlarged the Canterbury, and in 1861 he opened perhaps the most celebrated of music halls, the Oxford, in Oxford Street.

The entertainment at these halls contained a wide variety of musical items, including ballads and other popular songs, 'nigger minstrel' acts, selections from popular operas and also comic turns and monologues (dramatic performances were forbidden under the terms of the licence). The audience sat at tables in the body of the hall, where they were served with drinks, and the chairman presided at his own table below or to one side of the platform. The audience participated by joining in the choruses of the songs and in verbal interplay with the chairman, himself often a retired performer. Entertainment increasingly gained precedence over convivial drinking, and it is significant that the Alhambra in Leicester Square was converted in 1860 to have a proscenium arch. In 1878 the London County Council sought to exercise control over the music halls by requiring a proscenium

arch and a fire curtain dividing the stage from the body of the hall and by confining liquor to bars at the back of the hall. Some famous haunts were unable to meet the requirements and were closed, for example Wilton's (though the building survives) and the Winchester (formerly the Surrey).



The music-hall business continued to expand as syndicates built large 'variety' theatres throughout the country. In London several theatres were converted to music halls and others were built for the purpose. The intimate nature of the old halls was disappearing and the chairman was often replaced by an indicator board identifying each act by a number. Performers required stronger projection of their voices, and better material, but remained able to travel up and down the country giving their acts.

The turn of the century represents the 'golden age' of music hall as a source of popular song. By World War I it was on the decline. The respectability bestowed by the first Royal Command Performance at the Palace Theatre in 1912 and the bestowing of knighthoods for services to music hall were fundamental incongruities; but neither these nor the final banning of drinks from the back of the auditorium in 1914 were more than incidental factors. Music hall in its expanded form had run its course as a popular type of entertainment in the face of such new attractions as the cinema, revue and (later) radio. Variety theatres were increasingly converted to other uses or demolished. The successors to the original music halls are found in working-men's clubs and night-club cabaret; relics of the style of entertainment appear in Christmas pantomimes with their chorus singing, 'principal boys' and 'pantomime dames'.

2. THE MUSIC OF THE HALLS. In the later variety shows, the forms of entertainment included such non-musical acts as conjurors or acrobats. But the basic entertainment remained musical, as it had been in the older genuine music halls. The opening programme of the Oxford included among its artists Santley and Parepa, and it was at the Canterbury Hall that excerpts from Gounod's *Faust* were first heard in England. Later the Alhambra and the Empire were famous for their ballets; they helped to revive a taste for the genre, then out of favour. At the Hippodrome in 1911 and 1912 Leoncavallo and Mascagni conducted their most famous operas, and Leoncavallo wrote his *Zingari* for that theatre, as did Leo Fall *The Eternal Waltz* and Emmerich Kálmán *The Blue House* (1912).

Popular songs, however, were the most typical product of the music halls. Dispersed throughout the country not only by the variety theatres themselves but also as sheet music, they mostly dealt with topical or everyday subjects. Neither verses nor music sought artistic merit; an appealing verbal phrase allied to a catchy musical one was quite enough, in the hands of a good artist, to make a successful music-hall song. The performer mattered as much as the song, and both were more important to devotees than the identity of the author of words or music. The music was at times obviously derivative, the words banal, the humour unsubtle. It did not matter, for example, that when Wilkie Bard sang 'I want to sing in op'ra' the tune that was quoted was not operatic but Arditi's *Il bacio*. The singers, though each having his individuality, often fell into such categories as the Cockney or coster singer, the blackened-faced 'coon', or the male impersonator.

The early music-hall stars, up to about 1880, were mostly male. Without the benefit of gramophone records and the ubiquity that the variety theatres were to give music-hall artists their names remain little known: W.G. Ross, Sam Cowell (1820–64), Harry Clifton (1832–72), Sam Collins (1827–65), Arthur Lloyd (1839–1904), Vance (1838–88), George Leybourne (1842–84), Harry Rickards (1842–1911), Harry Liston (1843–1929) and G.H. Macdermott (1845–1933). A few of their songs have remained familiar, for example Clifton's *Polly Perkins of Paddington Green*, Leybourne's *Champagne Charlie* and *The Flying Trapeze* and Macdermott's *We don't want to fight, but by Jingo if we do* (which added the word 'jingoism' to the English language). When the music hall entered its 'variety' phase women gained more prominence, and Nelly Power (1853–87) first sang *The boy I love is up in the gallery*, later taken over by the greatest of all music-hall singers, Marie Lloyd (1870–1922). Dan Leno (1860–1904; fig.2), who was also a celebrated pantomime dame, Little Tich (1868–1928; he gave the word 'tich' to the language) and George Robey (1869–1954) were stars of music hall who were primarily comedians, but the following, among the most celebrated of music-hall singers, may be cited along with the songs they sang: Charles Coborn (1852–1945: *Two lovely black eyes*; *The man who broke the bank at Monte Carlo*), Eugene Stratton (1861–1918: *Little Dolly Daydream*; *The Lily of Laguna*), Albert Chevalier (1861–1923: *My old Dutch*; *Wot cher!* or *Knocked 'em in the Old Kent Road*), Gus Elen (1863–1940: *It's a great big shame*), Vesta Tilley (1864–1952: *Jolly good luck to the girl who*

2. *Cover of the song 'The Shop-walker' by George Le Brunn, as sung by Dan Leno: lithograph by H.G. Banks*

loves a soldier), Harry Champion (1866–1942: *Any old iron*; *Boiled beef and carrots*), Harry Lauder (1870–1950: *I love a lassie*; *Roamin' in the gloamin'*; *Keep right on to the end of the road*), Vesta Victoria (1873–1951: *Daddy wouldn't buy me a bow-wow*; *Waiting at the church*), Florrie Forde (1874–1941: *Down at the old Bull and Bush*; *She's a lassie from Lancashire*), Hetty King (1883–1972: *All the nice girls love a sailor*), Will Fyffe (1885–1947: *I belong to Glasgow*) and Ella Shields (1879–1952: *Burlington Bertie from Bow*, itself a parody of another song, *Burlington Bertie*).

By comparison with the singers, the writers of the songs are rarely fêted, although some singers, such as Albert Chevalier and Harry Lauder, wrote their own material. However, certain composers may be singled out from the mass for the quality or in some cases the quantity of their contributions: Alfred Lee (*Champagne Charlie*; *The Flying Trapeze*), George Le Brunn (*Oh, Mister Porter*; *It's a great big shame*), Leslie Stuart (*Soldiers of the Queen*; *The Lily of Laguna*; *Little Dolly Daydream*), Fred Gilbert (*The man who broke the bank at Monte Carlo*; *At Trinity Church*), Felix McGlennon (*Comrades*; *Sons of the Sea*), F.W. Leigh (*Put on your tat-ta little girlie*), Charles Collins (*Any old iron*; *Boiled beef and carrots*), C.W. Murphy (*Has anybody here seen Kelly?*; *Hold your hand out, naughty boy*), H.E. Darewski (*I used to sigh for the silvery moon*; *In the twi-twi-twilight*) and J.W. Tate (*A broken doll*; *I was a good little girl*).

ANDREW LAMB

Musici, I. Italian chamber ensemble. It was formed in March 1952 by 12 students at the Accademia di S Cecilia, Rome, and consisted of six violins, two violas, two cellos, double bass and harpsichord, playing without a conductor. Toscanini described the ensemble as 'Twelve very capable lads of eighteen, a perfect chamber orchestra. I applauded them'. Concert tours in Europe, and later to the USA, Canada, Central and South America, South Africa, Australia and Japan soon made I Musici known outside Italy, and numerous recordings, which have won many prizes and awards, gained the group an even wider audience. Although their reputation was founded on music by Italian Baroque composers like Albinoni, Bononcini, Corelli, Locatelli, Scarlatti, Torelli and, in particular, Vivaldi, I Musici have also played and recorded works by Bach, Handel and Mozart, as well as music by 20th-century composers, including Barber, Bartók, Britten, Hindemith, Martin and Respighi. Until 1968 the leader of the ensemble was the violinist Felix Ayo, who also frequently appeared as soloist. The group has subsequently been led by Roberto Michelucci (1968–72), Salvatore Accardo (1972–7), Pina Carmirelli (1977–86) and Federico Agostini. Despite changes of personnel, I Musici's style has remained remarkably constant, with emphasis on brilliance, firmness of attack and a high level of discipline.

ELIZABETH FORBES

Musicians Benevolent Fund. A British institution founded by Victor Beigel in 1921 as the Gervase Elwes Memorial Fund. Elgar was president until his death. It was originally intended to assist young musicians, but in 1926 it was

renamed the Musicians' (later Musicians) Benevolent Fund and became a registered charity, aiming to provide financial relief for musicians in need. During World War II the fund was maintained by proceeds from the daily concerts organized by Myra Hess in the National Gallery, London. It maintains a convalescent home and residential homes for the elderly. An annual concert in aid of the fund is given in London on or around St Cecilia's Day.

□

Musicians' International Mutual Aid Fund. Fund created in 1974 by the INTERNATIONAL MUSIC COUNCIL.

Musicians' Union. British trade union. It was formed in 1921 by the amalgamation of the National Orchestral Union of Professional Musicians (founded 1891 and mainly London-based) and the Amalgamated Musicians' Union (founded 1893 in Manchester and Birmingham and later active throughout the provinces). The union's main aim is the improvement of the social and economic status of musicians, and with 33,000 members in 1995 it is the second largest musicians' organization in the world (after the American Federation of Musicians). It operates through negotiated agreements with such bodies as broadcasting organizations, opera houses, the British Phonographic Industry, the Association of British Orchestras and the Film Production Association. Its policy is to achieve the highest degree of organization in all areas of the musical profession, defined as 'those engaged in performing, teaching or writing music'. Instrumentalists constitute the greater part of its membership, singers usually being members of the British Actors' Equity Association, with which the union developed close links in the 1970s. It participates in several other organizations in order to achieve its objectives, such as the Trades Union Congress, the Federation of Entertainment Unions and the Performers' Alliance. A founder-member of the National Music Council, its experience in all areas of British musical life has made it an advisory body to organizations concerned with the musical profession, broadcasting, copyright etc. (*Grove5*, H.G. Farmer)

□

Music Library Association. An association founded in 1931 to promote the establishment, growth and use of music libraries in the USA. It encourages the collection of music and music literature, furthers studies in music bibliography and works for increased efficiency in library service and administration. It has developed a standard code for descriptive cataloguing of printed music and recordings and has initiated specialized education for music librarians. Past presidents have included Otto Kinkeldey, Oliver Strunk, Carleton Sprague Smith, Edward N. Waters, Harold Spivacke and Vincent H. Duckles. Its official journal, the quarterly *Notes* (begun in 1934), contains reviews of books, music, records, periodicals and electronic publications. The association also publishes a quarterly newsletter and a series of valuable indexes to composers' works.

RITA H. MEAD/R

Musico (It.: 'musician'). The Latin term 'musicus' was first used to distinguish the music theorist from a mere practitioner, 'a man who, by his reason, has engaged in the science of music, not in order to practise it but from a speculative interest' (Boethius, 6th century). Later, in its Italian form, the word came to mean a professional musician as opposed to an amateur, a sense that can be found as late as 1781 in Padre Martini's *Storia della musica*. The term was also used in the 17th and 18th centuries to refer specifically to the operatic castrato. However, during this period it also took on a new and increasingly derogatory sense. For example, P.F. Tosi, himself a castrato, referred to singers in his *Opinioni de' cantori antichi, e moderni* (1723) by such respectful terms as 'cantore', 'soprano', 'maestro' and even 'professore'; when he used 'musico', which he did rarely, he implied a mediocre singer. Similarly, J.A. Scheibe's criticism of J.S. Bach in 1737 was made all the more inflammatory by his application of the equivalent German term 'Musikant' to the composer. In his 1738 response J.A. Birnbaum complained that 'the hon. Court Composer is called the most eminent of the *Musicanten* in Leipzig. This expression smacks too strongly of the mean and low, . . . [for] there is hardly any difference between *Musicanten* and beer-fiddlers' (H.T. David and A. Mendel, *The Bach Reader*, 1966, p.237–52). In the first half of the 19th century the term – usually PRIMO MUSICO – was revived to refer to operatic male roles of a type that would formerly have been sung by castratos but were now written for women, usually in the contralto or mezzo-soprano range. *See also* PRIMO MUSICO and VIRTUOSO.

OWEN JANDER, ELLEN T. HARRIS

Music of the spheres. A Pythagorean doctrine postulating harmonious relationships among the planets governed by their proportionate speeds of revolution and by their fixed distance from the earth. Belief in a universe ordered by the same numerical proportions that produce musical harmonies is hinted at in surviving fragments of pre-Socratic Greek philosophers such as Anaximander and Parmenides. The Greeks attributed ideas about a harmonious universe to the 'Chaldeans' or Babylonians, from whom Jewish beliefs about an orderly cosmos hymning the praises of its Creator (expressed in the *Psalms*, the visions of Isaiah and Ezekiel, and the talmudic treatise *Yoma*) may also have been derived (for further details *see* MESOPOTAMIA). The relationships of Indian and Chinese cosmologies to those of the ancient Near East have not been determined.

PYTHAGORAS and his followers developed a series of analogies between musical consonances – derived from proportionate lengths of a stretched string – and natural phenomena. In Plato's *Timaeus* the creation of the World-Soul, a model for the physical universe, is accomplished through the use of Pythagorean proportions; duple and triple geometric series are filled in with arithmetic and harmonic means, as a result of which one can see 'the whole heaven to be a scale and a number' (Aristotle, *Metaphysics*). The musical scale thus produced is that of Pythagorean tuning, and the World-Soul is created through the use of a kind of celestial monochord.

As described in the *Timaeus* the cosmic scale is not actual music but the foundation for the Greek science of harmonics. In the myth of Er (*Republic*, 617*b*.4–7) Plato described the universe as a set of concentric rings (planetary orbits) on the surface of each of which a Siren sits singing; together they form a harmonious sound, after Plato's time interpreted literally as the music of the spheres – audible to but unnoticed by mortals who hear it from birth (*see* PLATO, §2).

The influence of these two Platonic myths was great and long-lasting despite Aristotle's rejection of a sonorous

universe in favour of his own silent, frictionless spheres (*On the Heavens*, ii.9; *see* ARISTOTLE, §2). In Neoplatonic commentaries, particularly those on Cicero's *Somnium Scipionis* (itself derived from the myth of Er), the planetary harmony of the Sirens was conflated with the Timaeus scale. ARISTIDES QUINTILIANUS extended cosmic harmony to include the sublunary elements (fire, air, water and earth), the seasons, the tides, the growth of plants, and – as a microcosmic mirror of the universe – man's growth and behaviour. PTOLEMY in his *Harmonics* distinguished between cosmic and psychic harmony; these categories became, in the Latin of Boethius, *musica mundana* and *humana*, to which was added the music played and sung by men (*musica instrumentalis*). The place of music in the medieval Quadrivium is a result of the central importance of neo-Pythagorean thought in late antiquity.

Jewish belief in angelic habitation of the universe, coloured by Gnostic angelology and given canonic standing in the 6th-century Dionysian hierarchies of angels (*see* JEWISH MUSIC), led to a belief in *musica celestis*, the angelic music seen in countless medieval and Renaissance paintings and combined with *musica mundana* in the blazing vision of light and sound of Dante's *Paradiso*.

Pythagorean ideas about cosmic harmony continued to be elaborated by Neoplatonists from Carolingian times until the end of the Renaissance. These ideas strongly influenced astronomers and astrologers, physicians, architects, humanist scholars and poets. There were occasional musical representations of planetary harmony; an example is the tableau *L'armonia delle sfere* designed for the Florentine *intermedi* of 1589.

Perhaps the last creative statement of the idea of the music of the spheres was made by Kepler (*Harmonices mundi*, 1619); but cosmic imagery of Pythagorean cast has persisted in the work of later philosophers (Leibniz, Schopenhauer), astronomers (J.E. Bode) and polymaths (Mersenne, Kircher). There are 20th-century writers such as Hans Kayser who might be called neo-Pythagoreans, and 20th-century musicians such as Hindemith for whom the music of the spheres has remained a vital if metaphorical concept.

Musicological Society of Japan (Jap. Nihon Ongakugakkai). Society founded in 1952 by Yoshiyuki Kato. It was formerly known as the Japanese Musicological Society. It endeavours to improve communication among musicological scholars in Japan and contributes to the development of musicology there. Its membership in 1995 was about 1330. In 1954 the society founded a journal, *Ongakugaku* (Journal of the Musicological Society of Japan), issued three times a year.

□

Musicology (Fr. *musicologie*; Ger. *Musikwissenschaft*, *Musikforschung*; It. *musicologia*).

I. The nature of musicology. II. Disciplines of musicology. III. National traditions of musicology.

I. The nature of musicology

1. Definitions. 2. Origins: musicology as a science. 3. Scope. 4. Historical and systematic musicology. 5. New trends.

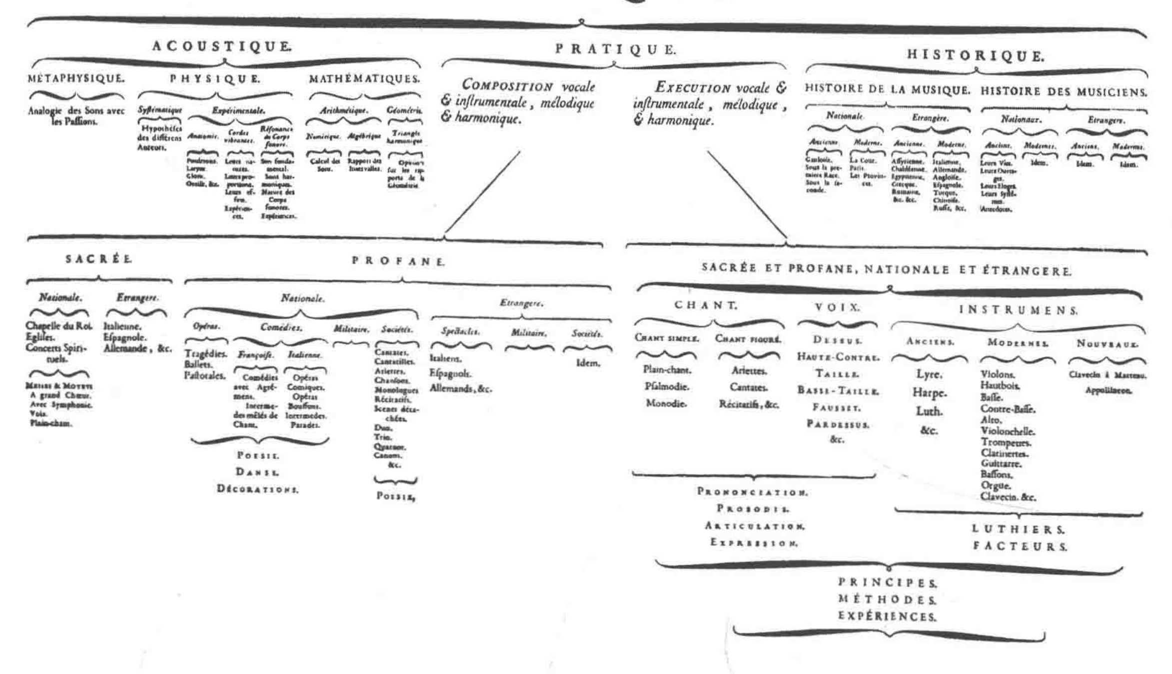
1. DEFINITIONS. The term 'musicology' has been defined in many different ways. As a method, it is a form of scholarship characterized by the procedures of research. A simple definition in these terms would be 'the scholarly study of music'. Traditionally, musicology has borrowed from 'art history for its historiographic paradigms and literary studies for its paleographic and philological principles' (Treitler, 1995). A committee of the American Musicological Society (AMS) in 1955 also defined musicology as 'a field of knowledge having as its object the investigation of the art of music as a physical, psychological, aesthetic, and cultural phenomenon' (*JAMS*, viii, p.153). The last of these four attributes gives the definition considerable breadth, although music, and music as an 'art', remains at the centre of the investigation.

A third view, which neither of these definitions fully implies, is based on the belief that the advanced study of music should be centred not just on music but also on musicians acting within a social and cultural environment. This shift from music as a product (which tends to imply fixity) to music as a process involving composer, performer and consumer (i.e. listeners) has involved new methods, some of them borrowed from the social sciences, particularly anthropology, ethnology, linguistics, sociology and more recently politics, gender studies and cultural theory. This type of inquiry is also associated with ethnomusicology. Harrison (1963) and other ethnomusicologists have suggested that 'It is the function of all musicology to be in fact ethnomusicology; that is, to take its range of research to include material that is termed "sociological"' (*see also* ETHNOMUSICOLOGY).

2. ORIGINS: MUSICOLOGY AS A SCIENCE. Until the second half of the 19th century, the study of music was regarded not as an independent discipline but as that part of general knowledge which gave theoretical handling to specifically

musical questions. It was Chrysander who in 1863 contended that musicology should be treated as a science in its own right, on a level equal to that of other scientific disciplines. The quantitative methods of natural science were brought to bear on music as a physical phenomenon by the ancient Greeks: the Pythagoreans studied number as the prime condition of musical sound, and numerical relationships as the underlying laws of harmony in music, mankind, and the spheres. This study continued throughout the Middle Ages as part of *ars musica*, itself part of the Quadrivium along with arithmetic, geometry and astronomy. Much later, in the 18th century, during the years spanned by the careers of Joseph Sauveur (1653–1716), Leonhard Euler (1707–83) and Ernst Chladni (1756–1827), attention was given to studies in acoustics and the physics of sound. These three men, significantly, were scientists by training: Sauveur and Euler mathematicians, Chladni a physicist. Similarly, in the 19th century many musical scholars were influenced by Hermann von Helmholtz (1821–94), an anatomist and physiologist, and Friedrich Carl Stumpf (1848–1936), both of whom worked on the psychology of hearing and sought to give tangible explanations to many aesthetic matters that had been considered intangible. Their work played an important part in a general trend towards determinism – a belief that all musical phenomena and experiences have attributable causes.

It was during this period that the German term 'Musikwissenschaft' came into use. Like the Latin term 'scientia', 'Wissenschaft' means 'knowledge', but also can be applied with equal relevance to the body of knowledge encompassing natural and cultural phenomena. 'Musikwissenschaft' appeared as early as 1827, in the title of a work by the German educationist Johann Bernhard Logier, and became established in the early 1860s; its acceptance was reflected in the title of the journal *Vierteljahrsschrift für Musikwissenschaft*, founded in 1855 and that of 'Musikforschung' in the name of the Gesellschaft für Musikforschung instituted by Commer and Eitner in 1868. The phrase 'musikalische Wissenschaft' had been in use since the 18th century and 'Tonwissenschaft' since the second half of the 18th century. Beginning in 1885, 'Musikologie' referred in Germany to a subdivision of 'Musikwissenschaft' roughly equivalent to 'ethnomusicology' (see §4 below), whereas in France, 'musicologie' was synonymous with the German 'Musikwissenschaft'.



When musicologists speak of scientific method in their research, what they usually mean is the methods of the social sciences, philology or philosophy. Musicology shares with them a common respect for the use of critical standards in the treatment of evidence, the employment of objective criteria in the evaluation of sources, the creation of a coherent account involving explanation and the sharing of one's research findings with a community of informed specialists. Such principles of investigation are of fairly recent origin, born during the Enlightenment. At the end of the 17th century, the philosophical innovations of Descartes made an important impact on European thought and the methods of empiricism replaced an uncritical reliance on the authority of the Church or myth. The Benedictine scholars of the Congregation of St Maur in Paris, led by Jean Mabillon (1632–1707) and Bernard de Montfaucon (1655–1741), established the principles of Latin and Greek palaeography and diplomatic. It was an age of rationalism and scepticism, personified most vividly in the figure of Voltaire and in the work of the *philosophes* which culminated in the great French *Encyclopédie*. From this period dates the establishment of some of the major learned societies and academies of science and letters, notably those in Britain and France: the Royal Society (1662, but dating informally back to 1645), the Académie Française (1635) and the Académie des Inscriptions (1663). Musicology, insofar as it reflects the cultural aims of 17th- and 18th-century society, is a manifestation of western European thought of the past 250 years and a phenomenon of the modern world. Its geographical origins have been responsible for the shape the discipline took in much of the 20th century and also accounts for some of the criticism to which it has been subjected.

3. Scope. The effort to determine the scope of musicology has prompted much discussion, with the result that certain areas have come to represent the core of the discipline while others remain in auxiliary positions. Since the early 19th century, historical studies have occupied the centre ground. However, each age has brought its own scale of values to bear, and this has led to a constantly changing disposition of emphasis. For example, a typical 18th-century framework designed to contain the whole of musical learning was fashioned by Nicolas Etienne Framery in 1770. Framery's 'Tableau de la musique et de ses branches' (see illustration) is a hierarchical scheme encompassing the entire discipline of music, which is subdivided at first level into three branches: acoustic, practical and historical. Acoustics is then subdivided three times, and represents the quantitative sciences and metaphysics; musical history is similarly subdivided to include the study of music and musicians, native and foreign, of the past and the present. Musical practice is broken down into two parallel divisions, 'composition' and 'execution', which in turn yield further divisions, sacred and secular, vocal and instrumental, native and foreign, and then institutions and musical genres. A place is also provided within musical practice for certain major interdisciplinary areas: music and poetry, music and dance, music and theatrical setting, music and elocution, the construction of instruments, music theory and instruction. Framery's design is a thoroughly rationalistic one, comprehensive, symmetrical and essentially static.

A few years later the Göttingen music historian Johann Nikolaus Forkel (1749–1818) brought out his map of musical knowledge in a pamphlet entitled *Über die Theorie der Musik, insofern sie Liebhabern und Kennern notwendig und nützlich ist* (1777). The scheme was revised and presented in an expanded form in his *Allgemeine Geschichte der Musik* (i, 1788). Forkel offered a fivefold approach to musical knowledge embracing the physics of sound, the mathematics of sound, musical grammar, musical rhetoric and music criticism. If history is not represented here it is because Forkel took it for granted. Implicit in his scheme is a concept of growth or progressive change in which the attainment of musical powers parallels the mastery of the language arts. Forkel's historical bias is best displayed in the organization of his *Allgemeine Litteratur des Musik* (1792), a bibliography of writings on music from antiquity to Forkel's own time. This work is divided into two main sections, one devoted to the literature of music history, the other to the literature of theory and practice.

TABLEAU DE LA MUSIQUE
ET DE SES BRANCHES.

MUSIQUE.

'Tableau de la musique et de ses branches' by Nicolas Etienne Framery, from 'Journal de musique historique, théorique et pratique' (January 1770)

François-Joseph Fétis's *Histoire de la musique* (1869–76) presented another model of musical knowledge in going beyond the limits of Western art music. In a five-volume study that included European folk music and non-European music (especially that of China and India), it laid the foundations for 'comparative musicology', the origins of ethnomusicology. Two subsequent publications called *Histoire de la musique*, the two volumes (1913–23) written by Jules Combarieu, the first Frenchman to write a doctoral dissertation on music (1894), and the four volumes (1909–24) which won Henri Woollett the music book of the year award in Paris in 1910, also include non-Western music (especially Hindu music) as well as the history of European music starting with the Greeks.

4. HISTORICAL AND SYSTEMATIC MUSICOLOGY. It was Guido Adler who, in a paper printed in the first issue of the *Vierteljahrsschrift für Musikwissenschaft* (1855) – 'Umfang, Methode und Ziel der Musikwissenschaft' – codified the division between the historical and the systematic realms of music study and tabulated their substance and method. The main outline, as repeated with slight modifications in Adler's *Methode der Musikgeschichte* (1919, p.7), was as follows:

MUSICOLOGY I. The historical field (the history of music arranged by epochs, peoples, empires, countries, provinces, towns, schools, individual artists): A. Musical palaeography (semiography) (notations). B. Basic historical categories (groupings of musical forms). C. Laws: (1) as embodied in the compositions of each epoch; (2) as conceived and taught by the theorists; (3) as they appear in the practice of the arts. D. Musical instruments.

II. The systematic field (tabulation of the chief laws applicable to the various branches of music): A. Investigation and justification of these laws in: (1) harmony (tonal); (2) rhythm (temporal); (3) melody (correlation of tonal and temporal). B. Aesthetics and psychology of music: comparison and evaluation in relation to the perceived subjects, with a complex of questions related to the foregoing. C. Music education: the teaching of (1) music in general; (2) harmony; (3) counterpoint; (4) composition; (5) orchestration; (6) vocal and instrumental performance. D. Musicology (investigation and comparative study in ethnography and folklore).

The 'Musicology' of II.D is the subdivision 'Musikologie' rather than 'Musikwissenschaft', which circumscribes the entire field.

In his tabulation Adler listed the auxiliary sciences of musicology. These are, for the historical field: general history, palaeography, chronology, diplomatic (i.e. the form of manuscript documents), bibliography (i.e. the form of printed books), library and archive science, literary history and languages; liturgical history; history of mime and dance; biography, statistics of associations, institutions and performances; and, for the systematic field: acoustics and mathematics, physiology (aural sensations), psychology (aural perception, judgment, feeling), logic (musical thought), grammar, metrics and poetics, education, aesthetics etc. More recent methodologists,

notably Hans-Heinz Dräger (1955), have refined and modified Adler's scheme, adding for example recording techniques, without changing its essential polarity. Dräger, however, introduced into his scheme the categories of music sociology and interdisciplinary subjects, though leaving the main weight heavily on the two original categories. In spite of the apparent equilibrium of the two sections of Adler's outline, history carries the greater weight, as it did in Adler's career as a musicologist.

Systematic musicology is not a mere extension of musicology but a complete reorientation of the discipline to fundamental questions which are non-historical in nature. These include aesthetics and research into the nature and properties of music as an acoustical, physiological, psychological and cognitive phenomenon. A systematic approach can also be given to all of Adler's historical areas, such as, for example, a semiological approach to musical notations and typological classifications of musical forms.

5. NEW TRENDS. In the last two decades of the 20th century, there was an explosion in the field of musicology as scholars, sought to give voice to a broader range of concerns. Some have interrogated the fundamental assumptions of historical musicology. Like their colleagues in history, they have questioned the focus on history as the product of great men, great works, great traditions or great innovations. This has led to the study of music as a social force and to histories of musics previously excluded by scholars, many of whom have tended to concentrate on the art music of social élites. Dahlhaus (1977) proposed that musicology should encompass not just stylistic history, 'a history whose subject matter is art and not biography or social contingencies', but also structural history, reception history and cultural history. Others, critical of traditional science and traditional historiography, have gone further, questioning the possibility of scientific objectivity and exploring the extent to which subjective elements inform any historical discourse. Some have even questioned the idea that history implies causality, preferring to define it by the mutability in anything that changes over time.

Another important trend has been in the focus on musicology as a form of criticism, or what Kerman (1985) has called 'the study of music as aesthetic experience'. In this, musicology resembles the humanistic disciplines, especially literature, and may borrow from literary or cultural theory and new fields such as gender studies. This interest has provoked debate over whether music has its own meaning, independent of the context in which it is created, performed and heard, or whether it is inevitably socially embedded and cannot be fully understood outside these contexts, whether its meaning results from a certain kind of intentionality mutually understood by the creator and perceiver, and whether it is principally an attribute of the mind, a product of cognitive responses to sound and/or bodily ones. Underlying the manner in which these questions are explored are certain fundamental issues – assumptions about the nature of knowledge, the source of that knowledge, and how scholars should relate to the inquiry. From these differences come the enormous range of subjects and methodologies that musicology has come to comprehend.

Some, working out of the humanist tradition, continue to believe that truth is something coherent and intentional: the goal is to unveil it. They may use close analytical and critical readings of scores to reinforce or question conventional truths or, like historians embracing the theory of *mentalités* or *Zeitgeist*, to suggest specific relationships of music to the other arts and society. Those influenced by structuralist anthropologists, semioticians and/or sociologists understand truth as a product of a system of signs and music, like any language, as a 'play of signifiers'. In Claude Lévi-Strauss's words, 'knowledge can be objective and subjective at the same time' and 'history is never history, but history-for. It is partial in the sense of being biased when it claims not to be, for . . . one must choose, select, give up . . . it consists entirely in its method'. Scholars embracing this perspective understand meaning as a product of interpretation. In their studies of music, they seek to understand what its structure or narrative may represent. Some, sympathetic to Marxist ideas or Theodor Adorno, believe that music is a dialectical discourse that both reveals and conceals its relationship to language and society.

Musicologists following poststructuralist thinking tend to agree with Michel Foucault that 'truth is linked in a circular relation with systems of power'. Sensing a crisis of authority, patriarchy, identity and ethics, they question the validity of the so-called master narratives, stories that we have come to regard as central to our understanding of Western music and musical progress – for example, the function of tonality and the importance of the narrative curve in music. Using deconstructive methods, they seek to unveil the operations of power in music, especially those related to articulations of gender, race and class, or point out how music helps to construct social identities and social spaces.

Postmodernist notions have begun to inspire questions about the validity of global, universalizing perspectives and to shift attention to the truths embedded in the local, everyday, variable and contingent aspects of music and music-making. Scholars engaged in this work see truth as always relative and subjectivity as multi-layered, contradictory and performative, as influenced by the body as well as the mind and sometimes spiritual concerns. They seek to break down hierarchies and show the multiple meanings that any music can have. They are often concerned with the physical impact of sound on the listener and with music as evoking a process, not just a presence that refers to an absence (i.e. what is represented). Sometimes the goal of their inquiry is not so much to increase knowledge of music as to restructure experience of it.

Postmodernists also tend to concentrate more on the role of the performer and listener in determining the meaning of a musical work. They analyse what is specific to individual performances, including Roland Barthes' 'grain of the voice', rather than the structure of written scores. They seek to understand musical expression independent from the structure, and some, music that is not written down. For postmodern scholars, the musical experience is essentially cooperative, collaborative and contingent. Listeners bring or attach meanings to music regardless of composers' intentions, often as part of a dialectics of desire that helps shape how they define what is outside themselves. The listening process is an activity that in turn shapes the personal, social and cultural identity of the listener. The desire to explore the experience of music and to understand what underlies the meanings

people ascribe to it has motivated an interest in applying psychoanalytic methodologies to the study of music.

These different approaches to knowledge are reflected in different relationships to the scholarly process. A scholar can play the role of a transcendent observer, applying rigorous reason and research to a chosen study and remaining unimplicated in the results of what is learnt. This relationship involves a strict separation of the observer from the observed and a trust of the 'other', be it the composer or the work, and a sense that the facts provided are what is needed. Or a scholar can be self-critical, acknowledging the power of language and the interdependence of language and meaning in musicological work. This may lead the scholar to ask not only theoretical questions but also political and ethical ones which may in turn shed light on some aspect of the larger world as reflected in music. Alternatively, a scholar can focus on personal insight, considering one's personal experience of music as a source of knowledge. Taking personal relevance or one's own perspective as the point of departure makes it clear that the scholar plays an important role in producing musical meaning. At the same time, such a perspective may have limitations as to the general relevance of the insights produced.

A number of important new subfields within musicology have arisen as a result of these different perspectives. Some, such as Kerman, Taruskin and Dreyfus, have used them to criticize the historical performance movement, throwing into question the notion of an 'authoritative' or 'authentic' performance of early music. Others, following the lead of McClary and Brett, have used them to explore how gender and sexuality may influence the creation and reception of music. More and more musicologists are crossing borders and reconsidering the boundaries of their research, not only that which has separated classical and popular music, written and oral traditions, but also historical musicology from other disciplines including ethnomusicology and music theory.

II. Disciplines of musicology

1. Historical method. 2. Theoretical and analytical method. 3. Textual scholarship. 4. Archival research. 5. Lexicography and terminology. 6. Organology and iconography. 7. Performing practice. 8. Aesthetics and criticism. 9. Sociomusicology. 10. Psychology, hearing. 11. Gender and sexual studies.

1. Historical method. Historical method in musicology falls into two basic categories. The first is an empirical-positivistic one, with an emphasis on locating and studying documents and establishing objective (or would-be objective) facts about and from them. The second, a theoretical-philosophical one, itself has two aspects: one that addresses general historiographical problems such as change and causality, periodization and biography; and one that considers issues specific to the histories of the arts and literature, such as the forms and style, or the historical meaning or content of individual art works or repertories, whether from the perspective of style, aesthetics or socio-cultural contexts and functions. The literature on historical method has concentrated on the second category, perhaps because the first seems unproblematic and less interesting. It is or should be self-evident that serious historical scholarship of the second category, although it sometimes tends to deny the legitimacy of the first, depends on as accurate a historical record as the actual state of the discipline can provide (*see also* Historiography).

This essay will also emphasize theory, yet the continuing importance of positivism (which itself constitutes a philosophy of history) and empirical work should not be overlooked. In the 18th century, when a music historiography began to emerge, curiosity about ancient music for its ancientness (musical antiquarianism) was a principal motivation for empirical research, and philological interests were also strong. As the discipline developed, problems such as chronology and transmission, attribution, palaeography and textual authenticity became even more crucial, as the archives, libraries and private collections yielded ever more of their treasures.

Empirical interests were not, however, primary to the work of Hawkins, Burney and Forkel, whose histories are often considered to be the origin of 'true' historical thinking about music, but rather a (naive) vision of historical development – the Enlightenment idea of human progress embracing all cultural activity. In this universal-historical perspective, the emphasis on human activity and perfectibility as the basis for historical change distinguishes ideas from earlier views of the past and development; yet their conclusions about the present state of music differed. Unlike Burney, Hawkins and Forkel viewed the music of their day with alarm, and their caution foreshadowed 19th-century perspectives: (i) a notion of 'progress with limits' that underlies conservative historical thinking well into the 20th century, and (ii) a historicism that replaced the principle of inevitable progress with that of historical relativism and validated early music.

It was historicism that provided the single greatest impulse to the development of music historiography in the 19th century. Despite Hegel's influence on historical thinking in Germany, continuing progress (or its necessity) in music was more a concern of journalists with historical perspectives – A.B. Marx, Schumann, Franz Brendel, Wagner and Hanslick (the latter two at cross-purposes) – than of most writers of formal music history. Marx and Brendel, who explicitly identified himself with Hegel, wrote histories from this perspective, and they have been usually associated with Hegelianism (as has Ambros), but their debts to Hegel must be precisely defined: their historical thinking is shaped by the liberal nationalism and metaphysical idealism that supported Hegel's concept of progress and his aesthetics, but the dialectical approach, the essential element in his theory of historical change, is largely absent in Marx's writing and not rigorously applied in Brendel's. The dialectic method is also foreign to the historical thinking of Fétis, whose importance as a historian has been overlooked. His rationalistic (as opposed to metaphysical) belief in progress is said to have been influenced by the enlightened universal historical approach of Jules Michelet.

All over Europe, most mid-19th-century music historians turned to music and musicians from a past that was generally and tacitly understood as ending with J.S. Bach. Several historians (e.g. Ambros) planned comprehensive histories but failed to complete them, perhaps because the empirical-positivistic work in the earlier historical stages exhausted their energies. The field of biography was less orientated to the distant past, largely because of Beethoven's celebrity, the continuing interest in Mozart and Haydn and, late in the century, the fascination with

Wagner. Yet the great monuments in 19th-century biography also include biographies of Bach by Spitta and Handel by Chrysander, and these are usually considered to be more important for the development of music historiography because their subject matter was more remote (*see* BIOGRAPHY).

Apart from the aesthetic impulses behind the first efforts to revive performance of Bach and Palestrina in the early 1800s, interest in old and new music as a historical phenomenon was nurtured by several strong intellectual and ideological currents in the 19th century. The deepest and broadest of them was the rise and dominance of historicism in all the humanistic disciplines and particularly the earlier emergence of the history of the visual arts. Aesthetics and theory, which had dominated music scholarship within and without the academy, began to yield room for history, a process that culminated in the establishment at the end of the century of the first university chairs explicitly assigned to music history. Surging nationalism, which in the wake of the Napoleonic period also underlay the rise of scholarly political and national history, stimulated investigations of national music traditions that sometimes assumed chauvinist character (Brendel), occasionally made use of the 18th-century advocacy of folk and popular culture associated with Rousseau and Herder, or stressed religious institutions and dogma. The identification of religion and nationalism was particularly strong in northern Germany. It led to an assertive identification of Germanness in music, coupling Lutheran tradition with an attempt to reinvigorate religious feeling through a discussion of art (Spitta). A nostalgically religious strain in Romanticism saw a purity in the arts preceding a 'modern' or 'new' time whose earlier or later beginning depended in large part on the personal aesthetics and degree of historicism in the thinking of the historian. (A 'Heilige Tonkunst' concluding in 1600 described the first of Carl von Winterfeld's two historical epochs in his *Johannes Gabrielli und sein Zeitalter* of 1834.) This attitude transcended national and denominational differences and helps to explain the widespread interest in Renaissance sacred music, in particular the Catholic repertories, which also extended into the 17th century.

Music historians struggled to impose order on the ever increasing body of music their archival work disclosed. Periodization, and the explanation of the historical developments underlying the periods, were their foremost tasks, whereby the former was often presented with disappointingly little concern for the latter. Epochs and periods based on leading figures provided a convenient mode of explanation: schools and styles grouped themselves around the great artists, who produced their art through their own genius *sui generis*, or drew on the culture of their time, or (commonsensically enough) in some way combined the two. The idea of the artist in cultural context shares features with the *Zeitgeist* theory of history that was particularly strong in Germany. *Zeitgeist*, which owes as much to Herder as to Hegel, solved two historiographical problems: (i) progress – music proceeded with general culture, as history advanced from period to period so too did music; (ii) meaning – music acquired meaning through its participation in general culture because it shared general culture's character. Music history benefited from its late origins; it could draw on general history and art history, which presented it with resonant period names such as the Renaissance. But shortcomings to this approach emerged towards the end of the 19th century. Music historians concentrated too much on biography, did not integrate the technical discussion of individual works in their histories, and failed to recognize music's (semi-) autonomy and its 'organic' development on the basis of its own materials. The solution was the formalization of the concept of style drawing again on art history (Burkhardt and Wölfflin), which became the dominating historical idea in 20th-century musicology. The strength of the concept of 'style' can be judged from the fact that it was as essential to Riemann, the systematic scholar, as it was to the humanist Adler (who is most closely identified with the concept), although they are usually considered to represent opposing branches of the discipline.

'Style' was extremely useful. It was the alternative to *Zeitgeist* for the explication of periodization. It also provided the language for a discussion of individual works in inherently musical terms, yet still differed crucially from non-historical, 'theoretical' analysis in that it retained, refined and lent rigour to established musico-historical ideas such as periods, schools, national, regional and individual styles, and made possible a comparative critical approach. Moreover, it was equally applicable to all historical periods and genres; it could support either a teleological view of historical development or a relativistic one; it could even buttress a *Zeitgeist* approach or a hermeneutic explication of an individual work. Although style was conceived as a value-free, objective idea, it later even served national-socialist musicology in determining the racial and folk basis of national and ethnic styles and their relative merits.

The emergence of historical musicology as a mature discipline and the development of the concept of style are inextricable. Style was the basis for the multi-volume histories (*Handbuch der Musikgeschichte*, *Oxford History of Music*), single-volume period histories (Reese, Bukofzer), genre studies, and the works part of life-and-works biographies that before and after World War II have defined the field.

Yet the concept of style has been criticized. Despite its flexibility, its major impact has been to separate musical historiography from general historiography, and to de-emphasize or even eliminate questions of meaning and function. In German musicology before the Nazi period, historians in the hermeneutic tradition advocated by Wilhelm Dilthey (1823–1911), in his day the leading German philosopher of the humanistic disciplines, recognized this danger. Arnold Schering (1877–1941), while recognizing its achievements, argued that a critical method designed to determine stylistic common denominators could not do justice to the unique structures and meanings of individual masterworks, and also perceived that the concept of style failed to explain the phenomenon of style change. In Anglo-American historical musicology the most recent major developments – the introduction of critical perspectives from linguistics and the literary disciplines, and their combination with a hermeneutics variously derived from the 'new historicism', Adorno-esque social theory, gender studies, reception theory and history, and anthropology – have sprung from a similar dissatisfaction with the concept of style, whose inability to address satisfactorily the problem of meaning has been the stronger impetus. (The problems of periodization

and style change, actively pursued in the 1950s and 60s – as the reports from various international musicological congresses attest – have lost their urgency. The approach of structural history, which attempts to grasp the totality of a moment in historical time rather than presenting the dynamic of historical process, is more amenable to the critical interests of 'new musicology'.)

The rise of new critical perspectives in English-language music history also must be understood as a response to the challenges posed by the postwar vigour and status of two diametrically opposed branches of the discipline: the 'hard' analysis of 'Theory' as it became institutionalized in American and British university departments, and, within music history, grandly conceived philological-positivistic projects. The latter consisted of new critical editions of the 'great' composers and historical repertories (some of them exhaustive reworkings of the great monuments of 19th-century editions); thematic catalogues; RISM in all its breadth; and manuscript studies of many different kinds that made important advances in method and technique and significant contributions and corrections to questions of chronology and transmission, authenticity and compositional process. In the USA after World War II philology helped support the rapid growth of musicology, offering virtually unlimited possibilities for dissertations and publications. Yet a saturation point seems to have been reached in the mid-1980s, when the call from scholars as dissimilar as Joseph Kerman and Leo Treitler in the USA, and Carl Dahlhaus in Germany, for a historically informed criticism (Kerman) or a critically inclined historiography (Treitler and Dahlhaus) began to bear fruit.

For West German musicology, as it regrouped after the war, positivistic approaches provided necessary safe alternatives to the ideologically indefensible nature of musicology under fascism, in whose wake cultural theory of any kind had become suspect, and to the Marxist historical and hermeneutic methodologies of the GDR and the socialist bloc. It also provided a haven to non-Marxist East German and Soviet-bloc musicologists, who concentrated on such areas rather than pursuing politically sensitive topics such as meaning and historical causality. But West German musicology did not ignore style criticism or abandon traditional 'bourgeois' historical topics such as philosophy and aesthetics or historical music theory (which were also favoured by non-Marxist scholars in the socialist countries). And it sometimes engaged in polemical debates about historical causality and determinism, progress, formalism and the social character and content of music with its neighbours to the East. The relative cautiousness of West German historical musicology, as well as the strength of its traditions, has made it less open to the most recent ('new-musicological') methodological innovations than its English-language counterpart. The important exception has been in the area of reception studies, which were stimulated by the work of the Germans Hans Gadamer (philosophy) and Robert Jauss (literature) and became established in German musicology well before it was embraced by musicologists writing in English. On the other hand, in the 1990s the writings of Theodor Adorno, whose thought stimulated and challenged some of the leading German postwar historians, have become more fashionable (although perhaps less well digested) abroad than in his native country. The nature of Adorno's influence in Germany can perhaps best be measured by the work of Dahlhaus, who, despite his fascination with Adorno's ideas, rejected the sociological approach and yet fashioned his own formalist hermeneutics as a direct response to him.

Historical method in musicology has always relied on its neighbouring disciplines. It has always been a semi-autonomous field, in part through its very nature as a historical discipline, in part because the materials of music are non-semantic and its forms and images are less tied to representations of material reality than those of the visual arts before the 20th century. As a consequence of this second condition, non-formalist historians concerned with the problem of musical meaning are almost forced to borrow. While important axioms such as style and historical periodization of the historical method still seem useful and entrenched, certain traditional emphases have been under attack in recent years, for example the notion of an authentic text, or the concept of the autonomous 'work', or the idea of a canonic repertory (this last is paradoxical in view of the preference for 'masterpieces' for the application of innovative interpretative strategies). As early as the 1970s, Dahlhaus voiced concerns about the disappearance of the historical method (in its second, theoretical category) from musicology; yet the discipline, in terms of its institutional bases – the academy, the professional journal and the published book – is thriving. Will the influx of new methodologies supplant music history or give it new life? One thing is certain: its own history is one of change and adaptation, and this process is a guarantee for its continued vitality.

2. Theoretical and analytical method. It is questionable whether it is possible to identify a single encompassing method for music theory and analysis. As an intellectual activity, Western music theory possesses an extensive and varied literature that extends virtually without interruption back to the ancient Greeks. At the same time, many non-Western cultures possess distinguished bodies of theoretical literature. Music analysis, with which theory is typically paired, has a more recent genealogy, although it too seems confoundingly diverse in practice.

Defined simply, music theories may be said to offer generalized descriptions of musical structure and behaviour. Such descriptive theories may apply only to a single composition, or they may attempt to account for and perhaps help define, a class of compositions grouped by historical style, genre or composer. From this perspective, then, it can be seen how analysis functions as a dialectical counterpart to theory. Analysis constitutes the detailed study of musical pieces from which theories may be inductively formulated, while at the same time serving to test the empirical validity and application of any theory.

Of course, the relation between theory and analysis is in reality far more complex. Many music theories, for example, are compositionally conceived and lack strong empirical verification in practice. That is to say, a given theory may arise not through induction from musical practice but be conceived *a priori* to guide composition. Other theories may make no empirical claims about particular compositions or historical styles and may concern themselves with more abstracted musical problems: the nature of consonance, concepts of time and metre or the ontology of tonality (to offer some contrasting examples). Still other theories may deal with aspects of

musical perception by analysing compositions according to their affective qualities, or perhaps as possessing social or programmatic content.

To make sense of this diversity within the field of music theory, and perhaps to rescue the notion of music theory and analysis as constituting a coherent and discrete field of study, it is helpful to distinguish 'traditions' of music theory that have historically enjoyed varying degrees of pedigree. Based on suggestions made by Carl Dahlhaus (1984, p.9), three such traditions, or 'paradigms' might be identified: (i) Speculative, (ii) Regulative and (iii) Analytic. While the present article will not attempt to duplicate the broad historical surveys of theory and analysis found elsewhere (*see* ANALYSIS, §I and THEORY, THEORISTS), it will be useful to consider individually the scope and methods historically associated with these disciplinary traditions.

(i) Speculative traditions. Speculative music theory (or 'harmonics', as it was often termed) represents the oldest and in one sense the most authentic tradition of music theory. Traceable to the earliest surviving Greek and Hellenic writings, musical harmonics encompasses the abstracted study of musical elements – sounds, intervals, rhythmic proportions, scale systems and modes – and often the place of these elements in the general cosmological order. The concern of the speculative theorist is not the application of musical material to *praxis* but rather the ontological essence of music – its nature and being. Aristotle characterized such knowledge as *episteme theoretike*, in contrast to the practical and poetic skills – *praktike* and *poietike* – of performance and composers.

In Greek thought two related branches of speculative harmonics may be distinguished: a Pythagorean tradition orientated towards mathematics and represented by Neoplatonists such as Ptolemy and Boethius, and an empirical tradition represented by theorists such as Aristoxenus. The Pythagoreans would emphasize the numerical basis of musical relations (for instance, that all musical consonances could be defined by simple ratios of integers) and see such musical relations as a model of cosmological order. The empiricists, however, were concerned with acoustical perception – the nature of musical sound and its organization into tonal systems. In neither case, though, were these theorists interested in practical music.

With varying degrees of emphasis, speculative music theory has been a continuous presence in the history of Western thought. The Pythagorean interest in the mathematical form of music was sustained within the medieval Quadrivium of numerical sciences, and found more concrete expression in various monochord and interval treatises. Most of the intricate tuning and temperament calculations found in Baroque treatises of *musica theorica* may also arguably be aligned with traditions of speculative harmonics. The empirical Aristoxenian tradition, however, found echo in the work of many natural scientists of the 17th and 18th centuries who studied the acoustical basis of consonance and tonality (Galileo, Descartes, Sauveur), as well as in 19th-century scientific work in the field of tone psychology (Helmholtz and Stumpf).

The more cosmological side of Pythagorean harmonics receded in the medieval West until its reinvigoration in the late 15th century under the influence of Neoplatonic thought (especially in the writings of Marsilio Ficino). Cosmological harmonics continued to hold fascination for a few individuals, although it was an interest largely motivated by esoteric or occult beliefs, as exemplified by writers such as the 17th-century German astronomer Johannes Kepler, the 19th-century French Masonic historian Fabre d'Olivet, and in the 20th-century Swiss mystic Hans Kayser (*see also* MUSIC OF THE SPHERES).

In the 20th century, speculative music theory has continued to flourish, although under new names and using new tools of analysis. Much research, for example into tone psychology, timbral analysis and psychoacoustics (see §10, below), including work by James Mursell, R. Plomp, Wayne Slawson and Ernst Terhardt, can arguably be filiated to Aristoxenian traditions of empirical harmonics in that its practitioners attempt to understand the fundamental nature of discrete musical elements, albeit elements typically defined and analysed as isolated acoustical stimuli. Mathematical traditions of harmonics have also enjoyed renewed attention. Catalysed in large part by compositional problems posed by Schoenberg's method of composing with 12 notes, a number of composer-theorists, beginning in the 1950s, notably Milton Babbitt, have developed extraordinarily far-reaching mathematical theories that explore with systematic rigour possible serial relations and orderings within the equal-tempered universe of 12 pitch classes (*see also* SERIALISM and SET).

The group theoretical principles on which Babbitt based his research were found by several American music theorists to be useful in accounting for properties of – and relations between – unordered collections of pitch classes. For example, Allen Forte extended and generalized some of Babbitt's work in order to develop a theory of 'pitch-class sets' by which the pitch structure of a delimited repertory of pre-serial 'atonal' music may be accounted. David Lewin, on the other hand, worked out a number of mathematical models by which to describe the transformational mappings of isomorphically-discrete pitch collections, although the sophisticated transformational networks that he constructed may also usefully be applied to relations between chord function, key area and even metrical time points. Further research by American theorists such as John Clough on diatonic scale systems, Richard Cohn on symmetrical pitch cycles and Robert Morris on compositional spaces and contour has extended our understanding of potential pitch topographies. While much of this scholarship is intended to have practical applications for both composers and analysts, it is at heart 'speculative' in the most distinguished and venerable sense of the word – as an exploration of the properties and potential of musical materials. In the closing decades of the 20th century, the spectacular reinvigoration of mathematical harmonics constituted one of the most remarkable chapters in the long history of music theory.

(ii) Regulative and practical traditions. If music theory in its oldest and most authentic sense was understood as the ontological speculation of musical material, undoubtedly its most consequential and resonant activities have concerned the regularization of this material into systems possessing practical applications for performers and composers. Such pedagogical writings, it is true, were not at first considered to be properly 'theoretical' (significantly, no practical treatise before the 18th century ever presented itself under the title of 'music theory'). But increasingly, *musica theorica* and *musica practica* were

recognized, and treated, as complementary domains of investigation.

The propadeutic tradition of music theory is first evident in the West in several Carolingian manuscripts dating from the 9th and 10th centuries that sought to answer the Church's growing need to systematize, codify and notate a burgeoning liturgical chant practice. Several intersecting problems were posed that have served as an agenda of music-theoretical research ever since: clarifying a tonal space in which this music was sung; devising an efficient notation for setting it down for practice and dissemination; establishing a vocabulary for segmenting and analysing the music's structure; and, finally, classifying the repertory of chant into categories of species or 'modes'. Later, other conceptual problems with practical implications arose to which theorists turned their attention, particularly the need to develop an accurate means to notate rhythmic duration and proportion.

With the appearance of several treatises dealing with the singing of organum and discant in the early 12th century an entirely new kind of prescriptive theory is to be seen – one that attempts to regulate the compositional process of music (or in this case, an improvisational process). By laying down rules for singing with a given chant melody, regulating what dissonances may be introduced and prescribing the opening and closing formulae of the organal voice, the anonymous authors of one notable example (the *Ad organum faciendum*; ed. H.H. Eggebrecht and R. Zaminer, 1970) inaugurated a species of compositional theory that would soon dominate the discipline (*see also* ORGANUM).

Throughout the late medieval and Renaissance periods, the primary concern of compositional theory was the regulation of dissonance within the increasingly dense polyphonic textures written by composers or improvised by singers (*see also* COUNTERPOINT and MUSICA FICTA, §2). Another regulative problem addressed by theorists during this time concerned rhythm, and specifically the codification of a mensural system by which metrical time points could be plotted, subdivided and noted (*see also* NOTATION, §III and RHYTHM, §II). For some Renaissance theorists, a particular empirical challenge was that of modal classification. The eight ecclesiastical modes inherited from monophonic chant practice (later expanded by Glarean and Zarlino to 12) could be made to accommodate expanding polyphonic and chromatic textures only with great ingenuity on the part of theorists (*see also* MODE, §III).

In the Baroque period, with a general stylistic evolution towards more homophonic textures and a sharper bass–soprano polarity, it was the classification of chords and an explanation of their succession that received the attention of theorists. Similarly challenging to explain and codify for theorists was a coalescing major-minor, transposable key system. Many treatises of thoroughbass from this time, though ostensibly aimed at training performers, can be seen as theoretical treatises that provided pratical answers to these questions. It is thus not surprising that the first treatise to attempt a full theory of this tonal practice – Rameau's *Traité de l'harmonie* of 1722 – was one that was conceived within the paradigm of thoroughbass pedagogy. Counterpoint remained important as a pedagogical discipline in the 18th century, although as seen in a work such as Fux's *Gradus ad Parnassum*, this necessitated drawing sharp distinctions between 'strict' styles of composition codified within his five species and a 'free' style of dissonance use, characteristic of the *seconda pratica*.

As these various examples suggest regulative music theory is possible only when there is a relatively stabilized musical practice that can be circumscribed by which a particular compositional parameter may be analysed and codified. Some of these practices may be global and cut across specific compositional styles, historical period or genres (such as shared systems of harmonic tonality, metre or timbral juxtaposition), while others may be more stylistically focussed. For theorists of the late 18th century one such stylistic issue that required attention was the nature of melody – its components, construction and development (Riepel, Koch); for theorists of the 19th century, however, it was the increasingly subversive chromatic and modulatory practices of composers that demanded explanation, as well as the more elaborate forms employed (Marx, Fétis, Reimann; *see also* HARMONY, §4 and FORM).

In the 20th century, regulative theory continued to play an important pedagogical function, although it was more typically applied in retrospect to delimited historical repertories or styles of music. (Schenker's theory of tonality is paradigmatic in this respect; Jeppesen's codification of Palestrinian 'style' of counterpoint and Lendvai's codification of Bartók's compositional practice are other good examples of retrospective regulative theories.) More common has been the development of original theories of composition to establish and regulate harmonic vocabulary, rhythmic structure or tonal syntax. Sometimes such theories may be rigorously formalized, as in the case of many serial theorists, such as Krenek, Eimert, Babbitt, Boulez and Perle. Other compositional theories may be more informally conceived, such as the 'modes of limited transposition' inventoried by Messiaen, or the theories of compositional 'intonation' and 'modal rhythm' conceived by the Russian theorists Boris Asaf′yev and Bodeslav Yavorsky. Even Cage's aleatory theory and Xenakis's stochastic method of composition can be seen as belonging to this tradition of regulative theory, although both involve elements of chance and indeterminacy. But as compositional practice in the 20th century has fractured into a multitude of individual styles and syntaxes, such broadly prescriptive theorizing has more and more given way to a particularist kind of descriptive analysis.

(iii) Analytic traditions. It is useful to distinguish music analysis as a subdiscipline in music theory from the regulative traditions just described, even though the two are interdependent. While a fuller history and taxonomy of music analysis is recounted elsewhere (see ANALYSIS), it will be appropriate here to say something about the methods and claims of music analysis and its relation to be broader epistemology of music theory.

In music analysis one is primarily concerned with the structure and individuating features of a particular piece of music. Typically, this involves two tasks: (1) to inventory the components of a particular composition deemed significant by the analyst; and (2) to explain the particular disposition and relationship of those components. Of course, any kind of analysis presupposes a theoretical stance: that is to say, it is not possible to undertake an analysis without theoretical presumptions, however informally conceived, that help determine the questions to pose and the kinds of language and method

by which these questions may be answered. But unlike the systematic traditions of regulative theory described earlier, the goal of music analysis is normally an understanding and aesthetic appreciation of the musical piece itself as an ontologically unique artwork, not the exemplification of some broader norm of structure or syntax.

A good example of such particularist analysis is seen in E.T.A. Hoffmann's famous review of Beethoven's Fifth Symphony, published in 1810. Unlike many earlier examples of music 'analysis' that offered generalized taxonomies of particular pieces (often using rhetorical terminology) in order to illustrate classical norms of structure and process, Hoffman undertook his analysis to reveal what was distinguishing and unique in Beethoven's composition. For Hoffmann, much of this uniqueness stemmed from the music's particular motivic material and its ingenious development. Not surprisingly, such close analytic readings were indebted to Romantic ideologies of historicism and the cult of artistic genius; far from being models for compositional emulation, the musical objects of analysis tended to be drawn from a canon of irreproduceable 'masterworks'. Analysis revealed at once the singular features that made up a particular composition (these typically being unusual thematic and harmonic material or special deviations from formal conventions) as well as the means by which these features cohered as an organic whole, to cite a favourite metaphor of the 19th century. Of course, a more pragmatic tradition of analysis continued with the 19th-century pedagogical *Kompositionslehre*. That is, musical pieces might be analysed for the purpose of learning and testing norms of chordal succession or form. But by the 20th century, with the loss of a common grammar of tonality and received forms of organizational structure, music analysis was increasingly becoming piece-orientated.

Heinrich Schenker occupies a particularly important place in 20th-century music analysis, not simply because his ideas have enjoyed such unparalleled influence – especially in Anglo-American academic circles – but because his work so clearly reflects the dialectic relation of music analysis and theoretical systematization. Originating through an intensive study of a select canon of tonal masterworks (especially Beethoven), Schenker's mature theory of the *Ursatz* and its 'prolongation' through structural levels emerged only after many years of struggle and thought. Although presented as an *a priori* systems of tonal logic, Schenker's theory also receives empirical validation – and indeed, can only be known – through practice, albeit a practice that is highly selective and arguably self-confirming. Schenker's theory presents itself as both a universal theory of tonality and a sophisticated tool of analysis by which an individual piece of tonal music may be opened up for inspection and its individuating features of harmony, form and thematic content delineated with unprecedented precision (*see* SCHENKER, HEINRICH).

At the close of the 20th century, music theory and analysis seemed finally to have matured as intellectual disciplines. Particularly in North America, although increasingly elsewhere, many academic programmes of music theory were established in universities and music conservatories alongside more traditional programmes of historical musicology. At the same time, numerous academic journals and professional societies devoted to music theory and analysis were founded, including the *Journal of Music Theory* (1957), *Musical Analysis* (1981) and *Musiktheorie* (1986), and the publications of the Society for Music Theory (from 1977).

It is ironic that just as music theory seems to have become institutionally accepted, strong criticisms have been voiced within those institutions concerning its conservative domain and scientistic aspirations (Kerman, 1985). Most compellingly, perhaps, many music theorists and analysts have been criticized for their penchant for considering musical pieces and styles largely from a formalistic, autonomous point of view rather than within broader historical and cultural contexts. At the same time, theorists have been faulted for too often disregarding questions of affect, expression or meaning in musical pieces at the expense of structural description.

It is true that in the course of the 20th century, much scholarship in music theory could be characterized as highly formalistic. Logical positivism, in particular, was an obvious influence on the work of many theorists such as Babbitt, who famously demanded that all analytic statements about music should adhere to strictly scientific criteria of formulation and verification (Babbitt, 1961, p.3). Other potent influences on music analysis (particularly in the 1960s) were developments in literary theory and specifically the movements of 'New Criticism' and structuralism, by which texts were analysed as discrete and autonomous objects standing apart from questions of historical origin or authorial intention. Certainly, a number of music theorists in their analytic work have tested a formidable array of tools and models borrowed from neighbouring disciplines that on the surface suggest positivist and structuralist pedigree, including mathematical group theory (David Lewin), cognitive psychology (Leonard Meyer, Eugene Narmour), information theory (Kraehenbuhl and Coons), generative linguistics (Lehrdahl and Jackendoff), and semiotics (Jean-Jacques Nattiez, Kofi Agawu and Robert Hatten). Probably little of this research would stand the test of Babbitt's strict rules for theoretical formulation and verification. As in many other scholarly disciplines, the explicitly positivistic and structuralist aspirations of music theory in the 1960s and 70s have considerably receded.

If in reality music theory and analysis were ever as uniformally conservative and narrow in scope as their critics have implied, it was certainly not true at the close of the 20th century. The repertories of music considered by analysts expanded dramatically to include virtually all historical periods, as well as much non-Western music and popular or vernacular musics. At the same time, many theorists showed increased sensitivity to problems of historical and social context, affective content and reception in their analyses. In particular, interpretative and critical modes of analysis (whose origins may be traced back to late 19th-century traditions of 'hermeneutic' analysis) are strongly evident in much recent musicological scholarship (Scott Burnham, Rose Subotnik, Brian Hyer), as are radically subjective 'phenomenological' modes of analysis (Thomas Clifton, Benjamin Boretz, Marion Guck) and post-Freudian theories of compositional influence and repression (Joseph Straus, Kevin Korsyn). Even issues regarding gender and sexuality so dominant in much 'postmodern' cultural criticism have been provocatively addressed by some recent musicologists (Susan McClary, Lawrence Kramer; see §II, below).

Yet if music theory and analysis are to continue to retain identities as authentic intellectual traditions, it is perhaps desirable to maintain some degree of epistemological formalism and empirical rigour. Far from suggesting a weakness in the programme of music theory, a certain autonomy – and tension – in relation to historical musicology and cultural criticism may indeed be a healthy sign of its vitality and integrity.

3. TEXTUAL SCHOLARSHIP. Textual criticism embraces several central sciences: palaeography (the decipherment of handwritings), diplomatic and bibliography (the study of the formal make-up of manuscripts and printed books respectively), editorship and collation (the identification of errors in the text of a document and the reconciliation of variant readings). Ancillary to these are such sciences as the studies of printing techniques and processes, of paper manufacture, of binding, of illumination and of book illustration. All these bodies of knowledge contribute directly to the establishment of a critical text. The first five have venerable scholarly traditions extending back into the early 19th century; the rest have developed in the 20th, with such works as Charles Briquet's *Les filigranes* (Geneva, 1907), Allan Stevenson's *The Problem of the Missale speciale* (London, 1967) and Charlton Hinman's *The Printing and Proof-Reading of the First Folio of Shakespeare* (Oxford, 1963) as landmarks.

In the context of music, the decipherment of notational systems (ekphonetic, neumatic, mensural, tablature etc.; *see* NOTATION, §I) forms an important part of musical palaeography – and also the decipherment of verbal text matter. The special demands of music on printing require study as processes; they carry their own peculiarities and tendencies to particular errors which must be known before the text can be fully elucidated (*see* PRINTING AND PUBLISHING OF MUSIC). The procedures of music writing, of the production and copying of the musical source, are again activities not yet fully appreciated in their own terms; to understand the 'psychology' of the producer of a text is half the battle in understanding the text itself (*see* SOURCES, MS, §I).

In the study of music printing the groundwork was laid by scholars such as Anton Schmid in his survey of the output of the Petrucci press (1845), by Robert Eitner, and by Emil Vogel in his *Bibliothek der gedruckten weltlichen Vocalmusik Italiens* (1892). Vogel's work was carried on by Claudio Sartori in his *Bibliografia della musica strumentale italiana stampata in Italia fino al 1700* (1952–68) and by Howard Mayer Brown in *Instrumental Music Printed before 1600* (1965). Basic studies of early French music printers and publishers were made by François Lesure and Geneviève Thibault, of the early English by Charles Humphries and William C. Smith, and of the early Viennese by Alexander Weinmann. More recent work has concentrated on single issues in early publishing (such as Boorman's work on the interpretation of features in madrigal publications) or individual publishers (Forney's work on Susato, Jackson's on Berg and Neuber, Lewis's on Gardane).

In manuscript studies, much attention has been given in recent years to the 18th century. Studies involving stitching marks from original bindings (Dürr), paper-making and watermarks (Tyson, Wolf) and handwriting (Plath) have brought about important revisions in the chronology of the works of J.S. Bach, Haydn, Mozart and Beethoven. Moreover, a new understanding of the creative processes of composers – notably of Beethoven and Wagner – has developed as a result of close examination of preparatory materials such as sketchbooks, drafts and preliminary scores (*see* SKETCH).

The principles of editing are another supporting science of musicology. They embrace not only the surface questions such as how to distinguish editorial emendation and interpretation from original readings and how to lay out suppressed readings in a critical commentary along with a description of sources (although these are matters on which no conformity has been reached among scholars), but also the much more fundamental issues of critical editing: how far editors should go in correcting and interpreting a text, and whether the variants of a particular text are separate entities or lead back hierarchically to an original exemplar – and thus whether the readings given in an edition of a work with many variant sources should seek to establish by reconstruction a hypothetical archetype, or simply present the best surviving text intact, or set out the variants or alternatives in several textual traditions (*see* EDITING).

In music, the concepts of 'Urtext' and of critical edition are in principle distinct. Urtext represents an attempt to present the contents of an original source free of editorial additions (slurs, bowing marks, extra dynamics etc.): it is 'pure', yet is to some extent a translation into modern notation. The concept is now largely discredited, however, in that it precludes editorial intepretation or even correction. Further to the same end of the spectrum is the so-called diplomatic transcription – a hand facsimile of the original notation still much used in German dissertations but properly replaced by the photographic facsimile. The critical edition, at the other end of the spectrum, is a presentation of the text after it has been subjected to critical scrutiny and a certain construction placed on it. The issues involved in editing from an earlier notation – 'translating' the music – are perceptively addressed by Bent (1994).

Many scholars at the beginning of the 20th century (e.g. Aubry and Beck) were trained as philologists before turning to musical scholarship. They brought a particular awareness of the problems of textual transmission, above all to the thorny field of medieval monophony. The series Paléographie Musicale (1889–) published by the monks of Solesmes exemplifies this dual approach to textual criticism which combines facsimiles of original sources with editions in more modern notation, later to be attempted systematically by Beck in his Corpus Cantilenarum Medii Aevi (1927–38) for all surviving troubadour and trouvère songs (never completed).

Textual criticism was itself a product of the search for authenticity which began in the 19th century and preoccupied 20th-century historical thought. In music this was manifested particularly in the production of critical editions of the works of leading composers. Following the foundation of the Bach Gesellschaft in 1850, European scholars started a series of Gesamtausgaben, definitive editions of the complete works of Beethoven, Mozart, Lassus, Palestrina, Schubert, Schumann, Schütz and Victoria, among others. Few of these sets reached the state of completeness envisaged by their editors, but they marked significant steps in the development of editorial techniques and in the bibliographical control of sources. Parallel to the Gesamtausgaben were the Denkmäler sets often devoted to the publication of

'monuments' of national music. Among the earlier projects of this nature were Franz Commer's Collectio Operum Musicorum Batavorum (1844–58), a pioneer edition of early Flemish music, and Robert Julien van Maldeghem's *Trésor musical* (1865–93). These established a continuing pattern of critical editions of historically significant music originating in Germany, Austria, France, Italy, Belgium, the Netherlands, England and other countries. However, new discoveries and changing ideas of source and textual criticism led to increasing discontent with the 19th-century collected editions, and new editions of the work of many composers were begun in the years after World War II (including Bach, Handel, Mozart, Beethoven, Schütz and Josquin). The Mozart edition was completed in 1991: even before it was finished, some Mozart scholars were pointing to the need for yet another new edition. (*See* EDITIONS, HISTORICAL.)

An important adjunct to text-critical study is the compilation of inventories and cataloguing of primary source materials. The towering figure in this area was Robert Eitner (1832–1905) who published numerous music catalogues and inventories in *Monatshefte für Musikgeschichte* (1869–1904) and who brought the results of his vast knowledge of European archives into evidence in his ten-volume *Biographischbibliographisches Quellen-Lexikon der Musiker und Musikgelehrten der christlichen Zeitrechnung bis zur Mitte des 19. Jahrhunderts* (1900–04). The ideals that Eitner initiated in this great work have served musical scholarship for a century and are still alive in the form of an 'International Inventory of Musical Sources' (RISM) published under the auspices of the International Musicological Society and the International Association of Music Libraries. The catalogues of the works of individual composers – those by Köchel for Mozart, Schmieder for J.S. Bach, Baselt for Handel, Hoboken for Haydn, Zimmerman for Purcell, McCorkle for Brahms, Rufer for Schoenberg, for example – often give information on the textual transmission of each individual work, enabling the user to locate all primary material and know its status. The first part of Ludwig's *Repertorium* (1910) was a model of another type of source catalogue: the *catalogue raisonné* of the materials of a repertory laid out according to stylistic dictates and explained as an evolutionary picture (*see* THEMATIC CATALOGUE).

4. ARCHIVAL RESEARCH. Archives are documents issued in the process of administration, whether it be of central government or a private business, a ducal household or a parish church (*see also* ARCHIVES AND MUSIC). They are of interest to the historian for study of the institution to which the archives refer, or for study of people or objects or events associated with that institution. Their essential feature is that they are generated automatically in the process of administration, and this makes them in principle different from almost all other sources of history. Unlike a chronicle, a diary or a newspaper report, which are selective historical accounts, they record everyday detail as faithfully as the unusual. Often the recorder does not participate in the events recorded.

As the centralization of archives into principal depositories got underway during the early part of the 19th century and the science of archive keeping began to develop, historians, following Ranke, turned to them as objective truth. 'Ultimate history' (Acton, 1896) seemed only a generation or two away. National series of archive transcripts were begun: Monumenta Germaniae Historica (1826–), Collection de Documents Inédits sur l'Histoire de France (1850–), the British Rolls Series and Calendars (1856–) and others. Only slowly was it realized that the proper use of archives could be made only after painstaking study of how the documents were produced, and that even then, error and fabrication could be uncovered.

Early musicological studies included some transcripts, either of entire series of documents concerning musical administration (such as Edward Rimbault's *The Old Cheque-book, or Book of Remembrance of the Chapel Royal*, London, 1872) or of selected items pertaining to music from more general documents (such as those in Casimiri's periodical *Note d'archivio*, 1924–42, relating to the Cappella Sistina in Rome), but air travel and microfilm contributed to a postwar wave of comprehensive archival studies on composers and musical activities in city, court and church. More recent archival studies have drawn on the administrative records of music printers, publishers, orchestras, opera houses and of the media, and on a broader historiographical base.

5. LEXICOGRAPHY AND TERMINOLOGY. The lexicography of music is a form of applied scholarship the object of which is to condense, organize (normally in alphabetical order) and clarify the terms musicians use to communicate their ideas about and their experience of their art; it is commonly extended to include biographical material on individual musicians. This interest has given rise to a long tradition of dictionary-making beginning with Brossard in 1701 and extending through Walther, Rousseau, Grassineau and Koch to such distinguished modern representatives of the genre as Willi Apel's *Harvard Dictionary of Music* (1944, 2/1969), the subject volume ('Sachteil') of the *Riemann Musik Lexikon* (12/1967) and the first edition of *Die Musik in Geschichte und Gegenwart* (1948–68). After a decade described by Michael A. Keller as 'the era of reprinters', lexicography received a fresh impetus with the publication of *The New Grove Dictionary of Music and Musicians* in 1980. The present revision appears at a time when other major projects, including the second edition of *Die Musik in Geschichte und Gegenwart* (1994–) and *The Garland Encyclopedia of World Music* (1998–), are already underway, yet which may prove, for economic and practical reasons, to be the high-water mark in the history of printed reference works in general. (*See* DICTIONARIES AND ENCYCLOPEDIAS OF MUSIC for a historical review of the genre and a comprehensive list of works.)

The history, purpose and practice of dictionary-making have been much discussed. According to Harold E. Samuel, 'the lexicographer is expected to synthesize existing knowledge, not to undertake new research'. Indeed, the practice of lexicography has often been denigrated as mere compilation or popularization; yet all scholars use dictionaries, whether they acknowledge them or not. Speaking in 1969, H.H. Eggebrecht remarked that the interest and historical value of a dictionary resides more in the integrity of its conception than in the individual articles. At a practical level, 'the art of lexicography consists largely in finding optimal compromises'. The quality of the result depends on finding contributors with the rare combination of specialist knowledge, enthusiasm for the task and a gift for dictionary style, combined with agreement on the classification and limits of topics. Jan LaRue has commented

further on the natural inclination of scholars towards expansion rather than conciseness and their difficulty in committing to paper anything short of a definitive version; he suggested sending drafts of articles that were prepared in-house or by graduate students to consultants who would react quickly and gleefully to every error of fact and interpretation.

Among the constant problems faced by lexicographers are issues of accuracy, content, balance and bias. The derivative nature of dictionaries leads to many pitfalls; Nicolas Slonimsky has chronicled the amusing fate occasionally befalling such eminent figures as Percy Scholes, Eric Blom and Slonimsky himself, along with 'Grove-diggers' in general. Viorel Cosma has made numerous suggestions for overcoming discrepancies caused by questions of translation and transliteration, including the use of multilingual headwords and standardized abbreviations, together with more precise documentation of sources. Some degree of national bias in lexicography remains almost inevitable and in some ways desirable, but the general trend has been towards greater inclusiveness and objectivity. As early as 1768 Rousseau went beyond a purely eurocentric view of music, and the terminological reference works of recent decades have offered enhanced coverage of non-Western and popular music. D.M. Randel drew attention to this tendency in his edition of *The New Harvard Dictionary of Music* (1986), although Apel's original had been regarded as a model in its day. Stanley Sadie has argued that any possible bias in favour of the music of English-speaking countries in *The New Grove* dictionaries is justified, indeed appropriate, on the practical grounds that those countries are where they would principally be used and about whose musical life fuller information would be sought. Defending the *Riemann Musik Lexikon* against the charge of European bias, Eggebrecht stated that the balance of art music to folk music reflected the quantity and quality of existing scholarship rather than any assumed value judgment as to their relative importance. Furthermore, non-Western music can be described only in its own terms and is not necessarily susceptible to analysis by the methods of Western musicology.

Dictionaries of music reflect the use of terms in all kinds of primary sources, musical, theoretical and documentary. At the same time, they themselves become historical phenomena furnishing primary evidence of the musical mentality of past eras. It is evident that terms often change their meanings over time, and may coalesce in groups or undergo mutations; logical classifications are constantly at risk of being upset by the march of history. The phenomenon of 'term-families' and their behaviour was of particular interest to Wilibald Gurlitt, who projected a *Handwörterbuch der musikalischen Terminologie* that would trace the lineage of the vocabulary of music in a manner similar to that used in the *Oxford English Dictionary*. Such a work would provide a historical analysis of musical terms according to their inherent relationships and family groupings. The first issue of a handbook under Gurlitt's title, edited by Eggebrecht, came out in 1972, and his scheme was still in the process of being realized in 2000. The loose-leaf format of this work allows constant revision and updating but condemns it to a state of perpetual incompleteness. A similar approach has been adopted in biographical dictionaries where currency is of prime importance, such as Hanns-Werner Heister's *Komponisten der Gegenwart*, begun in 1992.

The historical analysis of terms serves as a means to gaining an understanding of the development of concepts, but there is another aspect of the relationship between word and music that confronts the musicologist with a fundamental dilemma – the need to apply verbal symbols to an art that conveys its meanings through the medium of sound. One can talk or write about music, but the experience of music itself can be known only through its own 'language', the language of sound. The effort to resolve the disparity between verbal and tonal discourse was a lifelong preoccupation for Charles Seeger, who saw little chance of bringing these two realms of meaning into complete coincidence. Until recently it was the inevitable fate of the musicologist to suffer what Seeger called the 'linguocentric predicament', from which the advent of multimedia technology now offers, in theory at least, the possibility of an escape. The CD-ROM *Microsoft Musical Instruments* (1992), for example, presents an introduction to the subject using text, pictures, maps and recordings to place individual instruments in their cultural and aural context. Most such products, however, are educational rather than scholarly, and sometimes openly commercial, in their objectives.

The compilation and presentation of electronic dictionaries on the World Wide Web overcomes at a stroke the limitations of space but raises more acutely the issues of content and editorial control. In the field of music, many such ventures are compiled by amateurs whose technological expertise surpasses their musicological credentials, and the results consist mainly of links to existing documents or of randomly-contributed material whose accuracy and objectivity cannot be guaranteed. Enthusiasts have created numerous terminological lists for particular musical styles, as well discographies inviting users to submit their own opinions. Among the few scholarly dictionaries of music available on-line is *The New Grove Dictionary of Opera*, a revision of the four-volume edition published in 1992. As compared with the printed version, this offers enhanced search facilities, factual updating and links to related sites and images, yet it remains essentially text-based and has barely begun to exploit the theoretical potential of the electronic world which it inhabits. The harnessing of that potential, in musicology as in other disciplines, will be among the foremost challenges to lexicographers of the 21st century.

6. Organology and iconography.

(i) Organology. Organology, the study of musical instruments in terms of their history and social function, design, construction and relation to performance, has interested scholars since at least the 17th century. Michael Praetorius, in *Syntagma musicum* (ii, 1618–19), included an important section on instruments, including some non-Western types, with realistic illustrations drawn to scale. Other technical discussions appear in encyclopedic works of Mersenne (*Harmonie universelle*, 1636–7) and Kircher (*Musurgia universalis*, 1650). Modern organologists and reproducers of historical instruments (who might be called 'applied organologists') have benefited from the observations of such early scholars, particularly where well-preserved original instruments are rare or non-existent (*see also* Organology).

In addition to providing practical information useful to performers and instrument makers, organologists seek to elucidate the complex, ever-changing relationships among musical style, performing practices and evolution of instruments worldwide. This study involves authenticating and dating old instruments by scientific means, discerning the methods by which instruments of different cultures have been designed and produced, and investigating the many extra-musical influences – such as advances in technology and changing economic conditions – that lead to innovation and obsolescence. The symbolism and folklore of instruments are subjects that organology shares with music iconography and ethnomusicology.

Since the late 18th century, interest in instruments of all kinds has served an ethnomusicological purpose by providing a common avenue of approach to the music of diverse cultures. G.A. Villoteau (1759–1838) made the first scientific study of ancient Egyptian music largely on the basis of depictions of instruments in tombs and temples; later archaeological discoveries of actual if fragmentary Egyptian instruments allowed his conclusions to be refined and corrected. Organology as an academic discipline came into its own after the 19th-century development of large, permanent instrument collections in Europe and the USA. Once these repositories were established, organologists, who were often also museum curators, confronted the challenges of comprehensive classification and description. Curt Sachs's *Real-Lexikon der Musikinstrumente* (1913), a pioneering effort to systematize knowledge of instruments on a worldwide basis, and the widely-adopted classificatory scheme devised jointly by Sachs and Erich von Hornbostel, were based on Victor-Charles Mahillon's research on instruments collected at the Brussels Conservatory beginning in the 1870s. Nicholas Bessaraboff, who in 1941 introduced the term 'organology' in the sense used here, applied a classification derived from those of Francis W. Galpin (1910, 1937) to the collection at the Museum of Fine Arts, Boston.

The study of instruments *per se* became an important resource for comparative musicology (e.g. Hornbostel's adducing of panpipe tunings as evidence of a cultural connection between Brazil and Polynesia); but ethnomusicologists have tended to subordinate a purely object-orientated approach to a broader consideration of instruments' musical and social contexts. Especially in traditional and non-literate cultures, the shapes, materials and decoration of instruments, no less than their sounds, convey meaning essential to their functions; seeking to understand these features, organologists might collaborate in field research with ethnologists and native informants. Efforts to interpret ancient and prehistoric sound-producing implements have thus far usually proven inconclusive or unconvincing, in part because of the difficulty of faithfully reconstructing scattered fragmentary remains. Since primitive noisemakers often served multiple purposes, the sonic function of an excavated artefact might even go unrecognized.

Recent studies of Western instruments have produced important though sometimes controversial results in such matters as pitch and tuning, historically appropriate string materials, and the origin and dissemination of various instrument types. Technological advances (e.g. in dendrochronology and computer-assisted tomography) have broadened the scope of organological investigation and helped raise standards of connoisseurship. During the last quarter of the 20th century, John Koster and G. Grant O'Brien contributed valuable new information concerning the construction and uses of early stringed keyboard instruments, and Peter Williams explicated the obscure history of organs. Karel Moens raised fundamental questions about the authentication of antique bowed string instruments, while Herbert Heyde, a specialist in the development of woodwind and brass instruments, demonstrated the relevance of geometric proportional schemes and local units of measure to instrument design. Such studies as these depend on close examination of extant instruments and primary documentary sources, including treatises, patent claims and musical compositions, as well as iconographic evidence.

One striking conclusion to emerge from analysis of a wide range of data is that, contrary to common belief, major advances in instrument design often precede rather than result from musical style shifts, as innovative instrument makers, responding to general market conditions, introduce novel types having expressive potentials that might take generations for musicians to explore. The history of the piano and of the saxophone exemplify instances where, so to speak, the medium anticipated the message. Observations such as this demonstrate the power of organology to shift perceptions of music history.

(ii) Iconography. The first generations of musicological scholars in the late 18th and early 19th centuries were acutely aware that their discipline differed from neighbouring ones in so far as the objects of their study were invisible and bound to process in time, and hence more ephemeral than the painted or the written ones. The lack of tangible evidence inevitably led scholars to explore secondary sources such as pictures and texts about music. Thus Martin Gerbert appended to his *De cantu et musica sacra* (1774) a few plates (xxiii–xxxiv) with pictures of medieval musical instruments from illuminated manuscripts. In the main text he discussed their shape, purpose and terms and sketched a history of the use of musical instruments in the Church (iii, chap.3). A similar approach to visual material was taken 50 years later in a study of non-Western music. G.A. Villoteau, as a member of the Napoleonic expedition to the upper Nile valley, collected pictorial material on the music life in ancient Egypt and compared it with the ethnic evidence of his own day in Egypt and the eastern Mediterranean. The results were extensive articles with illustrations published as a part of the *Description de l'Egypte* (1809–22).

Throughout the 19th century the motive for iconographical studies continued to be the interest in the tangible objects of past cultures (*Realienforschung*). Musicologists found themselves in the good company of cultural historians of various kinds. Particularly important promoters of this area of research were the antiquarian societies such as the Société Française des Antiquaires in Paris, which inspired the iconographical work on medieval music by Fétis, Coussemaker and Bottée de Toulmon published in the decade 1839–49. Since that time an interest in musical iconography, in tandem with organology and performing practice, has been a hallmark of French scholarship. It bore fruit in the foundation of the Société pour la Musique d'Autrefois in the 1920s by Geneviève Thibault and in the doctoral dissertations of Evelyn Reuter (1938) and Claudie Marcel-Dubois (1941).

Given the close contacts between art history and musicology, which led, for instance, to the adoption in musicology of the art-historical terms Renaissance and Baroque from Jakob Burckhardt and Heinrich Wölfflin, one might have expected musical iconography to be a field of intense collaboration between art historians and musicologists. That, however, has rarely been the case. Emile Mâle, the most prominent art historian in France around the turn of the century, had little influence on French musical iconography despite his very influential work on themes in medieval art. Only after World War II did French scholarship enter a new era with the publications of Albert P. de Mirimonde.

For German, Spanish, Scandinavian and British musicological scholarship, too, the initial incentive for studying works of art was the interest in objects from past cultures, and so it remained until World War II. The first anthological collections of pictures with musical subject matter began to appear, culminating in Georg Kinsky's *Geschichte der Musik in Bildern* (1929, translated only a year later into English, French and Italian) and Besseler's *Musikgeschichte des Mittelalters und der Renaissance* (1931), a historical survey with a superb selection of illustrative material. After the war, Besseler and Max F. Schneider, and later Besseler's student Werner Bachmann, published the multi-volume serial *Musikgeschichte in Bildern*. Before it came to a halt with the closure of the East German publishing house in 1990, it had produced 18 volumes of European and eight of extra-European material.

As early as 1914 Hugo Leichtentritt, in his article 'Was lehren uns die Bildwerke . . . ?', voiced scepticism about the indiscriminate use of pictorial evidence for the reconstruction of instruments and performance. But it was another half-century before a methodological base was laid, by Steger (1961), Winternitz (1961), Hammerstein (1964), Seebass (1973) and Droysen (1976). Since then a number of British and American scholars, such as Mary Remnant, Ian Woodfield, Edward Ripin, Howard M. Brown, Keith Polk and Colin Slim, and in Italy Elena Ferrari Barassi, have provided models of cautious and successful scholarship; McKinnon also offered methodological reflections (1982). So, to the end of the 20th century, the number of scholars using musical iconography as an auxiliary discipline is considerable. Without their efforts and those of others, successful reconstructions of musical instruments and the revival of performing practices no longer in use would not have been possible. These areas of interest have made a spectacular move forward and enabled the Early Music movement to be a serious force in the global music business. The role accorded to musical iconography in the study of performing practice and musical instruments is also acknowledged by editors of such journals as the *Galpin Society Journal*, *Early Music*, *Journal of the American Musical Instrument Society* and *Basler Jahrbuch für historische Musikpraxis*, who occasionally accept articles in this area.

Interest in the visual arts as a source *sui generis* for the study of intellectual and social concepts of music is of a more recent date. Like literary sources, pictures can provide information about the place that society accords to music, what it thinks about music and how it is moved by music. The beginnings go back to the studies of visual symbolism in the mid-19th century (see Piper, 1847–51/*R*; Pougnet, 1869–70), but serious scholarship began only through the activities of the Warburg circle. There, for the first time, interdisciplinary cooperation between art history and musicology (and also literature) was set in motion. Much of the movement lost its impetus through the dislocation of the leading figures during the Nazi period, but at least two articles (Schrade, 1929, and Gurlitt, 1938) established a methodological standard that could serve, after the war, as a basis for musical iconography and iconology (in the Panofskyan sense). By the end of the 1970s it had been definitely established with the publications of Hammerstein, Winternitz, Seebass and McKinnon. A different perspective that had its sources in Besseler's approach focussed on the sociological side. Bachmann and in particular Walter Salmen are its representatives, as to a degree is Richard Leppert, who combines it with gender critique.

Meanwhile the International Association of Music Libraries had put a bibliographical network in place and began to work on its series of *Répertoires*. In 1972, as a parallel music-iconographical undertaking, Geneviève Thibault-de Chambure, Barry S. Brook and Harald Heckmann founded the RÉPERTOIRE INTERNATIONAL D'ICONOGRAPHIE MUSICALE (for reports of its activities see *Fontes artis musicae*). It spawned a number of cataloguing centres in various countries, the publication of a bibliography (Crane, 1971), catalogues, a newsletter and a yearbook, *Imago musicae*. Several centres have developed software for the computerized cataloguing of pictures with musical subject matter.

The last two decades of the century brought a steady increase of scholarship that can partly be connected to the increased number of academic positions (in Italy in the early 1980s, in Spain in the 1990s). The activity in Italy surpasses that in any other country (see Barassi, 1996, and Seebass, 1994) with theses, academic courses, conferences, publications and regional cataloguing centres. Besides the traditional avenues of scholarship, such neglected fields as scenography and the iconography of folk music have attracted development there.

Research in synaesthetic questions is of relatively recent origin. It began in 1949 with Thomas Munro, who was followed by T.H. Greer (1969) and Edward Lockspeiser (1973); since then it has increased at a rapid pace. Distinguished scholarship has been produced about individual figures such as Schoenberg, Klee and Cage, but otherwise few steps have been taken beyond the collection of materials in lavish exhibition catalogues and their enumeration in surveys. The pluralism of style in the visual arts, the breakdown of traditional genres and the subjectivism of verbalizations by artists and art critics (which has also affected musicologists) have so far prevented the formation of a reliable terminology for historical analysis. Much remains for future scholars.

Research in folk music and the music of the other continents has been a stepchild of musical iconography. The model study by Jaap Kunst and Roelof Goris on Hindu-Javanese instruments (8th–15th centuries), had found no worthy successors by the end of the century. The most productive groups include the scholars interested in India and those formerly active at the Research Centre at the Kunitachi College of Tokyo. In the long run the volumes of *Musikgeschichte in Bildern* covering non-European countries should have their impact. In 1986 the International Council for Traditional Music established a Study Group for Musical Iconography that led to an

intensification of research, with some of the results published in *Imago musicae*. Pluralistic methods of analysis are increasingly relevant for iconographical research in non-Western historical materials because they seem particularly apt for handling the emic-etic tensions that arise in interpretation.

See also ICONOGRAPHY.

7. PERFORMING PRACTICE. The study of the way music has been performed has been closely connected with the historical performance movement but is by no means identical with it (*see* EARLY MUSIC). Although 'old' music was performed in various circles in earlier times (Bach and Handel at Gottfried van Swieten's concerts in late 18th-century Vienna; Palestrina in the churches) performers used the then 'modern' style with which they were familiar. The discipline can thus hardly be said to have existed (save to an unimportant extent in a few 16th- and 17th-century treatises that deal with the music of the ancient Greeks and Romans, and in the interest of 18th-century writers such as Martini and Hawkins in the same music) until after the various revivals of earlier music began in the 19th century, for example, Mendelssohn's performances of music by J.S. Bach and the publication of historical editions of old music and editions of the works of Bach, Handel and others. Most performers in the 19th century and surprisingly many in the 20th assumed that older music must be improved by performing it, for instance, on modern instruments with their greater volume and brilliance, and even editors of medieval and Renaissance music have often followed the same idea in their own way, modernizing notation to resemble that to which their contemporaries were accustomed. Other musicians, however, began to think that unexpected meanings, and unexpected beauties, might be revealed if older works were performed in a manner close to that heard by the original audiences.

An important landmark in the history of performing practice was the publication in 1915 of Arnold Dolmetsch's book on the interpretation of music in the 17th and 18th centuries, and a number of other studies appeared about the same time or in the following few decades: Beyschlag on ornamentation (1908/*R*), F.T. Arnold on figured bass (1931/*R*) and Robert Haas on performing practice in general (1931/*R*). Much of this early work centred on the problems of performing music by J.S. Bach and his contemporaries, and was concerned with relearning obsolete instrumental techniques and conventions of performance: improvising embellishments, realizing keyboard parts from figured and unfigured basses, adding implied accidentals, inventing appropriate scoring where none is indicated and so on. The usual sources of information were treatises, dictionaries and other contemporaneous accounts, and the notated music itself.

After World War II such scholars as Robert Donington, Thurston Dart, Frederick Neumann, Sol Babitz, Michael Collins and Putnam Aldrich refined pre-war ideas about performing Baroque music and advanced new ones; their ideas have not always been accepted by the musical world or even the scholarly community. From the 1950s the discipline enjoyed a gradual expansion: performing practices of both earlier and later periods were investigated and more sophisticated approaches were developed. Paul and Eva Badura-Skoda's study of performing conventions in Mozart's keyboard music (1957) moved research on performing practice forward from the Baroque era. The revival of medieval and Renaissance music was an active collaboration of makers, players and scholars: musical sources are often demonstrably incomplete, instruments survive only as depicted in iconographical sources and must be reconstructed, writings on *musica ficta* are difficult to interpret, and so on. An important figure in establishing this new style of research was Howard Mayer Brown. The investigation of the performing practices of all periods has since benefited from this type of collaboration: treatises, archival notices, literary works and works of art have been used by those investigating later practices, as well as by medieval and Renaissance scholars. Other techniques have also been added: paper analysis, for example, has been used to aid in determining the state of a manuscript at the time of a particular performance, and rigorous techniques of measurement and physical analysis have aided in the recovery of earlier techniques of instrument making, which in turn has helped in determining how instruments worked and what they sounded like.

The concept of AUTHENTICITY in performance exercised scholars in the 1980s especially: a prominent, if controversial, thinker in this area was Richard Taruskin. Studies of recordings (available only from the late 19th century; a few musical clocks and barrel organs have provided interesting evidence of earlier performing styles) have revealed, among other things, how quickly ideas of musical performance change. Investigation in the late 20th century, while continuing to treat technical aspects, also came to encompass cultural context, the acoustics of performance spaces, aesthetics, relationships between composers, and relationships between modern and old perceptions of performance.

See also PERFORMING PRACTICE.

8. AESTHETICS AND CRITICISM. Music aesthetics seeks to answer the questions: what is music? how does it carry meaning? what is its place in human life, culture and society? What is greatness in music? Answers have been provided by some of the world's greatest philosophers: Plato and Aristotle, St Augustine, Thomas Aquinas, Kepler, Leibniz, Descartes, Rousseau, Kant, Hegel, Schopenhauer, Nietzsche and Marx. Scholars in acoustics and psychology, such as Stumpf, Helmholtz and Seashore, have made a large contribution. In the 20th century the most significant contributions have been offered by Adorno, Dahlhaus, Ingarden, Langer, Meyer, Scruton and Zuckerkandl.

Aesthetic questions are present in almost all types of musicological writing. They arise when music historians discuss the role of music in a social milieu or the impact of personal environment on individual musical development, or liken music to other arts, or define the terms of a specific style; they are raised by acousticians who seek their bases in physical properties; they are invoked by analysts as foundations for theories and methods of operating, and underlie their attitudes towards musical material, the process of hearing and the function of performance; they appear constantly in the writings of music critics wherever the criteria for judgment of craftsmanship, imagination in composition, and technical skill and interpretative insight in performance come into play; they penetrate the works of iconographers and experts in performing practice, just as they do the deliberations of performers, when leaping the gap –

imaginative, despite its historical conditioning – between evidence and statement or performance. They are thus expressed in many different styles of writing: scientific, scholarly, literary, philosophical. They also occur outside the literature of musicology, in systematic philosophical writings from Pythagoras to Leonard Meyer, and in general histories of art and culture.

Specialist writing in musical aesthetics extends back to the Middle Ages, above all in the speculative tradition which was inherited from classical Greek philosophy, and which extended through the Renaissance to the early Baroque period. It was with the theory of emotive meaning in music, the so-called THEORY OF THE AFFECT, that aesthetics took on a sharply different character. Scheibe and Mattheson were the most important figures in the development of this theory. In the 19th century Hanslick's theory of music as 'tonally moving forms' founded a line of aesthetic thought that rejected emotional and programmatic interpretations of music, a formalism that has been followed by Combarieu, Stravinsky, Langer and others. Kurth's theory of music as a stream of tension, and as expression of the will (in the Schopenhauerian sense) belongs to the same line of thought. Kretzschmar, on the other hand, took the view that music had meaning and emotional state, and that these could be directly deduced. There is an influential body of Marxist aesthetic or critical theory in music, particularly in the work of Adorno, Bloch, Lissa and Supičić. Many composers have contributed to the theory of aesthetics, among them Wagner, Busoni, Schoenberg, Stravinsky, Hindemith, Sessions, Cage, Cowell, Schaeffer and Stockhausen.

In the last decades of the 20th century, the aesthetics of music has broadened in scope. Its arena of concerns has moved beyond the domain of classical or high music to incorporate more popular forms, diverse in social, ritualistic and cultural ramifications. Ethnomusicological research has contributed to this general broadening of scope. Feminist, semiological and more overtly political theorizing has entered into the field alongside the continuation of a formalism that dominated music theory and philosophy for a large part of the 20th century. The philosophy of music presupposed by all the areas of music has become more critical and self-aware as the tendency towards theory has predominated.

See also CRITICISM and PHILOSOPHY OF MUSIC.

9. SOCIOMUSICOLOGY. That music is a social activity and not just a collection of musical artefacts in organized sound was realized by the earliest writers in the Western intellectual canon. Both Plato and Aristotle stressed the importance of music as an activity in society and sought to establish criteria for its evaluation as a social phenomenon. In the subsequent development of musical thought a different tradition, emanating from Aristotle's pupil Aristoxenus and centred on the investigation of music as a pure sounding phenomenon, gained a supremacy which remained largely unchallenged until as late as the 18th century, when Charles Burney, avoiding the Aristoxenian tradition, discussed music as a phenomenon influenced by manners and social circumstances.

In the climate of an increased importance of social sciences, several 19th-century music historians, while still adhering to the idealist philosophical tradition (Winterfeld, Spitta, Jahn) sought to incorporate ideas about the social position of music and musicians into their biographical studies. However, though interested in music as a social phenomenon, Guido Adler thought of the study of musical institutions as only an ancillary musicological discipline. At the end of the 19th century and during the early 20th, advances in general sociology enabled, among others, Lalo, Combarieu, Bücher and Max Weber to formulate theories about the interdependence of musical and social phenomena.

All the major ideological currents of the 20th century left their mark on the study of music as a social phenomenon. The positivist tradition reflected itself in the fact that, on the simplest level, social phenomena relating to music were being explored quantitatively, employing statistics to determine popularity of works and authors, modes of transmission and audience response. Some adherents of the German philosophical tradition sought to establish social history of music as a critique of processes in a capitalist society, uncovering tensions arising from the confrontation of individual creativity and social dictates (e.g. T.W. Adorno). Leninist Marxists dominated the thought in the Communist bloc in the middle of the century with a rigid distinction between the 'base' (society, economy) and the 'superstructure' (cultural and artistic phenomena) – thus discrediting those aspects of Marxism that were otherwise capable of providing the social history of music with criteria by which to judge the subtle distinctions that arise between musical pursuits – either of producers or of consumer of art – and the forces of tradition and social responsibility which, consciously or subconsciously, shape attitudes and help create forms of musical life.

About the middle of the 20th century, a dilemma began to be felt about whether sociology of music and the social history of music (or, to broaden the term somewhat, sociomusicology) are a single discipline or two separate disciplines. A contention exists according to which the sociology of music is simply a narrowing of general sociological principles applied to music as an object of inquiry (approaching it 'from the outside'), whereas sociomusicology examines social roles of music, musicians and musical institutions 'from within'. This is in practice difficult to establish, and the rich development in the last quarter of the 20th century of the study of 'classical' music as a form of cultural practice, as well as the claim of ethnomusicology that not just Western art music but all musics are essentially social phenomena, to be judged by the same criteria, confirm the lack of a clear distinction.

See also SOCIOLOGY OF MUSIC.

10. PSYCHOLOGY, HEARING. The areas of musicology that have witnessed the strongest links with psychological studies of hearing are theory and analysis. Theories of musical organization and investigations of the human response to music have been associated since the time of classical Greek writings on music (see Barker, 1989), and music was the focus for one of the earliest contributions to modern psychology – Helmholtz's treatise of 1863, *Die Lehre von den Tonempfindungen als physiologische Grundlage für die Theorie der Musik*, which already took account of differences between a perceptual and a musicological outlook. While asserting the importance of a scientific approach to the issue of consonance and dissonance, Helmholtz nonetheless noted that the distinction 'does not depend . . . on the nature of the intervals themselves but on the construction of the whole tonal system' (Eng. trans., p.228).

In the development of new music theory and analytical method after World War II, psychological principles played an important role. Leonard Meyer (1956*R*), for example, made use of Gestalt principles of perceptual organization to account for the ways in which listeners' musical expectations might be generated and manipulated, and thus for a theory of musical affect and an analytic method which gave an account of melodic and rhythmic processes based on the same principles. He later (1967) took the idea of expectation and developed it into a theory of implication couched within the framework of information theory. Meyer was not alone in associating music with information theory, but while the more formal attempts to understand musical processes and listeners' responses to them in these terms fell by the wayside as information theory failed to live up to its rather heady promises, Meyer's project, in which Gestalt and information-processing ideas were woven into music theory, continued to move forward both in another book of his own (1973) and in the work of Eugene Narmour (1977). Narmour's two subsequent volumes (1990, 1992) represent a culmination of this particular line of thought, presenting a painstaking investigation and classification of melodic processes still based very largely on Gestalt principles, but couched within the dominant paradigm of cognitive psychology.

An indication of the impetus to find common ground between psychological research and musicology was the founding in 1981 of the journal *Psychomusicology* (a term coined by Laske in a paper of 1977), whose position statement expressed the desire to bring together the perspectives of psychology and musicology in a consideration of music. A significant book in this domain is Lerdahl and Jackendoff's theory of tonal music (1983), which takes both the basic principles of generative theory from linguistics and perceptual principles from psychology to create a theory which states in its first sentence that the authors 'take the goal of a theory of music to be a *formal description of the musical intuitions of a listener who is experienced in a musical idiom*' (p.1). The interpenetration of listening and musicology can seldom have been more directly expressed. The form of the theory is a set of rules that generate hierarchical structural descriptions of musical surfaces, allowing for inevitable differences of interpretation and inherent structural ambiguities through the device of 'preference rules', which adjudicate between different interpretative possibilities in an interactive manner. Many of these preference rules are based on Gestalt principles, and the authors regard the theory as a contribution both to cognitive science and to music theory. The theory has been extended to tackle atonal music (Lerdahl, 1989), and has formed the basis of a cognitively based critique of compositional systems (Lerdahl, 1988).

From the perspective of the psychology of listening, musicology has made its mark in the recognition that empirical and modelling work should take account of the theoretical framework provided by musicology. An early example is Francès's wide-ranging treatment (1958), which considers a variety of issues, such as musical semantics and rhetoric, which have only recently made their way back into the perceptual literature. Krumhansl's research (1990) on the perception of tonal structure is another example, as is Parncutt, who has developed (1989) an explanation of harmonic function and harmonic process based on a psychoacoustic principle first investigated by Terhardt (1974). Similarly, the perception of tonality has been tackled using empirical studies based on set-theoretic principles which themselves occupy the boundary between what would be called systematic musicology in some traditions, and formal modelling or cognitive science in others (Butler, 1988–9). Other meeting-points of this kind can be found in the edited collections by Howell, Cross and West (1985, 1991) and in Bigand (1993), who considers a variety of ways in which research in music perception has contributed to an understanding of auditory cognition more generally.

A number of commentators have cautioned against a simplistic collapsing of musicological and psychological perspectives: musicology and psychology have rather different aims, and unsystematic leakage between the two can lead to shortcomings on either side being disguised and concealed (Clarke, 1989). Similarly, analysis offers a mythopoeic rather than scientific view of musical structure, and attempts to test analytical descriptions with empirical tasks are epistemologically confused (Cook, 1990); further, empirical work in the psychology of music has often been concerned with a kind of listening that is quite unrepresentative of spontaneous behaviour and is heavily influenced by the categories and concepts of musicology (Cook, 1994). Thus the attempt to compare musicological predictions or pronouncements with empirical results becomes a circular exercise with little relevance to the listening experiences of most people most of the time. While offering an optimistic view of the potential for interactions between music theory and cognitive science, Agmon (1989–90) points to misunderstandings that have resulted from confusing or collapsing different domains (physical, perceptual, cognitive) and different types of theory ('competence' and 'performance' theories).

Lastly, there have been attempts to make use of perceptual principles in constructing a theory of structure and meaning in electro-acoustic music – a development that is understandable given the inappropriateness of notation-based methods for this music. The relationship between different modes of listening has been explored (Smalley, 1992, based on those described by Schaeffer, 1966) and the dual capacity of sounds both to specify their sources and also to become bound up in the more abstract structural relationships that have been the primary focus of most theory and analysis. Windsor (1994) makes the link with perceptual theory more explicit, and opens the way for a more thoroughly perceptual theory of electro-acoustic music. A significant and closely related body of work is that of Bregman (1990), whose approach to audition has been influential in perceptually motivated accounts of polyphonic structure, melodic and harmonic organization, and the whole matter of how listeners identify an 'auditory scene' in the complex context of the acoustical environment. If the relationship between perceptual studies and musicology has been uneasy and uncomfortable at times, and has seen its fair share of epistemological 'ships in the night', there is now at least a greater awareness within musicology of the contribution that psychology might make, and equally a more musicologically informed approach within the psychology of music.

See also HEARING AND PSYCHOACOUSTICS, INFORMATION THEORY and PSYCHOLOGY OF MUSIC.

11. GENDER AND SEXUAL STUDIES. Until very recently musicologists rarely addressed issues related to gender or

sexuality. The vast majority of the musicians examined by the field were male and assumed to be heterosexual. Because 'male' and 'heterosexual' count as unmarked categories (as opposed to 'female' and 'homosexual') within traditional epistemologies, they did not seem to require comment. Only with the rise of women's, feminist and gay and lesbian studies in the other humanities and social sciences have gender and sexuality become significant areas of research within musicology.

(i) Women in music. The first venture within the discipline to focus on gender was the attempt begun in the 1970s to recover the history of women in music. Before that time very little was known – or at least remembered – about women in music history: their name rarely appeared in textbooks or journals, except for the occasional woman (e.g. Clara Wieck Schumann and Fanny Mendelssohn Hensel) noteworthy because she was related to a famous male composer. Since then, however, there has been an explosion of information concerning women composers, performers and patrons. The women who have received extensive attention in scholarship, recording and performances include Schumann and Hensel but also Hildegard of Bingen, Barbara Strozzi, Elisabeth-Claude Jacquet de La Guerre, Amy Cheney Beach, Cécile Chaminade, Ethel Smyth, Florence Price and Ruth Crawford Seeger. Contemporary women composers have benefited from this increasing interest, and they too have received an unprecedented degree of attention from music historians, critics and performing organizations.

The first contributions in feminist musicology dealt with individual women or with specific historical contexts, but a number of pioneering books from the 1980s began piecing together more continuous accounts of women in music. Unlike the more traditional surveys that trace a succession of 'masters', these accounts tend to pay attention to many kinds of music-related activities besides formal composition, and they also observe far more closely the social conditions within which musicians have operated (see Bowers and Tick, 1986; Briscoe, 1987; Marshall, 1993; Neuls-Bates, 1982; Pendle, 1991; and Sadie and Samuel, *GroveW*).

As in other disciplines, the more musicologists have learnt about the women previously overlooked by the canon of accepted masterworks, the more they have realized the need to reassess the historical processes that had resulted in its formation – in whose interests canons operate, what gets included, what excluded, and by means of what criteria (see Citron, 1993; Bergeron and Bohlman, 1992). Similar projects have focussed on the histories of women in jazz and popular music and have altered received notions of those traditions as well (see Carby, 1990; Dahl, 1984; Davis, 1998; Gaar, 1992; Gourse, 1995; Harrison, 1988; Placksin, 1982; and Rose, 1994).

Just as many music historians have turned their attention to women musicians from earlier times, so ethnographers have come to incorporate questions concerning gender ideologies into studies of music culture, both Western and non-Western (see Herndon and Ziegler, 1991; Koskoff, 1987; and Sugarman, 1997). As ethnomusicologists have studied gender-based divisions of labour across cultures, they have helped to diminish the longstanding gap between the Western art tradition and cultures of 'others'. For comparing structures and justifications for gendered hierarchies in different cultures sheds light not only on people in remote parts of the globe, but also on European and North American cultural practices and traditions, which have long claimed exemption from ethnographic analysis (see Bohlman, 1993, and Robertson, 1989).

Bringing women into music studies counts among the most remarkable contributions to musicology of the last 30 years of the 20th century. The number of institutions offering courses on women and music has increased dramatically, and most undergraduate music history surveys now include at least some music by women.

See also WOMEN IN MUSIC.

(ii) Gender and music. As soon as women became a focus for music research, the reinterpretation of male musicians as 'gendered' inevitably followed. Many dimensions of music study that had seemed objective began to appear in new lights, motivating innovative scholarship in several different directions.

The first cluster of publication on women in music concentrated on sources and biographical information. As musicologists turned to the music itself, however, they began reassessing the standards and analytical devices then brought to all music, without regard to intended content. This reassessment helped precipitate a move in the discipline towards criticism or interpretation. Two isolated yet influential studies of feminist-based music criticism, Rieger and Clément, appeared in the 1980s. Before their publication, musicologists had not even addressed representations of gender in the actual plots of operas, let alone the possibility of gender-encoding in non-theatrical music. Accordingly, feminist music criticism began with these pioneering volumes, which introduced into musicology the kinds of critique that had long since become familiar – almost *de rigueur* – in literary, art and film studies concerning cultural representations of women and men, masculinity and femininity.

The 1990s witnessed the development of several kinds of criticism focussed on gender. Some writers (e.g. Kramer and McClary) have brought a critical perspective to the study of music, often dealing in detail not only with plots or lyrics but also with the music itself. Nor do these studies usually concentrate on representations of gender alone, but they also treat class, race and exoticism, domains often mapped on to gender in operas. They also address how the music itself – its codes and more basic structural procedures – participates in the production of these representations and also predisposes listeners to certain points of view (Bellman, 1998; Lewin, 1992; and Locke, 1991).

This research has radically destabilized some of the assumptions that had sustained musicological narratives of music history. For instance, Kallberg (1992) has researched attitudes towards the genre of the nocturne and has found how 'the feminine' was projected on to that repertory, the composers who wrote such pieces and even the piano itself; Cusick (1993) has examined the gendered polemics of the Monteverdi–Artusi controversy; Austern (1989) and Leppert (1989) have investigated how gender has influenced musical production and performance at various moments in Western music history; McClary (1992) has been concerned with discerning how historically constituted ideas of gender, sexuality and the body have informed even the most basic of musical procedures from the 16th century to the present.

Many scholars involved in gender studies maintain strong allegiances with the music of the canon (see Abbate, 1991, 1993) and justify those allegiances by means of a variety of feminist theoretical strategies. The collections of feminist musicology of the 1990s (Blackmer and Smith, 1995; Cook and Tsou, 1993; Dunn and Jones, 1994; and Solie, 1993) offer a broad spectrum of political positions: there is no monolithic position within this area of musicology.

With the rise of gender-based criticism, other areas of music research have likewise opened up to questions of gender. Music education, for instance, long populated mostly by women under male supervision, has begun to rethink philosophical premises and revise curricular planning (see Lamb, 1987; and Green, 1997). Perhaps most surprising, given the separate nature of their discipline, a number of music theorists too have started developing ways of dealing with gender (see Guck, 1994; Hisama, 1995; Kielian-Gilbert, 1994; Lewin, 1992; Maus, 1993; Straus, 1995).

See also FEMINISM and GENDER.

(iii) Sexuality. In most humanities disciplines, the feminist research of the 1970s had already established itself before sexuality became a matter of widespread scholarly interest. But the Gay Liberation Movement that emerged after the Stonewall riots in 1968 and Foucault's theoretical rethinking of this and other aspects of subjectivity made serious research on the history of sexuality possible for the first time in history. As a consequence, the 1980s saw the growth of scholarship focussed variously on social identities based on sexual preferences, structure of desire or erotic pleasure, histories of the body and subcultures organized around same-sex erotic inclinations.

Feminism appeared late in musicology, however, and research and theoretical work on gay and lesbian issues emerged concurrently with the growth of feminist music criticism. The individual most responsible for securing a space for such work within musicology is Philip Brett, whose work on Britten relates the relevance of the composer's homosexuality to his music. Wood and Cusick have been at the centre of lesbian work in musicology, because of both their work on women composers and their theoretical essays linking sexuality and the perception of music. The principal publication to date concerning sexuality and music is the collection edited by Brett, Wood and Gary Thomas, *Queering the Pitch: the New Gay and Lesbian Musicology* (1994). Some of the projects concerned with sexuality deal with specific artists (Thomas on Handel, 1994; Solomon, 1988–9, and McClary, 1993, on Schubert; see also Gill, 1995); others deal with lesbian and gay reception, especially of opera (see Blackmer and Smith, 1995; Koestenbaum, 1993; and Morris, in Solie, ed., 1993).

When research on gender and sexuality first began to appear, some musicologists objected that it would bring prurient concerns into the discipline. Far from diminishing or tainting the repertories it studies, this research has opened all music to important questions about cultural understandings of the body, gender and erotic experience as crucial aspects of subjectivity.

See also GAY AND LESBIAN MUSIC and SEX, SEXUALITY.

III. National traditions of musicology

Just as there are recognizable national styles in musical composition, so too are there patterns in scholarship that owe their character to the presence of national traditions, ideas and institutions peculiar to a given country or language group. The objectives of scholarship are international, but it is instructive to follow the various native strands and note how they fuse into the total pattern. The present discussion nevertheless can only make passing reference to the principal events and individuals within the major countries.

1. FRANCE. If modern musicology is a product of the Enlightenment, then France is the logical place to begin a discussion of national schools. French learning was emulated throughout Europe as the source and centre of rationalism. The rationalistic spirit revealed itself first of all in the work of the lexicographers, in the dictionaries of Sébastien de Brossard and Jean-Jacques Rousseau, culminating in the great *Encyclopédie* of Diderot and D'Alembert, and beyond that in the musical volumes of the *Encyclopédie méthodique* (1791–1818) edited by Framery, Ginguené and Momigny. French learning was also disseminated in the writings of a group of aestheticians (notably the Abbé Dubos and Batteux) all preoccupied in some degree with the classic concept of art as 'imitation of nature'. Much of their argument was channelled into the prevailing controversy over the merits of French as against Italian opera. Chabanon, whose thinking took account of instrumental music, was the first to make a clean break with this aesthetic.

France had less to offer in writings on music history. After the efforts of Pierre Bonnet-Bourdelot early in the century there was only one work of any significance – J.-B. de La Borde's four-volume *Essai sur la musique ancienne et moderne* (1780), a provocative but uneven work important chiefly for the attention it draws to the early French chanson. In 1756 a Benedictine monk, Philippe-Joseph Caffiaux, had produced a systematic history of music from pre-history to contemporary times in seven volumes, but it was never published (MS in *F-Pn*). Finally, the theoretical works of Rameau were fundamental to French musical learning in the 18th century; they provided a focal point for the discussion of a host of crucial problems confronting composers and scholars alike.

After the disruptive events of the French Revolution a new generation of music scholars came to the fore. Prominent among them was Alexandre Choron (1771–1834), a man of broad knowledge and high didactic aims who was director of the Opéra in 1816 and for a brief period was involved in efforts to establish the Paris Conservatoire as the 'Ecole Royale de Chant et de Déclamation'. His lifelong objective was to revitalize the training of musicians in France and to raise the level of musical understanding of the public in general. He was well versed in the German and classical writings on music, but Italy remained for him the prime source of musical excellence, as demonstrated in his best-known work, *Principes de composition des écoles d'Italie* (1808, in three volumes; 2/1816, in six). As a teacher, writer and administrator, Choron exerted a profound influence on his contemporaries.

A more direct precursor of modern historical methods was François-Louis Perne (1772–1832), whose research

centred on the music of the Middle Ages and antiquity. He was among the first to transcribe the music of Machaut and the Chastelain de Couci, and he made a rather misguided effort to restore the musical notation of ancient Greece to modern practice. A model of erudition of another kind was presented by Guillaume André Villoteau (1759–1839), who was chosen to accompany Bonaparte's army to Egypt as a member of a scientific commission to study the culture of that country. His monographs treating of Egyptian music, musical instruments and iconography are pioneer works of ethnomusicology.

The central position in French musicology in the first half of the 19th century was occupied by François-Joseph Fétis (1784–1871), whose range of musical activity was extraordinarily comprehensive, embracing history, theory, music education, composition and the sociology of music. Prodigious in energy and prolific in output, Fétis dominated the music scholarship of his generation; he is best known today for his *Biographie universelle des musiciens*, published in eight volumes between 1833 and 1844. The journal *Revue musicale*, which he founded in 1827, served as a medium for the expression of his views as a critic and historian until it merged with Schlesinger's *Gazette musicale* in 1835. In 1833 Fétis left Paris to become director of the Brussels Conservatory. His series of historical concerts with commentary, given in Paris from 1832 and in Brussels from 1839, awakened public interest in the music of the past. With Raphael Kiesewetter he was one of the first to stress the importance of the Netherlands school in the history of early European music. In a competition set by the Dutch government for the best essay on the subject 'The Contribution of the Netherlanders to the History of Music in the 14th, 15th and 16th Centuries', Fétis's text was rated a close second and was published along with Kiesewetter's prizewinning work.

In the shadow of Fétis's vigorous personality, a distinguished group of French music scholars was active in the first half of the 19th century, including Adrien de La Fage (1805–62), a pupil of Choron and friend of Baini (Palestrina's biographer) in Rome. La Fage's interests ranged from plainchant and the music of the Near East to music bibliography and source studies in general. He collaborated with Choron on the latter's *Nouveau manuel complet de musique vocale et instrumentale* (1838–9) and wrote his own *Histoire générale de la musique et de la danse* (1844) emphasizing ancient and oriental practices. His best-known book was published posthumously under the title *Essais de dipthérographie musicale* (1864), a collection of notes and commentary related to early printed and manuscript sources, many of them deriving from Baini's library. Several of these French scholars were archivists or librarians associated with one or more of the Parisian collections undergoing rapid expansion at that time. One such was Auguste Bottée de Toulmon (1797–1850), a lawyer by training who served as librarian of the Conservatoire from 1831 to 1848; he produced a number of important monographs, on the medieval chanson, medieval musical instruments, and the life of Guido of Arezzo.

An interest shared by many of these early 19th-century French musicologists was the improvement of church music performance through the reconstruction of organs and restoration of the authentic corpus of the chant. A leader in this movement was Joseph Louis d'Ortigue (1802–66), best known for his *Dictionnaire liturgique, historique et théorique de plain-chant et de musique d'église* (1854, in collaboration with Théodore Nisard). Others concerned with chant reform include La Fage, Jean-Louis-Félix Danjou (1812–66), who with Stéphan Morelot (1820–99) edited the *Revue de la musique religieuse, populaire, et classique* from 1845 to 1849, Alexandre Vincent (1797–1868) and Félix Clément (1822–88). In its critical approach to chant sources the work of these men foreshadowed that of the monks of Solesmes later in the century. Another important figure, Aristide Farrenc, compiled jointly with his wife, the pianist and composer Jeanne-Louise Farrenc, a 23-volume set of early keyboard music, *Le Trésor des Pianistes* (1861–72). A selection of early vocal music was edited by the Prince de la Moskowa (son of Marshal Ney) in his 11-volume *Recueil des morceaux de musique ancienne* (1843). Charles Bordes (1863–1909) was responsible for an *Anthologie des maîtres religieux du XVe au XVIIe siècle* and Henry Expert (1863–1952) produced several well-edited sets of Renaissance French music. Of great significance still is the work of Edmond de Coussemaker (1805–76), a Franco-Belgian lawyer who came to medieval studies through reading Fétis's *Revue musicale*. Best known among his editions is *Scriptorum de musica medii aevi nova series* (1864–76), an anthology of medieval writings on music modelled on a similar collection produced by Martin Gerbert nearly 100 years earlier, the *Scriptores ecclesiastici de musica sacra* (1784).

All of these scholars, with the exception of Fétis, were amateurs in the best sense; they were largely self-taught in music, and pursued careers as doctors, lawyers and public officials. The French were slow in giving institutional support to research in music: it was not until 1872 that chairs in music history were established at the Conservatoire and at the University of Strasbourg (then part of Germany). By the second half of the 19th century, however, French musicology began to take on a professional character: a new generation of scholars had emerged, some, notably the medievalist Pierre Aubry (1874–1910) and Jules Ecorcheville (1872–1915), harshly critical of Fétis's dogmatism and frequent inaccuracies. A major effort to establish France as the centre of musical learning was made by Albert Lavignac (1846–1916) and Lionel de La Laurencie (1861–1933) who joined forces to edit the great *Encyclopédie de la musique et dictionnaire du Conservatoire* (1913–31). La Laurencie himself produced the definitive study *L'école française de violon de Lully à Viotti* (1922–4). Romain Rolland (1866–1944) was one of the many contributors to the *Encyclopédie*. Marie Bobillier (1858–1918), who published under the name Michel Brenet, was a prolific writer on early French music. Henry Prunières (1886–1942) founded a new *Revue musicale* in 1920.

It was Rolland who occupied the first chair in music history at the Sorbonne (University of Paris), beginning in 1903. He was succeeded in 1912 by André Pirro, one of the giants of modern French musicology. In addition to his basic research in the music of the late Baroque (J.S. Bach, Schütz and Buxtehude) and the 15th century, Pirro claimed a long line of distinguished pupils including Yvonne Rokseth, Jeanne Marix, Geneviève Thibault, Jacques Chailley, Armand Machabey, Elisabeth Lebeau, Nanie Bridgman, Vladimir Fédorov, Paul Henry Lang and Dragan Plamenac. Pirro retired in 1937, and his

successor, Paul-Marie Masson, was not appointed until 1943. Masson was succeeded by Chailley in 1952. In 1961 a third chair of musicology was created at the University of Poitiers, and Solange Corbin was appointed to it.

Outside the universities the Ecole des Hautes Etudes Sociales, where Pierry Aubry and Henry Expert taught, offered courses in musicology intermittently from 1902. In 1929 André Schaeffner founded the Department of Organology at the Musée de l'Homme in Paris (it was renamed the Department of Ethnomusicology in 1954); this was the point of departure for ethnomusicological research in France. During the 1950s musicologists also gained access to the Centre National de la Recherche Scientifique (CRNS), which organized conferences devoted principally to the Renaissance (focussing on instrumental music, particularly for the lute, and the relationship between poetry and music) and to the interaction of music and drama. Jean Jacquot, the organizer of these 'colloques', also edited a vast series of transcriptions of lute music, the Corpus des luthistes. From 1961 to 1973 Geneviève Thibault (Countess of Chambure) was director of the Musée Instrumental du Conservatoire de Paris, the precursor of the Musée de la Musique in the Cité de la Musique. Thibault, who amassed a large collection of instruments and scores, trained many researchers in the fields of organology and musical iconography. Among the other senior scholars of this period was Marc Pincherle, a specialist in the history of the violin in the Baroque and Classical periods.

The most important institution for musicological research in France was founded during the German occupation (although the idea had been put forward during the Popular Front period). The music department of the Bibliothèque Nationale, created in 1942, united under one administration the three major French music libraries: the music division of the Bibliothèque Nationale (now the Bibliothèque Nationale de France), the Bibliothèque du Conservatoire and the Bibliothèque de l'Opéra. From the 1950s this department became the centre of musicology in France; among the distinguished scholars who have been associated with it are Nanie Bridgman, Vladimir Fédorov and François Lesure, the last serving as head of the department from 1970 to 1988, when he was succeeded by Catherine Massip. Since 1965 the department has been the headquarters of the Société Française de Musicologie (see below). It housed the central secretariat of RISM from 1953 to 1967, and at present accommodates the French teams of RISM and RILM.

As a result of major reforms introduced in 1969, music finally became fully accepted into French universities (*see* UNIVERSITIES, §III, 1). Eight universities, as well as the Ecole Pratique des Hautes Etudes and the Ecole des Hautes Etudes en Sciences Sociales, are authorized to award doctoral degrees in music and/or musicology. In 1999 some 30 musicologists also worked at the CNRS, most of them belonging to one of five teams: the Institut de Recherche sur le Patrimoine Musical en France, Etudes d'Ethnomusicologie, Atelier d'Etudes sur la Musique Française des XVIIe et XVIIIe Siècles (the research team of the Centre de Musique Baroque de Versailles), Ricercar (a team working within the Centre d'Etudes Supérieures de la Renaissance at the University of Tours) and the Centre d'Information et de Documentation-Recherche Musicale (associated with IRCAM, the Institut de Recherche et Coordination Acoustique/Musique).

The SOCIÉTÉ FRANÇAISE DE MUSICOLOGIE (SFM) continues to play a crucial part in the musicological life of France. In 1917, when the Société Internationale de Musique closed abruptly as a result of World War I, the SFM was founded by a small group of French musicologists headed by La Laurencie. It publishes a journal (generally twice a year), entitled since 1922 *Revue de musicologie*, as well as scholarly studies and critical editions; the latter activity virtually ceased in the 1970s but has been revived since the early 90s. The society's traditional 'communications' or discussion meetings have been replaced since the 1970s by conferences held every two or three years, sometimes organized by the SFM alone, and sometimes in association with foreign societies. Originally a small academic society run by a few outstanding personalities who often had no connection with the life of French institutions, the SFM has slowly been transformed into an association uniting all French musicological research. In 1999 it had about 500 members.

Although France still lags behind Germany, the USA and other countries in musicology, some 40 musicological theses are now submitted annually and the number of important publications has greatly increased, including translations of foreign works (France used to be extremely backward in this respect). Essential research tools have been provided (notably the systematic inventory within the framework of RISM of the musical material of the French provinces) and French musicologists have contributed to the great international reference works (*MGG1* and 2, *The New Grove*).

2. ITALY. Before World War I the state of musicology in Italy presented a contrast between the extraordinary richness of the country's archives and the failure of its scholars to make the best use of them. The reasons for this may be sought in the failure of universities to offer courses or degrees in historical music studies, in the lack of funds available for research, in the haphazard organization of certain libraries (a situation not entirely remedied today), and perhaps also in the sheer quantity of material available. One result of all this was that scholars worked, often in isolation, on whatever came nearest to hand, and it was only after the 1960s that a broader sphere of interest and a more sophisticated methodology raised the status and productivity of Italian musicology to international levels.

At the same time Italy's early contributions should not be overlooked. In the area of music theory Burney met numerous learned musicians, collectors, theorists and historians during his Italian tour (1770), and even before this Antonio Calegari, his pupil F.A. Vallotti, and Tartini at Padua were looking for a theoretical basis for music founded on mathematical principles. Vallotti's ideas were systematically expounded in treatises by L.A. Sabbatini published in Venice about the end of the century. Sabbatini had been a pupil at Bologna of Padre Martini, a central figure in the Italian musical Enlightenment, whose reputation as a historian and theorist was unsurpassed. His three-volume *Storia della musica* (1757–81), though incomplete, badly proportioned and marred by archaic methodology, was of wide influence; and his two-volume *Saggio fondamentale pratico di contrappunto* (1774–5)

was an admired textbook on the contrapuntal practice of the old and new styles.

Martini's interest in the past as a lesson for the present was noteworthy, and his voluminous correspondence and library (now in *I-Bc*) represent in the first place a source of information about musical activity in the broadest sense. His methods were modelled on those of Muratori, the founder of modern Italian historiography, in nearby Modena.

In the area of music biography, G.O. Pitoni (1657–1743) compiled his *Notizie dei maestri di cappella*, containing copious information on some 1500 musicians active in Rome and elsewhere between 1000 and about 1700. Although it was never published, Giuseppe Baini drew on it for his study of Palestrina (1828) and for his projected *Storia della cappella pontificia*. The former is a starting-point for the 19th-century cult of Palestrina and the *a cappella* style, and it was soon followed by a seven-volume edition of Palestrina's works edited by Pietro Alfieri.

Extremely valuable (if not invariably accurate) documentary work on 'local' music history was carried out by scholars such as Francesco Caffi on the music at S Marco, Venice, Gaetano Gaspari on that of S Petronio, Bologna, and Francesco Florimo, whose account of the Neapolitan conservatories appeared in four volumes (1880–83). This 19th-century interest in local music history, often motivated by a scholar's pride in the place where he was born or brought up, continued in the 20th century (usually on a more scientific basis), for example by Francesco Vatielli at Bologna, Raffaele Casimiri at Rome and Ulisse Prota-Giurleo at Naples.

The more comprehensive outlook of 19th-century scholars led also to the formation of collections and publications of music: for example, Fortunato Santini (1778–1861) assembled at Rome a remarkable library of some 4500 manuscripts, 1100 prints and transcriptions, which ultimately found its way to Münster (now in *D-MÜs*). The interests of Abramo Basevi (1818–85) extended to contemporary German music as well as older Italian music, as did those of Alberto Mazzucato at the Milan Conservatory. Mazzucato's ideas on music history were systematically presented in the writings of his pupil Amintore Galli. An attempt to cover early Italian music comprehensively was made by Luigi Torchi in his L'Arte Musicale in Italia, projected in 34 volumes, of which only seven reached publication. At about the same time Oscar Chilesotti brought out a nine-volume set of early French and Italian music, mostly for lute and guitar, under the title Biblioteca di Rarità Musicali.

An influential figure in the early part of the 20th century was Fausto Torrefranca, whose writings were motivated by nationalism (*Le origini italiane del romanticismo musicale*, 1930) and by the 'neo-idealistic' philosophy and historiographic methods of Benedetto Croce (*La vita musicale dello spirito*, 1910). Following in the same trend was Andrea Della Corte, co-author with Guido Pannain of the first large-scale Italian history of music in 1936. Gaetano Cesari was the first Italian scholar to profit from a thorough musicological training, which he received in Munich from Sandberger and Kroyer. In 1931 he founded the historical series Istituzioni e Monumenti dell'Arte Musicale Italiana, on which Giacomo Benvenuti, another Sandberger pupil, also worked. Benvenuti inaugurated another important series, I Classici Musicali Italiani, in 1941. The Istituto Italiano per la Storia della Musica, founded in 1938, published Casimiri's edition of Palestrina and works by other Renaissance and Baroque composers. More recently Italian musicology has benefited from the outstanding scholarship of Nino Pirrotta (especially on Italian subjects of the Ars Nova and early Baroque) and Alberto Basso (his writings on Bach, and on freemasonry and music, and his editorial acumen).

A central figure in musical activity and organization during the first half of the 20th century was Guido Maria Gatti, author of several books, editor with Andrea Della Corte of what was long the standard Italian musical dictionary, editor with Basso of the dictionary and encyclopedia *La musica*, and music editor of two other encyclopedias. In the second half of the century Basso was the editor of several major works: *Opera*, a series of music guides (1973–5); with Guglielmo Barblan, the three-volume *Storia dell'opera* (1977); the five-volume *Storia del Teatro Regio di Torino* (1976–88); and the 13-volume *Dizionario enciclopedico universale della musica e dei musicisti* (1983–90). In 1920 Gatti founded the periodical *Il pianoforte*, which in 1928 became the *Rassegna musicale*; publication ceased in 1962, but a series of *Quaderni* followed. The most authoritative Italian music periodical from 1894 until it ceased publication in 1955 was the *Rivista musicale italiana*, published by the Bocca brothers of Turin; others include Ricordi's *Gazzetta musicale di Milano* (1842–1966, with several changes of title), and *Note d'archivio*, a mine of documentary information on early Italian music and musicians which Raffaele Casimiri edited from 1924 until his death in 1943.

In an effort to place Italian musicology on a sounder footing the Associazione dei Musicologi Italiani was founded at Ferrara in 1908 by Guido Gasperini. An important result was the publication between 1909 and 1941 of a series of catalogues of Italian libraries and archives. The project remained unfinished and the results were uneven, but many of the catalogues were of outstanding quality, notably those of the Biblioteca Estense in Modena and the libraries of the conservatories in Naples and Bologna. The association's activities ceased after Gasperini's death in 1942.

Since World War II enormous strides have been made in Italian musicology as a consequence of increased contact with scholars of other countries, resulting in the heightened appreciation of Italy's own rich heritage and the establishment of university courses in musicology-related subjects, beginning in Turin in 1925. The first chair in musicology was created in Florence in 1941, the second in Rome in 1957. At the end of the 20th century, music history was being taught at some 30 universities; few, however, offered a wide range of courses in musicology. Fully fledged departments of music existed only at the universities of Pavia at Cremona (Scuola di Paleografia e di Filologia Musicale, founded in 1952), Bologna (Dipartimento Arti Musica Spettacolo, 1970), Macerata at Fermo (Scuola Diretta Fini Speciali in Musicologia e Pedagogia Musicale, 1989) and Cosenza (Discipline delle Arti, della Musica e dello Spettacolo, 1990). A few universities also offer courses in ethnomusicology (usually limited to the traditional music of Italy). Journals and series of publications associated with universities include *Esercizi: musica e spettacolo* (from 1991), *Studi musicali toscani* (from 1993), *Il saggiatore*

musicale (from 1994) and *Studi e testi musicali* (from 1992). In 1987 a large-scale, multi-volume history of Italian opera, *Storia dell'opera italiana*, was begun, under the editorship of Lorenzo Bianconi and Giorgio Pestelli.

In 1964 the SOCIETÀ ITALIANA DI MUSICOLOGIA was founded (with Barblan as president). In 2000 it had about 800 members. The society publishes a biannual journal, the *Rivista italiana di musicologia*, as well as conference proceedings, catalogues, editions of music and books on music history. When outside funding for RISM was discontinued, the cataloguing of music sources directed by Elvidio Surian for the society was interrupted. Private associations were formed to carry on the enormous task, and they now exist in almost all regions of the country. Through their efforts many catalogues of private and public collections have been published. The reference centre for these activities is the Ufficio Ricerca Fondi Musicali in Milan, established by Claudio Sartori in 1964. However, Italy still lacks a coordinated national computer system, which would make all such information generally accessible.

The Società Italiana del Flauto Dolce, founded in 1969, was influential in the teaching of the recorder in schools and, especially through its early music summer schools, encouraged interest in pre-19th-century instruments and literature. In 1992 the society became the Fondazione Italiana per la Musica Antica; it publishes the annual journal *Recercare*.

The Istituto di Studi Verdiani at Parma, the Accademia Tartiniana at Padua, the Fondazione Rossini at Pesaro, the Fondazione Gaetano Donizetti at Bergamo, the Fondazione Locatelli at Cremona, the Fondazione Salieri at Legnago and the Istituto Liszt at Bologna are all engaged in scholarly research into those composers whose names they bear. The Fondazione Cini at Venice has assembled an important collection, in photographic reproduction, of Venetian musical sources, as well as organizing conferences on Venetian opera. Courses and conferences are also arranged each year at Siena by the Accademia Chigiana; the proceedings are published in *Chigiana*. Two other important research journals are the *Nuova rivista musicale italiana*, published by Italian Radio, and *Analecta musicologica*, published by the Istituto Storico Germanico in Rome.

3. GREAT BRITAIN AND COMMONWEALTH. Musicology in Britain has grown out of certain particularly strong and long-lived traditions: the collecting and study of musical instruments, the science of acoustics, the performing of early music (with the allied practices of textual criticism and editing) and to some extent also the collecting and editing of folksong. The development of music history as a scholarly discipline came, in a sense, rather later, although it has roots extending back to the 17th century. Its pre-Victorian manifestations were very much part of the amateur tradition of music study that has always been an element of British musicology. In those earlier times, all music other than contemporary music was termed 'ancient music' and thought of as the domain of the 'antiquary'.

Roger North (1653–1734) stands at the beginning of the English Enlightenment and was a man in whom the spirit of the Enlightenment was clearly visible. Furthermore, he represents an abiding tradition in British musical scholarship in placing emphasis on music not as a subject for speculation but as a living art to be enjoyed and understood in performance. North, a member of a distinguished family, was trained for a career in law but retired in 1688 to devote himself to music and gardening. He regarded himself as an amateur musician. He cultivated music in its widest dimensions, was fascinated by the ideas that move men to create it, and filled notebooks with observations related to theory and musical composition, history, aesthetics and performing practice. These views were consolidated in a series of treatises of which *The Musicall Grammarian* and *Memoires of Musick* were the most important. He continually redrafted and revised his writings but never brought them to publication. North, though not a profound music historian or speculative theorist, had vision and a lively curiosity, and was free from pedantry.

A more traditionally orientated musician was J.C. Pepusch (1667–1752). His fame rests chiefly on his association with John Gay as musical arranger of *The Beggar's Opera* (1728), but his contemporaries knew him as a student of ancient music and theory. The crowning achievements of English music historiography in the 18th century were the general histories of Charles Burney and John Hawkins. Hawkins's *General History of the Science and Practice of Music* appeared complete in five volumes in 1776. The first volume of Burney's *General History of Music from the Earliest Ages to the Present* was issued in the same year, but the author did not finish his work until 1789. The magnitude of these accomplishments is astonishing considering that Hawkins and Burney worked independently and without significant antecedents.

The two main preoccupations of 19th-century music historians were church music and the Elizabethan 'Golden Age' of English music. The critical study of church music arose at about the time that the monks of Solesmes were beginning their work in France on plainchant; it was associated in part with the Oxford Movement for liturgical reform, and later with the so-called English Renaissance at the end of the century. Two scholars represent the study of church music at the turn of the century: Walter Howard Frere (1863–1938), Bishop of Truro, and Edmund H. Fellowes (1870–1951), a minor canon of St George's Chapel, Windsor. Frere was concerned with the study of medieval plainchant, but he also did much to establish the forms of liturgy in late medieval England, particularly the Use of Sarum, and produced editions of the main Sarum liturgical books. His work was continued by Dom Anselm Hughes (1889–1974). Fellowes produced his standard history of *English Cathedral Music from Edward VI to Edward VII* (1942) and biographies of Byrd (1923, superseded by a second in 1936) and Gibbons (1925), as well as studies of the English madrigal and its composers and many editions of 16th- and 17th-century sacred and secular music (see below).

The first important 20th-century history of music in English was *The Oxford History of Music* (1901–5), written from very different standpoints by H.E. Wooldridge, Hubert Parry, J.A. Fuller Maitland, Henry Hadow, Edward Dannreuther and H.C. Colles, with an introductory volume by Percy Buck. Parry in particular, in his volume on the 17th century, took a Darwinian evolutionary approach to music history which he had already applied in *The Art of Music* (1893, enlarged as *The Evolution of the Art of Music*, International Scientific Series, lxxx, 1896), and which has characterized much English historical writing since. The successor to *OHM*,

The New Oxford History of Music (1954–86), was under the direction of Egon Wellesz and Jack Westrup – two great Oxford historians, the latter one of the most influential minds in English music historiography – and Gerald Abraham, noted particularly for his work on Russian and east European music. Another scholar of profound influence, in England and internationally, was Edward J. Dent (1876–1957), professor at Cambridge, whose main field of research was Italian Baroque opera, and who did much to bring little-known music of the past and present to a wider audience.

British historical writing prides itself on its strong critical tradition, cultivating descriptive and evaluative prose. An interest in musical aesthetics goes back to the 18th century, with a group of writers concerned chiefly with the relationship between music and poetry. Its principal member was Charles Avison, a composer-critic whose *Essay on Musical Expression* appeared in 1752. A few years later John Brown published his *Dissertation on the Union and Power, the Progressions, Separations, and Corruptions of Poetry and Music* (1763), which was followed by Daniel Webb's *Observations on the Correspondence between Poetry and Music* (1769) and James Beattie's *Essays on Poetry and Music* (1776).

Occasional reviews of music and musical performances began to appear during the second half of the 18th century in monthly journals such as the *Gentleman's Magazine* and *European Magazine*, but it was not until the early 19th century, with such publications as *The Harmonicon* (1823–33) and the *Musical World* (1836–91) that independent music journalism was firmly established. The *Musical Times*, which has been in continuous publication since 1844, combines unusually wide coverage of musical events with well-informed criticism and articles of general and scholarly interest. The *Musical Antiquary* (1909–13) was short-lived but set a new standard in the presentation of musical scholarship, while both the title and the contents of *Music & Letters* (founded 1920) are representative of the best traditions in English musicology. Newspaper music journalism has always been of a high standard, elegant and well informed. Among the most famous critics in the late 19th and early 20th centuries were George Bernard Shaw, Ernest Newman and Neville Cardus, and these were followed by Martin Cooper, William Mann, Jeremy Noble, Andrew Porter, Stanley Sadie, Paul Griffiths and others in the principal newspapers and weekly and monthly magazines.

The tradition of collecting musical instruments is a very old one, and Britain houses several fine collections which furnish primary material for research. These include the Russell Collection of keyboard instruments in Edinburgh, the Bate Collection of wind instruments in Oxford, the Cobbe Collection of keyboard instruments in Surrey, and the collections at the Ashmolean, Oxford, and the Victoria and Albert Museum, the Horniman Museum and the Royal College of Music, London. Francis Galpin (1858–1945), working at the same time as Hornbostel and Sachs, was one of the first to write in a scholarly way about instruments in his *Old English Instruments of Music* (1910). He investigated not only European instruments but also those of the Near East, and his private collection numbered more than 500 instruments. The Galpin Society, founded in 1946, publishes an annual journal which is indispensable to anyone interested in early instruments, with articles by such scholars as Philip Bate, Anthony Baines and Peter Williams (who also edits the important *Organ Year Book*, founded 1970). The quarterly *Early Music*, which started publication in 1973, devotes many of its pages to articles on instruments.

The twin traditions of performing and editing early music go back to the 18th century. Pepusch was one of the founders of the Academy of Ancient Music in the 1720s, the first of a British series of associations devoted to the performance of early music. Others were the Apollo Society (1731), the Madrigal Society (1741) and the Noblemen's and Gentlemen's Catch Club (1761). The repertory of these singing societies was drawn from English and Italian partsongs of an earlier period together with contemporary catches and glees.

The members of the Dolmetsch family were the most influential figures in the early 20th century in bringing about performances of Renaissance and Baroque music on authentic instruments such as lutes, viols, recorders and crumhorns. Arnold Dolmetsch (1858–1940) pioneered the accurate restoration of old instruments and the making of reproductions; he also researched and edited early instrumental music, and instituted festivals of early music. The Viola da Gamba Society (founded 1956) and the Lute Society (1948) continue to encourage authentic performance, and produce their own journals as forums for the discussion of performing practice, instruments and sources. This activity resulted in the setting up from the 1950s onwards of many instrument makers who based their designs on original instruments, as well as of a number of professional groups whose players were thoroughly versed in early performing practice and whose singers were trained in vocal production and ornamentation appropriate to specific musical styles.

These developments led to a sharp rise in the performance of early music in the 1950s by groups under directors who were also scholars and university teachers, among them Thurston Dart, Denis Stevens, Gilbert Reaney and, later, Raymond Leppard. With their work generously fuelled by the BBC and record companies (notably L'Oiseau-Lyre), they paved the way for younger musicans who mostly held no university position but were active publishing scholars and enthusiastically subscribed to the ideals of their predecessors: among them were David Munrow, Christopher Hogwood, Michael Morrow, Andrew Parrott and many others.

The performance of 17th- and 18th-century opera, particularly the operas of Monteverdi, Purcell and Handel under Westrup at Oxford University from the 1920s onwards and under Anthony Lewis at Birmingham University in the 1940s to 1960s, was an important venture. Lewis, on the staff of the BBC from 1935 and in charge of music on the Third Programme in the mid-1940s, brought such music to a still wider public. The spirit of all these operatic ventures derived from the work and teaching of Dent, who saw performance as the ultimate goal of scholarship.

The histories by Burney and Hawkins were remarkable for their extensive examples of early music, and the English were among the first to edit early music on a large scale. A collection, *Cathedral Music*, was projected by John Alcock and Maurice Greene and completed by William Boyce between 1760 and 1778. The edition, representing a continuous tradition from Tye and Tallis to Purcell and Croft, was further revised and expanded in 1790 by Samuel Arnold. It was Arnold who made the first

collected edition of the works of a major composer, namely Handel. The set was issued in 180 instalments between 1787 and 1797 and, for its time, was a creditable undertaking, but unfortunately Arnold, for all his enthusiasm, was not equipped to fulfil his promise that the work would be 'correct, uniform, and complete'. The many collections of catches and glees that appeared at intervals thoughout the century displayed widespread antiquarian interest. One of the most conspicuous examples of this kind was Thomas Warren's *Collection of ... Catches, Canons, and Glees* (*c*1775–), which contained 652 pieces, many of them transcribed from 16th-century sources. Another edition devoted to the music of the past was William Crotch's *Specimens of Various Styles of Music* (1807–8), one of the first historical anthologies of music designed for teaching purposes. Crotch's selection is unusual in the amount of folk or national music that it contains, of both Eastern and Western origin. John Stafford Smith published a similar anthology in 1812 under the title *Musica Antiqua: a Selection of Music of this and other Countries from the Commencement of the 12th to the Beginning of the 18th Century*.

The British Musical Antiquarian Society published music of the Elizabethan and Jacobean periods, and also of Purcell, between 1840 and 1847 (three decades before Eitner began his *Publikationen*). The Purcell Society, founded in 1876, embarked on its edition of Purcell's music in 1878, in collaboration with the publishing firm of Novello; it was eventually completed with volume xxxiii in 1965, but has continued with the active publication of revised and updated versions of the earlier volumes – another tradition that can be found throughout British musicology.

In 1898 John Stainer published his collection of medieval music, *Dufay and his Contemporaries*. The earliest English counterparts of the great German and Austrian Denkmäler editions, which began in 1892, were the publications of the Plainsong and Mediaeval Music Society (founded 1888), which date from 1891 onwards, Edmund Fellowes's 36-volume English Madrigal School (1913–24) and 32-volume English School of Lutenist Song-Writers (1920–32), and the jointly edited Tudor Church Music (1922–9). Fellowes also produced a collected edition of the works of Byrd (1937–50). Thurston Dart later revised much of Fellowes's work, as well as engaging in several important projects of his own. His editorial methods, which combined exact scholarship with sympathetic awareness of the needs of performers, were widely imitated. He was associated with the most important series of British scholarly editions to appear since World War II, Musica Britannica, launched in 1951 by the Royal Musical Association, with Anthony Lewis as general editor and Stainer & Bell as publishers.

As early as 1851 a learned society had been founded in London 'for the cultivation of the art and science of music'. This was the Musical Institute of London, presided over by John Hullah. It was dissolved two years later, but in 1874 the Musical Association (since 1944 the Royal Musical Association) was founded by John Stainer and William Pole 'for the investigation and discussion of subjects connected with the art and science of music'. The 'science' referred to was acoustics, a study strongly cultivated in Britain from the mid-19th century to the mid-20th by such scholars as Pole himself (who was a civil engineer by profession), Alexander Ellis, James Jeans and Alexander Wood; its major practical manifestation was the scientifically designed Royal Festival Hall, built in 1951. Since its formation the RMA has extended its activities, and its published *Proceedings* (continued from 1987 as the *Journal of the Royal Musical Association*), together with a *Research Chronicle* and a series of *RMA Monographs*, now constitute a major contribution to English musicology.

From its earliest times British musicology has placed great emphasis on research into folksong and popular music. The tradition extends from Bishop Percy's *Reliques* (1765) and Edward Jones's *Musical and Poetical Relicks of the Welsh Bards* (1784) to the 20th century. Joseph Ritson (1752–1803) introduced critical methods in place of the casual amateurism of Percy, and the Anglican clergyman John Broadwood was one of the first to collect (in 1843) songs directly from the lips of living singers. His methods were followed by his niece, Lucy Broadwood, and by another clergyman, Sabine Baring-Gould. Two of the leading 19th-century students of British popular song were Edward F. Rimbault (1816–76) and William Chappell (1809–88). Rimbault was a versatile if not very precise scholar who played an active part in the formation of both the Musical Antiquarian and the Percy Societies. William Chappell is best remembered for his *Popular Music of the Olden Time* (1845–9), a work of enduring value. Towards the end of the century Frank Kidson, Cecil Sharp and Ralph Vaughan Williams were collecting and editing folksongs – still part of a living tradition. Kidson was a founder-member of the Folk Song Society in 1898; Sharp and Vaughan Williams later became members. In 1932 the society joined with the English Folk Dance Society (founded 1911) to form the ENGLISH FOLK DANCE AND SONG SOCIETY. Later studies in English folk music have owed much to the research and activities of Maud Karpeles, A.L. Lloyd and Frank Howes, editor of the *Folk Song Journal* and its successor the *Journal of the English Folk Dance and Song Society* from 1927 to 1945.

Many later British scholars adopted a more anthropological approach to the study of Britain's folk music, and much research has been undertaken into the folk music of non-European countries, notably by Hugh Tracey, A.M. Jones and John Blacking on African music, Laurence Picken on Chinese music and Turkish folk instruments, and an important group of scholars at the School of Oriental and African Studies, London University, working on Indian music in particular.

In 1740 the young James Grassineau, encouraged by Pepusch, published *A Musical Dictionary*. This turned out to be something more than the mere translation of Brossard's *Dictionaire* that had been planned, and was in fact the first substantial work of its kind in the English language. Busby's *Complete Dictionary* (1786), Burney's articles for Rees's *New Cyclopaedia* (1802–20), Busby's *Musical Biography* (1814) and Sainsbury's *Dictionary of Musicians* (1824) are among the more important lexicographical works between Grassineau's and the first edition of Grove's *Dictionary of Music and Musicians*. This was completed in 1890 and, in its subsequent revisions, has remained the most comprehensive and authoritative English-language work of its kind. Percy Scholes's *Oxford Companion to Music* (1938) showed a more idiosyncratic approach to lexicography, but contained much information not readily accessible elsewhere, and Eric Blom's *Everyman's Dictionary of Music* (1946) was more useful

and reliable than its small size might suggest. Both these works subsequently appeared in several new editions.

The role of the universities in the advancement of British musicology was not a prominent one before World War II, although the influence of isolated scholars such as Donald Tovey at Edinburgh and Dent at Cambridge was profound on those students who came into contact with them. Oxford and Cambridge have continued to play a leading role, partly because of their rich archival resources, but also because of the example and teaching reforms of Jack Westrup at Oxford and Thurston Dart at Cambridge. Dart was also for a time professor at King's College, London University, and his influence was felt by a whole generation of British scholars.

Since the appointment (however brief) of overseas scholars such as Joseph Kerman, Howard Mayer Brown, Pierluigi Petrobelli, Thomas Walker and Reinhard Strohm to positions in British universities in the early 1970s, and the preparation of the 1980 *New Grove* with a much wider international contribution (authorial and editorial) and scope than any hitherto, musicology in Britain became far more strongly aware of currents elsewhere. The growth of British universities that began in the 1960s and continued well into the 90s has provided employment for enormously more musicologists; and a change in the method of national funding in the late 1980s, for the first time explicitly connected to research output, has ultimately led to a growth in both quantity and diversity in British musicology.

4. Germany and Austria.

(i) 19th century. Modern musicology owes much of its formation and development to the contributions of German and Austrian scholars, regarded internationally as leaders in the field from the 19th century to the mid-20th. Several standard historical works of the 17th century were the works of Germans: Sethus Calvisius's *De origine et progressu musices* (1600), Praetorius's *Syntagma musicum* (1614–18) and W.C. Printz's *Historische Beschreibung der Edelen Sing- und Kling-Kunst* (1690). Martin Gerbert wrote the first scholarly history of sacred music, *De cantu et musica sacra*, in 1767, and compiled an anthology of medieval treatises, *Scriptores ecclesiastici de musica sacra*, in 1784. Pioneer works in lexicography included J.G. Walther's *Musikalisches Lexicon* (1732) and Johann Mattheson's *Grundlage einer Ehren-Pforte* (1740). E.L. Gerber revised Walther's work and proceeded to compile the largest biographical lexicon up to that time, *Historisch-biographisches Lexikon der Tonkünstler* (1790–92), and the four-volume *Neues historisch-biographisches Lexikon der Tonkünstler* (1812–14).

J.N. Forkel is considered one of the founders of modern musicology; his *Allgemeine Litteratur der Musik* (1792) was the most comprehensive bibliography of music books to that time. He also wrote a history of music (*Allgemeine Geschichte der Musik*, 1788–1801) and the first Bach biography (*Über J.S. Bachs Leben, Kunst und Kunstwerke*, 1802). German writers trained in classical philology thereafter set the standards for biographical music research (Otto Jahn's *W.A. Mozart*, 1856–9; Philipp Spitta's *J.S. Bach*, 1873–80; Friedrich Chrysander's *Händel*, 1875–82; and Hermann Abert's revision of Jahn's *Mozart*, 1919–21). In Vienna, R.G. Kiesewetter, a civil servant in the Austrian War Ministry, wrote an outline of music history (*Geschichte der europäisch-abendländischen Musik*, 1834) alongside studies ranging from secular song of the Middle Ages and early monody to Arab music, tuning and temperament, and medieval instruments. Anton Schmid, head of the Österreichische Nationalbibliothek, was a specialist in the history of music printing and wrote the first critical biography of Gluck (1845). C.F. Pohl wrote a scholarly biography of Haydn (1875–82). Kiesewetter's nephew A.W. Ambros produced a five-volume history of music to 1600 (*Geschichte der Musik*, 1862–82) which set standards for subsequent research. These works, as well as Carl von Winterfeld's *Der evangelische Kirchengesang* (1843–7), contributed greatly to musicology's increasing focus on early music.

Until the late 19th century musicology was still practised largely outside the academy. The University of Vienna was the first to recognize it as scholarly discipline with the appointment of the music critic Eduard Hanslick as professor of music history and aesthetics in 1861 and his promotion to full professor (Ordinarius) in 1870. German universities were slower to acknowledge the field, even though Germany ultimately surpassed all others in the strength of its musicology curricula. Forkel and D.G. Türk had been appointed university music directors in 1779 in Göttingen and Halle respectively, but the first Ordinarius positions in musicology at those universities came as late as 1918 in Halle (Abert) and 1920 in Göttingen (Friedrich Ludwig). Carl Breidenstein was the first musician to occupy a professorship in music (Bonn, 1826), but that university did not appoint an Ordinarius in musicology until 1915 (Ludwig Schiedermair). The first German position comparable to Hanslick's was that of Gustav Jacobsthal (Strasbourg, 1897), and two more chairs were established in the next 12 years (Hermann Kretzschmar in Berlin, 1904; Adolf Sandberger in Munich, 1909). Even Hugo Riemann never attained the rank of Ordinarius, despite his incomparable productivity and his mastery in music theory, history, aesthetics, acoustics, keyboard instruction, performing practice, editing and lexicography (his highly regarded *Musik Lexikon* appeared in its 12th edition between 1959 and 1975).

As the 20th century approached, German and Austrian scholars set standards for creating catalogues and indexes for research purposes and critical editions of musical works. Vast amounts of newly discovered source materials were made accessible through Robert Eitner's ten-volume *Biographisch-bibliographisches Quellen-Lexikon* (1900–04), Eitner, Lagerberg, Pohl and Haberl's *Bibliographie der Musik-Sammelwerke des XVI. und XVII. Jahrhunderts* (1877), Ludwig's *Repertorium organorum recentioris et motetorum vetustissimi stili* (1910), Emil Vogel's *Bibliothek der gedruckten weltlichen Vocalmusik Italiens* (1892) and Johannes Zahn's six-volume *Die Melodien der deutschen evangelischen Kirchenlieder* (1889–93). Thematic catalogues of the works of major composers first appeared with Köchel's catalogue of Mozart's works in 1862 and Nottebohm's Beethoven catalogue in 1868. Collaborative critical editions of the works of a single composer (Gesamtausgaben) started with the establishment of the Bach-Gesellschaft in 1850, followed by editions of the works of Handel (1858), Palestrina (1862), Mozart (1876), Schubert (1883), Beethoven (1884) and Lassus (1894). The most ambitious editorial projects were the government-sponsored scholarly editions of early

music from German-speaking regions, the 'monuments' (Denkmäler) series, the largest of which date to the last decade of the 19th century (Denkmäler der Tonkunst in Österreich began in 1888, Denkmäler deutscher Tonkunst in 1889 and Denkmäler der Tonkunst in Bayern in 1900). Germans and Austrians were also the prime motivators in organizing the discipline. The first journal dedicated to serious music scholarship was a joint German-Austrian venture, *Vierteljahrsschrift für Musikwissenschaft*, edited by Chrysander, Spitta and Guido Adler (professor in Prague, later Hanslick's successor) from 1885 to 1894. Oskar Fleischer spearheaded the founding of the International Music Society and its scholarly journal, *Sammelbände der Internationalen Musikgesellschaft*, in 1904. The organization disbanded at the outbreak of World War I, but Adler successfully revived it as the International Musicological Society in 1927, with its journal *Acta musicologica*.

(ii) The early 20th century. In the first decades of the 20th century, German-Austrian musicology emerged as a highly diversified area of scholarly inquiry, with intellectual traditions converging from philology, art history, hermeneutics and Dilthey's influential philosophy of *Geisteswissenschaften* ('humanities'). The history of style, already established in other humanities disciplines, was adapted to musicology by Adler and further developed by Riemann into a synthetic approach incorporating music analysis, history and aesthetics. Kretzschmar, stressing the importance of cooperation between musicology and music practice, looked at music history by separate genres in the series he edited entitled Kleine Handbücher der Musikgeschichte nach Gattungen (1905–22). Specialization became more common in such areas as medieval and Renaissance music (Heinrich Besseler), notation (Johannes Wolf), Gregorian chant and history of the mass (Jacobsthal and Peter Wagner), Classical and Romantic music (Abert) and performing practice (Arnold Schering). German musicologists also continued to explore innovatory ways of presenting music history in such formats as anthologies of old music (Schering's *Geschichte der Musik in Beispielen*, 1931) and in iconography (Georg Kinsky's *Geschichte der Musik in Bildern*, 1929). Adler enlisted colleagues to contribute to a collaborative music history, the *Handbuch der Musikgeschichte* (1924), which served as a model for Ernst Bücken's *Handbuch der Musikwissenschaft* (1927–31) and a later series of the same title edited successively by Carl Dahlhaus and Hermann Danuser (1980–95).

As scholars in the humanities began to perceive the impact of science and technology on contemporary society, musicologists were also encouraged to open their minds to applications from natural sciences and social sciences. Research in systematic and comparative musicology laid its foundations in the first three decades of the 20th century at centres in Berlin (under the guidance of Carl Stumpf, Erich von Hornbostel and Curt Sachs) and Vienna (under Richard Wallaschek and Robert Lach). Working in the Psychology Institute at Berlin University, Stumpf built up a large archive of sound recordings from around the world and brought in collaborators from diverse fields, such as Hornbostel (with a doctorate in chemistry), Otto Abraham (a physician), Max Wertheimer (an authority in Gestalt psychology), and the musicologists Sachs, Georg Schünemann, Marius Schneider and Wolf. A recorded sound archive was established in Vienna in 1889, and Wallaschek, appointed to the University of Vienna in 1897, wrote extensively on the music of various cultures, aesthetics and psychology. Lach, appointed to the faculty in 1920, contributed to a variety of methodological issues, transcribed and analysed recordings, and shared an interest in oriental music with his colleague Egon Wellesz, best known as an expert in Byzantine music. Younger members of the Vienna school included Siegfried Nadel, Albert Wellek and Walter Graf.

At the outbreak of World War I, the International Music Society was disbanded, and travel restrictions and limited research funding compelled German scholars to stay at home. This led musicologists to pay closer attention to Germany's own musical traditions. H.J. Moser's three-volume *Geschichte der deutschen Musik* (1920–24) was the first comprehensive survey devoted exclusively to German music. During this period a profusion of studies focussed on the music of specific locales in Germany, societies dedicated to the performance and research of regional music were established, and plans were laid for local Denkmäler editions. The study of German folksong, until that point the exclusive domain of German philologists interested only in the texts, received more attention from musicologists. The Deutsches Volksliedarchiv in Freiburg, founded in 1914 by John Meier, collected and organized vast numbers of folksongs in text form, without their melodies. A serious study of melody came with the establishment of the Archiv Deutscher Volkslieder in Berlin in 1917, under the direction of Max Friedländer. It became a major centre for cataloguing folktunes and, under Hans Mersmann's direction, expanded its collection to include the music of contemporary amateur movements.

The end of World War I marked an organizational turning-point for German musicology with the establishment of the Deutsche Musikgesellschaft (with its scholarly journal, the *Zeitschrift für Musikwissenschaft*) and the Institut für Musikwissenschaftliche Forschung zu Bückeburg. Serving the dual aims of renewing severed ties with scholars from former enemy nations and promoting work on German music, these institutions helped win academic recognition for musicology and asserted Germany's leading role in musicological research. In the years up to World War II, full professorships in musicology were established in Halle, Breslau, Göttingen, Leipzig, Heidelberg, Kiel, Freiburg, Cologne, Frankfurt and Königsberg.

(iii) The Nazi period. After Hitler's rise to power in 1933 there was unprecedented government involvement in musicology (*see* NAZISM). Discriminatory laws forced many musicologists to emigrate; most were of Jewish descent or, in the case of Leo Schrade, had a Jewish spouse, and many went on to enrich musicological scholarship abroad. The departure of Sachs and Hornbostel (the only Jewish musicologists holding faculty positions), along with several of their students, left a vacuum in systematic musicology and forced the dissolution of the Gesellschaft für Vergleichende Musikwissenschaft (founded in 1930 as the Gesellschaft zur Erforschung der Musik des Orients) and its journal, the *Zeitschrift für vergleichende Musikwissenschaft*. The Jews and spouses of Jews who stayed behind suffered greatly. Kinsky's private library was seized and he was sentenced to hard labour; released in 1944 with a serious illness, he died in 1951 in severely reduced financial circumstances. Willibald Gurlitt was dismissed from the University of

Freiburg because of his Jewish wife, was banned from public speaking, publishing and academic work, and endured Gestapo surveillance and discrimination against his children.

Despite the immeasurable loss of personnel, German musicology reaped significant tangible benefits from Nazi government sponsorship. Most notable was the Nazi education ministry's resurrection of the virtually defunct Bückeburg-Institut and its move to Berlin. Now called the Staatliches Institut für Deutsche Musikforschung, it incorporated the Berlin folksong archive, the instrument collection of the Hochschule für Musik and the Deutsche Musikgesellschaft's scholarly journal, *Zeitschrift für Musikwissenschaft* (renamed *Archiv für Musikwissenschaft*). It established a second journal, *Deutsche Musikkultur*, for musicological articles directed towards a general readership, as well as publishing two bibliographies. All existing Denkmäler projects fell under the institute's control and subscribed to uniform editorial principles; supervised successively by Besseler and Friedrich Blume, they were published as the series Das Erbe Deutscher Musik. The institute also laid the groundwork for the most ambitious musicological reference work of the postwar period, *Die Musik in Geschichte und Gegenwart*, with Blume as general editor.

The Nazi propaganda ministry sponsored publications and employed musicologists as consultants for musical activities. The 'scientific' branch of Himmler's SS published musicological monographs and articles, funded archival research projects in ancient and medieval music, and organized field research for the collection of folksongs from ethnic Germans and their 'racial kin'. The Rosenberg Bureau, formed by the Nazi ideologue Alfred Rosenberg, enlisted musicologists to evaluate scholarly writings for their ideological content, to compile a music lexicon, to contribute to a comprehensive directory of Jews in music and to assess the value of musical treasures plundered during the war.

With the annexation of Austria into 'Greater Germany' in 1938, Denkmäler der Tonkunst in Österreich was immediately incorporated into Das Erbe Deutscher Musik, and Austria's folksong archives became part of the Staatliches Institut. Of the few remaining leading musicologists of Jewish descent, Wellesz and O.E. Deutsch left for England, and Karl Geiringer, dismissed as curator of the Gesellschaft für Musikfreunde, went to the USA. Wilhelm Fischer was suspended from his position in Innsbruck and was compelled to do forced labour until the end of the war. Vienna lost ground in comparative musicology as Lach retired and Erich Schenk was appointed in his place. The Nazi Education Minister also authorized a new musicology position in Graz and appointed Herbert Birtner. The Nazi propaganda ministry underwrote the Bruckner Gesamtausgabe, formerly funded by the Schuschnigg government, and Hitler commissioned a new Mozart Gesamtausgabe.

Under the Nazis unprecedented advances were made in German folk-music research and its applications for everyday use (in the work of Kurt Huber, Marius Schneider, Walter Wiora, Fritz Bose, Mersmann, Werner Danckert, Joseph Müller-Blattau, Gotthold Frotscher, Wilhelm Ehmann and Siegfried Goslich), and there was steadily increasing interest in German music, its history and its distinguishing characteristics (pursued by Moser, Bücken, Müller-Blattau, Gurlitt, Hans Engel and many more). A revival of music biographies, previously shunned by musicologists as 'positivist', generated the series Die Grossen Meister der Musik (edited by Bücken, 1932–9) and Unsterbliche Tonkunst (edited by Herbert Gerigk, 1936–42, and published by the Rosenberg Bureau); both displayed a decided emphasis on German composers. A short-lived preoccupation with racial science attracted much attention, particularly when the first musicological conference in the Third Reich in 1938 adopted 'Music and Race' as its theme and featured a keynote speech by Blume on its methodological ramifications. For the most part, however, German musicology failed to make any significant progress in either accepting or rejecting the ideologically charged theories proposed by race theorists and amateur musicologists such as Richard Eichenauer, and generally avoided inquiries into the 'Jewish Question'.

(iv) After 1945. German musicology suffered during World War II not only from the loss of valuable personnel and widespread damage to libraries and publishing houses, but also from its 12-year isolation from the international scholarly community. After the war scholars in both Germany and Austria directed their energies towards renewing international ties and reviving the publishing industry. Blume founded the GESELLSCHAFT FÜR MUSIKFORSCHUNG in 1946 and served as its first president, advocating the resuscitation of large-scale ventures established during the Third Reich with state and private funding. The Gesellschaft drew members from around the world, many of whom contributed to the revival of *Die Musik in Geschichte und Gegenwart* in 1949. In addition to its own journal *Die Musikforschung* (established in 1948) and Gurlitt's privately funded *Archiv für Musikwissenschaft* (1952), two international journals, *Acta musicologica* and *Fontes artis musicae*, were based in Germany. The establishment of the Répertoire International des Sources Musicales was a German initiative, planned by Hans Albrecht and Blume, supported by international funds, and published by Bärenreiter and Henle. In Austria, numerous international societies dedicated to individual composers arose after the war and made significant contributions to research and the publication of editions. The Internationale Stiftung Mozarteum produced the *Mozart-Jahrbuch* from 1951, the Haydn Society advanced the continuation of a Haydn-Gesamtausgabe under the editorial direction of J.P. Larsen, and the Bruckner Gesamtausgabe resumed under Leopold Nowak. A Johann Joseph Fux-Gesellschaft was established in 1955 and proceeded to publish Fux's complete works, and an International Chopin Society was founded in Vienna in 1952 and began publication of the *Chopin-Jahrbuch* in 1956, edited by Franz Zagiba. Other societies include the Franz-Schmidt-Gemeinde, the International Liszt-Center, the Internationale Hugo-Wolf-Gesellschaft, the Johann-Strauss-Gesellschaft and the Gesellschaft zur Förderung der Schubert-Forschung.

Many musicologists in the western zones of occupation were allowed to continue their careers as before, but the musicology establishment disassociated itself from the Nazi past, most notably by publicly ostracizing Moser for his overtly nationalistic writings. The Soviet zone, on the other hand, strove to evict all former Nazis between 1945 and 1948, and encouraged those driven out of Nazi Germany as Communists and Jews (such as the musicologists Georg Knepler, E.H. Meyer, Nathan Notowicz and Harry Goldschmidt) to return to help build the new

German Democratic Republic. Interest in sustaining publishing activities begun before the war, especially in the face of competition from the USA, led to Besseler's appointment in Jena and then in Leipzig, despite the active role he played in the Third Reich. Valued for his skills as an organizer and editor, Besseler succeeded in collaborating with Leipzig's famous music publishing houses. The *Jahrbuch der Musikbibliothek Peters* was revived in 1956 as the *Deutsches Jahrbuch für Musikwissenschaft*, the Neue Bach-Ausgabe began in 1954, and the series Musikgeschichte in Bildern began in 1961.

Much early postwar scholarship continued to concentrate on German and Austrian music, with a strong emphasis on critical source studies. New and revised thematic catalogues for the works of Bach, Beethoven and Haydn were published, along with new complete critical editions of the works of Bach, Mozart, Schütz, Handel, Telemann, Gluck, Spohr and Reger. The first task in Austria after the war was to regain control over Denkmäler der Tonkunst in Österreich; this was achieved with the re-establishment of the Gesellschaft zur Herausgabe von DTÖ and the resumption of editorial work, supervised successively by Schenk and Othmar Wessely. Although the study of folk music ceased to be as well organized as before the war, research flourished under Felix Hoerburger in Regensburg, where the materials from the Berlin archive had been stored during the war, and at the Freiburg archive, where Walter Salmen and Wiora worked and where the *Jahrbuch für Volksliedforschung* resumed publication. These and other researchers (Doris and Erich Stockmann, Ernst Klusen, Müller-Blattau and Wolfgang Suppan) investigated German folk music, while others (Bose, Hans Hickmann, Marius Schneider and Graf) turned their attention to non-European traditions as well. Graf revived the Vienna school of comparative musicology, and the Austrian education ministry established the Österreichisches Volksliedwerk and supported the publication of its yearbook.

Academic musicology experienced another spurt of growth in the postwar era as new chairs were established at the universities in Mainz, Marburg, Münster, Jena, Tübingen, Hamburg, Saarbrücken, Würzburg and West Berlin. Gurlitt returned to the Freiburg department, which continued to grow and diversify under him and his successor, H.H. Eggebrecht. Medieval and Renaissance concentrations continued in Göttingen in the work of Heinrich Husmann and Ursula Günther, and in Cologne (Fellerer and Heinrich Hüschen), and spread to Frankfurt (Ludwig Finscher and Helmut Hucke), Regensburg and Erlangen (both under Bruno Stäblein), and Berlin (Rudolf Stephan and Dahlhaus). In Austria, departments outside Vienna gained prominence. The department in Graz was directed successively by Hellmut Federhofer, Wessely and Rudolf Flotzinger. Wilhelm Fischer directed the department in Innsbuck until 1956, followed by Hans Zingerle and then Salmen, who emphasized folk-music research, music of the Classical period and musical iconography. A new musicology department came into being in Salzburg in 1966, focussing on the research and editorial production of music of local significance.

The division of Germany into two separate states resulted in the distribution of important source materials between the two countries, compelling East and West German musicologists to collaborate in a number of ventures, such as the Neue Bach-Ausgabe and the Hallische Händel-Ausgabe, both of which were published simultaneously by East and West German houses. Yet different philosophies and methodologies developed in the East and West, and in 1968 East Germans withdrew from the Gesellschaft für Musikforschung. East German musicology promoted a sociological approach, a Marxist interpretation of music history (*see* MARXISM), work in music education, the study of folk music and the music of the workers movement, collaboration with other eastern Bloc countries, and a closer relationship between scholarship and music-making. Musicologists were affiliated with the Verband Deutscher Komponisten und Musikwissenschaftler, which produced the journal *Beiträge zur Musikwissenschaft*, begun in 1959, as well as the more practically orientated *Musik und Gesellschaft*, begun in 1951. Until the 1970s, subject areas denigrated by communist ideology as 'formalist' and bourgeois, such as atonal music and jazz, could not be researched. Restrictions on travel abroad compelled East German musicologists to concentrate on available resources; thus the archives located in East Germany facilitated extensive work on Bach, Handel, Telemann, Schumann, Reger and Vivaldi. With access to foreign literature seriously limited, and scholars and students restricted in their choice of subject matter and its interpretation or even excluded from studying musicology because of their own and their families' political or educational background, a number of musicologists attempted to flee to the West. The study of musicology, available at six universities (Berlin, Jena, Halle, Rostock, Greifswald and Leipzig), had shrunk significantly by the late 1980s.

In the meantime, musicology in the West had been developing new strengths in areas of music research suppressed by the communists. West Berlin became an important centre for the study of the Second Viennese School by virtue of both its musical life and the concentration of engaged musicologists (Stephan, Dahlhaus, Reinhold Brinkmann and Elmar Budde). Other scholars pursued research in jazz and rock music and in systematic musicology at the universities and at the Staatliches Institut. In the wake of the student rebellions in the late 1960s, university reforms allowed students greater input into their curricula, and a new generation of scholars started to question the positivist approaches and emphasis on objectivity that had been nurtured in German musicology since World War II. Musicology in the 1980s yielded critical assessments of Germany's recent past, musicology's relationship to musical practices, new theoretical approaches to the interpretation of music history and an upsurge of interest in the music of the 19th century. Germany's reunification resulted in further reflection on the course of the discipline, a restructuring of musicological institutions and the reshuffling of personnel.

5. OTHER WEST EUROPEAN COUNTRIES. The smaller countries of western Europe have naturally leant heavily on their larger neighbours in the development of musicological studies, and in particular many of them have leant on Germany. Their own traditions have been relatively late in developing and have not always been distinctive – depending, to some extent, on the musical past of the country concerned. A typical case is that of Switzerland, at the junction of three larger cultures. Scholars in that country have worked extensively on the history of Swiss music (notably the Protestant psalm), and have been avid

in the production of dictionaries and periodicals; but apart from a continuing interest in medieval and Renaissance studies it would be hard to discover any national pattern in the work of such distinguished scholars of different generations as Peter Wagner, Jacques Handschin, Kurt von Fischer and Martin Staehelin. The activities of the Schola Cantorum Basiliensis, with which August Wenzinger and Wulf Arlt have worked, show an interest in the practical application of musicological knowledge.

Studies of performing practice, and of instruments, have been prominent in the Low Countries, typified by the instrument collecting of D.F. Scheurleer (1855–1927) and more recently by the conservation work of J.H. van der Meer, the performances of Gustav Leonhardt, the publications of Frits Knuf, and the historical instrument designs of Flentrop. The (since 1995: Koninklijke) Vereniging voor Nederlandse Muziekgeschiedenis, founded in 1868, is the oldest musicological society in the world. Albert Smijers became the first reader in musicology in a Dutch university (Utrecht, 1928), shortly after beginning his complete edition of Josquin. Partly through his influence, Dutch musicology has always been primary in research on the music of Josquin (with the New Josquin Edition in progress since 1987) and Obrecht (three editions, the second incomplete, the third, the New Obrecht Edition, ed. Chris Maas, 1983–99), even though neither composer was Dutch. Other interests were represented by scholars as diverse in their interests as Joseph Smits van Waesberghe, a chant scholar, and Frits Noske, whose work on song and opera covered the 17th to 19th centuries and whose interest in socio-musicology represented a significant new trend. The convergence of historical, sociological and ethnomusicological traditions (inherited primarily through Jaap Kunst, organologist and scholar of Indonesian music) typifies much Dutch musicology since the 1970s.

In Belgium the study of musicology made an impressive start with the famous competition of 1829 to write an essay on the importance of Low Countries music just before the establishment of Belgium as an independent country in 1830: the contribution by François-Joseph Fétis perhaps paved the way for his appointment as the first director of the Brussels Conservatory in 1833. His massive output of scholarly and educational writings over the next decades – not least his *Biographie universelle des musiciens* (1835–44) – helped to establish Belgian musicology as a serious topic. His pupil Edmond Vander Straeten similarly published an enormous quantity of archival research, particularly in his eight-volume *La musique aux Pays-Bas avant le XIXe siècle* (1867–88). Musicological studies were introduced at universities in 1931, partly through Ernest Closson's initiative. A specially influential figure was Charles Van den Borren, who at Brussels and Liège taught Suzanne Clercx-Lejeune, Albert Vander Linden and Robert Wangermée; his son-in-law was Safford Cape, with whom he founded the Pro Musica Antiqua ensemble.

Very different traditions have influenced Spanish musicology, with such scholar-priests as Higini Anglès, José María Llorens Cisteró and José López-Calo prominent in the uncovering of their country's heritage of ecclesiastical music. But important work was early accomplished by M.H. Eslava y Elizondo (1807–78) in his ten-volume Lira Sacro-Hispana and F.A. Barbieri (1823–94) in his edition of the early 16th-century Cancionero Musical de Palacio. The true father of modern Spanish musicology, however, was Felipe Pedrell (1841–1922), a composer, teacher, writer and music editor. He is best known for his editions of sacred music by early Spanish composers, Hispania Schola Musica Sacra (1894–8), and keyboard music by Cabezón, and especially for the complete edition of the works of Victoria. Iberian musicology received a decisive new impetus from the 1992 Madrid congress of the International Musicological Society, as well as from the rise of a new generation of scholars who were not priests and had been trained in the universities of Germany and elsewhere.

Scandinavian scholars, though much occupied with their national musical past, have tended to look to the German-speaking countries, particularly Switzerland, for their training. Tobias Norlind (1879–1947), the senior Swedish figure, studied at Leipzig and Munich; his pupil Carl-Allan Moberg (1896–1978), considered the founder of Swedish musicology, studied in Vienna and Fribourg; and Moberg's successor, Ingmar Bengtsson, studied in Basle. Moberg's research embraced early Swedish music and Swedish folksong. In 1947 Moberg was appointed to the first chair at the University of Uppsala (where musicology had been taught since 1927); chairs were later established at Göteborg and Lund. Other signal initiatives in Sweden have been the institute for acoustics (under Johan Sundberg) and the Corpus Troporum (under Ritva Jacobsson), both at the University of Stockholm. In Denmark musicology has been longer established: Angul Hamerik (1848–1931) was awarded the earliest doctorate in music (1892) and obtained the first lectureship in musicology at Copenhagen (1896); he was a teacher of Erik Abrahamsen (in 1926 the first Danish professor of musicology) and the great Palestrina scholar Knud Jeppesen (the first professor at Århus, 1946). Jens Peter Larsen's work on the Classical era, and the involvement of several Danish scholars in Byzantine studies, have helped give the country's musicology a special character as well as an international standing. In Norway the first musicological chair was established in 1956 at Oslo, for Olav Gurvin (1893–1974), who had studied in Heidelberg and Berlin; he and Ole Sandvik (1875–1976) had given the first regular university lectures in music in 1937–9. Folk music studies form the bulk of these men's work; the investigation of the national musical past, including the Protestant church music tradition, has always occupied an important place in Scandinavia. There are now institutes of musicology at the universities of Oslo, Trondheim and Bergen. The founder of Finnish musicology was Ilmari Krohn (1867–1960), who studied at Leipzig and Weimar, and founded the FINNISH MUSICOLOGICAL SOCIETY in 1916; his chief work was on theory, church music and Finnish folk music. Musicology is now also taught at the universities of Turku, Jyväskylä, Tampere and Oulu. Alongside many journals and the recently begun critical edition of Sibelius, the strength of Finnish musicology can be seen from the six-volume *Suuri musiikkitietosanakirja* (Keuruu, 1989–92).

6. RUSSIA. Scholarly investigation of Russian music history began in the 18th century, notably after the rule of Peter the Great (1689–1725), when sustained contacts with west European countries were established. The first significant publications in Russia were by foreigners, for example Leonhard Euler's *Tentamen novae theoriae musicae* (1739) and a lecture by G.W. Krafft (1701–54)

on consonance (delivered in Latin in 1742 and published in Russian in 1744). Both were well-known mathematicians. Jacob von Stählin was the first to publish information about music in Russia; his 'Nachrichten von der Musik in Russland' appeared in Haigold's *Beylagen zum neuveränderten Russland*, ii (Riga and Leipzig, 1770). The first music periodical established in Russia was published by a German: Johann Daniel Gerstenberg's *Magasin musical de St. Pétersbourg* (1794). Towards the end of the 18th century the Russians began investigating their musical legacy by collecting folksongs (Vasily Trutovsky) and studying the rich domain of church music. The first to assemble data on Russian chant was Yevfimy Bolkhovitinov (1767–1837), better known as Metropolitan Yevgeny of Kiev, whose 1797 lecture on the subject was published two years later.

Some early 19th-century Russian writers preferred to study European music. Count Grigory Orlov (1777–1826), for example, published his *Essai sur l'histoire de la musique en Italie* (1822), and Aleksandr Ulïbïshev and Wilhelm von Lenz their writings on Mozart and Beethoven. Aleksandr F. Khristianovich (1835–74) collected folktunes in Algeria in 1861 and published them in Cologne in 1863 under the title *Esquisse historique de la musique arabe aux temps anciens avec dessins d'instruments et quarante mélodies notées et harmonisées par Alexandre Christianowitsch*.

Prince Vladimir Odoyevsky, though an amateur, played an important role in the study of Russian music and may be viewed as one of the founders of musicology in Russia. Despite some earlier work, it was in the 1860s that the scholarly investigation of Russian chant history began, with the research of Dmitry Razumovsky, Stepan Smolensky, Ivan Voznesensky and especially Vasily Metallov and Antonin Preobrazhensky.

Apart from an article by Aleksey Veselovsky in *Russkii vestnik* (July 1866, pp. 97–163), the first significant attempt at a history of Russian music in the Russian language was Vladimir Mikhnevich's *Istoricheskiye ėtyudï russkoy zhizni: ocherk istorii muzïki v Rossii v kulturno-obshchestvennom otnoshenii* ('Historical studies of Russian life: essay on the history of music in Russia in relationship to culture and society', 1879). In the next four decades, leading to the establishment of the Soviet Union in 1917, a number of writers specialized in aspects of Russian music history. Probably the most significant were Vsevolod Cheshikhin (1865–1934), a historian of Russian opera, and Nikolay Findeyzen, founder and editor of the important periodical *Russkaya muzïkal'naya gazeta* (1893–1918) and of the annual *Muzïkal'naya starina* ('Musical past'; 1903–11). Findeyzen's lifework, *Ocherki po istorii muzïki v Rossii s drevneyshikh vremyon do kontsa* XVIII *v.* ('Essays on the history of music in Russia from the earliest times to the end of the 18th century'; 1928–9), is still the most comprehensive survey of Russian music. The high level of analytical and historical musicology attained in the pre-revolutionary period is also exemplified in articles by a variety of writers on the 19th century and on contemporary music in the periodical *Muzïkal'nïy sovremennik* ('The musical contemporary'; 1915–17), edited by Andrey Rimsky-Korsakov, biographer of his father and a first-rate scholar. However, this and all other pre-revolutionary music periodicals were suspended after the 1917 revolution.

There were significant developments between the wars. Perhaps most far-reaching and internationally recognized was the publication of original scores of Musorgsky's works under the editorship of Pavel Lamm, starting in 1928. This gave a strong impetus to systematic, critical study of sources. Even more significant were attempts to re-examine the basic postulates of music as an art, its components and its impact on the listener. These problems were studied from a theoretical point of view with a strong tendency to formulation in Marxist terms and, from the 1930s, in accordance with the officially promulgated concepts of SOCIALIST REALISM. Among the leaders of these studies were Boris Asaf'yev (who also wrote under the pseudonym Igor Glebov), a scholar of great erudition who formulated the concept of *intonatsiya* dealing with the creation of audio-imagery by association with familiar melodic patterns, and Boleslav Yavorsky, the creator of a concept of harmonic rhythm in his theory of 'auditory gravitation'. Important in the historical field was Tamara Livanova, whose works, especially her classic book *Ocherki i materialï po istorii russkoy muzïkal'noy kulturï* ('Essays and documents on the history of Russian musical culture', 1938), are among the most scholarly in Russian musicology, as are also Boris Yarustovsky's on dramaturgy. A number of scholars have tried to write comprehensive histories of world music, notably Roman Gruber.

In the years immediately following World War II, Russian musicology continued to focus on aspects of Russian music and on the artistic development of non-Russian ethnic groups in the USSR. In the 1950s and 60s the number of scholars increased dramatically, and the scope of their research expanded beyond the narrow confines of Russian music. Books, periodicals and yearbooks appeared in unprecedented quantities. Music bibliography (which had its roots in pre-revolutionary Russia) kept most scholars informed about trends outside the USSR, although most foreign publications were unavailable. Retrospective bibliographies were compiled for periods hitherto inadequately covered, for example in Livanova's *Muzïkal'naya bibliografiya russkoy periodicheskoy pechati XIX v.* ('Musical bibliography of the Russian periodical press in the 19th century'; 1974). Lexicography also became highly developed: Boris Shteynpress, Izrail' Yampol'sky and Grigory Bernandt (1905–86) were prominent in this area. Yury Keldïsh, author of a history of Russian music and an account of music in 18th-century Russia, was chief editor of a collective work on the music of all the peoples of the USSR, *Istoriya muzïki narodov USSR* (begun in 1970); he was also the editor of the largest Russian music encyclopedia, *Muzïkal'naya ėntsiklopediya* (1973–82), as well as chief editor of the first Russian equivalent of the Denkmäler series, Pamyatniki Russkoy Muzïki. In 1983 Keldïsh initiated a multi-volume history of Russian music.

Another publication of great significance was Semyon Ginzburg's anthology of Russian art music up to Glinka, *Istoriya russkoy muzïki v notnïkh obraztsakh* ('History of Russian music in music examples', 1940–52). Biographical studies of Russian composers and analytical discussions of their works have proliferated, and, after a period of neglect, scholarly studies of Russian church music and its history were resumed by Maxim V. Brazhnikov, Nikolay D. Uspensky and many younger scholars. Vladimir Protopopov has studied both Western and

Russian polyphony, while Abram Gozenpud is the most erudite investigator of the traditions of Russian opera. Notable theorists of music include Viktor Tsuckermann (1902–88), Lev Mazel′ and Yury Kholopov. The participation of Russian musicologists at international conferences, which after many years of ideological control started to increase in the 1960s, continues in an obvious attempt to keep pace with scholarship in western Europe and North America.

With the break-up of the USSR at the end of 1991, Russia emerged somewhat diminished in size yet still the culturally dominant member of a loose family of nations. All periodicals with the word 'Soviet' in their titles were discontinued; thus the 'official' monthly magazine *Sovietskaya muzyka* was replaced by the quarterly *Muzykal′naya akademiya*. *Muzïkal′naya zhizn′* ('Musical life') survives as a monthly chronicle of musical events, albeit somewhat reduced in scope, while a number of other periodicals fight for survival under uncertain economic conditions. The publishing of books, which in the former USSR was subsidized by the state, now depends on the market economy and foreign subsidies. Similar financial difficulties have since 1992 forced the scholarly research institutes, which in the Soviet era largely controlled the content of publications, to reduce their personnel, programmes and field expeditions.

7. EASTERN EUROPE. In the past musicology in Eastern Europe was preoccupied with the history of church music and opera, with local music history, and increasingly with folk music. More recently Marxist ideology fostered the systematic and social study of music, and it is in this part of the world that the SOCIOLOGY OF MUSIC first became an independent discipline with rigorous standards.

Before 1989 most European countries followed the Soviet model in establishing scholarly institutions as state-funded research institutes within an Academy of Sciences. Since the disintegration of that system, the worsening financial situation has resulted in a reduced number of publications, which are now dependent on commerical sponsorship.

The first important musicological publication on Polish music was the biographical dictionary *Les musiciens polonais et slaves anciens et modernes* (1857) by the pianist and amateur scholar Wojciech Sowiński. In the same year Józef Sikorski founded a significant periodical, *Ruch muzyczny*, but it lasted only five years. An anthology of the rich legacy of church music, Monumenta Musices Sacrae in Polonia (1885–96), was initiated by Józef Surzyński. Many 19th-century scholars focussed on Chopin, including Maurycy Karasowski, who also wrote the first history of opera in Poland (*Rys historyczny opery polskie*, 1859). The first full-scale history of Polish music seems to have been that by Aleksander Poliński, *Dzieje muzyki polskiej* (1907). No fewer than eight Poles obtained doctorates in musicology at German universities in the first decade of the 20th century. In 1911 the first chair in musicology was established in Poland, in Kraków. By World War I a group of scholars was already producing significant and lasting work. Among the next generation of scholars were Hieronim Feicht, Jósef Chomiński and Zofia Lissa, a leading thinker in musical aesthetics and historiography and one of the most influential musicologists in eastern Europe. The two main centres of publication for music scholarship are Warsaw and Kraków, to which must be added Bydgoszcz, where triennial conferences for scholars of eastern European music have been held since 1966 under the title Musica Antiqua Europae Orientalis. Among the most distinguished scholars of the last few decades are Stefan Jarociński, Zygmunt M. Szweykowski, Mirosław Perz, Irena Poniatowska and Zofia Chechlińska.

Romania had a forerunner of musicology in the humanist Dimitrie Cantemir, who wrote a description of Romanian music (1716), studied Turkish music and devised a notational systsem for recording it. Before the 20th century there were individual attempts at collecting church music, notably by Anton Pann; Eusebius Mandyczewski, the great scholar and editor active in Vienna, was of Romanian origin. Modern scholarship began only after World War I with the ethnomusicological studies of Constantin Brăiloiu and the musicological work of George Breazul and Ioan D. Petrescu, who studied church music and its relationship to Byzantine music. Distinguished scholars of recent years include Gheorghe Ciobanu, Viorel Cosma (the very erudite lexicographer), Octavian Cosma, and Romeo Ghircoiasiu.

In Bulgaria, except for some studies in folk music, scholarly activities did not really begin until the work of Ivan Kamburov and Stojan Brashovanov, author of the first history of Bulgarian music (1946). Since 1945 there has been a much greater emphasis on scholarly work, supported by the Institute of Musicology founded in 1948 as part of the Bulgarian Academy of Sciences. Until the early 1990s, the dominant figure in musicology was Venelin Krastev, who was responsible for the first comprehensive encyclopedia of Bulgarian music. Among younger scholars, Stefan Lazarov, Lada Brashovanova and Bozidar Karastojanov have concentrated on Bulgarian music of the last two centuries, and on the Byzantine roots of its ecclesiastical music.

The first systematic gathering of data about Czech musicians seems to be the *Allgemeines historisches Künstler-Lexikon* (1815) of Bohumír Dlabač. The beginnings of a more systematic study of the Czech and Slovak musical past appear in the works of Otakar Hostinský, who trained a generation of scholars, among the Dobroslav Orel, Otakar Zich and most notably Vladimir Helfert, a fine scholar particularly active after the creation of an independent Czechoslovakia in 1918. Otakar Šourek devoted himself to the study of Dvořák. The three most important centres of musicological studies are Prague, Brno and Bratislava. In Prague scholarly activities were long directed by Bohumír Štědroň, joint editor of the dictionary *Československý hudební slovník* (1963–5). The important centre in Brno was long directed by Jan Racek, who has not only written a comprehensive history of Czech music up to the beginning of the 19th century and been principal editor of the series Musica Antiqua Bohemica, but has also specialized particularly in Italian monody.

Since the separation of Slovakia from the Czech Republic, the Bratislava group (originally formed around Orel), which fostered publications like *Musica Slovaca*, has produced a number of significant writers. The finest anthology of Czech music before Smetana was prepared by Jaroslav Pohanka. Historical studies are supported by a profusion of periodicals and publications of high quality.

Hungarian musical scholarship before 1918 was closely tied to that of Austria. Liszt's writings about Gypsy music aroused much interest in traditional folk music, on which

Kodály and Bartók later contributed studies. The first Hungarian music periodical, *Zenészeti lapok* ('Musical journals'), was founded in 1860 by Kornél Ábrányi, and Emil Haraszti did much to make Hungarian music known in other countries. Modern musicological studies came into their own after 1918, especially in the work of Bence Szabolcsi, pre-eminent as a student of the distant past as well as of more recent developments in Hungarian music; Otto Gombosi, a medievalist of unusually broad erudition; and Dénes Bartha, well known for his work on Haydn as well as on Hungarian music. The Haydn and Bartók studies of László Somfai are in the forefront of research on those composers. Benjamin Rajeczky's studies of Gregorian chant have led to the formation of a group of scholars headed by László Dobszay which, in cooperation with the Institut für Musikwissenschaft at Regensburg, is the nucleus for periodic gatherings of medievalists known as Cantus Planus.

In the former Yugoslavia the 19th-century beginnings of music historiography can be traced to those areas belonging to the Austrian empire before 1918. Perhaps the most significant figure was the ethnomusicologist Franjo Kuhač, who fancifully claimed Croatian origin for Haydn, Tartini and Liszt. In Slovenia Peter Radics published *Frau Musica in Krain* (1877), which marks the beginning of interest in the Slovenian musical past; the first true scholar, however, was Josef Mantuani, long active in Vienna. Dragan Plamenac was a scholar of international reputation whose interests centred on the music of the 14th to 16th centuries; his contributions to scholarship include an edition of Ockeghem's works. The greatest progress in musicology since 1945 has been achieved in Slovenia; at the University of Ljubljana the first and so far the only chair of musicology was founded in 1962; it was occupied by Dragotin Cvetko until his death in 1993. Andrej Rijavec, Marija Koren and others continue to publish *Muzikološki zbornik*, the musicological annual started by Cvetko in 1966. In Croatia the teacher and author Josip Andreis trained a whole generation of fine scholars; and Ivo Supičić created an important centre for the sociology and aesthetics of music in Zagreb before moving to France. A number of scholars around Stanislav Tuksar have produced studies of distinctively Croatian musical traditions. In Serbia the beginnings of music historiography were made by the composer-scholars Miloje Milojević and Kosta Manojlović. Several studies on the history of Serbian music were produced by Stana Đurić-Klajn, editor of a number of journals. The most significant recent achievements in historical musicology have been Dimitrije Stefanović's and Danica Petrović's studies of ecclesiastical chant. Musicological studies are mainly centred on research institutes in Belgrade (founded in 1948), Zagreb (1967) and Ljubljana. Cooperative efforts, however, were dealt a severe blow by the break-up of Yugoslavia in 1991–2.

8. The USA.

(i) To the 1970s. Musicology was slow to respond to Ralph Waldo Emerson's call for distinctive American contributions to humanistic disciplines in an address 'The American Scholar' (1837), for the field was at that time scarcely in existence in a formal sense in Europe. It began in the USA in the later 19th century with distinctive though necessarily isolated achievements by scholars who lacked the institutional bases that were later created by the development of the field as an intellectual enterprise. To its earliest phase belong such efforts as J.S. Dwight's *Journal of Music* (1852–81), which included material on music history, and the work of Lowell Mason, who combined the roles of music teacher, editor and collector of rare music. Intellectually more distinguished though geographically more isolated was the achievement of A.W. Thayer (1812–97), the great pioneer of serious Beethoven biography, who spent all his later life as US consul at Trieste.

The first important American-based scholar, in the true sense, was Oscar George Theodore Sonneck (1873–1928), who was born in the USA, trained in Germany and for 15 years was chief of the Music Division of the Library of Congress (1902–17). Sonneck was not only instrumental in building the great music collection of the Library of Congress; he was also the author of essays and studies on a variety of music-historical subjects and the compiler of a bibliography of early American music and of a richly annotated *Catalogue of Opera Librettos Printed before 1800* (1914). He was also the founder-editor of the *Musical Quarterly* (published first by G. Schirmer and later by Oxford University Press) which began publication in 1915 and long remained the most widely circulated American periodical containing serious writing on music.

Between the wars American musicology began to establish its roots in American institutions of higher learning and formed the professional ties that would make possible its growth as a scholarly discipline. As early as 1915 the *Musical Quarterly* had issued a programme for the field in an article by Waldo Selden Pratt entitled 'On Behalf of Musicology'. Although the term 'musicology' at first rang strangely in American ears, the field by the early 1930s was beginning to acquire in academic circles the status accorded to other branches of humanistic scholarship. A seminal figure in the establishment of musicology in the American university was Otto Kinkeldey (1878–1966). Like Sonneck, Kinkeldey was trained in Germany, where he was not only awarded the PhD but was also in 1910 named Royal Prussian Professor of Musicology at the University of Breslau. On returning to the USA in 1914 he became head of the Music Division of the New York Public Library, and in 1930 professor of musicology at Cornell University, the first such chair to be established in an American university.

Kinkeldey was the first president of the American Musicological Society, founded by a group of nine scholars and teachers on 3 June 1934 in New York. By the late 1990s the society, whose *Journal* has been issued regularly since 1950, had a national membership of more than 4500, making it the largest professional association in the USA devoted to music scholarship. In 1961 the society was host to the eighth congress of the International Musicological Society in New York, the first such congress held off European soil; in 1977 the twelfth congress met at Berkeley, California. Although members of the AMS are active in every field of study, the bulk of their efforts has been undeniably directed towards the Western historical tradition. In response to this orientation the Society for Ethnomusicology was founded in 1954; this society still serves as the primary professional organization in the field of musical ethnography and issues its own journal, *Ethnomusicology*. Despite this formal separation there have always been signs of mutual awareness of the common interests that can unite traditional musicological disciplines and their ethnomusicological counterparts. For

example, the important set of essays entitled *Musicology* (1963), published in the series Humanistic Scholarship in America, was written by two scholars who were then principally distinguished for their work in music history, Frank Ll. Harrison (from Great Britain) and Claude V. Palisca, and by the ethnomusicologist Ki Mantle Hood. (After this book Harrison devoted himself to full-time teaching and research in the field of ethnomusicology.)

A third general orientation within American musicology was solidified with the founding of the Society for Music Theory in 1977. This society represents scholars primarily engaged in music analysis and speculative music theory. Still other, smaller societies share membership and sometimes meetings with these large umbrella groups: these include the Sonneck Society, devoted to the study of American musics, and the Center for Black Music Research.

Since the first American PhD in musicology was awarded at Cornell University in 1932 (to J. Murray Barbour), the field has spread widely among universities. Music in any form was relatively late in entering American university curricula as a separate subject, but it has undergone enormous growth in the past century (*see* UNIVERSITIES, §III, 4). Today few universities or colleges in the USA can fail to offer, in addition to practical vocal and instrumental music-making, at least elementary courses devoted to music theory and to music history in one or more of its phases. Most offer much more, including courses in theory, analysis and related fields, a full range of courses in the history and literature of music, and courses in one area or more of non-Western musics, jazz and popular music.

The large number of PhDs awarded in musicology since 1945 is indicative of a growing population of American-trained scholars, but also indicates the creation of university positions on a larger scale than before, although conditions of economic retrenchment since the 1970s have reduced the earlier trend. In part, the significant role of American musicology in every field of study now being pursued in the discipline is attributable to its substantial number of practitioners, to the location of its research bases in universities, and to the research support available to American scholars through such private organizations as the Guggenheim Foundation, the American Council of Learned Societies and the federally supported National Endowment for the Humanities. Even more, it is attributable to the contributions of a score of eminent scholars who, in the generation after Kinkeldey, can be said to have created the field in its more modern forms in the USA. Among these seminal teacher-scholars were three of the founder-members of the AMS: Gustave Reese, Charles Seeger and Oliver Strunk. The first and last of these trained generations of scholars at, respectively, New York University and Princeton University. To their names must be added those of Paul Henry Lang, Glen Haydon, Donald J. Grout, Charles Warren Fox and Arthur Mendel.

During the Nazi regime a large number of significant figures in musical scholarship emigrated to the USA, including Willi Apel, Manfred Bukofzer, Hans David, Alfred Einstein, Karl Geiringer, Otto Gombosi, Paul Nettl, Erich Hertzmann, Edward Lowinsky, Curt Sachs, Leo Schrade and Emanuel Winternitz. All these men taught at major institutions and had vital roles in the training of younger American scholars; all of them, furthermore, published their work in English and brought European backgrounds and modes of approach to the fields in which they specialized. With the recovery of Europe after World War II, the increasing internationalization of the discipline was felt in many ways: in the resumption of European travel and research by American scholars, in their contacts with foreign scholars and scholarly enterprises, and in the presence of other major foreign scholars in American teaching posts; among the latter was Nino Pirotta, who taught at Princeton, Columbia, and then for many years at Harvard before returning to his native Italy. Such teachers as these laid the foundations for the postwar generation of American scholars, among them Barry S. Brook, Howard Mayer Brown, James Haar, Daniel Heartz, Joseph Kerman, Jan LaRue, Lewis Lockwood and Claude V. Palisca.

By the 1970s musicology in the USA had become a solidly established field of scholarship embracing a vast spectrum of interests. At distant ends of the arc these interests coalesced in the work of large groups of scholars sharing common approaches: at one end a group concerned with Western historical musicology in all its forms, fields and sub-disciplines (ranging from archival work and narrative history to performing practice, which manifested itself in, for example, the pioneer work of the New York Pro Musica and the authentic instrument designs of such men as Hubbard and Dowd); and at the other end, a group of ethnomusicologists more and more deeply involved in anthropological and ethnographic approaches. In addition to these more or less clearly definable segments of the active scholarly population, there was abundant evidence of the opening of the discipline to new or formerly less emphasized areas such as speculative and descriptive theory and analysis (notably Milton Babbitt, Allen Forte and Leonard Meger), contemporary music, folk and popular music, and the music history of the American continent (to which such scholars as Gilbert Chase, Robert Stevenson and H. Wiley Hitchcock contributed substantially).

Perhaps the greatest challenge facing American musicology in the 1970s was to make its impact felt outside the academy – on the world of performance, in conservatories, in concert life, and even in the commercialized music industries. By 1980 American musicology had barely breached the long-established barriers that divided the forces of serious intellectual life from the vast media that produce and disseminate music and musical culture. Several results of this situation can be noted: the continued isolation of scholarship from practical musical life, the proliferation of much traditional misinformation, the generally low level of music criticism in the mass media, and the perpetuation of long-established and deeply entrenched attitudes about music, largely inherited from the 19th century. One important question facing many musicologists was whether scholarly knowledge of and about music might come to be more strongly felt in American society in the future than it had been in the past.

(ii) Since 1980. Despite the willingness of American musicologists to embrace new approaches and subject matters that were in many cases unimaginable (or undesirable) for earlier generations of scholars, American musicology has failed significantly to enlarge its role outside the academy. The reasons are various. While contemporary American culture offers some niches for 'public intellectuals', there is little public place for the

musical intelligentsia, and what space there is tends to be occupied by performers rather than scholars. (Crossover figures who pursue dual careers as both accomplished concert performers and serious scholars are rare.) Moreover, musical studies have been broadly implicated in recent 'culture wars' in the USA. As musicology has grown more pluralistic, its practitioners have increasingly adopted methods and theories deemed by observers to mark the academy as irrelevant, out of touch with 'mainstream values', unwelcoming of Western canonic traditions or simply incomprehensible. Paradoxically, such approaches have distanced music scholarship from a broad public at the very moment they have encouraged scholars to scrutinize the popular musics that form the backbone of modern mass musical culture.

At the same time, the growing diversity of musical scholarship in the 1980s and 90s served in the most general way to blur the discipline's longstanding focus on individual musical styles, genres, composers and works. In the process scholars asserted more and more clearly approaches to musicology that endeavour to understand music as acts of expression in a sociocultural context; these approaches were relatively undersung in the postwar period, even though they had been anticipated by musicologists from the time of Guido Adler. This diversification of emphasis has strengthened the ties of musicology to other interpretative disciplines within the academy, notably anthropology (especially in its culturalist guises), sociology (again in culturalist versions such as those derived from Weber) and history (especially its non-positivist hermeneutic and philosophical modes). It has linked musicology with emergent fields of cultural studies and performance studies. It has led many musicologists to explore a broad range of cultural theory – including latter-day feminism, new conceptions of ethnicity and race, and poststructuralist views of language and subjectivity – that has been prominent in literature (and especially English) departments in the USA. Not least, it has underscored the affinities between European-orientated musicology and ethnomusicology, notwithstanding the lingering defensiveness with which these subdisciplines regard each other. In sum, these new emphases engage musicology more and more deeply in central agendas of today's humanistic academy.

Few if any of the approaches prominent in recent American musicology have broken with the empirically based reasoning and evidentiary standards that have characterized Western scholarly work at least since the Enlightenment. The criticism of Joseph Kerman (1985), for example, is fundamentally allied to the 'positivistic' researches he has at times disdained; his critical exegeses are based as profoundly on argument from musical and non-musical evidence as are positivistic histories and philology; and both of these approaches are likewise allied to the novel scholarly strategies that have emerged since the mid-1980s. Nevertheless, most of these newer approaches are committed in one fashion or another to understanding music-making as an act situated in a cultural or ideological context. Even when they circle back towards individual works, they question musical claims to autonomy, absoluteness or transcendence and treat handed-down evaluations and canons with suspicion. Indeed in many cases they challenge the basic conception of discrete, self-identical works that has tended to guide musicologists since the beginning of the discipline.

The turn away from objective historicism, in which the historian was seen as an inert observer of past objects and facts, has led in two directions. The first endeavours to describe an 'effective' history, a tradition in which the historical object and the historian stand in mediated relation to one another. This approach looks back through Collingwood at least to Nietzsche, but owes its recent elaboration especially to Hans-Georg Gadamer. The formulation of Gadamer's ideas in music-historical terms preoccupied the German musicologist Carl Dahlhaus, who exerted a strong influence on American musicology from the 1980s. Leo Treitler heralded the effective-historical approach in the 1960s, and it is exemplified in his more recent writings on the reception history of Gregorian chant; in Richard Taruskin's studies of Russian music and the philosopher Lydia Goehr's examination of the Western musical canon; and in the work of historically sensitive music analysts such as Scott Burnham.

The second alternative to objectivist historiography is more explicitly political, endeavouring to reveal the structures of power that inform and shape acts of music-making (or even of music scholarship-making). Such ideology critique looks back on another influential German, Theodor Adorno; it emerges fully formed in his *Versuch über Wagner*, much of which dates from the 1930s. His brand of critique was ushered into American musicology especially by Rose Rosengard Subotnik, in essays written in the late 1970s and 1980s. Adorno's hermeneutics of suspicion in the face of prevailing relations of power may be sensed more or less clearly in much recent scholarship, especially that scrutinizing the formation of the Western canon (e.g. Bergeron and Bohlman, 1992) or emphasizing feminism, gender studies or queer studies (e.g. McClary, 1991; Solie, 1993; Brett, Thomas and Wood, 1994). It is felt also in popular music studies (e.g. Taylor, 1997), though this area remains somewhat underdeveloped in the USA in comparison with the UK and Canada, where it was nurtured by sophisticated traditions of Marxism and grew along with the cultural-studies orientation they spawned.

In its broadest implication, musicological ideology critique moves beyond the political, narrowly conceived, to assert the view that the self is largely constituted, in body and psyche alike, through the action of social forces and the corollary view that the play of these forces may be witnessed in music-making. As language may be considered to form a crucial element of such forces, it is not surprising that some recent American musicology has selfconsciously exploited post-Saussurean language theory (with its shift from ideas of reference to the view that meaning emerges from relations among words) and its outgrowths (for instance, in Lacan's psychology, Barthes's narrative theory, Derrida's grammatology or Foucault's archaeology). Scholars have brought these theories to bear in critical exegeses of individual works (e.g. Kramer, 1990; Abbate, 1991), as well as describing broad discursive systems in which acts of music-making, traditions of performance or conceptions of music do not merely represent but actively constitute particular subjectivities (e.g. Floyd, 1995; Tomlinson, 1999).

While a focus on individual works, however theorized, has usually gravitated towards a text-centred view of musical study, a more general discursive approach can at times move away from scores towards performative views and a focus on aspects of musical traditions, even élite

European ones, not conducive to inscription. This division represents a reformulation of the oral/written dichotomy that long differentiated musicology and ethnomusicology in the USA. As non-ethnographic musicology has given increasing attention to performative aspects basic to the traditions it scrutinizes, the divide between written and unwritten traditions has eroded. This development has been particularly clear in jazz studies, an area that long seemed intent on legitimizing its subject matter through construction of a canon of masterworks analogous to the European art-music canon, but which recently has taken large strides in the direction of performative analysis (e.g. Berliner, 1994; Monson, 1996). The development can be witnessed also in other areas, even ones as close to the heart of musicology's old objective historiography as Renaissance studies. Recent rethinking of issues such as modality and Tinctoris's shadowy *cantare super librum* has raised broad questions concerning the status of the work-concept around and after 1500 (e.g. Bent, 1983).

Perhaps the broadest division in recent American musical studies is between a scholarship that aims finally, through whatever congeries of new and conventional means, at exegesis of the musical work or act itself, and a scholarship that sees musical utterance not as its endpoint but as the inception of an investigation of trans-musical human concerns – a scholarship that aims, in other words, to exploit music in order to describe particular configurations of human culture and ideology. Such work allies itself with goals that until recently were more evident in ethnomusicology than historical musicology. As it proliferates it once again blurs boundaries between the two fields that were always questionable (as Frank Ll. Harrison asserted in 1963), if seldom questioned. Thus one scholarly trajectory leads back towards the musical act or work, but with a panoply of scholarly technique perhaps more varied and certainly more questioning of culture-transcending values than that of earlier decades. The other leads towards broader considerations of human aspiration and limitation, armed with tools that aim to guard against the too-frequent universalisms of earlier scholarship. In the coming years the truest measure of the success of the diversification in subject matter and method of American musicology may well be its ability to sustain and interwine these two strategies.

9. Latin America.

(i) Historical musicology. In most Latin American countries musicology has been understood primarily as the history of music. With few exceptions, interest has centred on local art music activities, frequently related to concurrent western European trends. Several national music histories written in the early 20th century stressed the achievements of individual composers and the development of musical institutions; interpretative or critical analysis did not become part of musicological work until the 1960s. Latin American music historians, however, early on showed a special concern for integrating music within the social history of an era or a country. In addition, their nationalist ideology forced them to consider at least some aspects of folk and popular music (see below).

Lack of access to primary source material, both historical and musical, hindered the development of musicology in the region; only after World War II was it established as a research discipline in some areas of Latin America and the Caribbean. Journals such as the *Revista brasileira de música* (1934–44), the *Revista musical chilena* (from 1945) and the *Revista de estudios musicales* in Argentina (from 1949) published articles on Latin American topics. Systematic bibliographical compilations also began to appear in this period, notably Gilbert Chase's *A Guide to Latin American Music* (1945), the *Bibliografia musical brasileira (1820–1950)* by L.H. Corrêa de Azevedo, C. Person de Matos and M. de Moura Reis (1952), and the Organization of American States series *Composers of the Americas* (1955–72). The first important dictionary dealing with the whole of Latin America was Otto Mayer-Serra's *Música y músicos de Latinoamérica.* Major international dictionaries and encyclopedias have given serious attention to Latin American music only since the 1970s. New national music dictionaries and periodicals have appeared since that time, but most are predominantly descriptive rather than critical.

The central figure in Hispanic-American historical musicology concerned with music before 1900 is Robert Stevenson. Among the leading Latin American musicologists in the early postwar years were Carlos Vega in Argentina and Lauro Ayestarán in Uruguay. Francisco Curt Lange, editor of the six-volume *Boletín latinoamericano de música* (1935–46), supported his campaign of 'Americanismo musical' out of his Inter-American Institute of Musicology, established in Montevideo in 1945. Lange was one of the first South American scholars to study colonial music archives in Argentina and Brazil. These, together with archives in Mexico, Cuba, Colombia, Peru, Bolivia, Chile and Uruguay, have been extensively catalogued since the 1940s, and modern editions of colonial church music have also appeared. Until the 1970s, however, musicology was not an area of academic priority in many countries. A number of well-known scholars, such as Mário de Andrade, Renato Almeida, Alejo Carpentier and Vasco Mariz, were not trained as musicologists, and many composers turned to musicology as well. In the last quarter of the century the field received more attention in universities, which now provide systematic training, frequently leading to doctoral study in Europe or North America. The work of the younger generation of scholars has resulted in publications of source and thematic catalogues, editions, recordings and critical analyses of colonial and 19th-century music.

(ii) Ethnomusicology. Corrêa de Azevedo observed that ethnomusicological research preceded historical musicology throughout Latin America. The first students of native American music were the numerous European travellers, missionaries and scientists who had varying degrees of contact with Indian and mestizo cultures during the colonial period. In the late 19th century cultural historians began to study local oral cultural phenomena, reacting primarily against the domination of European and European-related music in Latin America under the control of élite social classes. The first music histories of various Latin American countries, beginning in the 1920s, acknowledged traditional, folk and urban popular music. This awareness was fostered by the emergence of nativist-nationalist intellectual and artistic movements such as the Mexican post-revolutionary Aztec Renaissance, the *afrocubanismo* trend, the Peruvian-Andean *indigenismo* movement and the Brazilian *modernismo.* For the most part, however, field research was not undertaken seriously until World War II. This has resulted in a better, more

representative account of various aspects of folk and traditional music, but the majority of ethnomusicologists and music folklorists have maintained an essentially descriptive approach to such music. Because of this emphasis, neither music folklore nor the incipient Latin American ethnomusicology of the last four decades of the 20th century contributed substantially to a general theory of ethnomusicology. Since the 1980s, however, a broader conceptual approach to ethnomusicological studies has emerged, especially in Argentina, Chile, Peru, Brazil, Mexico and Cuba.

An important issue for Latin American ethnomusicologists has been the study of origins within the tri-ethnic make-up of Latin American music (Iberian, Amerindian, African). Generalizations have frequently resulted from the search for 'pure' retention of a given musical trait believed to be attributable to a specific cultural root. This diffusionist, evolutionist and neo-colonialist attitude is reflected in the influential theories of Carlos Vega, who raised the characteristics of regional songsters (*cancioneros*) to the level of universal criteria. A more basic problem has been a lack of conceptual distinction between 'music folklore' as thought of and practised throughout Latin America and ethnomusicology. Music folklore has had little or no theoretical and methodological formulation; the social uses and functions of music, for example, are hardly mentioned in most studies of folk and popular music. Until the late 20th century, Latin American researchers in the field tended to believe that they possessed unique understanding of the music and culture of their country, without questioning the objectivity of their observations. However, most Latin American folklorists and ethnomusicologists come from the dominant social groups, which in general exhibit a high degree of eurocentrism. Rather than blindly following the lessons of European or American ethnomusicology, Latin American scholars must attempt to formulate theoretical objectives based on their own conceptualization of research problems and purposes in specific countries. The problems of cultural hegemony and cultural populism in some regions of Latin America must also be faced; for example, consideration of the internal market pressures exerted by the multi-national music industry that tend to alienate folk communities, precipitating changes or requiring adaptive strategies, has become a necessity in the study of these communities.

Like historical musicology, Latin American ethnomusicology has suffered from a lack of attention in institutions of higher learning. Schools of music, conservatories and university music departments recognize the need to provide at least a general introduction to local musical traditions, but most continue to treat 'music folklore' as an exotic subject. When it is recognized as a discipline in its own right, ethnomusicology tends to receive more attention from social scientists than from musicians, although younger musicians trained either abroad or in anthropology are developing a broader conception of the field (see Béhague, 1993).

10. Japan. Japan's long tradition of music scholarship began in the 12th century when Emperor Goshirakawa in his retirement compiled *Ryōjin hishō*, a collection of popular songs of the time. In 1233 Koma-no-Chikazane completed a ten-volume study of court music (*gagaku*) and dance entitled *Kyōkun-shō*. Other important works on *gagaku* include *Taigen-shō* (1512) by Toyohara-no-Muneaki and *Gakka-roku* (1690) by Abe-no-Suehisa. Zeami (*c*1363–*c*1443) discussed the aesthetic principles of *nō* theatre in a series of writings, notably the *Kadensho* ('Book of Flowers'). *Seikyoku ruisan* (1839; published 1847) by Saitō Gesshin is a detailed study of vocal music in the Edo period. Konakamura Kiyonori provided a history of traditional Japanese music and dance in *Kabu ongaku ryakushi* (1887).

Tanaka Shōhei (1862–1945) and Kanetsune Kiyosuke (1885–1957), both physicists, were the precursors of modern musicology in Japan; the former is known for his study of temperaments, the latter as a music critic and collector of folksongs. Tanabe Hisao (1883–1984), one of Tanaka's pupils, is regarded as the first Japanese musicologist in the European sense; he studied music of Japanese and other Asian traditions. Outstanding among his pupils are Kikkawa Eishi, a specialist on Japanese music, and Kishibe Shigeo, a leading scholar of Asian music. Hayashi Kenzō made a detailed study of ancient instruments, and Machida Yoshiaki (Kashō) collected folksongs extensively. In 1936 they and other scholars founded the Society for Research in Asiatic Music. Koizumi Fumio was the leading ethnomusicologist in Japan in the 1950s and 60s; he was followed by Fujii Tomoaki, Tokumaru Yosihiko, Tsuge Gen'ichi and Yamaguti Osamu. Among the outstanding younger scholars of Japanese music are Hirano Kenji, Yokomichi Mario and Kamisangō Yūkō. Tanimoto Kazuyuki is the foremost authority on Ainu music.

Tsuji Shōichi (1895–1987), a Bach scholar, was the first Japanese musicologist to specialize in European music. After World War II the field grew significantly, led by Nomura Yosio and Hattori Kōzō, and in 1952 the Musicological Society of Japan was founded to promote studies of Western music. Younger Bach scholars include Sumikura Ichirō, Kobayashi Yoshitake, Isoyama Tadashi and Higuchi Ryuichi. Ebisawa Bin has written extensively on Mozart. Other areas of scholarly activity include Romanticism (Mayeda Akio, Morita Minoru and Osaki Shigemi), contemporary music (Funayama Tadashi and Takeda Akimichi) and early music (Toguchi Kosaku, Minagawa Tatsuo, Kanazawa Masakata and Imatani Kazunori).

The majority of Japanese universities do not have a department of music or musicology. As a result, students seeking a higher degree in musicology usually pursue his or her study within a Department of Literature or Aesthetics (e.g. Tokyo University or Osaka University), or of Education (e.g. Tokyo Gakugei University or Nagoya College of Music). There were about two dozen such institutions in 2000. The first institution with a higher degree programme in musicology was the Tokyo Geijutsu Daigaku (Tokyo National University of Fine Arts and Music; MA in 1963, and PhD in 1976). The example was followed by the Musashino College of Music (MA in 1964), the Kunitachi College of Music (MA in 1968), the Osaka College of Music (MA in 1968) and Elisabeth University of Music in Hiroshima (MA, 1990; PhD, 1993). By the end of the 20th century several other institutions had started a graduate programme in musicology, most offering only a masters degree.

11. Australia and New Zealand. Musicology in Australia and New Zealand constitutes a Western intellectual tradition within a culturally complex Asian-Pacific

environment. The high importance of indigenous music studies, the conspicuous presence of transplanted traditions from Europe and South America and the propinquity of Oceanic and Asian traditions have long encouraged a confluence of musicological and ethnomusicological disciplines. Most university music courses deliberately combine studies in both disciplines from the first-year undergraduate level. The confluence colours even the most overtly eurocentric studies by encouraging a dialectic between literacy and orality, tradition and innovation. Moreover, by giving immediacy to questions of aesthetics, meaning and interpretation, it fosters consideration of the particular nature of mainstream Western musical culture.

Concerted developments in music research began after World War II, though serious studies had been made in both indigenous Australian and Maori music from early in the 20th century. In New Zealand, university music departments were from their beginnings associated with humanities faculties and readily able to take advantage of postwar developments in music scholarship emanating from the USA and Europe. In Australia the first musicologically orientated music department (as opposed to those with a vocationally-based structure) was founded in 1948 at the University of Sydney by the English scholar Donald Peart. He was soon joined by another English musicologist, Peter Platt, who was later able to build on work began by Mary Martin at the University of Otago in New Zealand. Andrew McCredie, who studied in Sydney, Scandinavia and Hamburg, developed a musicology department at the University of Adelaide with an important postgraduate school owing its ethos to American and continental European models.

In Australia, important centres of musicological study are the universities of Sydney, Adelaide and Melbourne (the latter housing the Grainger Museum and the Centre for Australian Music Studies), the University of Queensland, the University of Western Australia, Monash University in Melbourne, the University of New South Wales in Sydney and the University of Western Sydney. The principal centres in New Zealand include the universities of Auckland, Christchurch, Otago and Wellington. The region's most distinguished scholars in Western musicology have included Gordon Anderson, David Tunley, Jamie C. Kassler and Richard Charteris in Australia, and John Steele in New Zealand. Roger Covell and John M. Thomson have done pioneer work in Australian and New Zealand studies respectively; Thomson was the first editor of the journal *Composer* (1963–6) and founding editor (1973–86) of *Early Music*.

The Musicological Society of Australia was founded in 1963 by Peart, Dene Barnett, Ian Spink and others; Peart served as its first president. In 1976, on the initiative of Graham Pont and Michael Kassler, the society became a truly national body with regional chapters that sponsored an annual conference and study weekends. The society's occasional journal *Musicology* became an annual from 1985 under the title *Musicology Australia*. The New Zealand Musicological Society dates from 1981; Warren Drake was its first president. The society holds a yearly conference and publishes the annual *Research Chronicle*. Other scholarly journals include *Miscellanea Musicologica* (from 1966), *Studies in Music* (1967–92), *Music in New Zealand* (1988–96), *Context* (from 1991), *Australasian Music Research* (from 1996) and *Perfect Beat* (from 1992). The anthropological journal *Oceania* and publications of the Australian Institute of Aboriginal and Torres Strait Islander Studies are of great importance in the field of indigenous music research.

Music printing and publishing. *See* PRINTING AND PUBLISHING OF MUSIC.

Music Publishing Co. English firm of music publishers founded and directed by GEORGE HENRY DAVIDSON.

Music roll [piano roll]. Perforated paper roll used in the operation of a PLAYER PIANO.

Music Sales. International publishing firm. Founded in 1935 by the Wise family, it initially produced classical and teaching material; later it moved into popular music, with editions of the Beatles, Paul Simon, Eric Clapton, Tori Amos and others. In 1970 a UK branch was established by Robert Wise. Copyright acquisition began in 1979 with the purchase of Campbell Connelly, a publisher of popular standards, and expanded significantly in 1986 with the acquisition of G. Schirmer and its subsidiaries, notably Associated Music Publishers. Subsequent classical-music acquisitions include J. & W. Chester, J. Curwen & Sons, Edition Wilhelm Hansen, Union Musical Ediciones, Shawnee Press, Novello and Bosworth; popular-music acquisitions have included Dorsey Brothers, Sparta Florida, Tempo Music (Ellington and Strayhorn), Ethnic Music, Embassy Music Corporation, AVI Music Publishing Group and Stuck on Music. With offices in London, New York, Los Angeles, Paris, Madrid, Copenhagen, Sydney and Tokyo, the company maintains vast interests in copyrights, printed music, distribution and retailing and new media. (N. Lebrecht: *When the Music Stops*, London, 1996)

SUSAN FEDER

Music Teachers National Association [MTNA]. American organization founded in 1876 by the musician and publisher Theodore Presser. In 1883 it helped establish an international pitch and promoted an international copyright law; in 1967 it approved a national certification programme for qualified teachers. The association commissions works by American composers, presents an annual Distinguished Composer of the Year Award and holds annual competitions for young musicians at local, state and national levels. The MTNA Foundation supports teaching, performance, composition and research. In 1995 the association had about 24,000 members – teachers, performers and composers – in the USA and elsewhere. Its official journal, *American Music Teacher*, was begun in 1951.

RITA H. MEAD/R

Music theatre. A term often used to characterize a kind of opera and opera production in which spectacle and dramatic impact are emphasized over purely musical factors. It was first used specifically in the 1960s to describe the small-scale musico-dramatic works by composers of the postwar generations that proliferated in western Europe and North America during that decade.

1. Introduction. 2. The European mainland. 3. Britain. 4. North America.

1. INTRODUCTION. During the early 1960s, the elaborate trappings of the opera house and of 'grand opera' in particular were selfconsciously discarded by a number of progressive composers in favour of more modest dramatic and musical means, often combining elements of song, dance and mime, which could be tailored to a wide range of performing spaces. The genre came to prominence during the 1960s and early 70s for aesthetic, economic and political reasons, and though it almost as quickly became unfashionable again the most effective works of the period – especially those by Ligeti, Berio, Henze, Birtwistle and Maxwell Davies – remain in the repertory and to a large extent continue to define its parameters.

The advocates of music theatre cited more remote historical precedents such as Schoenberg's *Pierrot lunaire*, Stravinsky's *The Soldier's Tale* and *Renard*, Weill's *Mahagonny* Songspiel and even Monteverdi's *Il combattimento di Tancredi e Clorinda*. In the postwar period, however, it appears to have arisen as a loosely connected tendency, partly dictated by the attempts of a number of composers to come to terms with the prescriptions and proscriptions of total serialism and to reconcile that rigour with their interest in exploring renewed combinations of music and gesture, partly as a political reaction against the conservative musical establishment which traditional opera was perceived as representing, and partly (and perhaps most significantly) as a pragmatic response to the increasing problem of mounting new operas in a period of rapidly increasing production costs.

2. THE EUROPEAN MAINLAND. Even in 1968, when leaders of the postwar avant garde such as Nono and Berio had begun to work within the framework of the operatic establishment, and the première of Zimmermann's *Die Soldaten* in 1965 had been hailed as the remaking of an operatic tradition thought broken after Berg's *Lulu*, Boulez was calling for opera houses to be blown up because they were representative of a 'museum culture' antipathetic to the radicalism that composers of his and subsequent generations had espoused (indeed, in 1992 he described music theatre as 'opera of the poor'). Most of his contemporaries went on to explore opera in some form and often used music theatre as the means of first approaching the genre.

'Music theatre' became an umbrella term covering works ranging from those that were in effect chamber operas, demanding traditional vocal techniques and a high degree of virtuosity in performance, to pieces such as Stockhausen's *Herbstmusik* (1974) and *Musik im Bauch* (1975) and many works by Schnebel and Kagel in which the overt musical content was at best minimal. Ligeti's *Aventures* and *Nouvelles aventures* (1962 and 1962–5) existed as concert works, albeit ones of a highly individual character, before their theatrical implications occurred to the composer and he concocted (in 1966) a suggested scenario. Kagel's compositions, such as *Match* (1964), often demand the description 'music theatre' even when apparently they were written for conventional genres. His *Staatstheater* (1967–70), commissioned by the Hamburg Staatsoper, uses all the apparatus of the opera house to question cherished assumptions about the traditions of operatic performance rather than to extend the range of means by which music and gesture might be combined.

Henze used music theatre as a means of focussing an overt political message, notably in *El Cimarrón* (1969–70). He began to explore music theatre only in the late 1960s, when his disaffection with the social trappings of traditional opera had reached a climax, and he sensed that in *The Bassarids* (1964–5) his own operatic style had reached a stylistic end-point. His Second Violin Concerto (1971) also contains a strong element of music theatre.

Nono and Berio were both influenced by the experimental theatre groups that flourished during the 1960s and incorporated elements from such productions into their music-theatre compositions (e.g. Nono's *A floresta è jovem e cheja de vida*, 1966). Nono's large-scale

dramatic works, *Al gran sole carico d'amore* (1972–4) and *Prometeo* (1984), forsook the trappings of the opera house altogether. Berio's *Opera* (1969–70, revised 1977) used material from the Open Theatre's production *Terminal* as one element in a highly allusive meditation on the nature of opera and the interdependence of music and gesture. But his exploration of music theatre and its possibilities for concert works was already well advanced before *Opera*: there is a clear line of development from *Circles* (1960) through *Laborintus II* (1965) to the fully-fledged music theatre of *Recital I (For Cathy)* (1972). And in his series of solo instrumental *Sequenze* (1958 onwards) there was a gradual drift away from the abstract musical designs of the early pieces towards much more comprehensive studies of performance. In the instrumental works of Heinz Holliger and Vinko Globokar the dramatic potential of virtuoso performance was used to define a distinct genre for which 'music theatre' seems the most appropriate description.

3. BRITAIN. In Britain, where in the period after 1945 conditions for the encouragement of new opera were arguably more unfavourable than anywhere in western Europe, Goehr, Maxwell Davies and Birtwistle were prominent in efforts to establish a music-theatre repertory in the 1960s and early 70s. Their music-theatre pieces represented a much more direct and concentrated fusion of music and gesture than the equivalent works of their continental European contemporaries, perhaps because their aims were concerned less with ideology than with producing a more potent dramatic fusion than traditional opera appeared to offer.

Goehr's *Triptych* (*Naboth's Vineyard*, *Shadowplay* and *Sonata about Jerusalem*, 1968–70) was composed immediately after the completion of his first opera. Davies and Birtwistle jointly formed the Pierrot Players (later called The Fires of London) in 1967 with the specific purpose of creating and presenting a repertory of music theatre. For their concerts Davies composed *Eight Songs for a Mad King* (1969) and *Vesalii icones* (1969), in which it was the borderline between concert and theatre piece, rather than that between theatre piece and opera, that was blurred. These works were consciously designed to be performed in a concert hall. The theatre pieces Birtwistle wrote for the Pierrot Players (including *Monodrama*, 1967) have been withdrawn, but in such works as the 'dramatic pastoral' *Down by the Greenwood Side* (1969) the pared-down instrumentation and skeletal gestures reveal the experience of those explorations. In his *Bow Down* (1977), composed when the music-theatre movement was on the wane across Europe, Birtwistle achieved an unclassifiable fusion of music, text and gesture that was perhaps closer to the music-theatre ideal than anything produced during the movement's heyday ten years earlier.

The influence of John Cage's work and an increasing awareness of Kagel's significance fostered a new phase in British music theatre in the 1970s and 80s, typified by the creations of Trevor Wishart and Michael Nyman.

4. NORTH AMERICA. In the USA and Canada music theatre acquired an entirely distinct and independent pedigree. Its most striking manifestations had their origins in the experimental tradition of the inter-war years, in the multimedia projects of Harry Partch and in Cage's demonstrations from the 1950s onwards of the open-ended and all-embracing possibilities of any work of art. From his 'happenings' of the 1960s, *HPSCHD* (1967–9, in collaboration with Lejaren Hiller) and *Musicircus* (1967), to *Apartment House 1776* (1976) and the purely electronic *Roaratorio* (1979), Cage gave demonstrations of the spectacular possibilities of such catholic musical collage, while in *Europeras 1 & 2* (1987) he offered a commentary on the European operatic tradition.

In other respects North American music theatre struck out in several directions, often straining the limits of the definition of the term. The works of R. Murray Schafer may be related to developments in the European avant garde of the 1960s, though his theatre pieces show a far wider range of reference and gesture, while Robert Ashley's explorations of the possibilities of television opera and use of multi-layered technology introduced another ingredient into the experimental mix. And within the broadest sweep of the term, Alvin Lucier's installations and 'sonic environments' offer experiences in which the visual component is certainly intended for consideration alongside the acoustic phenomena, but which take music theatre a very long way from both its origins and its conventional parameters.

ANDREW CLEMENTS

Music Theatre International. Theatrical licensing agent specializing in West End, Broadway and off-Broadway musicals. It was founded as a subsidiary of the FRANK MUSIC CORP. in 1950 by Don Walker and Howard Hoyt; in 1952 they joined forces with Frank Loesser, who had become sole owner of the business by the mid-1950s. In 1976 the firm became a subsidiary of CBS; from 1987 it operated as an independent concern until purchased by Freddie Gershon, the present owner, in 1989. The firm represents some of the most successful musicals, such as *Fiddler on the Roof*, *West Side Story*, *Guys and Dolls*, *Annie*, *Miss Saigon*, *Les misérables* and *Jesus Christ Superstar* and is the sole agent for the music theatre works of Sondheim.

□

Music therapy. The use of sounds and music within an evolving relationship between child or adult and therapist to support and encourage physical, mental, social, emotional and spiritual well-being. Music has long been used as a healing force to alleviate illness and distress, but the specific discipline of music therapy developed only in the middle to late 20th century. There are differences within and across countries as to what specifically constitutes music therapy. In some ways the term itself is misleading, given that music therapists are not helping to develop a person's music, as might be implied by analogy with physiotherapy or speech and language therapy. Music therapy is not about developing musical skills or teaching people to play an instrument, though these may be unintentional by-products of the therapeutic process. Therapy implies change, and many definitions refer to the

development of therapeutic aims and the dynamic processes that are at the core of a therapeutic relationship as it evolves. The provision of a safe and consistent space where these processes can take place is considered by most experts to be paramount, and it is important for sessions to happen on a regular basis and ideally at the same time of day. These boundaries allow for a feeling of trust to be established between client/patient and therapist.

1. The elements of music in music therapy. 2. Music in and as therapy. 3. Basic response to sound and music. 4. Application. 5. Experience. 6. Different philosophies and approaches. 7. Some research evidence. 8. Historical perspective.

1. THE ELEMENTS OF MUSIC IN MUSIC THERAPY. Sound has four major elements – timbre, loudness, duration and pitch – which manifest themselves in music as rhythm, melody and harmony. The music therapist observes and listens to how patients/clients make use of these different elements. This then influences the therapist's own response and style of music-making. Silence is also an important element: spaces between sounds add meaning and significance to the musical events. Of all the elements, rhythm is often given a central position within music therapy because of its potential to focus energy and bring structure and order (Gaston). Rhythm can be prominent at the start of a period of active music therapy, when an individual or members of a group are often invited to explore a wide range of tuned and untuned percussion instruments. The use of percussion provides opportunities for exploration from the simple (a small stroke on a cymbal) to the complex (an intricate rhythmic passage on a drum). The instruments, from a wide range of musical cultures, are accessible to people of all ages and abilities, regardless of musical experience and background. Children may be drawn to the shape, colour and size of an instrument, in addition to its sound. And the use of percussion frees adults from any reliance on preconceived views of what constitutes music, coming from the traditional western and somewhat restrictive emphasis on diatonicism. Percussion instruments also allow individuals to improvise, to make 'sculpted sound' as one patient described the music made by his group (Bunt). With very disabled people it may be necessary for the therapist to initiate some music, for example when grasping an instrument is difficult. Flexibility is also fundamental to an approach to improvisation adapted to the individual. Here the therapist as musician is trained to match an individual's own sounds, elaborating and structuring them into coherent musical forms, that are part of the present moment. Musical form provides some semblance of order and cohesion to the creative expression of the musical gestures, however fragmentary and disparate they might be. A moment of improvised music can simultaneously sum up the immediate past and predict the music's future. The technique of matching relates to the well established 'iso principle' (from Gk: 'equal'), which may also be adapted to group work, where a search for some unifying musical common denominator is a feature. As many musical styles are used in music therapy as there are tastes in music: free improvisation, composed music (both live and recorded), folk music from different cultures and jazz all have their relevance in the different contexts in which music therapists work.

2. MUSIC IN AND AS THERAPY. Definitions of music therapy range from an emphasis on the music on the one hand to the relationship on the other. Personal background, training, therapeutic orientation, and cultural and philosophical issues influence each therapist's position. In some countries music therapy is practised by musical physicians, psychologists or psychiatrists as an adjunct to another therapy, such as a verbally based psychotherapy, in what Bruscia (1987) refers to as 'music in therapy'. For example, a psychotherapist might choose to include some joint listening to music as part of the therapy, to aid general relaxation or for the music to stimulate feelings and reactions that can be brought into the verbal domain. Other examples of music in therapy could be the use of music in dentistry or the operating theatre, with preferred music being played to patients directly through headphones or speakers during distressing procedures (see Standley in Wigram, Saperston and West). The alternative is what Bruscia calls 'music as therapy'. Here the music is a central focus, with changes in the music often being mirrored in changes within the relationship. Musicians are very much at the centre, and clearly they need to feel comfortable and secure within their own use of music if they are to be able to listen openly, attend and engage fully in music therapy. The approach of Paul Nordoff and Clive Robbins is a well-respected example. Here improvisation is primary, the therapist improvising piano music initially to accompany and support whatever musical gestures are offered by the child or adult, containing them in a musical frame that develops form and variation as the musical relationship unfolds.

3. BASIC RESPONSE TO SOUND AND MUSIC. One common view among music therapists is that there will be some form of musical response despite serious degrees of cognitive impairment. Musical response seems to be stored at a very deep level. For example, Marin cites the case of a person with diffuse damage across both cortices able to sing with clear rhythm, intonation and prosody. Sacks gives eloquent descriptions of the stiff movements of post-encephalitic patients becoming freer and more natural while the music lasts, becoming 're-musicked' as one patient described it. There are case reports of music being used to help recall patients from coma (see the work of Gustorff reported by Ansdell). Further evidence of this very basic response to sound arises from fortunately rare cases of musicogenic epilepsy, when a particular grouping of musical parameters can cause a temporary loss of consciousness (see Critchley and Henson).

4. APPLICATION. Music therapy is used, both individually and in small groups, to help children and adults of all ages who have diverse kinds of physical and mental disability. Traditionally it has been proved to help overcome some major break in communication as a result of brain damage or mental problem. One successful and well-documented application has been with young children who have major communication difficulties such as autism (see Alvin and Warwick; Nordoff and Robbins; Robarts; and the papers by Howat and Warwick in Wigram, Saperston and West). The often fragmented musical gestures of many autistic children can be placed within the holding, connecting and cohesive musical forms improvised by the music therapist. The child is helped to hear and find meaning in the sounds, and to move eventually to a position of more shared meaning. Very often these interactions take place as indirect communications via the instruments, taking the pressure

away from more – and often excessively – arousing direct communication. Some therapists may also work towards developmental objectives, the music helping the child, for example, to gain further physical organization and control. Music therapists are able to build on a child's innate curiosity about making sounds: a child is very often highly motivated to attend in an active musical environment, where the emphasis is away from divisive verbal exchange to the more uniting aspects of music-making (see Bunt for evidence of changes in levels of attention and motivation over time with groups of children).

With older children and adults with learning difficulties, music therapy has been found to help in developing physical skills, cognitive potential, motivation, speech and language, non-verbal expression, social skills, choice-making and independence. A very withdrawn or tense person can be gently encouraged to explore the instruments, building a trusting relationship with the therapist through the music over a period of time. A physically disabled person can be stimulated or relaxed by the appropriate music, the musical parameters closely adapting to the individual problems. The early pioneers of adult psychiatry soon discovered that music could influence changes in mood, expression of feelings, social interaction in a group and self-esteem, and such influences have been observed over a whole lifespan (see Odell in Wigram, Saperston and West). Music therapy has thus found a place in numerous settings: special hospitals and units for adults and children with a wide range of learning difficulties, physical disabilities, neurological problems and mental-health problems; pre-school assessment centres and nurseries; special schools; day centres, hospitals and residential homes for older people; centres for people with visual or hearing impairments; the prison and probation service; hospices and private medical practices (see Ansdell; Bruscia, 1991; and Wigram, Saperston and West for descriptive case studies). Music therapy can help those needing stress and pain reduction (Rider; Hanser), victims of sexual abuse (Rogers, 1992), cancer patients (Bunt and Marston-Wyld) and people living with HIV/AIDS (Lee). Such developments are enlarging music therapy's relevance to all kinds of treatment.

5. Experience. Music therapy is at once a physical, mental, emotional and social activity, with both children and adults. The experience of music therapy clearly involves the whole person. Sears (in Gaston) distinguished three sorts of experience in music: experience within structure, experience in self-organization and experience in relating to others. For example, in the first he described how music 'demands time-ordered behaviour'. Sloboda (1992) found features such as melodic appoggiaturas or sudden shifts in harmony that are associated with crying or the commonly expressed 'tingle factor'. Such empirical research by music psychologists can be related to the earlier work of Meyer, who found emotional response connecting with his notions of expectancy and violation of expectancy in musical form. On a more philosophical level, Langer is often cited by music therapists in their search for clues to the emotional meanings of musical gestures made by children and adults: especially suggestive is her hypothesis of an inner impulse expressed externally in the music's 'significant forms'. This suggests that there is a close correspondence between internal state and musical gesture, and it opens a debate relating to cultural and individual influences, as well as to the absolutist/referentialist dichotomy. The worlds of poetry, myth and metaphor offer alternative points of reference.

6. Different philosophies and approaches. Music therapy straddles many disciplines, including ethnomusicology, aesthetics and the psychology of music, and many differing schools of psychology and treatment. A developmental approach is often adopted when working with very young children. Here one reference point is the developmental psychology of music, a useful model being Swanwick and Tillman's spiral of musical development, which is based on analysis of over 700 spontaneous compositions by children. The spiral moves through the development sequences of mastery, imitation and imaginative play, combined with the manipulation of musical materials, expression on both personal and vernacular levels, and experimentation with musical form. At the top of the spiral are the more complex cognitive, symbolic and value-laden aspects of an older child's understanding of music. The multi-dimensional and multi-directional aspects of this model can be applied to work with adults too. An older person with an established, inflexible system of musical values may benefit from revisiting an earlier, more playful and freer exploration of sound.

Another point of reference is the micro-analysis of patterns in early child–adult relationships (see Robarts; and Pavlicevic in Gilroy and Lee), for very often musical parameters – stress, duration, timing, accent, phrase etc. – are used to describe these interactive patterns, and psychological concepts of intersubjectivity, joint attention and turn-taking can apply as much to musical exchange as to early child development. Aldridge extends these metaphors of music and development to make forms in music central to all biological patterning. He regards musical and biological form as isomorphic, and moves outwards from music to embrace other worlds; his notion of 'symphonic beings' describes how continuous processes of composition help to redefine a person. These views present music as a measure of health, so that an improvisation, for example, may be seen as a direct expression of the needs of the self, bypassing words. Capra has made synchronization a measure of health, 'dis-ease' being observed in a lack of synchronization within oneself, between self and others, and with the surrounding environment.

While music cannot represent objects as language does, some research has compared grammatical and structural similarities between music and language. Stern's work provides further stimulus for music therapists to explore the links between the dynamic forms of emotion and music. This notion of 'affect attunement' helps the therapist move beyond imitating the child's musical gesture to understanding the world of feeling that might lie behind – a kind of musical empathy. The therapist and child move towards joint and potentially reciprocal communication, towards equal partnership within the music.

For many years music therapists have also turned to other established therapeutic approaches to support their work (see Ruud). Connections have been made between listening and physiological changes in, for example, respiration, pulse rate, metabolism, attention and the electrical conductivity of the body (see Arrington in Podolsky). This early body of physiologically based

research, though rather inconsistent and based on short-lived effects using a restricted range of recorded music, did a great deal to validate the emerging profession (see Saperston's critique in Wigram, Saperston and West). However, little research has examined the more interactive approach adopted by many therapists, where the variables are obviously vastly more complex than in listening to recorded music. The development of computer technology has instigated a return to a physiological approach, for example in vibro-acoustic therapy. Here a pulsed low-frequency tone is combined with pre-recorded music to help reduce muscle tone and spasm and induce a state of sustained relaxation for people with profound physical disabilities, thematoid conditions and pulmonary disorders (Skille and Wigram in Wigram, Saperston and West). It seems that a deep response to music can be so harnessed, though it is still notoriously difficult to separate physiological from emotional response.

While psychodynamic theory may not uncover the meaning of music (see Noy), several music therapists yet refer to the writings of psychoanalysts to provide an underpinning to their work. Freud was unable to derive much pleasure from music, being unable to rationalize how it affected him. His writings on creativity in general have been criticized by later analysts for their emphasis on the processes of sublimation, regression, fantasy, escape and compensation (Storr). Jung, however, is reported to have been impressed by the potential of music therapy, noting how music 'reaches the deep archetypal material that we can only sometimes reach in our analytical work with patients' (Hitchcock). His functions of the psyche – sensation, feeling, thinking and intuition – also seem to find correlations in musical experience (Goodman), and he even recommended music as an essential ingredient of every analysis.

In Priestley's analytical music therapy, the client/patient is encouraged to talk through the area to be explored in the traditional analytical way. This exploration is then enacted in musical improvisation, in which the therapist and patient may take on particular roles. Priestley's sessions are completed by the playback of a tape and integration of the musical material into the final discussion. Other therapists use music as a supportive or projective technique in psychotherapy; Winnicott and others of the object-relations school have also been influential. Winnicott's notion of the 'intermediary object' can be applied to musical interaction, the child using an instrument to explore a sense of 'not me', a sense of self in interaction with another, an object through which meaning can be shared. Levinge related a two-and-a-half-year-old girl's development of self in a period of music therapy using the Winnicottian concepts of 'me' and 'not me'. John also is concerned with the development of musical psychotherapy.

During the 1960s and early 70s many studies of music therapy in the USA had strong links to behaviour therapy, with music therapy often seen as a science of behaviour (see Masden, Cotter and Masden). Music was regarded not only as a stimulus but also as a reward for eliciting and maintaining certain behaviours. The very act of playing an instrument can be described as a positive self-reinforcing activity. Carefully designed studies demonstrated highly significant results when music was used, for example, to effect developmental changes in reading, numeracy and imitation skills (see Roskam, and Miller, Dorow and Greer) and to reduce aggression, stereotyped behaviours and hyperactivity (see Steele, Jorgenson, Scott and Lathom). This body of quantitative research did much to contribute to the growing credibility of music therapy.

Other therapists developed a more 'client-centred' approach with reference to Gestalt therapy (Perls, Hefferline and Goodman), a notion of 'peak experience' (Maslow) or concepts of empathy, acceptance and genuineness (Rogers, 1969). Also more humanistic is the phenomenological position that the therapy lies within the music itself (Ansdell). The developing use of 'Guided Imagery in Music', a specific training initiated by Helen Bonny, also has its roots here. Bonny's work, in exploring beyond pre-personal and personal states, moves music therapy into transpersonal and spiritual realms.

7. Some research evidence. The wide range of approaches and the differing needs of children and adults present enormous challenges but also offer a rich descriptive background to further analysis and research. Music therapy is still criticized on the basis of insufficient evidence to support its effectiveness, particularly with regards to changes in the person outside the therapy. In response to that criticism, and as an alternative to the more behavioural approach adopted in the 1960s and 70s, researchers in the 1980s and 90s began to explore other methods to describe the work. Some have been influenced by ethologists such as Hinde and Richer who advocate periods of direct observation in naturalistic settings before any internal state of mood can be inferred or even guessed at.

Odell, for example, demonstrated that a period of music therapy significantly increased her elderly, mentally ill clients' levels of engagement as measured by eye direction and other means (see Wigram, Saperston and West). Bunt's work, with children with special needs, examined similar very basic changes over time in, for instance, vocalizations, imitation and initiation of ideas, looking behaviour, level of adult support and direction, and turn-taking. His series of interrelated studies demonstrated that music therapy positively influenced all these, against the controls of no music therapy or playing with a well-known adult. Oldfield and Adams investigated the benefits of music therapy in accomplishing a set of individualized objectives when working with a small group of adults with profound learning difficulties (see Gilroy and Lee). Video analysis showed that measurable skills, such as the ability to hold on to objects, were improved as a result of music therapy as compared with play activities. Aldridge has brought his extensive research background to examine methodologies that maintain the richness of the work without reducing it to a series of basic measures. He advocates single case studies that can be scientifically rigorous but also adapt to the individuals involved, whether patients/clients or therapists. There are many stories to be told, which can be reported in a rigorous way without losing any of the human aspects many music therapists consider central to their work.

Some research integrates objective and subjective stances. Hoskyns, for example, used an external system, Kelly's Theory of Personal Constructs, in devising detailed interviews with her offender clients before and after music therapy, and her findings show correlations between the results of the interviews and her own more subjective observations (see Gilroy and Lee). This more collaborative

approach to research, employing direct reporting from the clients or patients, is felt by many music therapists to be more suited to the aesthetics and fundamental nature of music therapy. Another example of it is Rogers's research (1992) into music therapy and sexual abuse. In the move to understand more about the musical processes involved in any course of music therapy, there has been a shift generally to a more phenomenological and qualitative approach. Lee, working with HIV/AIDS patients, used techniques drawn from music analysis to discover what clients and therapists view as 'significant moments' in improvisations. These studies include powerful verbal evidence from the clients, alongside music analysis and verbal transcripts from other listeners.

8. HISTORICAL PERSPECTIVE. The clinical profession of music therapy is relatively new, but music has been used as a healing force for a long time – longer perhaps than any other art form (see Fleshman and Fryrear). Examples appear throughout the Bible, in Eastern and Western mythology and in tribal medicine. Songs and such instruments as drums and rattles are still used in many healing rituals worldwide, and some music therapists (e.g. Moreno) explore links between contemporary music therapy and these more ancient healing traditions. The influence of music on the human body was mentioned in Egyptian medical papyri dating back to 1500 BCE (Benenzon). In Book 3 of the *Republic* Plato promoted the discovery of rhythms expressive of harmonious and courageous lives, and warned against the use of certain modes that could promote indolence or sorrow, recommending those with stronger qualities. The astro-musicology of the Renaissance master Marsilio Ficino gives insights into the care of the soul throughout 'a well-tempered life' that are as relevant today as 500 years ago (see Moore). Goodman traces the growth of a therapeutic approach to music in different cultures from its use in magical and religious healing to the evolution of rational and scientific ideas about medicine and music.

Working within the Western medical tradition, Hector Chomet, a French doctor, wrote in 1875 of the effects of music on health, including its influence in helping to offset epileptic fits. A British cleric, Canon Harford, set up the Guild of St Cecilia in 1891 to introduce sedative music into hospital wards, sometimes by the newly invented telephone (see Davis). This use of music to boost morale and to provide an entertaining diversion persisted until well into the 20th century. Musicians were invited to play to large groups of patients on the vague assumption that it might activate certain metabolic functions and relieve mental stress (see Feder), and the early literature of music therapy abounds with anecdotal accounts of patients being reached by music. One famous example is of a schizophrenic musician being administered a daily dose of Chopin (see Podolsky).

The use of music in the rehabilitation programmes for returning combatants after World War II proved a watershed for the development of a more clinical approach to music therapy. The first academic courses were set up in the USA in the mid-1940s, and the earliest association dedicated to the specific promotion of music therapy, the National Association of Music Therapy, was founded in the same country in 1950. Europe quickly followed suit, and the British Society for Music Therapy was founded by Juliette Alvin in 1958. Since then the profession has developed rapidly, at a time when there has never been such a variety of music available to so many. By the early 1990s there were over 3000 qualified therapists practising in the USA alone, and over 300 in Britain, where the profession had gained recognition by the Department of Health as a para-medical discipline. Expansion since the 1970s has been part of a wider trend of increasing public interest in complementary medicine and of increasing research. Music therapists in over 30 countries are engaged in constructive work in a variety of settings (see Maranto).

An active World Federation of Music Therapy organizes international conferences and is developing standards in ethics and training. More students are turning to music therapy as a career, and opportunities to train are increasing. The British professional association supports six postgraduate degree courses, the two American associations over 70. These developments in training and practice are running in parallel with progress in music therapy assessment and research. The growing body of research is outlining both the specific therapeutic values of music and the processes by which therapeutic outcomes are achieved.

The profession of music therapy is at an interesting stage as it approaches its mature adulthood. There is room for a variety of approaches, backgrounds, methodologies and theoretical perspectives: process and outcome studies, for example, need not be separate, as long as the researcher presents the perspective clearly. Wheeler has published a comprehensive survey of research from both the established quantitative and more recent qualitative viewpoints, including contributions with a historical and philosophical reach. The boundaries are very blurred in music therapy between mind and body, active and passive, conscious and unconscious, subjective and objective, internal and external, right-brain and left-brain, observer and observed. But music therapy appears to be discovering its own methodologies from within itself (Aigen in Wheeler), and proving itself greater than the sum of its disparate parts.

LESLIE BUNT

Musikalisches Magazin. Austrian firm of music publishers. It was founded by the composer Leopold Kozeluch (*b* Velvary, 26 June 1747; *d* Vienna, 7 May 1818), whose first works written in Vienna were published by Artaria and by Torricella; the desire for more profit led him to publish his works himself. On 14 April 1784 the *Wiener Zeitung* carried his first advance announcement of his two piano concertos op.12, which appeared on 1 September; on 12 November 1785 it advertised the opening of his music and art shop, the beginning of his publishing business.

Because of Kozeluch's activities as a composer, especially from 1792 when he became court composer, he was obliged to engage his brother Anton (*b* 9 Dec 1752, bap. Antonín Tomáš; *d* Vienna, 4 July 1805), who had come to Vienna in 1788, as business manager; it was at this time that the firm began to trade under the name Musikalisches Magazin, later changed to Kozeluchsche Musikhandlung. Anton did not apply to the Vienna city council for the licence left by his brother until 29 May 1802. The firm's activity however ceased completely in 1803 and the licence left to Anton Kozeluch's widow passed to Ludwig Maisch. Compared with Artaria, the Musikalisches Magazin was insignificant, and lacked a definite policy. Nevertheless the publishing programme included Haydn's 'Tost' quartets, a piano reduction of Mozart's *Die Zauberflöte* and reprints of several of his works, and 13 pieces by Ignace Pleyel. Kozeluch's own

compositions make up the bulk of the output. Other composers published included Ferdinand Kauer, J.G. Lickl, Lipavský, Wenzel Müller, Paradis, Pasterwiz, Ambrosius Rieder, Vanhal, Anton Wranitzky and their lesser contemporaries.

Musin, Ilya (*b* Kostzomo, 25 Dec 1902/7 Jan 1903; *d* St Petersburg, 6 June 1999). Russian conductor and pedagogue. The son of a music-loving Jewish watchmaker, he was a gifted pianist, entering the Petrograd (later Leningrad) Conservatory in 1919 (on the same day as Shostakovich). After poor living conditions permanently damaged his hands, he changed to conducting in 1924, tutored by Nicolay Malko. He began teaching at the Leningrad Conservatory in 1929, and in 1937 became conductor of the Minsk PO. Forced to flee the advancing Germans during World War II, he, his wife and infant son undertook a perilous journey to safety on foot, returning to Leningrad in 1944. Refusing to join the Creative Union of Musicians and Composers, he ensured that top orchestral positions would never be his. Although praised for innovations in conducting technique, Musin considered himself tied to 19th-century Russian musical principles. By all accounts, he was a rigorous but beloved teacher with enormous respect for music and its inherent integrity. His numerous conducting pupils included Gergiyev, Temirkanov, Rudolf Barshay, the brothers Semyon Bychkov and Yakov Kreizberg, Sian Edwards and Martyn Brabbins. Musin did not travel outside Russia until 1991. In 1996 he conducted the RPO in London, the first time he had worked with an orchestra outside his native land.

Musique Vivante. French ensemble founded in 1966 by DIEGO MASSON.

Musorgsky [Mussorgsky; Moussorgsky], **Modest Petrovich** (*b* Karevo, Pskov district, 9/21 March 1839; *d* St Petersburg, 16/28 March 1881). Russian composer. His life was disjointed, ending in loneliness and poverty, and at the time of his death some of his most important compositions were left unfinished. His greatest achievements were as a composer of operas and solo songs. Largely self-taught and highly intellectual, he discovered a way of writing for the voice that was both lyrical and true to the inflections of speech. He was the most strikingly individual Russian composer of the later 19th century and an avatar of modernism for the generation of Debussy and Ravel.

1. CHILDHOOD AND BEGINNINGS AS A COMPOSER. Like several other 19th-century Russian composers, Musorgsky was born in the countryside to wealth and property. The family's principal estate, where he spent the first ten years of his life, lay amid forests and fields about 400 km south-south-east of St Petersburg, overlooking Lake Zhizhitsa (formerly Zhistso). According to an autobiographical sketch written late in life, he took delight as a toddler in the Russian folktales of his nurse and tried to capture their spirit in improvisations at the piano before he had learnt even the most basic rules of playing. At the age of six he began music lessons with his mother, who taught him those rules. His progress was rapid if unexceptional within his social class: he was playing small pieces by Liszt at the age of seven and a Field concerto before an audience of family and friends two years later. In 1849, when he was ten, his father took him and his older brother Filaret to St Petersburg to enrol them in the Peterschule, an élite secondary school for the sons of the gentry, where he spent the next two years. At this time too he began to study the piano with Anton Herke, a pedagogue and performer acclaimed in St Petersburg, who was a pupil of Field, Kalkbrenner, Moscheles and Ries.

After a year's further study at A.A. Komarov's preparatory boarding school for prospective cadets, Musorgsky entered the Cadet School of the Guards in 1852 and began to train for the career of a military officer common among young men of his rank. According to his brother, he was particularly interested in history while at school, and studied German philosophy as an upper classman. He advanced rapidly in his lessons with Herke, and as a result often found himself called upon 'to thump out dances to please his fellow cadets in the Guards school' (Kompaneysky, 1906). Soon after entering the school he published at his father's expense his first composition, the *Porte-enseigne Polka*. Long thought lost, the work was rediscovered and published anew in 1947; nothing in it suggests the mature Musorgsky. He sang in the school choir, and the religious instructor, Father Kirill Krupsky, gave him church music by Bortnyans′ky and still more recent composers to study. Because of legal restrictions imposed on liturgical music after 1837, only six composers, all Russians flourishing after 1750, could have contributed to the choir's repertory. Thus, Musorgsky's assertion in his autobiographical sketch that Father Krupsky helped him acquire 'a profound knowledge of the very essence of ancient Greek and Catholic church music' must be regarded as a great exaggeration; after Musorgsky's death, Krupsky himself confirmed that he had no such knowledge to impart.

Although Musorgsky's formal lessons with Herke ended in 1854, he regularly attended and frequently played at the lessons Herke gave to the daughter of the Cadet School's director. In 1856, though he had learnt nothing of harmony or composition, he considered writing an opera after Victor Hugo's *Han d'Islande*; nothing came of the plan because (in his own words) 'nothing could'. Likewise in 1856 he graduated from the Cadet School and was commissioned an officer in the Preobrazhensky Regiment, the foremost regiment of the Russian Imperial Guard, founded by Peter the Great and traditionally led by the tsar himself. Borodin, who met him in the autumn of 1856, described him as an elegant piano-playing dilettante.

In the winter of 1856–7 Musorgsky was introduced to Dargomïzhsky, already an established composer, and soon he began to appear at musical evenings in Dargomïzhsky's home. The following autumn Dargomïzhsky introduced him to Cui, another young military officer who dabbled in composition and had studied briefly with Moniuszko as a teenager. Through these new acquaintances he soon met Balakirev and Stasov, and in December he began lessons in composition with Balakirev, which consisted of their playing and analysing (in piano duet arrangements) all Beethoven's symphonies, plus compositions by Schubert, Schumann, Berlioz, Liszt, Glinka and Dargomïzhsky, as well as some Bach, Handel, Haydn and Mozart. He resumed composition even before meeting Balakirev and Stasov, completing in April 1857 a *Sel'skaya pesnya (Gde tï zvyozdochka)* ('Rustic Song (Where art thou, little star?)'), which he then orchestrated in 1858. Like the *Souvenir d'enfance* for piano of October 1857, this early song is an undistinguished apprentice piece. But because Musorgsky had the habit of backdating revisions of his work to the time of original composition, the true first version of this song has long been wrongly known (thanks to the date of its orchestration) as the second version, and the true second version (a minor masterpiece dating from the mid-1860s) as the first. Ironically, one of the unintended consequences of Musorgsky's backdating has been to perpetuate a view of him as an *idiot savant*, who understood his art so poorly that he often abandoned vivid first thoughts in favour of drab second ones, when in fact his revisions are always carefully considered.

Other apprentice works followed in 1858–9, including a drinking-song, *Vesyolïy chas* ('The Joyous Hour'), the romances *Otchego, skazhi* ('Tell me why') and *List'ya shumeli unïlo* ('The leaves rustled sadly'), and a handful of piano transcriptions from Glinka, Balakirev and Beethoven. Musorgsky began two piano sonatas, in E♭ major and F♯ minor, as exercises for Balakirev in 1858 and left both unfinished. Likewise in 1858 he began to compose incidental music to Vladislav Ozerov's play *Édip v Afinakh* ('Oedipus in Athens'), of which only one number has come down to us, the choral 'Scene in the Temple'. During the summer of 1858 he suffered a nervous or spiritual crisis – 'mysticism mixed with cynical thoughts about the Deity' he writes to Balakirev – and on 17 June resigned his commission, turning decisively to music. After spending several weeks in the country (during which his nervous condition may have improved temporarily), he returned to St Petersburg in late summer and soon resumed lessons with Balakirev. Though much of his time was devoted to studying scores – his letters mention Gluck's *Alceste*, *Iphigénie en Aulide* and *Armide*, Hérold's *Zampa*, Mozart's Requiem and Beethoven's 'Moonlight' Sonata – he nonetheless managed to complete (in November) two scherzos for piano, in C♯ minor and B♭ major, and to orchestrate the second with Balakirev's help.

2. Continued apprenticeship. In the spring of 1859 Musorgsky spent a few weeks in the village of Glebovo, near Moscow, at the estate of the Shilovskys, friends whom he had met through Dargomïzhsky. Mariya Shilovskaya had been known in the salons of St Petersburg for her 'dashing and somewhat gypsy-like style' of singing (Stasov, 1881), and after marrying a wealthy man, Stepan Shilovsky, she turned her husband's estate into a rural centre for music and a haven for talented young composers. In 1859 she invited Konstantin Lyadov (then conductor of the Mariinsky Theatre and a family friend) to conduct Glinka's *A Life for the Tsar* in the estate's private theatre, with herself in the role of Vanya. While at Glebovo, Musorgsky helped prepare this production, made Lyadov's acquaintance, and probably had his first glimpse of the many practical details involved in staging an opera. There too his mental crisis may have come upon him again, but it was quickly submerged in the excitement of his first visit to Moscow. Writing to Balakirev from the old capital, he proclaimed a love of 'everything Russian' and excitedly described as 'sacred antiquity' the sights that then were kindling his imagination: the cathedrals and palaces of the Kremlin, St Basil's Cathedral and Red Square. Back in St Petersburg, in October, he produced a charming if conventional *Impromptu passionné* for piano, suggested by two characters in Herzen's novel *Who is to Blame?*, and the beginnings of a cantata, *Marsh Shamilya* ('Shamil's March') for tenor and bass, chorus and orchestra. On 11/23 January 1860 his Scherzo in B♭ was conducted by Anton Rubinstein at a concert in St Petersburg of the newly founded Russian Music Society; the sole review, by Aleksandr Serov, was cordial.

That summer he spent three months at the Shilovskys' estate, and his mental crisis worsened. He wrote: 'For the greater part of the time from May to August, my brain was weak and in a state of violent irritability'. Although it is impossible to know what was wrong, hints and allusions in his correspondence suggest a late adolescent sexual crisis, probably an infatuation or perhaps an affair with his hostess, Mariya Shilovskaya. Whatever happened that summer, when autumn came, he announced his recovery and his intention to put his work in order and begin a new period in his creative life. The crisis was past in January 1861, when he spent several weeks at the Shilovskys' mansion in Moscow. Only three new works appeared in 1860: the romance *Chto vam slova lyubvi?* ('What are words of love to you?') and a duet arrangement of Gordigiani's *Ogni sabato avrete il lume acceso* (both dedicated to Mariya Shilovskaya), plus first and third movements of a Sonata in C major, for piano four hands. Although the sonata's third movement is just a rearrangement of the Scherzo in C♯ minor (1858), its first – plainly modelled on the first movement of Schubert's 'Great' C major Symphony – provides Musorgsky's only completed exercise in sonata form, as well as the first important indication of his exceptional gift for learning by absorbing the works of others. The sonata was followed, early in 1861, with sketches for two movements of a Symphony in D and an 'exercise in instrumentation', *Alla marcia notturna*. These are the last projects that can be dismissed

easily as exercises for Balakirev. Then on 6/18 April 1861 the temple scene from his *Oedipus* was given a concert performance in the Mariinsky Theatre, St Petersburg, under Konstantin Lyadov. (In November 1860 Musorgsky had rejected an offer by the Russian Music Society to perform this work, probably because of the musical politics then starting to divide St Petersburg's musical life.)

Having weathered his adolescent crisis, Musorgsky tried to put his relationship with the autocratic Balakirev on a new footing, gently chiding his mentor for offering too much unwanted advice and treating him too much like a child. According to Nikolay Kompaneysky, he began at this time 'to study the technique of his art on his own, after which the direction of his talent suddenly took an independant turn', an indication that Kompaneysky alone among his contemporaries may have noticed something of his extraordinary ability as an autodidact. In March 1862 he conceived the first version (for piano) of the *Intermezzo in modo classico*, the only important work to appear between December 1860 and August 1863. The years 1861–2 also saw the creation of exercises and transcriptions, including a piano duet arrangement of most of Beethoven's String Quartet op.130. Musorgsky later characterized this period as a time in which he had 'set his brain in order and acquired useful knowledge'.

The emancipation of the serfs on 17 February/1 March 1861 involved him in family problems. Throughout 1861–2 he was obliged to spend much of his time dealing with financial matters and helping his brother Filaret manage the family estate. Like so many other members of the minor nobility, the Musorgskys were gradually impoverished by the Great Reform, and Modest was soon forced to accept a low-grade civil service appointment.

1. Modest Petrovich Musorgsky, 1870

On 1/13 December 1863 he was assigned to the Central Engineering Authority, with the rank of collegiate secretary, and on 20 January/1 February 1864 he was appointed assistant chief of the authority's barracks division. This period of service lasted less than four years; on 1/13 December 1866 he was promoted to the rank of titular counsellor, but on 28 April/10 May 1867 he was declared supernumerary and furloughed from the authority, remaining in service but collecting no wages. Even before entering the service he had settled in St Petersburg (autumn 1863) in conditions that, under the influence of Chernïshevsky's recently published novel *Chto delat'*? ('What is to be done?'), had suddenly become popular among younger Russian intellectuals: he joined a commune with five other young men, living in the same flat and ardently cultivating and exchanging scientistic ideas on art, religion, philosophy and politics. According to Stasov, it was during the years of communal life that Musorgsky came under the influence of Chernïshevsky's views on realism in art, in particular the belief that art cannot exist for its own sake, but must educate and uplift mankind, and reveal 'artistic truth'. In a series of works written over the next few years, Musorgsky vividly attempted to implement these ideas in music, and he professed allegiance to them for the rest of his life, writing in 1880, for example, that 'art is a means of communicating with people, not an aim in itself'. Nevertheless, although these brave words remained a part of his credo, his music throughout the 1870s retreated steadily from the extremes of the realistic style.

Even before entering this 'realistic' phase of his career, Musorgsky had begun to produce works that announce his impending artistic maturity. In August 1863 he composed two songs, settings in Russian translation of Goethe's 'An die Türen will ich schleichen' and Byron's 'Song of Saul before his Last Battle'. Shortly before, on 16/28 May, he and Stasov attended the première of Serov's *Judith*, the first important Russian opera to appear since Dargomïzhsky's *Rusalka* in 1855. Even though his letters carp at Serov's work – the required response in view of Balakirev and Stasov's feud with Serov – Musorgsky plainly was excited by the opera. Not six months later, while still under its spell, he began his own opera *Salammbô*, based on Flaubert's novel of ancient Carthage. He wrote the libretto as he went along, combining his own verses with lines from Heine and several Russian poets, and taking his stage directions straight from Flaubert. He also incorporated earlier works into the opera, stitching the *Oedipus* chorus into Act 2 and the theme of the *Intermezzo in modo classico* into Act 4 scene i. Though he completed about 90 minutes of music (three big scenes and three small numbers, mostly in vocal score), he gradually lost interest in the subject's exoticism and abandoned the project in the summer of 1866, after having worked intermittently on it for three years. He saved these pages, however, and recycled many of them in later works, including the opera *Boris Godunov* and the tone poem *Ivanova noch' na Lïsoy gore* ('St John's Night on Bald Mountain'). Two short works that frame *Salammbô* exhibit, in Cui's phrase, the same 'bold oriental colouring . . . entirely similar to the Assyrian music of Mr Serov': the Byron setting from 1863, best known under the title *Tsar' Saul* ('King Saul') given to it in revision, probably in 1870–71, and the chorus *Porazheniye Sennakheriba* ('The Destruction of Sennacherib',

1866–7). At this time of his life, still living in the commune, Musorgsky also suffered his first serious bout of alcoholism, probably induced by grief at his mother's death in March 1865. He recovered after his brother and sister-in-law took him into their household.

3. FIRST MATURITY. By the beginning of 1866 Musorgsky had finished 18 songs in a generally lyric vein, which he then gathered together in the manuscript *Yunïye godï* ('Years of Youth'). With one inconsequential exception, this manuscript contains all the songs he had written by the time of its compilation: conventional romances, a single 'experiment in recitative', and a few songs showing the influence of Balakirev's folksong settings (which had been known in the circle for several years and were soon to be published). In this latter group are some of his best-known early songs: *Kalistratushka* ('Little Kalistrat'), *Kolïbel'naya pesnya* ('Cradle Song') and the true second version of *Where art thou, little star?*. In the autumn of 1866, after a summer in the country, he returned to St Petersburg with the first of his so-called realistic songs – *Gopak* ('Hopak'), *Svetik Savishna* ('Darling Savishna'), *Akh tï, p'yanaya teterya!* ('You drunken sot!') and *Seminarist* ('The Seminarist'). In these songs he mined for the first time a vein that his contemporaries were to regard as particularly rich in his creative work: musical naturalism and ironic, realistic comedy in song. In 1867 two of his new songs, *Darling Savishna* and *Hopak*, plus the unexceptional *Tell me why* of nine years earlier, were published by Johansen, the publisher of his mentor's folksong anthology. These were the first of his works to appear in print since the *Porte-enseigne Polka*.

Freed from office work and living on his brother's farm (Minkino, in the Luga district), he occupied himself during the summer of 1867 with orchestral composition and the piano transcription of still more movements of Beethoven's quartets (from opp.59 no.2, 131 and 135). The orchestral works were *St John's Night on Bald Mountain*, an orchestration of the *Intermezzo in modo classico* (now with an added trio), and a projected symphonic poem *Podibrad Cheshskïy* ('Poděbrad of Bohemia'), inspired by Balakirev's recent sojourn in Prague and the Pan-Slav Congress held in St Petersburg earlier in the summer. It was in the aftermath of a concert for these Serbian, Croatian and Bohemian guests that Stasov coined the nickname 'Moguchaya Kuchka' ('Mighty Handful'), which in time would become synonymous with the Balakirev circle, or more narrowly, with its five leading members: Balakirev, Cui, Musorgsky, Rimsky-Korsakov and Borodin.

Although Musorgsky may have toyed with the idea for *St John's Night on Bald Mountain* as early as 1858, he probably wrote nothing down until the difficult summer of 1860, when he told Balakirev that he then had in hand 'some material' for incidental music to a play entitled *Ved'ma* ('The witch') by Baron Georgy Mengden, one of his army comrades. In April 1866 he returned to the work, now projected as an orchestral piece and informally dubbed 'The Witches' in his correspondence: he composed the music over the next 12 months, writing out the orchestral score during 11 days of intense work, at Minkino, in June 1867. He took great pride in it, describing it excitedly as 'Russian and original, . . . hot and chaotic', and almost certainly he expected Balakirev to perform it, since the latter had been invited to conduct four concerts of the Russian Music Society in the 1867–8 season. Instead Balakirev found fault and angered Musorgsky by demanding changes. The composer firmly defended his work, choosing to forego performance rather than alter what he regarded as his first large-scale independent composition. He also abandoned the projected tone poem *Poděbrad of Bohemia*, of which nothing survives besides themes quoted in a letter to Rimsky-Korsakov. With performance of his orchestral works blocked, Musorgsky returned to vocal music, completing in 1867–8 such well-known naturalistic and mimetic songs as *Po gribï* ('Gathering Mushrooms'), *Ozornik* ('The Ragamuffin'), *Sirotka* ('The Orphan') and *Svetskaya skazochka* ('A Society Tale'), the last perhaps better known under Stasov's title *Kozyol* ('The Goat'). Other songs – *Klassik* ('The Classicist', 1867), *Rayok* ('The Gallery', 1870) – are little more than salvos in the musical polemics of the age. From this time on, Musorgsky no longer submitted his work for Balakirev's approval.

Back in St Petersburg in the autumn of 1867, he and the other members of the group drew closer to Dargomïzhsky, then working on his last opera, *Kamennïy gost'* ('The Stone Guest'), a nearly verbatim setting of Pushkin's eponymous 'little tragedy'. *The Stone Guest* came to be celebrated in Musorgsky's circle as exemplary of the group's views – which had been developed primarily by Cui in his newspaper criticism – according to which an opera must be a careful and sensitive setting, in recitative style, of a good (and minimally altered) text, with each line receiving its own 'characteristic' setting and with little reliance on closed forms or traditional musical logic. The result, *opéra dialogué*, emphasized freely evolving melodic recitative at the expense of more lyrical and symmetric forms.

Taking his cue from Dargomïzhsky and Cui – but more profoundly stimulated by the mimetic theory of word-tone relations that he had found in Georg Gervinus's book *Händel und Shakespeare* – Musorgsky began a nearly verbatim setting of Gogol's prose comedy *Zhenit'ba* ('The Marriage') on 11/23 June 1868. By 8/20 July he had completed in vocal score a single act, corresponding to Gogol's Act 1 scenes i–xi (printed in some editions simply as Act 1 scene i). This much done, he reflected on his 'experiment in dramatic music in prose' in a group of letters to friends. At times closely paraphrasing Gervinus's formulations, he expressed in these letters ideas of text setting that guided much of his subsequent work, even after he began to attenuate the most extreme elements of his style:

> Here's what I would like. That my characters speak on stage as living people speak, but so that the character and force of their intonation, supported by the orchestra which is the musical background for their speech, hit the target head-on; that is, my music must be an artistic reproduction of human speech in all its most subtle windings. (Musorgsky to Lyudmila Shestakova, 30 July/11 August 1868; A. Rimsky-Korsakov, 1932)

The single act of *The Marriage* was privately performed at Cui's on 24 September/6 October 1868, with Musorgsky himself, a fine baritone, taking the role of the hesitant bridegroom Podkolyosin. His colleagues were cool, admiring only the piece's humour and a few 'interesting declamatory moments'. Having forged the tools with which he hoped to capture in music the authentic intonations of Russian speech, he abandoned *The Marriage* in the autumn of 1868, calling it merely a preparation. He then turned, at the suggestion of his

friend Vladimir Nikolsky, to Pushkin's drama *Boris Godunov*.

4. The years of 'Boris'. *Boris* would have been an impractical subject just three years earlier. Though completed in 1825 and first published in 1831, Pushkin's play was not approved for performance by the tsarist censor until 1866. In October 1868, when Musorgsky began his libretto, he had reason to hope that he could overcome the censorship obstacles still blocking an opera on this subject, and he began work eagerly. Soon after finishing the first three scenes in vocal score, on 21 December 1868/2 January 1869, he was appointed assistant chief in the third section of the Forestry Department of the Ministry of State Property, where he was destined to work until 30 September/12 October 1878; his starting salary in this post was 450 rubles annually. He moved in with old friends, Aleksandr Opochinin and his sister Nadezhda, and in these settled conditions work on the opera flourished. The first version of *Boris*, in seven scenes, was completed in vocal score by 18/30 July 1869 and in full score on 15/27 December. Still committed to *opéra dialogué*, Musorgsky took his text directly from Pushkin with few changes. But although his setting is predominantly in melodic recitative, reflecting the accentuation pattern of spoken Russian, it avoids the most extreme characteristics of *The Marriage* and thus marks a first slight step back from his most severely 'realistic' style. Two weeks before the completion of the full score, he was promoted to the rank of collegiate assessor.

In the summer of 1870 Musorgsky approached Stepan Gedeonov, director of the Imperial Theatres, about staging *Boris* and considered writing an opera, *Bobïl'* ('The Landless Peasant'), on a scenario adapted by Stasov from Friedrich Spielhagen's novella *Hans und Grete*. Before abandoning that idea, he composed the music for a divination scene, which later reappeared in *Khovanshchina* (Act 2). In the autumn he wrote both words and music for four studies of childhood; these, with one earlier piece in the same vein, were published by Bessel (his principal publisher) as *Detskaya* ('The Nursery') in June 1872. Two more songs were composed shortly thereafter and first published separately, in Rimsky-Korsakov's edition, under the title *Na dacha* ('At the Dacha', 1882). Later editions of *The Nursery* collected all seven, the most masterful as well as the last of Musorgsky's naturalistic songs.

The long-delayed production of Pushkin's play *Boris Godunov* finally took place on 17/29 September 1870, to mixed if generally unenthusiastic reviews. Not quite five months later, on 10/22 February 1871, the Mariinsky Theatre's music committee rejected the opera by a vote of six to one, on the grounds that it lacked an extended female role. The composer began a revision at once, ultimately carrying it much further than the stated objections of the music committee required. Retaining five of the scenes already composed – but with important cuts and insertions that clarify the opera's tonal structure and the significance of its reminiscence motives – he added the two Polish scenes and the role of Maryna Mniszech to supply the missing prima donna. He composed the palace scene anew, adding among much else a recitative and aria for Boris based partly on a lyric theme from *Salammbô*. He replaced the scene in front of St Basil's Cathedral with the anarchic Kromy Forest scene, putting it after Boris's death. In all the new scenes he was much less faithful to the letter of Pushkin's text; indeed, the Kromy Forest scene has no parallel in Pushkin. The net effect of so extensive a remodelling was to elevate the work's tone, mitigating the comedy that his contemporaries heard in the recitative style and introducing an elemental theatricality missing in the initial *opéra dialogué*. Composition was completed on 14/26 December 1871, the full orchestral score on 23 June/5 July 1872; during the latter part of the work (from late summer 1871 onwards) Musorgsky shared rooms with Rimsky-Korsakov. Also, early in 1872 Gedeonov invited the two fellow lodgers to collaborate with Borodin, Cui and the staff ballet composer Ludwig Minkus in a projected fantastic opera-ballet, *Mlada*. For this Musorgsky drew once more on his old *Oedipus* music and also on *St John's Night on Bald Mountain*, revising the music extensively and adding choral parts in a 'demon language' reminiscent of Berlioz's *La damnation de Faust*. Although Gedeonov was forced to abandon *Mlada* when it became clear it would be too expensive to produce, Musorgsky was able to recycle his contribution in other works. From this period, the first half of 1872, the Balakirev circle began to disintegrate.

On 5/17 February 1872 the coronation scene of *Boris* was given its première at a concert of the Russian Music Society under Eduard Nápravník, who had been principal conductor of the Mariinsky Theatre since 1869. Then on 3/15 April Balakirev conducted the polonaise at a concert of the Free School of Music. Meanwhile, Musorgsky had submitted his revision to the censors. Their report of 7/19 March recommended performance, pointing out that the only obstacle lay in the edict of Nicholas I, dating from 1837, which forbade the operatic representation of a tsar. Over the next four weeks, this report drifted up through the imperial bureaucracy, receiving approval along the way, and finally reaching the tsar, who alone could set aside his predecessor's ruling. On 5/17 April Aleksandr II authorized the production of *Boris Godunov*. During the next month the Mariinsky's music committee re-examined the opera, which now contained a female role and had the approval of both the censor and the tsar himself. On 6/18 May the committee almost certainly accepted *Boris* for performance, but because its members had already committed themselves to two other major productions in the next season, they did not give Musorgsky a definite date.

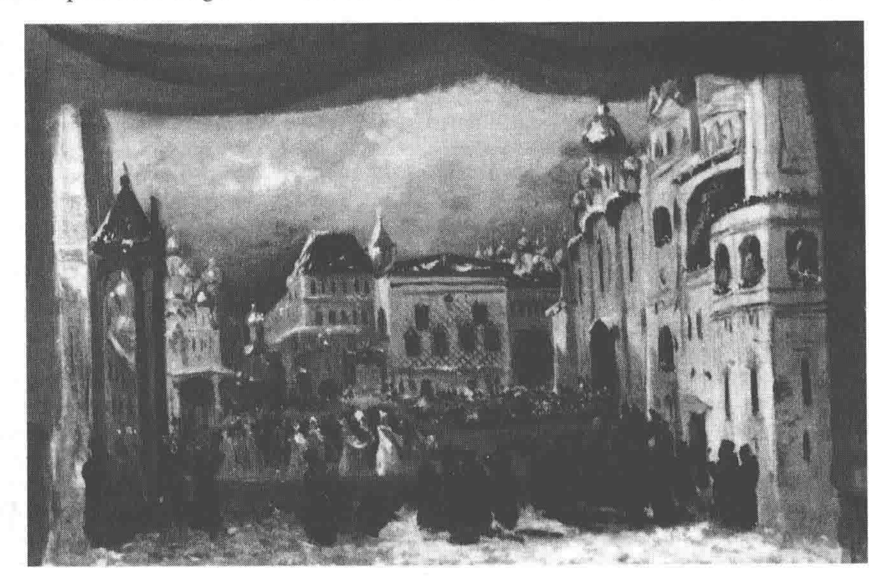
On 5/17 February 1873, once those prior commitments had been discharged, three scenes from *Boris* were performed with great success at the benefit for Gennady Kondrat'yev, the Mariinsky's chief stage director. Not quite two months later the publisher Bessel announced the opening of a subscription list for the vocal score. This first edition, issued in January 1874, in no way constitutes a 'third version' of the opera; it is, rather, Musorgsky's final refinement of the revision, a few additional small cuts having been taken after the libretto's publication in 1873. Finally, on 27 January/8 February 1874 *Boris Godunov* was given its première at the Mariinsky, at the benefit for the soprano Yuliya Platonova. Several cuts were taken to reduce the work's length by about an hour; none of them, including the omission of the entire scene in Pimen's cell, was imposed by the censor. Although the Orthodox Church strictly forbade the representation of clergymen on stage, Pimen was able to appear in the death scene as a 'hermit', dissociated from the ordained clergy.

Such a stratagem had brought the cell scene into the play's production in 1870 and could have brought it into the opera's too. Nápravník, not the censor, insisted on this and the other cuts on the grounds that the omitted sections would be ineffective on the stage. In all, four performances of *Boris* was given before the arrival of Lent ended the theatre season; each was sold out. 22 more performances were given during the period up to October 1882, often to full (or nearly full) houses, never to less than a half-full house.

5. ON TO 'KHOVANSHCHINA' AND 'SOROCHINTSÏ FAIR'. Even as he was finishing the full score of *Boris*, in June 1872, Musorgsky was starting to plan *Khovanshchina* ('The Khovansky Affair'), a grand historical opera dealing with the political turmoil attendant on Peter the Great's full accession to the throne. With Stasov's help, and plainly stimulated by the celebrations marking the bicentenary of Peter's birth, he began by compiling a 'notebook for *Khovanshchina*': 20 pages of jottings and quotations taken from eyewitness accounts, 17th-century documents and later histories. But instead of finishing the libretto at the outset, he built it up as he went along, at times incorporating documents from the 'notebook' almost unchanged. He finally prepared a clean copy of the text in 1879 or 1880, apparently to clarify his final conception of the opera and guide himself towards completion of the work, but even this libretto is incomplete, lacking the second half of Act 5. He could not introduce Peter or his sister, the regent Sophia, as characters because of a censorship rule forbidding representation on stage of members of the ruling house. Thus Sophia was depicted through her minister Golitsïn, while Peter's offstage presence was indicated with a regimental march of the Preobrazhensky Guards (the composer's old unit) and his triumph was shown through the elimination, one by one, of his opponents.

Although Musorgsky excitedly described several scenes of *Khovanshchina* in letters during the summer of 1873, only two brief episodes from Act 3 were put on paper that year. In June he formed a close friendship with Count Arseny Golenishchev-Kutuzov, a poet and distant relative, with whom he later shared a furnished apartment. He also seems to have fallen ill, or perhaps to have started drinking again that summer. Stasov's brother Dmitry, hinting at a relapse, wrote to his wife that Musorgsky had experienced 'fits of madness' such as he had had a few years earlier, and commented nervously on a striking change in the composer's appearance, 'somewhat sunken, grown thinner'. Stasov, writing from Europe, tried to persuade him to visit Liszt in Weimar, but he refused, citing loyalty to his supervisor in the civil service (who had fallen ill) and the need to work on *Khovanshchina*. On 1/13 December 1873 he won promotion to the rank of court counsellor.

The production and popular success of *Boris Godunov*, early in 1874, marked the peak of Musorgsky's career. Still, most critics condemned the work or, at best, misconstrued what was in it to praise. Even Cui blended praise for certain details with unexpectedly sharp criticism, declaring the opera to be an 'immature' work resulting from an 'unfastidious, self-satisfied, hasty process of composition'. Stung by the critics' vehemence and Cui's betrayal, Musorgsky expressed his loneliness and isolation in the darkly pessimistic song cycle *Bez solntsa*



2. Death of Boris (Act 4 scene i) in the first production of 'Boris Godunov', Mariinsky Theatre, St Petersburg, 1874: engraving

3. Page from the autograph MS of the vocal score of Musorgsky's 'Boris Godunov', 2nd version, composed 1871–2, revised 1873, showing the original ending of Act 1 scene ii (RUS-Mcm)

('Sunless'), completed in August 1874, to poems by Golenishchev-Kutuzov. In June he also wrote the piano suite *Kartinki s vïstavki* ('Pictures from an Exhibition'), suggested by a memorial exhibition of the architectural drawings, stage designs and watercolours of his friend Viktor Hartmann, who had died the year before. Little was done to *Khovanshchina* in 1874, although the prelude, subtitled 'Dawn on the Moscow River', was written down in September of that year.

In July 1874 Musorgsky halted his work on *Khovanshchina* in order to consider a comic opera after Gogol′'s short story *Sorochinskaya yarmarka* ('Sorochintsï Fair'). He had enjoyed the support of the Ukrainian-born bass Osip Petrov, the most venerable singer in the Russian opera troupe, since the latter's performance as Varlaam in the three-scene *Boris* of February 1873, and chose *Sorochintsï Fair* in order to create a Ukrainian role for him. But after pondering the subject for a season, Musorgsky temporarily abandoned it early in 1875, uncertain about his ability to handle Ukrainian speech patterns in recitative. Returning to *Khovanshchina*, he finished the first act in vocal score on 30 July/11 August

4. Coronation scene (Prologue scene ii) from Musorgsky's 'Boris Godunov' (revised version), Mariinsky Theatre, St Petersburg, 27 January/8 February 1874: set design by Mikhail Il′yich Bocharov

1875. Also during the first half of the year he wrote the first three numbers of a new song cycle to poems of Golenishchev-Kutuzov, *Pesni i plyaski smerti* ('Songs and Dances of Death'). When the poet left for the country later that summer, and then decided to marry a few months after that, Musorgsky was given a home by a retired naval officer, Pavel Naumov, where he lived for the next several years. He had begun to drift away from his earlier musical friends, Cui and Rimsky-Korsakov, because of Cui's hostile review of *Boris* and Rimsky's self-imposed immersion in technical studies, which Musorgsky viewed suspiciously as a retreat from the ideals they once had shared. Though remaining close to Stasov and Borodin, he formed new friendships, in the wake of *Boris*, with the singers, medical men, actors, writers and artists who frequented the Maly Yaroslavets restaurant in St Petersburg, an establishment characterized by Nikolay Tcherepnin as 'the favourite place of the leading figures in Petersburg's world of the arts'. The effects of alcoholism had yet to show themselves, but he was increasingly unable to resist drinking.

He made steady progress with *Khovanshchina* between August 1875 and August 1876, during which time he completed, in vocal score, almost all of Act 2, the first half of Act 3, and the 'Dance of the Persian Maidens' from Act 4 scene i. During the spring of 1876 he and Lyudmila Shestakova, Glinka's sister, were instrumental in organizing the jubilee marking Petrov's 50th anniversary as a singer, and Musorgsky's activity on behalf of Petrov, whom he affectionately called 'Grandpa', led him back to work on *Sorochintsï Fair*. By the end of June he had worked out a final revision of *Night on Bald Mountain* – written down only in May 1880 – that was very like the version adapted for *Mlada* save for a new ending. He now planned to insert this episode into *Sorochintsï Fair* as a dream sequence for one of the characters.

Apparently he recognized the retreat from realism that his later work represented. In a letter to Stasov, dated 25 December 1876/6 January 1877, he contrasted the 'folk scenes' which he had done before *Boris* with his current work, described as 'the embodiment of recitative in melody . . . I would like to call it intelligently justified melody'. The new manner may be seen in five songs to texts of Alexey Tolstoy, composed between 4/16 March and 21 March/2 April 1877, but also in pages of *Sorochintsï Fair*, *Khovanshchina*, the two later song cycles and even the revised *Boris*. Still committed to finding a musical equivalent for the Russian language, he nevertheless turned with increasing conviction throughout the 1870s towards greater lyricism and formal symmetry, occasionally writing vocal melodies at variance with the spoken language's accentuation and inflection, and using traditional sectional forms.

In 1877 he set *Khovanshchina* aside in favour of *Sorochintsï Fair*, for which he finally drafted a scenario in May. Later that summer he composed a substantial new scene for Act 2 and in the autumn worked on the Act 1 scene at the fair, adapted from an earlier market scene in *Mlada*. In June that same year he completed the fourth of the *Songs and Dances of Death*; further songs projected for this cycle and mentioned in the poet's papers were never written down. A short choral piece, *Iisus Navin* ('Joshua'), based on material recycled from the durable *Salammbô*, was completed in July. Work on *Sorochintsï Fair* came to a halt after Petrov's death on 28 February/12 March 1878 – an emotional blow which devastated Musorgsky and from which he may never have fully recovered. On 23 May/4 June 1878 he was promoted in rank to collegiate counsellor; although he rose no higher in his department than senior chief, a post he had attained in March 1875, his annual salary had now risen to 1200 rubles with occasional bonuses.

6. Final years. The final version of Marfa's divination (*Khovanshchina*, Act 2) at last was put on paper in July 1878; little else was done with the opera for the rest of the year. Although Musorgsky apparently kept his alcoholism in check throughout the first half of 1878, in August the craving for drink overtook him again. Just as he was about to be fired from the Forestry Department, Stasov and Balakirev secured a transfer for him to a temporary position in the Office of Government Control. He took up this post on 1/13 October 1878; his new boss, the state comptroller and folksong enthusiast Tyorty Filippov, proved extraordinarily lenient.

In 1879 Filippov permitted him to leave for a three-month concert tour of south-central Russia, Ukraine and the Crimea. An old acquaintance, the contralto Darya Leonova, had invited him to make this provincial tour as her accompanist, and between 11 August and 29 October they gave concerts in 12 cities. Besides accompanying Leonova, who included some of his songs in her programmes, he played as soloist several short piano pieces of his own, as well as arrangements of choral works and scenes from his operas. While on tour he composed one of his best-known songs, *Pesnya Mefistofelya v pogrebke Auerbakha* ('Mephistopheles's Song in Auerbach's Cellar'), plus two brief piano pieces, both impressions of the Crimea, which were published in the music magazine *Nuvellist* in 1880. The trip also gave him the impetus he needed to resume work on *Sorochintsï Fair*.

On 1/13 January 1880 he was dismissed from government service, but Filippov and other friends guaranteed him a monthly stipend of 100 rubles on condition he finish *Khovanshchina*. Shortly afterwards another group of well-wishers, led by his friend from Cadet School days, the banker Fyodor Vanlyarsky, offered him 80 rubles per month on condition he finish *Sorochintsï Fair* within a year, and that he demonstrate his progress by issuing individual numbers with the publisher Bernard. Thus pressed to finish both operas, he finished neither. The last manuscripts of *Khovanshchina* are dated August 1880, by which time he had completed, in vocal score, everything but the end of Act 2 and the Old Believers' chorus with which the opera was to end (though he had transcribed its melody in 1874). He had orchestrated only two short sections of the opera. *Sorochintsï Fair*, begun later and pursued under worse conditions, was left in an even more fragmentary state.

During this last year of his life Musorgsky made further appearances as Leonova's accompanist. She also gave him a home at her summer dacha in Oranienbaum and employed him as accompanist, theory teacher and assistant in the singing school she had established in St Petersburg; he composed several folksong arrangements and vocalises for the pupils there. Besides working at his two operas he thought of writing an orchestral suite with harps and piano and, in January or February 1880, added a trio *alla turca* to a processional march on a Russian folksong originally written for *Mlada*. This 'new' march,

Vzyatiye Karsa ('The Capture of Kars'), was commissioned for an event celebrating the reign of Aleksandr II, but when the organizers dropped from sight, their 'grand scenic presentation' was never mounted. Later in the year, on 18/30 October, Nápravník performed the piece at a concert of the Russian Music Society in St Petersburg.

On 9/21 February 1881 Musorgsky made his last public appearances, accompanying at concerts in the morning and evening, the latter a benefit for needy students of the Art Academy. Two days later he went to Leonova (according to her own account) 'in a state of great nervous excitement', saying 'that there was nothing left for him but to go and beg in the streets'. That evening he suffered a seizure. He spent the night at Leonova's house, sleeping in a sitting position, and the next day (12/24 February) had three more seizures. On 14/26 February he was taken by his friends to the Nikolayevsky Military Hospital. There was a temporary improvement in early March, during which Repin painted his famous portrait, but on 16/28 March he died, a victim of chronic alcoholism. He was buried in the Aleksandr Nevsky Cemetery two days later.

7. Posthumous completion of works. After Musorgsky's death other musicians began to edit his music for performance, producing ultimately a confusing number of completions, redactions and orchestrations of various works. Beginning with Rimsky-Korsakov, his first editors often distorted his work by altering it, appealing for justification to a belief that had originated in his own circle and was commonly accepted in late 19th-century Russia, namely, that Musorgsky was brilliant but inept, an amateur who disdained the technical studies that would have enabled him to realize his ideas. Once this belief was discredited, later editors generally avoided changing what Musorgsky wrote and confined their efforts largely to orchestration.

The editing of the posthumous publications was mainly – at first solely – carried out by Rimsky-Korsakov, who selflessly undertook the task and gave his editions gratis to the publisher Bessel. Rimsky found life, talent and originality in his friend's music side-by-side with 'absurd, disconnected harmony, ugly part-writing, sometimes strikingly illogical modulation' – in short, 'utter technical impotence'. Convinced of both the music's value and the foolishness of 'publication without a trained hand to set it in order', Rimsky prepared what he regarded as practical performance editions, 'for making [Musorgsky's] colossal talent known, not for studying his personality and his artistic sins'. Every composition that passed through Rimsky-Korsakov's hands was to a greater or lesser degree 'corrected' by him.

He began with what all Musorgsky's friends recognized as the most important and most necessary task: the completion of *Khovanshchina*. He trimmed several episodes, filled the gaps in Acts 2 and 5 with new music, smoothed out many details of melody and harmony, and orchestrated the whole. Finished and published in 1883, his version was decisively rejected by the Imperial Theatres that same year and first produced by an amateur group in St Petersburg on 9/21 February 1886 (abridged, and with changes imposed by the censorship). For Diaghilev's 1913 Paris production Ravel and Stravinsky orchestrated and restored a few of Rimsky's cuts, and Stravinsky composed a new concluding chorus for the final act, based on the Old Believers' melody that Musorgsky had intended to use. Diaghilev also took several drastic cuts of his own to reduce the work's overall length, and remodelled it to appeal to his audience's interest, at the time, in 'authentic' Musorgsky, emphasizing the chorus and inserting various details calculated to appeal to the composer's modernist admirers. Although Stravinsky's new chorus was published by Bessel in 1913, the Diaghilev version did not replace Rimsky's score as the standard text.

Besides finishing *Khovanshchina* Rimsky-Korsakov also turned his attention to compositions left in satisfactory state by Musorgsky and produced editions which for a number of years supplanted the authentic texts. The piano suite *Pictures from an Exhibition* appeared in 1886 with relatively few changes. In the case of *Night on Bald Mountain*, Rimsky prepared a new orchestral piece based most closely on the version with chorus that Musorgsky had prepared for *Sorochintsï Fair*. The *Songs and Dances of Death* appeared in 1882 in Rimsky's edition; subsequently he and Glazunov orchestrated the cycle. When in 1898 Belyayev reissued the seven songs originally published by Johansen 30 years earlier, they were anonymously edited by Rimsky-Korsakov, who also prepared for Bessel in 1908 new editions of the songs originally published by that firm, introducing the customary changes, most blatantly in the thorough reworking (dubbed a 'free paraphrase') of the first number of *The Nursery*. But all these publications are of minor importance when compared with Rimsky's versions of *Boris Godunov*.

Rimsky began working on *Boris* early in 1889, when he rescored the polonaise for concert performance. For a time he considered writing an article about the opera, its merits and faults, but he decided that a revision of the work would be both more instructive and more useful, and in 1896 he completed an entirely new version of the opera, which Bessel then published in both vocal and full score. Though based on Musorgsky's vocal score of 1874, Rimsky's redaction introduced drastic cuts, some new music of his own, wholesale rewriting in vocal line, harmony, rhythm and dynamics, a complete reorchestration, and the transposition of the order of the last two scenes. This version was produced privately in the Great Hall of the St Petersburg Conservatory on 28 November/10 December 1896, then by the Mamontov Opera Company with Chaliapin (Moscow, 7/19 December 1898; St Petersburg, 7/19 March 1899), and finally by the Imperial Theatres, again with Chaliapin (Moscow, 13/26 April 1901; St Petersburg, 9/22 November 1904). Rimsky returned to *Boris* in 1906 in order to restore most of the cuts he had made ten years earlier; shortly thereafter, for Diaghilev's 1908 Paris production, the first in western Europe, he composed two new passages for the coronation scene. This second Rimsky score was for many years the primary text by which *Boris* was known.

Although Rimsky-Korsakov left *Salammbô* untouched, early in 1906 he decided to publish the single act of *The Marriage*; the vocal score, typically toned-down, was issued by Bessel in 1908. He also began an orchestration, but completed only a few pages before his death; the single act subsequently was orchestrated by Aleksandr Gauk (1917) and later by several others. Rimsky-Korsakov made no attempt to edit *Sorochintsï Fair* (apart from the *Bald Mountain* music), but on his suggestion Golenischev-Kutuzov was asked to complete the libretto and Anatoly Lyadov the music. In 1886 Bessel published

three numbers in vocal score; three more numbers appeared in 1904, all orchestrated by Lyadov and including a rewritten version of the prelude. This prelude and parts of Acts 1 and 2, edited by Vyacheslav Karatïgin, were performed as illustrations at Karatïgin's lecture on *Sorochintsï Fair*, given privately in St Petersburg (16/29 March 1911) with piano accompaniment and without chorus; these sections were staged, with the addition of the finale of Act 2, in the Comedia Theatre, St Petersburg, on 17/30 December 1911. Then on 8/21 October 1913, a pastiche of all the available numbers in the Lyadov and Karatïgin editions, plus Rimsky-Korsakov's version of *Night on Bald Mountain*, was produced at the Moscow Free Theatre, the lacunae in the action being filled with spoken dialogue drawn from Gogol''s short story; the numbers edited by Karatïgin were orchestrated by Yury Sakhnovsky, who also composed a few additional passages. In 1915 Cui prepared a complete musical version, using all the available numbers and in some cases Lyadov's orchestration, and composing additional music as required, partly on Musorgsky's themes; the vocal score of Cui's version was published by Bessel in 1916, and on 13/26 October 1917, shortly before the Bolshevik Revolution, was produced at the Theatre of Musical Drama, Petrograd. Another complete version was later prepared by Nikolay Tcherepnin in Paris, incorporating music from the editions of Lyadov, Karatïgin and Cui, and filling the gaps with music borrowed from *Salammbô*, songs and other works of Musorgsky. This version was published by Bessel, now in Paris, and they also issued the manuscript collection *Years of Youth*, which had come into the possession of Charles Malherbe, archivist of the Paris Opéra, in 1909. Although Malherbe had permitted publication of four previously unknown songs when he acquired the manuscript, the Bessel edition added nearly all the others (albeit in defective texts); only the duet after Gordigiani was omitted.

About the time that Rimsky published his first edition of *Boris* (1896), Musorgsky's reputation began to grow in France, where the avant garde saw him as an innovator who had 'trampled on the rules and crushed the life out of them by the sheer weight of his thought' (d'Alheim, 1896). When Diaghilev brought *Boris* to Paris, modernist critics attacked Rimsky's editorial tampering and began to wage a vigorous campaign for the publication and performance of Musorgsky's music as he had written it; others defended Rimsky's editions and his selfless labour on behalf of his friend. At last the Russian State Music Publishing House embarked on a collected edition of Musorgsky's music in accordance with his manuscripts, embodying all textual variants and provided with critical apparatus. This edition, of which Pavel Lamm was editor-in-chief, began with the publication of *Boris Godunov* in 1928, but in a problematic format. In Lamm's score, a conflation of both versions and all sources known at the time, neither the initial *opéra dialogué* nor the revision unfolds as Musorgsky left it; instead, the two are combined to the greatest extent possible. Episodes unique to the initial version are inserted into the alien context of the revision, and the result is an elephantine *Boris* in ten scenes, each at maximum length, from which one may extract Musorgsky's separate conceptions only by careful attention to the vocal score's commentary and footnotes. Working from Lamm's score, Shostakovich prepared a fresh orchestration of *Boris* in 1939–40, and in 1953 Karol Rathaus touched up Musorgsky/Lamm for a new production at the Metropolitan Opera. In 1975 David Lloyd-Jones published a new critical edition of *Boris*, based on Musorgsky's revised holograph full score but still echoing Lamm's blend of the two versions in the five scenes common to both.

Lamm and Boris Asaf'yev, in 1931, published a vocal score of *Khovanshchina*, which assembled and presented Musorgsky's manuscripts as he had left them, and Asaf'yev prepared an orchestration (which remains unpublished) faithfully embodying all the material left by Musorgsky. *Sorochintsï Fair* was completed in the same spirit by Vissarion Shebalin, whose score, published in Lamm's edition in 1933–4, has become the standard performing version. Though interrupted in 1939 before its completion, Lamm's edition presented most of Musorgsky's music in authentic texts; the last instalment to appear was a volume of folksong arrangements, rough drafts and miscellaneous autograph materials. In 1951–2 Shostakovich orchestrated from Lamm's vocal score a few scenes of *Khovanshchina* that Rimsky-Korsakov had omitted, and those were inserted into the Kirov production of Rimsky's edition. Then in 1958 Shostakovich prepared a new orchestration of the rest of the opera from Lamm. This version is now the basic text of most productions, with Stravinsky's final chorus offering an alternative ending more in tune with Musorgsky's own dramatic instincts. Other orchestrations deriving from Lamm include Zoltán Peskó's *Salammbô* (1980), Gennady Rozhdestvensky's *Marriage* (1982), Shostakovich's *Song and Dances of Death* (1962) and Yevgeny Svetlanov's *Sunless* (1968). At least a dozen orchestrations of *Pictures from an Exhibition* have been made; the earliest is by Mikhail Tushmalov (?1891), the best known by Ravel (1922). A new *Polnoye akademicheskoye sobraniye sochineniy M.P. Musorgskogo v 34-kh tomakh* ('The Complete Academic Collection of the Works of M.P. Musorgsky in 34 Volumes'), initially projected to start in 1989, to mark the sesquicentennial of Musorgsky's birth, finally began to appear in 1996.

8. Music. Musorgsky's career falls into four periods: childhood and adolescence (1839–58), apprenticeship (1858–66), maturity (1866–76) and last years (1877–81). The traditional view, postulating a marked declined after the production of *Boris* in January 1874, is contradicted by the composition after that date of *Pictures from an Exhibition*, most of *Khovanshchina*, the final version of *Night on Bald Mountain* (for *Sorochintsï Fair*), and the song cycles *Sunless* and *Songs and Dances of Death*. Poverty and alcoholism surely contributed to Musorgsky's failure to put on paper all that he had composed, but despite his lonely and disordered bachelor's life, despite the hours he was forced to waste in the Forestry Department to eke out a living, he continued to grow as an artist up until his death. Indeed, the words that he once applied to Verdi describe his own career equally well: 'This one pushes ahead on a grand scale, this innovator doesn't feel shy . . . outdistancing everything, outdistancing everyone, even himself'.

His earliest compositions were conventional romances, songs and salon piano pieces, the work of a talented gentleman enthusiast. He acquired basic technique in his lessons with Balakirev by analysing and imitating European and Russian masterworks. The Schubert source for the first movement of the Sonata in C (1860), for example,

is shown in how triplets pervade the first theme and the ensuing transition, how the second theme appears in E minor and the exposition closes in G, and how in recapitulation the second theme returns in A minor. But side by side with these gestures taken from Schubert, the sonata contains a harmonic mannerism that is typically Musorgskian and that reappears in many later works: juxtaposed tritones having coloristic or structural significance. (The climax of the development is reached on F♯, whereupon retransition is effected immediately and abruptly through a striking chromatic progression, which is used again, more deftly, 14 years later in the third song of *Sunless*, F♯ simultaneously sliding down to F♮ and up to G♮, the F♯ triad progressing to a dominant 7th and so to C.) Despite its shortwindedness and immaturity, the sonata thus reveals an important pattern that helps define Musorgsky's craft: study and assimilation of the music of a peer (whether Russian or western European), then redeployment of the lessons learnt – technical, declamatory, dramaturgical – in combination with personal elements. In the words of Carl Dahlhaus (1985), 'Musorgsky was a self-taught composer, but he was also undoubtedly an intellectual one'.

Musorgsky's growth during his apprenticeship was shaped by ideas of verisimilitude in art, by his experience of opera (both native and foreign), and by his absorption of the folk style through Balakirev's collection of Russian folksongs. His interest in the realistic portrayal of incidents from life first bore fruit in the almost scientifically precise character studies of the late 1860s; such songs as *Darling Savishna*, *The Seminarist*, *The Orphan* and *A Society Tale* reveal a strong talent for dispassionate observation and keen characterization of specific human types. Musorgsky never fully lost this early interest in versimilitude, but he became 'more flexible and subtle about the areas where it might apply' (Emerson, 1988) and more amenable to established musical techniques and procedures. His subsequent penchant for a quiet curtain is foretold in the enthusiasm he had for the end of Act 1 of Serov's *Judith* (1863): 'pianissimo . . . a kind of solemn hush which is left unfinished . . . very beautiful'. Characteristics of the *protyazhnaya*, or melismatic folksong, appear in the true second version of *Where art thou, little star?*, beginning with the melismas that decorate the voice part at the beginning and elsewhere. The melodic phrases of a *protyazhnaya* in minor mode normally cadence either on the tonic or subtonic, a characteristic known as mutability (*peremennost'*). Since the subtonic of the minor (e.g. E♮ in F♯ minor) is also the dominant of the relative major, harmonic settings of such melodies move easily between the minor and relative major, a detail that gives a characteristic coloration to much Russian music 'in folk style', whether Musorgsky's or anyone else's. *Where art thou, little star?*, *Duyut vetrï, vetrï buynïye* ('The winds blow, the wild winds'), *Little Kalistrat*, *Cradle Song* and the 'Song of the Parrot' from *Boris Godunov* all exhibit this trait.

In his maturity Musorgsky's musicianship was more broadly based than scholars traditionally have maintained, and his technical mastery was derived not just from folk music, Glinka and Dargomïzhsky, but from the major Romantic masters of Europe as well. Indeed, as Wiley observed (1982), it is 'precisely within the realm of opera that Glinka and Dargomïzhsky . . . perform least satisfactorily their roles as teacher to the later generations'. They provided devices – Wiley lists orchestral combinations, fragments of melody, techniques of text setting, harmonic audacities – but lessons in theatricality came from Verdi, Meyerbeer and Wagner. In both the theatre and his workroom Musorgsky must surely have noticed how adept his European contemporaries were at placing, highlighting and recalling reminiscence themes. With equal skill he recalls the melody by which Marfa had prophesied Golitsïn's exile (*Khovanshchina*, Act 2) when the prophecy is fulfilled (Act 4 scene ii), and he took other lessons in dramaturgy from his European contemporaries as well. The revision of 'Dostig ya vïsshey vlasti', the tsar's monologue from Act 2 of *Boris*, unfolds as a recitative and aria: Boris first relates circumstances and events in a relatively free-flowing parlando, then expresses emotion in lyrical cantilena. The monologue resembles King Philip's aria 'Ella giammi m'amò' from *Don Carlo*, an opera heard in Italian in St Petersburg in 1869 and admired, albeit grudgingly, even by Cui. Both arias begin with recitative-like writing that nonetheless is surprisingly melodic for recitative, and both conclude with music that is both memorably melodious and formally symmetric. Furthermore, each of these scenes is followed by a scene of confrontation with a sinister character from which the ruler emerges defeated, Philip by the Grand Inquisitor, Boris by Shuisky. Nor did Musorgsky draw lessons in composition only from opera: the St Basil's scene, from the first version of *Boris* (1869), begins with a short orchestral prelude which borrows both gesture and orchestration from a passage of Liszt's 'Procession by Night', the first of his *Two Episodes from Lenau's 'Faust'*, a work admired in Musorgsky's circle and very likely known to him soon after its composition. Stimulation by the great Romantic masters was a crucial factor in Musorgsky's development, much more so than a narrow 'nationalist' view of this composer would permit us to believe.

One of the guiding principles of Musorgsky's mature style was, to be sure, his quest to find a musical equivalent for the patterns, inflections, pace and cadence of spoken Russian, to fix in music the paralexical aspects of speech that give it plasticity and nuance. This quest, arising from exposure to the scientistic thought of the 1860s in Russia, was at its most intense when he was studying Gervinus, composing *The Marriage*, and absorbed with speech so keenly that he could write to Rimsky-Korsakov, in the wake of this work: 'No matter who is speaking (nor what he says) my mind is already working to find the musical statement for such speech'. The type of recitative he developed in this way has several style traits that are recognized as Musorgskian: placing the accented syllables on metrically strong beats, reinforcing the metric accent with both tonic and agogic accent, setting unaccented syllables to strings of short equal notes after the beat, never permitting an unaccented syllable to fall on even a weak beat (thereby avoiding secondary accent, alien to Russian), avoiding melismas, and relying on note values – neither very long nor very short – that mimic the pace of speech. In his subsequent works – *Boris*, *Khovanshchina*, the late cycles – he combines this naturalistic declamation with a keen understanding of the essentially musical elements of music drama and song: periodic melody, aria and ensemble, reminiscence music as a dramatic device, tonal structure. Though it is misleading to ignore his passion for the Russian language and the care with which

he shaped and set words, it is equally misleading to characterize him as a composer interested in declamation and little else.

In the large-scale works of his maturity and last years, tonality often functions as an opposition of colours. In *Boris*, for example, opposing characters or ideas receive their musical expression in opposing tonalities, with the work's dramatic conflicts reflected in the underlying contrast. The song cycle *Sunless* is organized in the same way. F♯ emerges as the cycle's tonic in the fifth song, and the work's final despairing text (no.6, 'On the River') dies away, open-endedly, on the dominant of F♯. Throughout *Sunless* no more than a fleeting glimpse of hope appears; it is expressed (no.3, 'The useless noisy day is ended') in C major, a tritone away from F♯. Modal melodies occur in many of Musorgsky's works, at times suggesting folksong and national traditions and at times running counter to them. In the revised *Boris*, Kseniya's lament (Act 2) is in the Dorian mode, characterized by Balakirev as 'the Russian minor'. The third act of *Khovanshchina* begins with an Old Believers' chorus which invokes the Mixolydian mode, even though this mode is uncharacteristic of Russian church chant. In *Pictures from an Exhibition* Phrygian inflections appear in the central section of 'The Great Gate of Kiev', which Musorgsky based on the church chant 'As you are Baptized in Christ', and the main melody of 'The Old Castle' is Aeolian. 'The Old Castle' also illustrates Musorgsky's use of pedal, another persistent characteristic. A pedal point appears, for example, in the trio of the Scherzo in C♯ minor (1858), and other instances of the device occur in *Salammbô* (the 'Chorus of Priestesses'), *Boris Godunov* (the closing measures of the revised palace scene and the beginning of the love duet), *Songs and Dances of Death* ('Serenade'), *Sunless* ('Within Four Walls' and 'On the River') and *Khovanshchina* (end of Act 1, 'Marfa's divination', 'Dance of the Persian Maidens'). Like other 19th-century Russian composers, Musorgsky also drew on the whole-tone set (notably in the 1867 version of *Night on Bald Mountain*) and the octatonic set (most famously in the '*Boris* chords' of the coronation scene, but also in *Tsar' Saul*, *Sunless* and elsewhere). The octatonic set also helps account for the many tritone relations that appear throughout his music.

Musorgsky's last years saw him moving away from the limiting positions staked out by the dogmatists of his circle, Cui and Stasov, towards fully professional participation in Russia's musical life. He associated with professional performing musicians – among them Leonova and Petrov – and began to plan works with specific artists in mind. He showed remarkably little interest in the third historical opera, *Pugachevshchina* ('The Pugachev Affair'), that Stasov was pressing him to write. In *Sorochintsï Fair* he even began to use folksong and folklike melody in place of realist recitative, even though the practice directly countered the preachment of his circle.

The image of him as an illiterate, if brilliant, dilettante is now long out of date. He was a highly intellectual composer, who forged a unique personal style from the elements around him: Glinka, Dargomïzhsky and folksong, to be sure, but Berlioz, Liszt, Serov, Verdi and Wagner as well. Long known for mimetic text setting, profound respect for the Russian language and technical procedures that are both unconventional and bluntly direct, he also demonstrated a profound grasp of musical structure and the associative use of tonality. Though his influence on Russian composers in his lifetime was minuscule, 'in the 20th century his bluff anti-conventional stance and remarkable powers of psychological penetration have made him a protomodernist icon' (Taruskin, *The New Grove Dictionary of Opera*, 1992), profoundly influential on Debussy, Ravel, Janáček, Prokofiev and Shostakovich. To borrow words Stravinsky applied to himself, Musorgsky related 'only from an angle to the German stem'. But no less than Stravinsky, he constructed his works meticulously and in them strove to join the highest ranks of European masters.

ROBERT WILLIAM OLDANI

Mussat [née Le Moigne], **Marie-Claire** (*b* Saint-Brieuc, 13 Aug 1937). French musicologist. She studied Classical literature at Rennes University (1955–60), obtaining the agrégation in grammar in 1962. In 1966 she was appointed to teach at Rennes University, where she founded a music school in 1978 and from 1979 to 1990 was head of the Department of Arts. Concurrently she studied at the Sorbonne, gaining the doctorat d'Etat in 1986 under the supervision of Mongrédien. She has carried out research principally on the social history of music from the 18th century to the 20th, Breton composers and musical life in Brittany in the same period, and 20th-century music. She explored the first two of these subjects simultaneously in her doctoral dissertation, which was published under the title *Musique et société à Rennes aux XVIIIe et XIXe siècles* (Geneva, 1988). Her particular interest is in the relationships between the arts and between history and music history, and she has organized several exhibitions addressing these issues, including *La Bretagne à l'opéra*, which she undertook in collaboration with the Breton Museum at Quimper in 1994.

JEAN GRIBENSKI

Mussele, Corneille. *See* NERVIUS, LEONARDUS.

Musset, (Louis-Charles-)Alfred de (*b* Paris, 11 Dec 1810; *d* Paris, 2 May 1857). French writer. He studied the piano as a boy, and was sensitive to the emotional effect of music, as is shown by his *Stances à la Malibran*. He quickly gained admission to Romantic literary circles, and had a tempestuous relationship with George Sand. He attracted attention with his *Contes d'Espagne et d'Italie* (1830), and his *Confession d'un enfant du siècle* (1836). One of his early works, *La quittance du diable*, resembles an *opéra comique* in style, and music plays an important decorative or evocative role in many of his *Comédies et proverbes*, as well as in his lyric poems. Musset identified music with melody, preferably Italian, such as he heard sung by the great artists of the Théâtre Italien, in particular Rubini, Mario, Pasta and Malibran; and in his criticism written for the *Revue des deux mondes* from 1833 onwards he was actively hostile to what he considered 'learned' music. By this he meant Berlioz and Meyerbeer, whose claims he rejected for those of his particular favourite, Rossini.

Apart from the overtly musical *Chansons à boire*, his works are interspersed with lyrics which by their form, language and character invite a musical setting. Romantic disillusion and ennui, the *mal de siècle*, finds elegant and charming expression in his work and attracted many musicians of the generations following his own, including Franck, Debussy, Lalo and Lili Boulanger. The elegiac aspect of music, perfectly summed up in his *Stances à la Malibran*, was his chief concern, and he expressed it in a much quoted couplet: 'les plus désespérés sont les chants les plus beaux, et j'en connais aucuns qui sont de purs sanglots'. This might be applied to much of Bellini's and some of Chopin's music, and Musset met both composers in the Princess Belgioioso's salon during the 1830s.

Although Musset's play *La nuit vénétienne* (1831) was a resounding failure – it left him with a deep distrust of the theatre – more than 20 operas have been composed to librettos based on his plays and stories. These include *Fantasio*, by both Offenbach (1872) and Ethel Smyth (1898), Messager's *Fortunio* (1907) and Pierné's *On ne badine pas avec l'amour* (1910). Bizet's one-act *opéra comique Djamileh* (1871), with a libretto by Louis Gallet, was based on *Namouna*, a verse-tale in the Arabian Nights tradition of French Romanticism that Musset included in his *Premières poésies* (which also provided the subject for Lalo's 1882 ballet *Namouna*). Despite the qualities of the heroine's major solo, a ghazel that anticipates Carmen's habanera, the work received only ten performances when first produced in 1872. Puccini also turned to Musset early in his career, although with similarly limited success; Ferdinando Fontana, author of the libretto for *Le villi*, fashioned *Edgar* (1889, revised 1905) out of *La coupe et les lèvres*, moving the scene from the Tyrol to early 14th-century Flanders and making the most of the passionate characters and melodramatic situations.

MARTIN COOPER/CHRISTOPHER SMITH

Mussio, Emanuele. *See* MUZIO, EMANUELE.

Mustafà, Domenico (*b* Sterpara, nr Perugia, 14 April 1829; *d* Montefalco, nr Perugia, 18 March 1912). Italian soprano castrato and composer. He entered the choir of the Cappella Sistina in 1848 and later became its director, holding the post until his retirement in 1895. Emma Calvé, who took singing lessons from him in 1891, described certain notes in his voice as 'strange, sexless, superhuman, uncanny', while Wagner considered casting him as Klingsor in *Parsifal*. His compositions include settings of *O salutaris hostia*, *Tu es Petrus*, *Miserere* and *Dies irae*, many other sacred works and some songs.

ELIZABETH FORBES

Mustea, Gheorghe (*b* Mîndresht, 1 May 1951). Moldovan composer and conductor. He completed his studies at the

Kishinev Institute of Arts in three specialities: flute, under Rotaru (1975), composition under Zagorsky (1980) and conducting under Altermann (1980). He has worked as a musical director and conductor of the folkdance group Zhok (1975–8) and served a probationary period as a conductor with the Leningrad Academic SO (1984–6) as well as conducting the Moldavian PO (1983–9). In 1989 he was appointed artistic director and principal conductor of the television and radio orchestra of Moldova. He now lives and works in Chişnău and teaches at the Academy of Music. He is an Honoured Representative of the Arts (1989), a laureate of the State Prize (1990) and a People's Artist of the Republic of Moldova (1991). Mustea's creative scope is broad and ranges from opera and symphonic music to folk and light music. The organic blending of contemporary compositional techniques with folk and national traditions (although he rarely uses actual quotations) is characteristic of his work. His large-scale works are most indicative of this: the performance of the opera *Alexandru Lăpuşneanu* was an important event in the history of the republic, reflecting the tragedy of the troubled history of Moldova during the 16th century. Small-scale forms play a no less important role: as a performer on a number of folk instruments, he thinks naturally in terms of motifs which are close to folklore prototypes, he has produced many works of this caste. As a conductor he performs not only classical works but also contemporary Moldavian compositions.

WORKS
(*selective list*)

Op: Alexandru Lăpuşneanu (G. Dimitriu, after K. Negrutsi), 1980–86, Kishinyov, 20 Dec 1987

Inst: Rhapsody, nāy, cl, pf, 1971; Monodiya, solo cymbal, 1972; Concert Piece, va, pf, 1974; Syuita, pf, 1974; Variations, fl, chbr orch, 1976; Str Qt, 1978; Evocare [Reminiscence], sym. poem, orch, 1978; Floarya doruluy, trad. folk orch, 1979; Orch Conc. no.1, 1979; Ecoul codrului [Echo of the Codra], vn ens, pf, 1983; Concert Waltz, orch, 1985; Moldova, rhapsody, trad. folk orch, 1986; Fantasy Capriccio, orch, 1988; Orch Conc. no.2, 1990

Vocal: Baladă 'Rezboi' [War] (G. Vieru), S, orch, 1975; Patriya [Homeland] (cant., N. Dabizha), S, chorus, orch, 1978; Baladă Moldovei [Moldovan Ballad] (I. Khadïrke), S, orch, 1984; Patriye veshhike play de nekuprins (Dimitriu), chorus, wind orch, orch, 1986; Ciocîrlia [The Lark] (romance, B.P. Khazhde), T, chbr orch, 1988; Frunzele (Khazhde), children's chorus, pf, 1988; Ne cheamă Andries (S. Gimpu), 1v, children's chorus, 1989; Basarabenilor (A. Mateyevich), chorus, 1991; many unacc. choral works, songs and romances

18 incid music works, 5 film scores, 6 cartoon scores, folksong arrs.

ĖLEONORA ABRAMOVA

Mustel, Victor (*b* Le Havre, 13 June 1815; *d* Paris, 25 Jan 1890). French manufacturer of harmoniums. His several inventions resulted in the instrument known as the *Orgue Mustel*. Orphaned at the age of 12, he was apprenticed to a carpenter and became a journeyman for him; in 1838 he set up in business for himself in that trade in Sanvic (near Le Havre). Endowed from youth with a peculiarly constructive genius, he first attempted to make musical instruments by devoting himself to the improvement of an accordion which he had bought at Le Havre. Elated with his success, he disposed of his workshop in May 1844 and set out for Paris with his wife and two children. For the next nine years he worked in several different workshops. In 1853 he determined to start in business for himself as a harmonium maker, and in 1855 he exhibited his harmonium with *double expression* and a new stop, the *harpe éolienne*, for which he gained a medal of the first class. Business was difficult for the first few years, but such was the quality of the instruments that the firm of Victor Mustel & ses Fils soon gained a reputation as noteworthy in England as in France. Mustel's two sons, Charles and Auguste, and grandson Alphonse succeeded to the firm. Alphonse died in 1936.

The inventions due to the Mustels are the 'double expression' (patented in 1854, with additions in 1855), which allows the treble and bass halves of the keyboard to make a crescendo or diminuendo independently by means of knee pedals (*genouillères*) that control the energy and pressure of the wind; the *forte expressif*, a divided swell governed by pneumatic action; and the *harpe éolienne*, a tremolo register of two sets of reeds, 2′ pitch, which produce a gently undulating effect by one of the sets being tuned slightly sharp. In 1865, Mustel invented the Typophone, a keyboard percussion instrument made of tuning-forks in resonance boxes of the proper acoustic capacity. The principle was developed and improved in the CELESTA, introduced in 1886 by Auguste Mustel, in which the tuning-forks are replaced by metal bars. The Métaphone (patented 1878) was devised by Mustel's son Charles to soften the strident tones of the harmonium. This softening effect is produced by a sliding shutter of leather to each compartment and governed by draw-stops, as with other modifications of tone and power. The *Anche euphonique* (patented in 1880) improved the sounding quality of the free reeds in the harmonium by rounding off the mounting plates, resulting in a softer sound.

Mustel instruments gained a reputation for their high quality. Produced in small series, they played an important role in the musical life of the late 19th and early 20th centuries (for a discussion of the construction and repertory of the harmonium, *see* REED ORGAN, esp. fig.3). The firm also produced (or at least sold) pianos. Alphonse Mustel composed music for harmonium, and wrote his book, *L'orgue expressif ou harmonium* (Paris, 1903) in homage to his grandfather.

Mustonen, Olli (*b* Helsinki, 7 June 1967). Finnish pianist and composer. As a child he studied the harpsichord as well as the piano; he took lessons in the latter with Ralf Gothóni for three years before entering the Sibelius Academy in Helsinki in 1977, where he studied the piano with Eero Heinonen. He also studied composition with Einojuhani Rautavaara (1975–85). Among Mustonen's principal works are the Fantasia for piano and strings (1985) and the Toccata for piano, string quartet and double bass (1989). His first recording, of preludes by Shostakovich and Alkan, won major awards in 1992; his

subsequent recordings include notably vivid accounts of Prokofiev's *Visions fugitives* and Hindemith's *Ludus tonalis*. As a pianist Mustonen is creative and intelligent, if eccentric to watch; his understanding of compositional processes informs his interpretations with considerable freshness. He forms an occasional piano trio with the violinist Joshua Bell and the cellist Steven Isserlis.

JESSICA DUCHEN

Muta (It.: 'change'). A performing instruction: 'Muta in La' would mean change to an instrument in A, or change the tuning-crook of a wind instrument to put it in A.

Mutation. In solmization, changing from one hexachord to another. *See* SOLMIZATION, §I, 3.

Mutation stop [overtone stops] (Ger. *Aliquotstimmen*). In modern organ usage, mutations are understood to mean stops of one rank of flue pipes whose sounding pitch is not the same note as the key which plays them, whether they are made to a scale similar to the Open Diapason of Principal (e.g. Twelfth, Seventeenth, Nineteenth) or wider (e.g. Grosse Quinte, Grosse Tierce, Quinte, Tierce, Larigot), and whether stopped, chimneyed, open or conical in construction. Romantic organs occasionally include mutation stops derived from contemporary studies of harmonics, e.g. the Septième (1⅐′; where *B♭* sounds from a *C* key), and some post-*Orgelwebegung* organs have mutations unknown to classical organs, such as the None (8/9′; sounding *D* from a *C* key), sometimes combined in 'aliquot' or 'colour' Mixtures. From the Renaissance onwards, organ makers have also exploited the fact that a stopped pipe can be made to sound its first harmonic (a 12th) at about the same strength as its fundamental tone (Quintade, Quintadena, Quintatön), but these stops have been employed for their characteristic sound, and not (usually) as part of a series of mutation stops related to the harmonic series. True mutation stops are never used without a suitable foundation, and the organist can combine them in various ways to imitate the effect of some wide-scaled Mixtures such as Cornet, Sesquialtera and Tertian.

Historically, 'mutation' (Ger. *Mutationen*; Sp. *mutaciones*) meant much the same as 'mixture' did in 18th-century England: a combination of stops (registration) or the stops themselves (Franciscan church, Barcelona, 1480; J.B. Samber: *Continuatio ad manuductionem organicam*, 1707: *Mutationen* was a synonym for *Stimmen*). In the early French classical organ, stops outside the *plein jeu* were so called, perhaps because they could be combined freely.

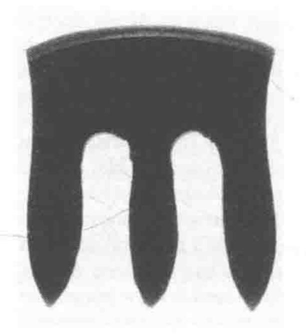
For the use of the term on pianos, *see* PEDALLING, §1; *see also* ORGAN STOP and MIXTURE STOP.

MARTIN RENSHAW

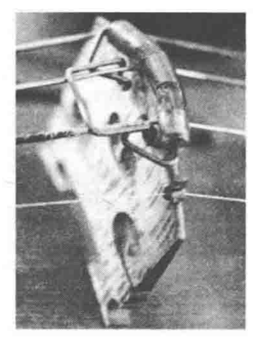
Mutazione (It.). In the Italian poetic forms of the 14th-century BALLATA and 16th-century BARZELLETTA, a pair of lines having identical scansion and end rhymes, usually forming part of the stanza. *See* FROTTOLA, §2.

Mute (Fr. *sourdine*; Ger. *Dämpfer*; It. *sordino*). A mechanical device used on musical instruments to muffle the tone, i.e. to alter the timbre; the volume is usually somewhat decreased in the process.

Two debated points about the meaning of 'with the mute' may be settled here. First, in works that consist of several movements the instruction *con sordino* ('with mute') applies only to the movement concerned. Thus, in Mozart's String Quintet in G minor (K516), the term *con sordino* over all parts at the beginning of the third movement applies only to that movement. Second, the claim that *con sordino* is synonymous with 'soft' is disproved by the specified variety of dynamic markings in the movement just mentioned, including *piano*, *forte*, *crescendo* and *sforzando*.



1. Strings. 2. Wind. 3. Other.



1. STRINGS. In instruments of the violin family the typical mute takes the form of a three-pronged clamp (sometimes two- or five-pronged), made of such materials as metal (particularly steel and aluminium), ivory, bakelite or wood (especially ebony and boxwood) (fig.1). Attached to the bridge, the mute absorbs some of the vibrations and makes the sound relatively veiled and a bit nasal; the degree of muting and the difference of tone-colour depend on the material used for the mute, its mass and the firmness with which it is attached to the bridge (*see* ACOUSTICS, §II, 4). Originally a separate accessory, the mute is sometimes installed on the instrument between bridge and tailpiece, to be pushed up against the bridge for muting as needed. 'Practice' mutes are exceptionally heavy, and are used to decrease the volume to a fraction of the normal sound for convenience when practising (their use in concert performance is occasionally requested). A 'wolf mute' is sometimes used to correct the WOLF effect at the major 6th or 7th above the open G string of the cello.

The mute has been used on bowed string instruments since at least the 17th century, and was described by Mersenne (1636–7). Mutes are specified in all five string parts in several passages in Act 2 (scenes iii and iv) of Lully's *Armide* (1686), among them the famous air 'Plus j'observe' (scene iii). Similarly Purcell specified mutes for the violins in the air 'See, even night herself is here' from *The Fairy Queen* (1692).

2. WIND.

(i) Woodwind. The flute is virtually never muted, but the loud high notes of the piccolo have been moderated by the covering of the middle and foot joints with a tube which has cloth-covered holes. In the 18th century the oboe was occasionally muted by the insertion of cotton wool, paper, sponge or pear-shaped pieces of hardwood into the bell. The mute was used to soften the lower notes or to impart a veiled quality to music representing sorrow or death. Muting is now generally accomplished by stuffing a cloth or handkerchief into the bell, a method also used by saxophonists and bassoonists. German

1. Mutes for instruments of the violin family: (a) a conventional three-pronged mute: (b) a Roth (or Roth-Sihon) mute.

bassoonists sometimes use a mute made of a brass cylinder around which some soft material is wound. Bassoonists and clarinettists have also used mutes made of a sound-absorbent material, for example in the form of a disc of a size that fits just inside the bell (it may have a central hole to enable the player to insert or remove it easily). A type of clarinet mute is known to have existed in the 18th century, although nothing precise is known about it: in 1785 the firm of Tuerlinckx, in Mechelen, listed an order for '23 clarinets with A-joints and *sourdine*' for sale to a military band (see *Bulletin du Cercle archéologique, littéraire & artistique de Malines*, xxiv, 1914, p.176). Spontini (*Fernand Cortez*, 1809) muted both oboes and clarinets by tying a leather bag over the bell, a technique also used by Berlioz for the clarinet (*Lélio, ou Le retour à la vie*, 1831–2). It should be borne in mind that a mute applied to the bell of a woodwind instrument is likely to be unevenly effective, as compared with one applied to a brass instrument, as the proportion of the sound issuing from the bell is not constant.

(ii) Brass. Mutes are applied to brass instruments as much for modifying the tone colour as for softening the tone. Trumpets were being muted by the early 16th century for funeral ceremonies, and Mersenne depicted and described a mute in *Harmonie universelle* (1636–7; fig.2) and *Harmonicorum libri XII* (1648). 17th- and 18th-century references indicate that use of a mute raised the pitch of an instrument by a tone. However no surviving mute seems to transpose this exact amount: most raise the pitch a semitone or a bit more, depending on the mute and trumpet used (research has been hampered by a lack of mutes that can be linked with specific instruments). If desired, an instrument could be retuned to the original pitch by adding an appropriate crook. The technique of hand stopping on the horn is said to have been developed from experiments with mutes by the Dresden horn player A.J. Hampel around the middle of the 18th century (Domnich, *Méthode*, 1807). (*See* HORN, §2(iii); see also Gregory, 49ff.) Altenburg (1795) gave five reasons for muting the (natural) trumpet: secret military retreat; use at funerals; embouchure development; prevention of 'screeching'; and improving intonation.

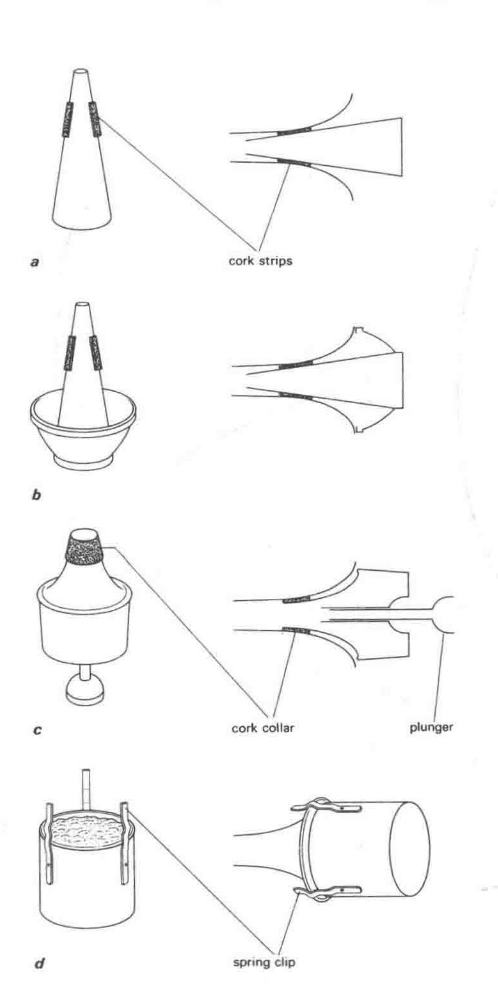
A mute acts on the principle of the Helmholtz resonator, changing the instrument's timbre by reducing the intensity of certain partials and amplifying others. Additional effects of muting may include, besides changes in pitch, attenuation of volume and increased directivity. The player almost always has to adjust, when muting the instrument, to some alteration in its response.

During the 20th century, largely because of the work of jazz orchestrators, a considerable range of mutes was developed. Mutes may be constructed from aluminium, brass, copper, wood, papier-mâché, cardboard, fibre, composition, polystyrene and rubber. Few types of mute are equally effective in all registers, and there are particular problems in muting the lower notes of a brass instrument without affecting its tuning. To a large extent such problems, although they have been the subject of research, are solved empirically. Final adjustments are often left to the player who may file the corks that support the mute to achieve the best effect with the minimum disturbance to the instrument's normal blowing characteristics.

The trumpet in particular, and to a lesser extent the trombone, is played with a large variety of mutes; these are listed and described below. The 19th-century 'echo

2. *Trumpet and mute (top right): engraving from Mersenne's 'Harmonie universelle' (1636–7)*

cornet' had an integral mute controlled by a fourth valve. Until the 20th century the only mute used regularly in the symphony orchestra was the straight mute (which has been used on the tenor and bass tubas since Strauss's *Don Quixote*, 1897). On the horn, muting may be done by hand, indicated by the term 'stopped' (Fr. *sons bouchés*, Ger. *gestopft*, It. *chiuso*), or with a mute that is pear-shaped or in the form of a truncated cone (fig.3); some



3. *Horn mutes: (a) all-purpose mutes made of fibreboard and wood, with cork strips which prevent the conical portion actually closing the bell and raising the pitch (the interior shape is a hollow cylinder, the lower half of which serves as a resonance chamber); (b) mute made of brass and cork, producing a brassier tone than (a) and raising the pitch by a semitone (the interior shape follows the outline of the exterior)*

mechanical mutes affect pitch, and may contain a tuning-screw regulator to adjust intonation, while some horns incorporate a stopping valve to compensate for the change in pitch caused by muting. A special effect on the horn is the use of 'brassy' or *cuivré* (Fr.) notes (Ger. *schmetternd or blechern*): this is produced by fully stopping the horn and blowing hard, which raises the pitch as well as producing a harsh and metallic effect. The most famous instance of the use of muted horns is in the music for the bleating sheep in Strauss's *Don Quixote*, where flutter-tongue effects are used at dynamic levels from *pp* to *ff*.

Of the types of mute listed below, (a) to (d) are in standard use, most notably on the trumpet and trombone (fig.4)

(a) Straight mute. Its shape is conical (though when made of metal often pear-shaped), with the wider end closed. Longitudinal strips of cork hold it in position, allowing some air to pass between the walls of the instrument and the mute. It is usually made of aluminium, fibre, cardboard or polystyrene, often plaster- or stone-lined. The sound is pure: incisive when blown hard. Straight mutes are available for all brass instruments and instructions to use a mute generally refer to this type.

4. Standard mutes for brass instruments: (a) straight mute; (b) cup mute; (c) harmon mute; (d) bucket mute

(b) Cup mute. This is essentially a straight mute with the wide end bearing a cup which more or less covers the bell. The cup is often adjustable to provide a greater or lesser degree of muting and usually contains a lining of felt. The sound is attenuated and lacks edge yet has a certain roundness. Cup mutes are normally used only for the trumpet and trombone.

(c) Harmon mute (wah-wah). A metal mute held in the bell of the instrument by a cork collar so that all the air is directed through the mute. An adjustable (often removable) tube allows different amounts of air to enter the mute chamber. The sound is distant, with an edge which varies in presence according to the position of the tube. The outer face of the mute carries a bowl-shaped indentation; a 'wah-wah' effect can be produced by covering and uncovering this with the palm of the hand while playing. The mute is available for trumpet and trombone.

(d) Bucket mute (velvetone). A parallel-sided bucket is filled with absorbent material and usually clipped on to the trumpet or trombone bell by means of spring steel strips which hold it at a fixed distance from the instrument. The sound is quiet and dull.

(e) Practice mute. A type of straight mute with a heavy cork collar that drastically reduces the sound output. It is available for trumpet, trombone, horn and tuba.

(f) Mica mute. A variety of cup mute with a rubber edge around the cup. The sound is similar but much quieter and slightly more edgy. It is normally played close to a microphone.

(g) Whispa mute. A microphone is also necessary for this mute as its tone is otherwise inaudible. All the sound goes into a chamber filled with sound-absorbent material and it can escape only through small holes.

(h) Solo tone mute (mega, double or clear tone). A double straight mute which has a nasal yet resonant timbre. It is rarely required and is used only by the trumpet (e.g. in Bartók's Violin Concerto, 1937–8, where the instruction '*doppio sordino*' appears).

(i) Buzz-wow mute. A type of cup mute incorporating a membrane which adds a buzzing quality to the sound.

(j) Plunger. This rubber or metal cup is like a drain-clearing device but lacks a handle. By skilful manipulation the natural sound can be distorted in such a way that the trumpet or trombone seems almost to speak and sing.

(k) Hat (derby). This mute is a metal bowler hat, usually stone-lined, which is normally held by the left hand over the trumpet or trombone bell. When the instrument is blown 'in hat' the basic tone is retained but with reduced intensity. (In *An American in Paris*, 1928, Gershwin calls for trumpeters to play 'in felt crown'; Stravinsky requests 'hat over bell' for trumpet and trombone in Ebony Concerto, 1945.)

(l) Handkerchief (cloth). A modified version of 'hat over bell' can be achieved by the use of a handkerchief or cloth. The technique is usually restricted to the trumpet (in, for example, Ives's *The Unanswered Question*, 1906–8).

(m) Electronic mute. A mute that absorbs almost all the sound of the instrument. The sound is fed into a processing system where it can be manipulated to sound through the player's headphones as if in a concert hall or other space; the sound can also be recorded or played through an audio system. This mute was developed by Yamaha in the

mid-1990s and is available for all standard modern brass instruments.

(n) Hand over bell. The effect of 'hand over bell' is to slightly diminish the sound of the trumpet or trombone. It was characteristic of the Glenn Miller band in the 1930s and 40s, where the brass could produce a subtle 'wah' in complete rhythmic accord by this method.

(o) Hand in bell. A technique very occasionally required of trumpeters. The tone becomes increasingly muffled and the pitch of the note progressively lower as the hand is inserted further into the bell.

(p) Beer glass. One of the first types of muting used in jazz, it is used with trumpet and cornet. The glass is held in the left hand and the angle between the glass and the bell changed to vary the distortion of the sound.

(q) In stand. Playing a trumpet or trombone into the music on the stand (from a distance of about 10 cm seems the most effective). Since orchestral brass players tend anyway to blow into the music to some extent it is not markedly successful. If the bell is held too close to the music intonation and pitch are affected.

3. OTHER. Kettledrums are muted by placing a cloth or handkerchief on the drumhead, opposite the striking point, or with an internal damper mechanism (*see* TIMPANI, §2).

On the harp, a species of muted tone may be produced by a method of plucking that stops the string as soon as the note is produced (*sons étouffés*). This sound resembles a short, dry, string pizzicato, quite different from the usual warm, vibrant tone of the harp as normally plucked (*laissez vibrer*).

A mute effect is also possible on the harpsichord and piano. On the former, a device called a BUFF STOP presses felts or leathers against a whole set of strings, thereby muting the tone and shortening its period of resonance, the resulting sound being almost like pizzicato. The piano has both dampers and mutes. The damper, which is made of felt, is used not to dampen (i.e. to lessen or muffle) the sound but to extinguish it. The 'soft' pedal is the modern version of a mute on the piano (*see* UNA CORDA and DUE CORDE).

Some early pianos had true mute stops – strips of leather, cloth or other material interposed between hammers and strings to mute and change the timbre. In 1783 Broadwood of London patented (under the name 'sourdin') a mute stop in which a long strip of leather was applied against the strings by the action of a pedal. Several of Beethoven's pianos (e.g. his Erard of 1803) were equipped with mute stops. Some modern upright pianos still use a strip of felt to achieve this muting effect.

The term 'sordino', however, has caused some confusion, as it is also the normal term for a damper. The direction *senza sordini* evidently requires the damper pedal to be depressed to raise the dampers. The first edition of Beethoven's Piano Sonata op.27 no.2 gives the direction, 'One should play this whole piece very delicately and *senza sordino*'; and above the bass staff, 'always pianissimo and *senza sordino*'. Interpreted literally, this seems to mean that the damper pedal should be kept down continuously from the beginning to the end of the movement. The use of continuous pedal for an entire passage or movement is found also in works by Steibelt and others from the 1790s. The technique was always used in conjuction with a very soft dynamic level (Rowland, 1993; *see* PEDALLING).

Müthel, Johann Gottfried (*b* Mölln, Lauenburg, 17 Jan 1728; *d* Bienenhof, nr Riga, 14 July 1788). German composer. He received his earliest musical instruction from his father, Christian Caspar Müthel, organist at the Nikolaikirche in Mölln, and was later taught by Johann Paul Kunzen in Lübeck. At the age of 19 he became a chamber musician and organist at the court of Mecklenburg-Schwerin under Duke Christian Ludwig II. A year's leave of absence allowed Müthel to go to Leipzig in the spring of 1750 to visit 'the famous Capellmeister and Music-Director Bach . . . in order to perfect himself in his profession', as an accompanying letter from his employer stated. Bach was already ill at this time, and it is not known what kind of teaching he was able to give Müthel. After Bach's death on 28 July 1750, Müthel left for a study tour, visiting J.C. Altnickol in Naumburg, Hasse in Dresden, C.P.E. Bach in Potsdam and Telemann in Hamburg; he was also active as a copyist during this period. In 1753, through the good offices of his brother, he obtained the post of Kapellmeister to the Russian privy councillor O.H. von Vietinghoff in Riga; he was appointed organist of the principal church of Riga in 1767. His friends and admirers in Riga included J.G. Herder. Müthel, who was also highly regarded as a keyboard virtuoso, never seems to have left Riga again; almost nothing is known about his later life.

Müthel's output is small, and both musically and technically his keyboard works are the most demanding part of it. However, fewer of the works in the Pretlack Collection (now in *D-Bsb*; see Jaenecke), seem to be by Müthel than was originally thought. For instance, C.F. Schale is named elsewhere as composer of the two harpsichord concertos preserved there (see the Kritischer Bericht to the first volume of Wilhelm's edition of organ works, 1982). The extract from a letter by Müthel which occurs in the German translation (1773/*R*) of Burney's *The Present State of Music in Germany, the Netherlands, and United Provinces* should therefore be taken seriously, although it sounds like a typical effusion of the *ars poetica* of the *Sturm und Drang* period: 'I have devised many a piece when in good humour and a cheerful mood, but

only in outline, and the pieces await a happy disposition of my mind for further work to be done, for I do not care to work when I am not disposed to it. And that true cheerfulness of mind I require to work visits me only rarely'. Particularly in the inner movements of his compositions, Müthel's characteristic originality watchword gave rise to rhythmically striking motifs and phrases, abrupt changes of dynamics, and other expressive means, all in the service of individual self-expression. His style has something in common with the styles of C.P.E. Bach and other experimentally minded composers of his generation. Burney wrote of him: 'The style of this composer more resembles that of Emanuel Bach, than any other. But the passages are entirely his own, and reflect as much honour upon his head as his hand'.

LOTHAR HOFFMANN-ERBRECHT/REGULA RAPP

Muti [Mutio], **Giovanni Vincenzo Macedonio di.** *See* MACEDONIO DI MUTIO, GIOVANNI VINCENZO.

Muti, Riccardo (*b* Naples, 28 July 1941). Italian conductor. His first piano and violin lessons were from his physician father, who was also an able tenor. At the S Pietro a Majella Conservatory in Naples he studied composition with Jacopo Napoli and Nino Rota and the piano with Vincenzo Vitale. After studying philosophy at Naples University Muti moved to the Conservatorio di Musica G. Verdi in Milan, where he studied composition with Bruno Bettinelli and conducting with Antonino Votti. In 1965 he joined the Franco Ferrara conducting seminar in Venice, and two years later won the Guido Cantelli Conducting Competition. His professional début took place with the RAI orchestra in 1968 and led to numerous engagements as guest conductor. In 1969 he became principal conductor of the Florence Maggio Musicale, in 1970 he was appointed principal conductor at the Teatro Communale in Florence, and in 1972 he made his US début with the Philadelphia Orchestra, his British début with the New Philharmonia and his first appearance with the Berlin PO. In 1973 Muti became principal conductor at the New Philharmonia (from 1977 Philharmonia), a position he held until 1982. In 1973 he first worked at the Vienna Staatsoper and the following season made his début with the Vienna PO. He became music director of the Philadelphia Orchestra in 1980, a position he held until 1992. There he reintroduced concert performances of opera, commissioned new works by, among others, Berio, Bolcom, Davidovsky, Kirchner, Ran and Rouse, led a major campaign for a new hall, and by common consent polished the sound and strengthened the discipline of that famous orchestra. He was appointed music director of La Scala in 1986, and the following year became principal conductor of the Orchestra Filarmonica della Scala. Muti has also appeared regularly at Salzburg (from 1971), Covent Garden (from 1974) and other leading opera houses. In 1992 he conducted the Vienna PO in their 150th anniversary concert.

In all his posts Muti has demanded exacting standards in matters of textual fidelity and orchestral sonority. He is gifted with a superb baton technique, an impeccable ear, probing intelligence and an intense conviction in all that he does. He has a wide operatic repertory, directing acclaimed performances and recordings of Mozart, Bellini, Cherubini, Donizetti, Rossini (in 1972 he conducted the first uncut production of *Guillaume Tell*), Spontini, Verdi and Wagner. Among his many recordings, *Don Pasquale*, Bellini's *I Capuleti e i Montecchi* and his series of Verdi operas have been particularly admired for their cogency and dramatic immediacy. Muti is equally persuasive in modern repertory, and has conducted works by Britten, Dallapiccola, Hindemith, Ligeti, Petrassi and Shostakovich to wide praise. Although esteemed for his encompassing musicianship, Muti has sometimes been criticized for tempos driven too hard, and (in the manner of Toscanini) for a certain relentlessness. He holds several international awards, including the Grosses Verdienstkreuz der Bundesrepublik Deutschland, the Grand'Ufficiale and the Cavaliere di Gran Croce, and is a member of the Légion d'Honneur.

CHARLES BARBER, JOSÉ BOWEN

Mutin, Charles (*b* Saint Julien-sur-Suran, Jura, 7 April 1861; *d* Paris, 29 May 1931). French organ builder. Mutin lost his father, an innkeeper, before he was three, and his mother took him and his two sisters to Paris after the Franco-Prussian War, where he was apprenticed to Aristide Cavaillé-Coll from 1875. His benefactor there,

the voicer Joseph Koenig, later became his brother-in-law. Assignments in Normandy, where he married, led Mutin to set up shop in Falaise, where he built his first organ in 1887, then in Caen. Instruments followed for Lure (1889–90) Ste Catherine, Honfleur (1890); St Julien, Caen (1894); Notre Dame, Orbec (1895); Notre Dame de Bon Secours, Trouville (1895); and Ste Anne, Vire (1896), among others. As one of the staunchest followers of the Cavaillé-Coll style, he came to the attention of the era's leading organists so that, when the 87-year-old master was no longer able to carry on the business, their endorsement helped Mutin to acquire the firm on 18 June 1898. Successfully bolstering the company's sagging accounts, he constructed several hundred instruments before ceding activity to Auguste Convers on 19 March 1924. During the years 1894–99 several articles about Mutin and his work appeared in the periodical *Le monde musical*.

Numerous elegantly cased house organs for wealthy private customers greatly offset the reduced ecclesiastical demand resulting from the separation of Church and State in 1905. Significant organs built under Mutin's directorship of the Cavaillé-Coll firm (all are of three manuals unless otherwise noted) include an organ in the house of Alexandre Guilmant in Meudon (1899); Moscow Conservatory (1900, 50 stops); the concert hall of the Schola Cantorum, Paris (1902) and St Pierre, Douai (1922; originally built in 1910–14 and intended for the St Petersburg Conservatory, its delivery was halted by the outbreak of World War I and the Russian Revolution). Mutin also relocated the large Cavaillé-Coll organ of the Baron de l'Espée in Biarritz (1898) at the Basilica of the Sacré Coeur in Paris (1919). While occasionally using pneumatic or electric actions, he remained partial to mechanical action with Barker levers. Despite – or on account of – undeniable commercial acumen, his personality was not characterized by the same generosity and unshakable integrity as that of his mentor: the quality of his instruments – particularly their tonal finesse – tended to vary according to the funds available, which has led to highly negative appreciation and concomitant alteration of the organs by ensuing generations. Caught between the Romantic conception which paired Cavaillé-Coll with Franck, Widor and other masters, and the 'neo-classic' school embodied in Alain, Duruflé, Messiaen and Langlais, Mutin is still awaiting objective study and evaluation.

KURT LUEDERS

Mutis, Bartolomeo, Count of Cesana (*b* ? *c*1575–80; *d* Vienna, Nov 1623). Italian singer and composer. He was a member of the family of the counts of Cesana, whose estates lay to the south-west of Belluno in the Veneto. He was appointed chaplain and tenor singer at the court of Archduke Ferdinand at Graz on 1 April 1604. He accompanied Ferdinand's sister, the Archduchess Constantia, on her journey to Poland in 1605 to marry King Zygmunt III and in 1611 went to Vienna with the archduke to attend the wedding of the Emperor Matthias. When Ferdinand became emperor in 1619 Mutis moved to Vienna with the other Graz court musicians and remained there as court chaplain until his death. While in Graz he may have acted as almoner to one of Ferdinand's younger brothers, the Archduke Maximilian Ernst, to whom he dedicated his *Musiche a una doi e tre voci* (Venice, 1613; edn in DTÖ, cxxv, 1973). This volume, which shows the influence of Italian monodists like Caccini, establishes him as the earliest exponent of secular monody in an Austrian court chapel. As well as three solo madrigals it includes six pieces, either madrigalian or aria-like, for two voices and five for three; the volume also contains a richly ornamented madrigal by the Graz court musician Francesco degli Atti (*b* Todi, *c*1574; *d* Vienna, early May 1631). There are also two two-part motets with continuo by Mutis in G.B. Bonometti, ed.: *Parnassus musicus Ferdinandaeus* (RISM 1615[13]).

HELLMUT FEDERHOFER

Muttationen (Ger.). *See* CORPS DE RECHANGE.

Mutter, Anne-Sophie (*b* Rheinfelden, 29 June 1963). German violinist. A member of a musical family, she took up the piano at five, quickly followed by the violin, on which she was schooled in the Flesch method by Erna Honigberger. In the 1970 Jugend musiziert competition she won both the violin category (with special distinction) and the piano duet category, with her brother Christoph – another brother, Andreas, is also a violinist. On the death of her teacher she entered the Winterthur Conservatory in the class of another Flesch pupil, Aïda Stucki. When she was 13 Karajan heard her play a recital with brother Christoph at the Lucerne Festival, invited her to Berlin for an audition and engaged her for the 1977 Salzburg Whitsun Festival and a recording of two Mozart concertos. That year she made her British début, with the LSO conducted by Barenboim. Her Berlin début was made with Karajan in 1978, her US début at Washington in 1980 and her Russian début at Moscow in 1985. At the 1985 Aldeburgh Festival she played string trios with Bruno Giuranna and Rostropovich; this ensemble endured for several years. In 1986 she gave the first performance of Lutosławski's *Chain II*, with the Zürich Collegium Musicum under Paul Sacher; other important premières have been the orchestral version of Lutosławski's Partita, Norbert Moret's *En rêve* in 1988, Rihm's *Gesungene Zeit* in 1992 and Penderecki's Second Concerto in 1995. In 1986 she was appointed to the International Chair of Violin Studies at the RAM. In 1987 she established a foundation in Germany to help younger players.

Mutter is a solid player with a secure technique, an ample tone and a strong sense of musical structure. She makes playing the violin look easy and, perhaps as a result, her performances sometimes lack inner tension. She does not vary her tone or her dynamics as much as many violinists, and when she essays a fast tempo her

Anne-Sophie Mutter

playing is sometimes more remarkable for its technical skill than for any genuine excitement. But if there are more interesting players, few are so consistent. She is a successful recording artist and has won awards for her recordings of Berg, Lutosławski, Rihm and Penderecki. On the other hand a Beethoven sonata cycle with her regular pianist, Lambert Orkis, was found by many to be disappointingly bland. For a time she played a Nicola Gagliano but in 1999 she had two Stradivaris, the 'Emiliani' of 1703 and the 'Lord Dunraven' of 1710.

TULLY POTTER

Mūwashshaḥ [Muwassah] (Arab.: 'ornamented'). A strophic song with refrain (*see* SYRIA, §2(ii)(a); LEBANON; ARAB MUSIC, §II, 4(ii), with music example). The word goes back to the 12th century at least, being found in the treatise of Ibn Bassām (*d* 1147). The form originated at Cabra, near Córdoba, in the 9th century; it enjoyed a vogue in Muslim Spain in the 11th century, and spread subsequently throughout the Arab world, where it survives in oral tradition. The mūwashshaḥ may be accompanied by the *samah* dance.

See ZAJAL.

JACK SAGE/SUSANA FRIEDMANN

Muyinda, Evaristo (*b* Nabbale, Kyaggwe, Buganda, 2 June 1916; *d* 11 Oct 1993). Ugandan instrumentalist and teacher. At the age of nine, Muyinda learnt to play the *amadinda* and *akadinda* log xylophones. In 1939, when Muteesa II became Kabaka of Buganda, Muyinda was appointed court musician in the *akadinda* ensemble. Beyond his remarkable expertise as a musical performer, Muyinda was a tireless promoter of the traditional musical culture of the Buganda region. In 1948, Klaus Wachsmann, then curator at the Uganda Museum, gave him a post as musical demonstrator. Muyinda taught instrumental music at schools, and he gave musical demonstrations at the Makerere University College in Kampala. Between 1957 and 1959 he was responsible for the founding of a multi-ethnic *akadinda* ensemble at the Salama Rural Training Centre of the Blind. The development of a simple number notation for xylophone compositions can also be attributed to Muyinda, a notational system that in a more developed form is often used in ethnomusicological studies. Over the years, Muyinda became a multi-instrumentalist who covered a wide spectrum of Kiganda music with his performances on the harp, lyre, tube fiddle and notched flute among others. He is considered to be the inventor of the Kiganda orchestra, an ensemble format in which instruments from various Kiganda musical traditions are joined, leading to a mixture of timbres that is unusual in traditional music. The Kiganda orchestra became an integral part of the Uganda National Ensemble called the 'Heartbeat of Africa', a group whose profile can also be largely attributed to Muyinda. He participated in several concert tours to many countries in Africa and overseas with this ensemble as well as with several other ensembles of his own. As a research assistant of Klaus Wachsmann and instrumental teacher of Joseph Kyagambiddwa, Gerhard Kubik and other music researchers, Muyinda exerted a considerable influence on the scientific studies of the traditional music of Buganda. His work is discussed in Gerhard Kubik: *Ostafrika*, Musikgeschichte in Bildern, (Leipzig, 1982), 78–9.

ULRICH WEGNER

Muza. Polish record company. Its origins go back to 1912, when a company called Beka (later Odeon) started producing recordings in Warsaw. Until 1939 the factory was under German ownership; during World War II it was closed. On 11 September 1945 a record company was established in Warsaw and the following year it took the name Warszawskie Zakłady Fonograficzne (Warsaw Phonographic Works). The equipment was mainly inherited from the pre-war Odeon company, together with materials from the then liquidated Poznań firm of Kurczewski. In the Warsaw factory they made recordings directly on to wax plates and then pressed on to double-sided shellac gramophone discs at 78 r.p.m. In 1953 the Warsaw works was divided into Zakład Nagrań Dźwiękowych (Sound Recordings Works) and the Fabryka Płyt Gramofonowych (Gramophone Record Factory) or 'Muza'. At the former magnetic tape was used, with microgroove discs. At the latter standard discs at 78 r.p.m. were produced. In 1955 the Sound Recordings Works was changed into Polskie Nagrania (Polish Recordings: 'PN'), which subsumed the Muza factory. Polskie Nagrania took over the process of recording and producing records, devolving the physical production of discs to other factories. During the next phase of modernization, from 1959, the firm moved over to the production of LPs and phased out the production of 78 r.p.m. discs.

The era of LPs at Polskie Nagrania was inaugurated with a recording of Beethoven's Seventh Symphony played by the Polish RSO, conducted by Witold Rowicki. From 1960 Polskie Nagrania began to issue recordings in stereo, and in 1983 they introduced the compact disc into the Polish market. Until the late 1980s Polskie Nagrania-/Muza was the leading phonographic company in Poland. In August 1992, after the collapse of communism, the firm reduced its activities; it continues to produce CDs in cooperation with foreign companies.

Initially Muza recorded only light music, mainly with the Czejanda Choir and an orchestra directed by Olgierd Straszyński, the firm's music director. Later it also produced recordings of serious music, mainly performed by Polish artists, including the Polish RSO, conducted by Grzegorz Fitelberg, and the Polish RO, conducted by Stefan Rachoń. In addition, it produced recordings documenting the Chopin Piano Competition, the Warsaw Autumn Festival of Contemporary Music and other events.

KATARZYNA JANCZEWSKA-SOŁOMKO

Muzak. A type of ENVIRONMENTAL MUSIC piped into public buildings in order to create a specific atmosphere or mood.

Mužík, František (*b* Duchcov, Bohemia, 1 May 1922; *d* Prague, 30 June 1998). Czech musicologist. After his school education he spent four years as a political prisoner in the Nazi concentration camp at Buchenwald (1942–5). From 1947 to 1952 he studied musicology with Hutter, Očadlík and Sychra at Prague University, where he obtained the doctorate with a study of music historiography in 1952. He was appointed assistant lecturer in musicology (1954) and after taking the CSc degree in 1960, with a work on the Trnavský Manuscript, he became lecturer and subsequently reader in music theory and historiography (1960–80) and professor (1980–90). He succeeded Očadlík as chairman of the musicology department at the university (1959–86) and served also as deputy dean (1960–61, 1972–6) and dean (1961–6) of the philosophy faculty.

Mužík was one of the leading personalities in Czech musicology of his day. Under his long chairmanship of the Prague musicology department he shifted its orientation from the 19th century to early music while at the same time bringing prominent composers such as Petr Eben and Vladimír Sommer on to the staff. He was also the long-time editor-in-chief of the periodical *Hudební věda* (1971–89) and of the Prague musicology department's yearbook *Miscellanea musicologica* (1965–88). In his own work Mužík stimulated a substantially new approach to Czech music of the Middle Ages by the consistent application of textual criticism. His contributions to medieval research were of special value in the field of 14th-century Czech song.

MILAN POŠTOLKA/R

Muzïka. Russian music publisher. The name was first used in 1964 of the company formed by the amalgamation of the music publishers Sovetskiy Kompozitor ('Soviet Composer') and Muzgiz (Gosudarstvennoye Muzïkal'noye Izdatel'stvo, 'The State Music Publishing House'). Muzgiz was the successor to the music publishing house of Jürgenson, whose accumulated skill, plant and stock were taken over by the Soviet publishing house (Gosizdat) following Lenin's decree of 19 December 1918

which nationalized all music publishers. From 1918 to 1922 the state music publishing firm was known as Gosmuzizdat ('State Music Publishing House'), from 1922 to 1930 Muzsektor ('Music Sector') and from 1930 to 1964 Muzgiz. In 1956, because of pressure of work at Muzgiz, The Union of Composers of the USSR established Sovetskiy Kompozitor, a body dedicated entirely to publishing the works of Soviet composers; three years after its incorporation into Muzïka in 1964 it regained its independent status.

As a servant of the state the firm responded to the 'social command' by producing, as required, huge editions of popular and patriotic songs to suit political and national circumstances while also seeking to do justice to the Russian and European classical canon as well as publishing new music by Soviet composers. Besides producing music in a great variety of printed formats Muzïka also publishes books about music. It has also been responsible for multi-volume editions of the works of Glinka, Prokofiev, Rimsky-Korsakov, Shostakovich, Tchaikovsky and others. It has sometimes persisted in the pre-Revolutionary practice of printing in Leipzig (for example, the series Russian Symphonic Music and Russian Piano Music); it is now collaborating with Schott of Mainz to produce new scholarly editions of Musorgsky and Tchaikovsky. Despite the end of the Soviet period Muzïka remains as before a state enterprise. There have been no changes in principle in the types of material published. The firm maintains its output of all kinds of music, much of it educational. The music of the past remains a priority, with contemporary music and books on music published to a lesser extent. (R.M. Maslovataya: *Izdatel'stvo 'Muzïka'* [The Muzïka publishing house], Moscow, 1987)

GEOFFREY NORRIS/STUART CAMPBELL

Muzio, Claudia [Muzzio, Claudine] (*b* Pavia, 7 Feb 1889; *d* Rome, 24 May 1936). Italian soprano. Her father was a stage director at Covent Garden and the Metropolitan, her mother a chorus singer. Among her teachers was Annetta Casaloni, Verdi's first Maddalena (*Rigoletto*), who probably helped her to obtain engagements at Turin in 1911 and 1914–15. She had made her début at Arezzo on 15 January 1910 in Massenet's *Manon*; her first appearance at La Scala, as Desdemona, was during the 1913–14 season. In the Covent Garden summer season of 1914 she attracted considerable attention in some of her best roles, including Desdemona, Margherita (*Mefistofele*), Tosca and Mimì (the two last with Caruso in the cast), but was never to return to that theatre. In the USA, however, she quickly became a much valued member first of the Metropolitan company (début as Tosca, 1916), where she remained for seven consecutive seasons and reappeared briefly in 1934, and where she sang Giorgetta (*Il tabarro*) in the première of Puccini's *Trittico*; and subsequently of the Chicago Civic Opera (début as Aida, 1922), to which she returned for nine seasons with only a single break. During this period she was also much in demand in the principal South American houses; in Italy she made some notable appearances under Toscanini at La Scala in 1926–7 (*La traviata*, *Il trovatore*, *Tosca*), but thereafter sang mostly in Rome.

Muzio's extensive repertory embraced all the leading Verdi and Puccini roles, as well as those of the *verismo* school – which last, however, she interpreted in a more subtle and refined manner than was usual. Nobility and

Claudia Muzio in the title role of Puccini's 'Tosca'

sweetness of voice and aspect, together with intense drama and pathos, were marked features of her style; good judges thought her one of the finest artists of her time. Although she made many recordings, few of them do her full justice. The early groups (1911, 1917–18, 1920–25) are marred by low technical standards, although in subsequent reissues on CD the compelling quality of her voice can be clearly heard. In many of the technically excellent recordings made in 1934–5, however, her tone has lost much of its pristine freshness and steadiness. Among this last group, however, there are some unforgettable achievements, notably her infinitely pathetic reading of Germont's letter in the last act of *La traviata*.

DESMOND SHAWE-TAYLOR

Muzio [Mussio], **(Donnino) Emanuele** (*b* Zibello, Parma, 24 Aug 1821; *d* Paris, 27 Nov 1890). Italian conductor and composer. He studied literature with Andrea Pettorelli and music with Verdi's first teacher, Ferdinando Provesi, at whose death in 1833 he unsuccessfully tried to be admitted to the Scuola del Carmine at Parma. In 1844, supported financially by Verdi's father-in-law Antonio Barezzi and by the Monte di Pietà of Busseto, he moved to Milan to study with Verdi. In 1847 he assisted in preparing *Macbeth* for Florence and *I masnadieri* for

London. He also made transcriptions and reductions for the publishers Ricordi and Lucca. In February 1849, for political reasons, he went to Mendrisio, Switzerland, to the publisher Carlo Pozzi, Ricordi's son-in-law. In 1850 he conducted at the Théâtre du Cirque Royal, Brussels, where his first opera, *Giovanna la pazza*, was performed in 1851. Returning to Italy, he had other works performed, but without great success. In 1858 he conducted at Her Majesty's Theatre, London, then began a long tour in the USA, where in 1861 he introduced *Un ballo in maschera* and announced a new opera of his own, *La scommessa*, though this was never produced. In 1862 he was in Havana and in 1863 again in the USA. At the end of 1866 he returned to Europe, having married the singer Lucy Simmons. In March 1869 at Bologna he conducted the Italian première of Rossini's *Petite messe solennelle* in its orchestral version. Late in 1869 and in 1870 he conducted in Egypt during the inauguration of the Suez Canal and soon after became conductor and adviser at the Théâtre Italien, Paris. In 1873 he gave the first performances of *Aida* in the USA and returned there in 1874 to introduce the Requiem. In 1876 he conducted the French première of *La forza del destino*. From the end of 1878 to spring 1879 he again conducted at Havana. He was then active as a singing teacher, as well as a frequent collaborator of Verdi, who named him the executor of his will.

WORKS

OPERAS

Giovanna la pazza (os, 3, L. Silva), Brussels, Cirque Royal, 8 April 1851; *I-Mr**, excerpts (Milan, 1851)

mv. *Mezza voce. See* MEZZO, MEZZA.

Mvet. An idiochord stick zither with a notched bridge. It is unique to an area of western central Africa which includes southern Cameroon, Gabon, Equatorial Guinea, northern areas of the Republic of the Congo and the south-west of the Central African Republic. Its invention is attributed to the people of the Pahouin group (known variously as the Fang', Fan, Fanwe, Mfang', Mpangwe, Pangwe) and, according to tradition, its first player was Efandene Mvie. First described by Hornbostel as a 'Pangwe' instrument, it is thought to be a development of the monochord stick zither of the Fang' and other peoples.

The Pahouin *mvet* (see illustration) is made from a raffia branch about 1·5 metres long. Five idiochord strings are raised from the hard surface of the branch and are supported at their centre by a notched bridge. Small rings of fibre are wound round the ends of the strings and the branch; the *mvet* is tuned by adjusting these rings to shorten or lengthen the strings. One to six gourd resonators are attached to the back of the string-bearer. (*See also* CAMEROON; CENTRAL AFRICAN REPUBLIC; GABON.)

GERHARD KUBIK

Myanmar [(Union of) Burma; Myanmar Naingngandaw]. Country in South-east Asia, formerly known as the Union of Burma, occupying the westernmost part of the Indo-Chinese peninsula. The peoples of Myanmar include the Burmese proper, that is the Burmese-speaking people who live in the central and lowland areas of the country; their linguistic and cultural neighbours, the Arakanese (Burmese, Yahkaing), who occupy south-western Myanmar; and various peoples living in the hills, each with a unique language, culture, music and dance tradition.

I. Music and dance of the hill peoples. II. Music and dance of the plains peoples. III. 20th-century practice.

I. Music and dance of the hill peoples

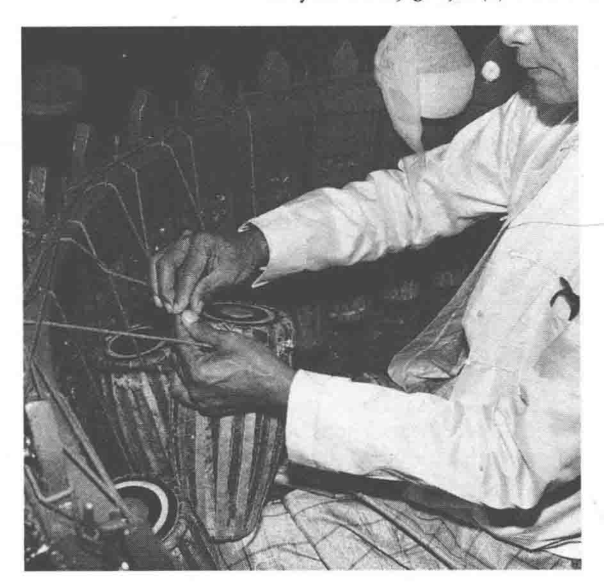
Little is known of the music and culture of the Burmese hill tribes beyond a few general anthropological studies. Three prominent groups are the Kachin in far northern Myanmar, the Shan, who are closely related to many ethnic groups in Thailand and who occupy north-eastern central Myanmar, and the Karen in south-eastern central Myanmar. There is also a large Mon minority who are related to the peoples of Cambodia and other regions of South-east Asia. The Mon peoples are also known as the Talaìng by the Burmese.

The Karen and Kachin were both indoctrinated with Christianity by British Protestant missionaries after the fall of the Burmese monarchy, and their music is of three types: traditional music, newer adaptations of Christian hymns, and interesting combinations of the two. All the hill tribes seem to distinguish between various genres of vocal music and dance music, which is dominated by gong rhythms. Most gongs used in this area are of the South-east Asian bossed type with narrow flanges, producing distinct pitches of a somewhat mellow tone quality. Gong patterns used for dance rhythms are generally not melodic but consist of short figures repeated many times, much like those used by the hill peoples of other parts of South-east Asia and the Philippines, to which a vocal or flute melody is sometimes added. The music is intended primarily for dancing, and the repeated patterns enjoin the community to participate in the dance. Among the Kachin and the Shan, another kind of dance music is played on an ensemble consisting of small bamboo panpipes and *hnyìn* (small bamboo free-reed mouth organs). This music is often played during mourning.

The Shan, unlike other hill tribes of Myanmar, are primarily Buddhist, and their music combines traditional gong, flute and mouth organ music with more complex ensemble music borrowed from the lowland Burmese through contacts made in the course of diplomatic relations and warfare. The Saw-bwâ, princes of the Shan, modelled their courts on those of the Burmese kings and like them used special music to announce the beginning of the court day and its various hours. The Shan also use, as part of their traditional dance music, a unique framed gong instrument; this large bamboo structure has several gongs suspended in it, and a bamboo mechanism strikes all the gongs simultaneously, producing rich tone clusters on every beat.

The Karen have several unique instruments, including the *hpà-si* (bronze kettledrum or frog drum, so-called because of the small frogs that decorate four points around the drum head). It is struck in the centre of the head with a padded stick and sometimes also on the side with a thin stick. When not being played, *hpà-si* are sometimes turned upside down and used as containers for raw rice (*see* BRONZE DRUM). The Karen also play a *pa:ku* (bamboo-keyed xylophone) and a *t'na* (small harp with five to seven strings). The *t'na* is similar in general shape and construction to the Burmese arched harp, with a small wooden resonator covered with deerskin. It is traditionally used to accompany love songs.

The Yahkaing are predominantly Muslim. Much of their music is similar to Burmese folk music, and although they have their own song genres they also use classical Burmese song forms. In addition to various types of drum, the *hnè*, an oboe with a composite double-reed, is popular and is played in a distinctive style by the Yahkaing. The Mon were at one time one of the great civilizations of the region; their capital was the city of Pegu. Both influenced by and influencing the music of Myanmar and Thailand, Mon music appears more closely related in structure to the various ensembles of Thai music. Gong-chimes (*gong mon*), xylophones (*renad*), the reed oboe (*pi*) and crocodile zither (*cham*) are shared with Thai music. The Mon in Myanmar, however, often add a small number of tuned drums to their ensembles, similar to the Burmese *chauk-lòn-bat* drum-chime.



II. Music and dance of the plains peoples

1. Instrumental ensembles: (i) Hsaìng-waìng (ii) Other instruments and ensembles (iii) History of the instruments. 2. Classical vocal music. 3. The Burmese harp (saùng-gauk). 4. Theory.

1. INSTRUMENTAL ENSEMBLES. The isolation of Myanmar has contributed to the survival of instruments extinct in other Asian areas and has resulted in a music system that is related to other South-east Asian music but is significantly different in sound and instrumentation from the music of the nearest peoples – the Thais, Cambodians and Laotians. The distinguishing feature of South-east Asian ensembles is the knobbed gong (with a raised central boss and a deep rim; *see* SOUTH-EAST ASIA, §2). The widespread diffusion of knobbed gongs and other metalwork in remote areas of South-east Asia testifies to the antiquity of the blacksmith's craft, and legends abound in which the central character is, or was originally, a blacksmith. A northern Burmese myth traces the origins of the Kachin people to an ancestor who was a smith. Similar ensembles are found throughout the lowland or valley-civilization areas of South-east Asia: the Irrawaddy valley in Myanmar, the Mekong valley in Laos and Cambodia, the Menam valley in Thailand, the Indonesian islands and the southern Philippines. These ensembles consist of a core of knobbed-gong instruments with xylophones, flutes, oboes, drums or string instruments; the combination varies from country to country. In addition to their morphological similarity, the instruments of South-east Asian ensembles also have common functions, the most important being to accompany theatre and religious rituals (the two are often inseparable). They also have a common basic musical structure, and it is this that provides the most cogent argument for considering South-east Asia as a single musical area.

The underlying phrase structure of these ensembles is outlined by a rhythmic pattern played by a combination of bell and clapper. The rhythmic patterns are two or four beats long (or multiples of four, e.g. 8 × 2, 16 × 2 or 32 × 2). This pattern is repeated as often as the length of the piece or section requires.

(i) Hsaìng-waìng. In Myanmar the dominant outdoor percussion ensemble is the *hsaìng-waìng*. The term has two general meanings, referring both to the main instrument of the ensemble and, by extension, to the entire ensemble including that instrument. The drum circle is specifically called *pat-waìng*, although in common Burmese usage it is often called *hsaìng-waìng* as well. The *hsaìng-waìng* ensemble is the most characteristic one in Myanmar and is used for theatre performances, ritual and religious occasions or any festive occasion, such as the visit of a high government official. The instrumentation

1. Applying tuning paste to individual drums of the pat-waìng (drum-chime)

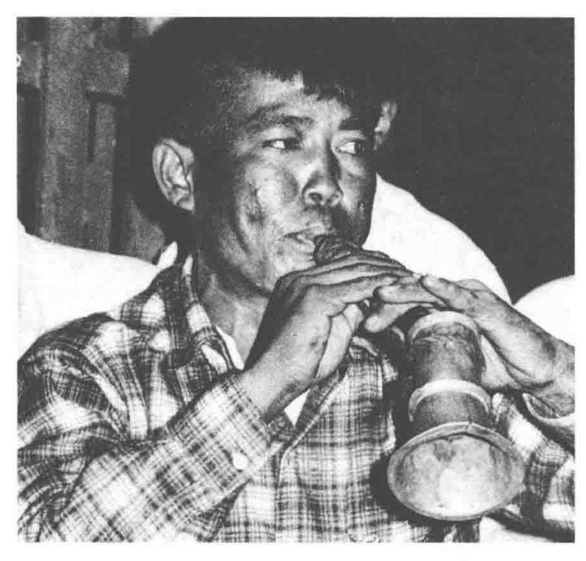
of the *hsaìng-waìng* ensemble can vary slightly and has evolved over time. The ensemble generally includes the *pat-waìng*, the *kyì-waìng*, the *maùng-zaìng*, the *hnè*, the *chauk-lòn-bat* and various punctuating instruments.

The *pat-waìng* is a drum-chime of 21 tuned drums suspended from the inside of a circular wooden frame (fig.1). The drums are made of wood with two laced heads and are 12 to 40 cm high. They have a range of more than three octaves. The wooden frame is approximately one metre high and is often ornamented with inlaid glass and painted gold. The player sits on a stool in the centre with only his head and shoulders visible from the outside. The drums are hung vertically within the frame so that the musician plays on the upper heads only. Unlike other Burmese and South-east Asian drummers who play rhythmic patterns on their drums, the *pat-waìng* musician plays melodies and the harmonic pitches required in the performance of traditional Burmese music. The *pat-waìng* drum circle, the leading instrument in the *hsaìng-waìng* ensemble, is rarely found outside Myanmar. A similar instrument has been recorded in Cambodia, but it uses fewer drums compared to the Burmese example. In India a circle of drums is depicted on temple reliefs. The presence of a similar instrument in ancient India, and the Burmese use of the Indian method of tuning drums with a mixture of cooked rice and ash applied to a painted brown circle on the upper head, indicate that the *pat-waìng* drum circle may be one of the few Indian musical instruments that survived the period of Indian influence in South-east Asia (*c*200–1000).

The *kyì-waìng* is a gong-chime of 21 small knobbed gongs set horizontally on a circular wooden frame (fig.2). This is one of the instruments common to South-east Asian percussion ensembles. The circular wooden frame, found in Myanmar, Thailand, Cambodia and Laos, contrasts with the straight row found in island South-east Asia (Indonesia, northern Borneo and the Philippines). Among the Mon people of lower Myanmar the instrument occurs in another form, with the small knobbed gongs suspended from a U-shaped, upright circular frame. An alternative name is *kyì-naung*.

The *maùng-zaìng* is a gong-chime of 18 or 19 small, horizontal knobbed gongs mounted in five rows on straight wooden frames (fig.3). These knobbed gongs are flatter and generally larger than those of the *kyì-waìng*. The rows, starting from the one closest to the musician, usually contain three, three, four, three and five or six gongs. The frames are laid flat on the ground except for the largest, deepest-sounding group, which is usually propped up. This instrument is said to be a recent development, perhaps dating from the 1920s or 30s.

The *hnè* is an oboe with a conical body. It may have a large, flared metal bell loosely attached to the end (fig.4).



Rhythmic instruments include the *chauk-lòn-bat*, a set of six drums that are used to play the rhythmic pattern

2. Kyì-waìng (circular gong-chime)

3. Maùng-zaìng (gong-chime), with pat-waìng (drum-chime) in the background

4. Hnè (oboe)

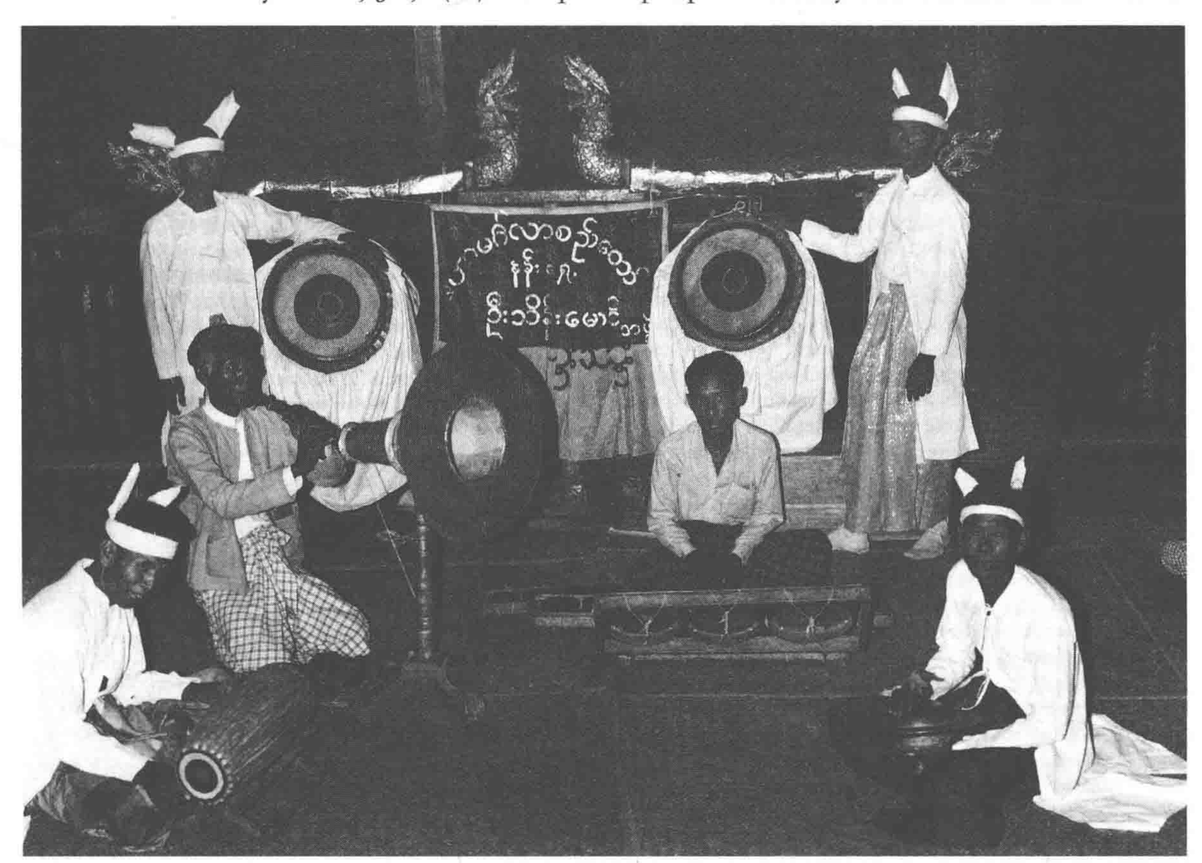
underlying melodic contours. The set consists of four barrel drums, the *sahkún* (a double-headed horizontal drum) resting on a low trestle, and the *pat-má* (large barrel drum) suspended from a rack; they are all played by one man.

Punctuating instruments include the *byauk*, a small, stick-beaten slit-drum; the *walet-hkok*, a clapper made from a piece of slit and hinged bamboo approximately 120 cm long; the *yagwìn*, cymbals approximately 30 cm in diameter; the *sì*, small hand cymbals approximately 3 to 5 cm in diameter (*see* SAÙNG-GAUK, fig.2); the *maùng*, a large, knobbed gong suspended vertically (fig.5); and a variety of different drums for special uses in particular pieces.

This represents the ideal *hsaìng-waìng* ensemble, but a village with a few resources or a small touring company of musicians and actors can play all the traditional repertory with a much reduced complement of instruments. A small *hsaìng-waìng* ensemble might include only the *pat-waìng*, the *kyì-waìng*, the *pat-má*, the *yagwìn*, the *sì* and the *hnè*. Indeed, depictions of earlier ensembles and even photographs taken during the early years of the 20th century often show only the *pat-waìng*, the *kyì-waìng*, *hnè* and one large barrel drum.

The *hsaìng-waìng* ensemble, playing music of great verve and impetuosity, is an essential adjunct to every kind of dance or drama performance at spirit-worshipping rituals in central Myanmar and at Buddhist ceremonies. There are many professional *hsaìng-waìng* troupes as well as innumerable amateur ensembles. Professional companies with dancers and actors are largely based in Yangon (Rangoon) or Mandalay. During the dry season (October to April) the professional troupes tour almost constantly, reaching the smallest villages at least once a year, the prosperous towns more frequently. The traditional repertory of the professionals is disseminated throughout the country and imitated more or less successfully by the smaller, poorly trained village ensembles.

There is a close relationship between music, drama, dance and poetry. Accompaniment of theatre performances and religious ritual is the primary function of the *hsaìng-waìng* ensemble. In a drama, pieces or motifs are used to denote specific situations: the hero meditating in the forest is accompanied by a particular tune, the entrance of a rough king is accompanied by one of a limited group of appropriate compositions. In a *nat-pwè* (spirit-worshipping festival) a series of 37 tunes is played, each accompanying the entrance and dance of an actor portraying one of the 37 principal spirits of Burmese animism. The musical signals of the *hsaìng-waìng* ensemble are well known to the Burmese audience, so that theatrical and ritual pieces carry semantic meaning relating to a character, a situation or a mood. In the theatre, specific compositions and types of performance have associations with certain types of dramatic action on the stage. There are certain song types associated with love scenes, scenes of departure, horses, elephants, demons, battles, chase scenes and even acts committed in stealth. The only extant treatise on Burmese music, the *Nara-lei-hká*, compiled in the 17th century, includes a list of the 37 ritual songs connected with the 37 Burmese *nat* (spirits).



(ii) Other instruments and ensembles. The *hsaìng-waìng* ensemble is the largest and most common of the ensembles used for outdoor music in Myanmar. Other ensembles that play for festivals and outdoor celebrations also take their names from the particular drums used. Each type of drum is used to play distinctive rhythmic patterns associated either with that instrument or with a particular festival. Among these drum ensembles are the *si-daw*, the *bon-gyì*, the *ò-zi*, the *dò-bat* and the *byàw*.

The *si-daw* (fig.6) is a pair of double-headed drums, 120 cm long and 60 cm in diameter, known as royal drums; they were played at royal ceremonies before the British occupation of Burma in the mid-19th century and are now played for important ceremonial occasions. One or more large *hnè* (*hnè gyì*), a *maùng-zaìng*, and a pair of cymbals may complete the ensemble.

The *bon-gyì* are double-headed drums about one metre long suspended horizontally across the chest of the musician and played on both ends. They are usually played in pairs, for rice-planting festivals or pagoda festivals, and may be joined by a *hnè*, *yagwìn* and *walet-hkok* or a full *hsaìng-waìng* ensemble.

5. Striking the maùng (large knobbed gong)

6. Si-daw ensemble from Mandalay with (from left to right) gandama (double-headed drum), hnè gyì (oboe), si-daw (double-headed drums, background), maùng-zaìng (gong-chime) and cymbals

The *ò-zi* are goblet-drums suspended vertically on the player's chest. A *palwei* (bamboo flute) or a *hnè* often accompanies the *ò-zi*, which are used for pagoda festivals or any kind of celebration requiring a procession. Often the drummer dances as he plays.

The *dò-bat* are small, double-headed drums of various sizes, suspended horizontally across the chest. Like the *ò-zi*, the *dò-bat* drums are played in villages throughout Myanmar. They may be used in a procession making collections for a Buddhist charity or at any time when a festive atmosphere is desired. *Dò-bat* drums are usually played with *hnè*, *yagwìn* and *walet-hkok*.

The *byàw* are large, double-headed drums played with sticks in a village when someone is giving alms, or in the paddy fields when rice seedlings are being transplanted. The *byàw* drums may be accompanied by *hnè*, *yagwìn*, *walet-hkok* and *kyì-waìng*.

Folk ensembles dominated by percussion instruments playing for theatricals, pagoda festivals or agricultural rites are familiar to all Burmese regardless of social status, wealth or education. Together with this vigorous tradition, however, the Burmese enjoy a chamber music tradition that is only slightly less widespread. Its instruments are softer, used singly or sometimes in pairs and played indoors, but the repertory is largely the same as that of the *hsaìng-waìng* ensemble. However, whereas the drum-dominated ensembles are always part of a large-scale event – a theatre performance or a youth's initiation into a Buddhist monastery – in which the music is functional and generally carries extra-musical semantic connotations, chamber music may be played and enjoyed for aesthetic pleasure alone.

(iii) History of the instruments. The earliest known document with references to music in Myanmar is a description of a troupe of musicians and dancers sent by the Pyu of lower Myanmar to the court of a Tang dynasty emperor of China in the 9th century. Possibly the Pyu had the same racial and cultural background as the ethnic group later called Burmese. In the Chinese chronicle no instrument resembling the *pat-waìng* drum-chime or the *kyì-waìng* gong-chime is mentioned: apparently only chamber music instruments and musicians were sent. This could mean either that the Pyu did not use the *hsaìng-waìng* ensemble, or that they chose to send to China only their softer-sounding instruments; possibly they felt that the music of the *hsaìng-waìng* was too closely associated with peasant rituals. In any case, some instruments now used as chamber instruments appear to be the same as some of the 9th-century Pyu instruments. The most important of the modern chamber instruments was one of those sent to China, the *saùng-gauk* (arched harp; see §3 below). Another instrument still played that was sent to China is the *mí-gyaùng* (crocodile-zither), a long, narrow zither in the shape of a crocodile. Three metal strings pass over eight to ten raised movable frets on the flat belly of the instrument. This Burmese zither is related to similar instruments distributed widely in South-east Asia. While the crocodile shape is not always found elsewhere, the reptilian name remains in variants such as

the Thai *čhakhē* ('alligator', wooden tube zither) and the Indonesian *kacapi* (board zither). In Myanmar the *mí-gyaùng* is associated with the Mon, an ethnic group in southern Myanmar linguistically related to the Mon-Khmer peoples of Thailand and Cambodia.

Among the other instruments sent to China were two *hnyìn* (also called *can, khene, khāēn*), free-reed mouth organs with two rows of eight pipes each, the longest pipe being about 1·5 metres long, closely related to the Chinese SHENG and the Japanese SHŌ. Although this instrument is no longer used by the Burmese, it is widespread among the tribal peoples of highland Myanmar and elsewhere in South-east Asia. The *pat-talà*, a trough xylophone with 21 keys suspended over a curved, boat-shaped resonator, is widely played now as a chamber instrument but was not mentioned in the Tang dynasty chronicle. It is related to the *ranāt ēk* of Thailand and the *gambang* of Java and is often used to accompany the voice or is played with the *palwei* (end-blown flute). The *don-mìn*, a zither directly related to the Thai *khim* and ultimately to the Persian *santur*, is also a popular instrument for traditional music or for newly composed tunes.

Western instruments that have been adopted by the Burmese are the violin, the Hawaiian guitar, the piano, the trumpet and the clarinet. The violin and the guitar, played with a sliding bar or rod in the Hawaiian style, are easily adapted to the traditional Burmese tuning system, but the retuning necessary to make the piano acceptable is more difficult. The violin replaced an older bowed fiddle (*hùn tayàw*) that has completely disappeared from Myanmar. It appears to have been similar in structure to the Thai *sǫ ū* or Javanese *rebab*.

2. CLASSICAL VOCAL MUSIC. Burmese classical vocal music consists of one repertory, with two different formats for interpretation and performance. The repertory comprises several hundred traditional classical songs, clearly categorized, whose texts are contained in two large, regularly printed anthologies, the *Maha Gi-tá* and the *Gi-tá Wí-thàw-dani*. They are usually available in several editions and are basic reference works for all classical musicians. Most professional musicians know all the songs in this repertory of several hundred compositions, and many musicians often know several versions of many of the pieces. In addition, special theatrical compositions and newly composed pieces based on older texts derive their content and style from the traditional repertory. Most songs in the *Maha Gi-tá* and the *Gi-tá Wí-thàw-dani* are known as *thachìn-gyì* ('great songs'). Both works contain essentially the same song texts, although certain texts are found only in one and variants of the same song occur in each. The *Maha Gi-tá* and *Gi-tá Wí-thàw-dani* contain only song texts; the melodies, fixed harmonic accompaniments and various instrumental interludes and introductions are all transmitted by oral tradition.

Both collections are organized according to song types. In both, the first three song types form the core of the *thachìn-gyì*; they are the old court songs and are the basis of the classical literature. The first category is called *kyò*, which means 'string'; these elementary pieces were traditionally taught to apprentice harpists. The first piece in both books is called *Pazìn taung-than kyò* ('The *kyò* of the sound of the dragon-fly's wings') but is generally referred to by the words of the first line, *Htan-tya-tei-shin*; the song includes verbal imitations of the sound of the *hsaìng-waìng*. The student then progresses to the second *kyò*, called *Thi-da* ('The river'), and on through the first 13 *kyò*. These songs are said to have been played when the king travelled in the royal barge (see also §3 below). The *kyò* songs are graded, making more frequent use of modal modulations and requiring more complex vocal and instrumental patterns as they increase in difficulty. Both *hsaìng-waìng* players and chamber music players still learn the basic *kyò* songs before attempting the more difficult repertory.

The second category, *bwé*, and the third category, *thachìn-gan* or *thachìn-gán* ('elegant', 'noble'), include songs eulogizing the court and king. These first three categories form the basis of the classical repertory and are all set in the basic mode known as *hnyìn-lòn* by chamber music players and *than-yò* by *hsaìng-waìng* musicians. (Table 1)

The *pat-pyò* form by far the largest group in the collections; each book contains over 200 such songs. They are regarded by traditional musicians as the most complex and challenging of all *thachìn-gyì* songs: they were the old popular songs of the court and as such contain frequent quotations from other forms of music, so that the singer or instrumentalist must be familiar with the rest of the repertory to interpret them properly.

Another large song category in the traditional collections is *yò-dayà*. These songs, reputedly of Thai origin, date from the 18th century, when the Burmese king invaded Ayutthaya (Burmese: Yò-dayà), the ancient Thai capital. To Thai musicians, songs in this category sound unlike Thai music, but they are said to have resulted from the abduction of Thai musicians from Ayutthaya to the Burmese capital and the adaptation by Burmese musicians of their ancient music. *Yò-dayà* songs are usually performed in the mode *palè* (called *pat-sabò* by *hsaìng-waìng* musicians).

The *kyò*, *bwé*, *thachìn-gan*, *pat-pyò* and *yò-dayà* categories constitute most songs in the *Gi-tá Wí-thàw-dani* and *Maha Gi-tá*. Of the remaining categories, the *myìn-gìn* is a song in praise of the elegance and beauty of horses, performed instrumentally to kindle the spirits of the royal horses before battle. It was later used as a dancing exercise for the horses and is now always played in the theatre whenever there is need for a motif alluding to horses. A parallel to the *myìn-gin* is the *hsin-gìn*, a song used to make the elephants dance.

There are also about 30 short songs known as *nat-chìn*, usually associated with the worship of the Burmese spirits, and a small group of *mon* or *talaìng* songs, the latter derived from a Mon-Khmer group, once powerful in Myanmar, which survives as an ethnic minority around the city of Moulmein. Several groups of short strophic songs, in which the melody varies only slightly with each

TABLE 1

Animal symbols	*Terminology of the Burmese harp*	*Terminology of the hsaìng-waìng ensemble*
peacock	du-raká	chauk-pauk
bull	pyi-daw-byan	than-bauk
goat	myin-zaìng	ngà-bauk
crane	palè	pat-sabò
cuckoo	auk-pyan	leì-bauk
horse	chauk-thwe-nyún	hkun-nathan-gyi
elephant	hnyìn-lòn	than-yò

repetition to accommodate text changes, include the lament *bàw-le* and the *teì-dat* and *deìn-than*. There is also a small group of texts for the *si-daw-than* (*si-daw* music) and several different types of classical song, often sung without accompaniment. These are the laments or 'crying songs', *lùn-gyìn* and *aing-gyìn*, and other types of short unaccompanied song, *yadú*, *yagan* and *è-gyìn*.

These songs comprise a broad and varied collection of different types of music: the core of the old repertory found in the first three categories, old popular court songs *pat-pyò*, the lovely and clearly articulated *yò-dayà* songs, various forms of lament and short strophic songs, ceremonial pieces such as the *si-daw* and *myìn-gìn* and various types of unaccompanied song used in the theatre or as individual songs. The *thachìn-gyì* in these two works are thus not simply a collection of classical songs but include samples of the entire range of Burmese classical music, including the various theatrical, ceremonial and entertainment genres.

3. The Burmese harp ('saùng-gauk'). Two types of arched harp still exist in Myanmar. One, made by Karen and Mon hill peoples in the lower part of the country bordering Thailand, has five to seven strings tuned with pegs (see T. and T.A. Stern, 1971). The other, long associated with the Buddhist royal dynasties of Burma, is the ornate, 14-string *saùng-gauk*, traditionally tuned with cords encircling the arch, though now commonly tuned with pegs. The arched harp was the most esteemed of the Burmese royal court instruments. After the demise of the courts, the harp tradition has continued at the State School of Fine Arts in Mandalay. (For a discussion of the instrument's construction and history *see* Saùng-gauk.)

In performance (*see* Saùng-gauk, fig.2) the player braces the fingers of the left hand against the arch, shifting them agilely up and down; the left thumbtip with squared nail is placed against the string from the inside to raise the pitch or to produce frequent embellishments. The thumb may pluck from the inside in order to double octaves. The index finger and thumb of the right hand activate the strings from the outside in the centre of their length, separately or in pairs. A complex damping technique is also employed.

The oldest *kyò* ('string', possibly indicating the early use of the harp in song composition) songs are thought to have been popular at court in the early 14th century. Later, a set of 13 *kyò* were arranged in order of difficulty as basic training for musicians (see §2 above). Of these, no.6 (*Hpaung Là Kyò*), the first of three 'barge songs' said to describe an early king's ceremonial voyage in about 1370 from Ava up-river to ancient Tagaung, is the oldest known Burmese classical song.

Poems were written in a chosen form and then arranged by the harpist and singer in the melodic and metric patterns of the poems' assigned tuning and class. There is no evidence of musical notation until Western influence took effect in the 20th century, and songs were arranged for piano or xylophone. Theoretical concepts have reinforced oral transmission: metre is determined by *wà* (clappers) sounding the strong beat, and *sì* (hand cymbals) the weak beat. Symbols for each (Mandalay, o = *wà*, x = *sì*; Yangon, x = *wà*, o = *sì*), when placed over syllables of the poetic text, indicate the song's metric framework (Table 2). Most *kyò* songs are accompanied by pattern 1 and *yò-dayà* songs by pattern 2. Though syncopation occurs in the harp part, and caesuras and rubato characterize the singer's style, the metric pattern of a piece remains stable except in ad lib interludes and codas.

A hierarchy of open 5ths that originated in the oldest harp tuning (*hnyìn-lòn*), but is present in them all, defines the five tonal levels of the *tì-gwet* (instrumental patterns). Each tonal level consists of an open-string pitch and its *meik* ('concordant') a 5th above, and is named after the Burmese modal number of its root, with *pauk* (from *apauk*, 'hole') and *tàw* (from *atàw*, the solo instrumental cadential formula): No.1, *tabauk-tàw* (Western scale degree 1–5); No.6, *chauk-pauk-tàw* (3–7); No.5, *ngà-bauk-tàw* (4–1); No.4, *leì-bauk-tàw* (5–2); No.2, *hna-pauk-tàw* (7–4). The five levels are learnt by rote in the first three *kyò* songs (ex.1), composed by Wun-gyì Padei-thá-ya-za (*b* 1672). Names of important intervals, melodic patterns and note names of a movable 'do' system (Williamson, 'Aspects of Traditional Style . . .', 1975, p.119) are also learnt in these songs that constitute the student's introduction to Burmese musical theory. (For information on harp tunings *see* Saùng-gauk, ex.1 and ex.2).

Burmese musicians think of their music in a linear way. Governed by the beat of the singer's *wà* and *sì*, the harpist plays independently, following the vocal line or playing against it, in the *tì-gwet* of the tuning, with solo *atàw* concluding each couplet or stanza, as indicated in the song text. The *atàw* is typically announced by the singer's *than-gyá* ('fall of sound') to the upper pitch of the desired level, and confirmed by root and 5th in the short or lengthy *atàw* of the harpist (ex.2). Modulation between *atàw* levels is called *than-byaùng* (Mandalay: 'sound shift', or 'shift of pitch') and remains within the tuning.

As noted above (see §2), song texts have been published in several editions. *Gi-tá Wí-thàw-dani Kyàn* includes 535 texts, indexed by harp tuning and song class (see Table 1 above). Songs in *auk-pyan* tuning, particularly seasonal songs and love songs, are characterized by long closing sections (*thahpyan*) in ad lib rhythm, with virtuoso harp cadenzas. Those in *palè* tuning, including the *yò-dayà*, the *talaìng* (*mon*), the *bàw-le* and the *than-zàn* ('new songs'), have a brilliant harp style in a faster tempo. The *teì-dat* and the *deìn-than* of mode *myin-zaìng* also require florid harp accompaniment.

In the late 18th century and throughout the Kòn-baung dynasty, members of the royal family, ministers and musicians at court composed songs and became renowned

harpists, including Prince Pyin-si, Princess Hlaing-hteik-hkaung-tin, Myá-wadi Wun-gyì Ù Sá (the most prolific of all composers), Ù Maung Maung Thaik, Daw Thu-za, King Thi-bàw and Ù Maung Maung Gyì, harpist for the last two kings (his pupils are indicated * below). During this period a virtuoso style of playing developed, characterized by faster tempos, long solo intoductions and interludes between stanzas, brilliant cadenzas and *athan-zàn* passages in free time and improvisational style. Eminent harpists of the early 20th century included Ù Maung Maung Lat*, Ù Sein Bei-da*, Ù Hpù-Gaung (Shan States), Daw Sàw Myá Eì Kyi* and Daw Hkin Hkin Galeì*. Mid-20th century and contemporary harpists in Yangon include Ù Bá Thàn, Ù Sein Hpei, Daw Myá Thwin* and Daw Tin Gu; in Mandalay Daw Hkin Mei*, Ù Bá Myín (pupil of Ù Sein-Bei-da and Ù Maung Maung Lat) and Ù Myín Maung, until 1996 staff harpist at the State School of Fine Arts (pupil of Daw Hkin Mei and Ù Bá Than).

4. Theory. Little written information exists on Burmese music theory or practice in either Burmese or any other language. The complex theoretical tradition is orally transmitted as a musician learns the repertory; as each composition is learnt, the increasing complexities of the system are further defined.

The basis of the Burmese tonal system is seven fundamental pitches from which all music is composed, each of which has its own name and associated animal. In some cases, however, vocal notes are not expected to correspond precisely with those of the fixed-pitch instruments. The basic seven notes may also be modified depending on the instruments used: one tonal system is used for the *hsaìng-waìng* ensemble, another for the *saùng-gauk* another for chamber music instruments; (Table 3), a fourth, the Western tempered system, is now also used and accepted as a medium for performing traditional Burmese classical music.

The pitches in the Burmese *hsaìng* system are identified by numbers in descending order. Pitch names in general use among musicians are derived from the finger-hole names of the *hnè*, and are as follows: *than-hman* ('correct sound'), tonic or fundamental; *hnapauk* ('second hole'), seventh degree; *thòn-bauk* ('third hole'), sixth degree; *lei-bauk* ('fourth hole'), fifth degree; *ngà-bauk* ('fifth hole'), fourth degree; *chauk-pauk* ('sixth hole'), third degree; and *hkun-nathan-gyì* ('great seventh sound'), second degree.

The two traditional tonal systems of Burmese classical music differ not in intervallic structure but in fundamental pitch. Chamber music players of the *saùng-gauk* and *pat-talà*, for example, use a *than-hman* one degree higher than that used by the *hsaìng-waìng* musicians. Chamber music players now tend to tune *than-hman* close to the pitch D, and the *hsaìng-waìng* musicians tune it closer to C♯. Compared with the Western diatonic series, the seven-note Burmese series usually has somewhat lower seventh and third degrees, as well as a raised fourth, giving an impression of an equidistant tuning. However, equidistance is never mentioned by Burmese musicians. Certain Western scholars may have been led to attribute it to the intervals of the Burmese heptatonic system because they seem more nearly equidistant than those of the Western diatonic system. When Western instruments were first used by Burmese traditional musicians they were retuned to the intervals of the Burmese system. But when the piano is used now, Western tuning may be retained so that the pianist can take advantage of the chromatic intervals to suggest vocal notes not ordinarily available for modes played on traditional instruments.

There is no exact word for the various tonalities or modes in Burmese music. They are generally referred to as tones (*athan*). But the manner in which they are used

strongly suggests that Burmese musicians recognize unique qualities for each of them, something that might not occur if each was merely a transposition of the other at another pitch. Each of these *athan* in Burmese music uses all the seven pitches but emphasizes five of them as basic pitches of the mode; the other two are regarded as secondary. The tuning of the two most important Burmese instruments, the *pat-waìng* (drum circle) and the *saùng-gauk* (arched harp), best demonstrates this system of primary and secondary pitches. These two instruments must retune for each *athan*. The upper range of the *pat-waìng* remains basically the same for all modes and uses all seven pitches, but the lower range must be retuned to produce the five different primary pitches of each *athan*. On various other Burmese instruments, such as the *pat-talà* or the *kyì-waìng* and *maùng-zaìng*, all seven pitches are available, and there is no need to retune for each mode; the player simply omits certain pitches, playing only the primary pitches of the mode. Nevertheless, these instruments are usually played in a style similar to that of the *pat-waìng* and *saùng-gauk*. The five basic pitches of the mode are emphasized in the low range by omitting the secondary pitches, which are used primarily in the high register of the instrument and have the character and quality of passing notes, suspensions or appoggiaturas.

The names of the *athan* for the *hsaìng-waìng* are different from those for chamber music instruments. Table 4 gives only the five basic pitches of the low range of the *pat-waìng*. It is assumed in every case that all seven notes are available and are used as secondary pitches on the *pat-waìng* in the upper register and on the gong instruments and *hnè* throughout the range. Some musicians consider that C is actually a secondary rather than a primary note in the mode *hkun-nathan-gyi*.

The *athan* names used by *hsaìng-waìng* musicians are functional rather than theoretical and include some that are tunings for the *pat-waìng*, intended to make certain pitches more easily available in the low register of the drum circle. *Hsaìng-waìng* tunings, with the exception of *than-yò hnapauk* and *ngà-bauk auk-pyan*, can be grouped into two basic types according to the placing of secondary pitches and the intervals between primary notes. These two types are given inTable 5 with the secondary pitches indicated by an S.

Both *hsaìng-waìng* and chamber musicians create new modal structures by shifting the tonal emphasis from one

TABLE 4

Mode	*Pitch*				
than-yò chauk-pauk	1	3	4	5	7
	C	E	F	G	B
hkun-nathan-gyi	1	3	4	5	7
	G	B	C	D	F

pitch to another within the same tuning. In this way two new modes, *chauk-pauk* and *hnapauk*, are created from the *than-yò* tuning. *Hsaìng-waìng* musicians use another modal practice when they accompany a singer whose voice cannot comfortably reach all the pitches of a composition: the *pat-waìng* player retunes the drums to produce the desired mode at a different pitch level. For example, *than-yò* can be transposed up either one degree to *hkun-nathan-gyi* (D) or down one degree to *hnapauk* (B). But the musicians prefer not to use this solution since it is impossible to retune the gongs; a different combination of gongs has to be used, and the resulting pitch structure does not produce an accurate transposition of the mode as conceptualized by Burmese musicians. In rare cases, compositions in one mode are performed in another mode; this transposition, called *than-dì*, is not prevalent in the traditional repertory and is more suitable for some compositions than others.

The *pat-talà* (xylophone), like the *kyì-waìng* and other gong-chimes, includes all seven pitches. When the *pat-talà* is used to accompany the voice, its tuning terminology follows the system used for the *saùng-gauk*. The *saùng-gauk* may be used to accompany the voice or may be performed as a solo instrument. Like the *pat-waìng* it can be freely retuned to any modal system; unlike the *pat-waìng* it is not restricted by other accompanying instruments in its ensemble. Although this would permit the ideal Burmese tuning system, in contemporary practice Burmese harpists tend to be more influenced by modern European tuning than *hsaìng-waìng* musicians. In theory the modes used for the *saùng-gauk* are thought of as being arranged with their fundamentals forming a circle of 5ths, with seven 5ths completing the octave. Most *saùng-gauk* musicians now use only the first four modes, and most traditional classical compositions are played in these. Several harpists, however, do play in all seven *athan*.

The *pat-talà* is taught as a beginner's instrument by *hsaìng-waìng* musicians as well as being used in chamber music. When it is used by the *hsaìng-waìng* musicians, its fundamental pitch, *than-hman*, is tuned to C or C♯. Chamber musicians tune the *pat-talà* to the higher pitch. For purposes of comparison, *hnyìn-lòn* and *than-hman* are given in Table 6 as beginning on the pitch C. Although the fundamental pitches of all seven modes are theoretically available on the *pat-talà*, in practice most *pat-talà* players prefer to use only the pitches *than-hman*, *leì-bauk* and *ngà-bauk* as fundamentals. The interval structures produced by starting on other fundamental pitches are

TABLE 6

Saùng-gauk name		*Hsaìng-waìng and pat-talà pitch name*
hnyìn-lòn	(C)	than-hman
auk-pyan	(F)	ngà-bauk
palè	(B)	hnapauk or pat-sabò
myin-zaìng	(E)	chauk-pauk
du-raká	(A)	thòn-bauk
chauk-thwe-nyún	(D)	hkun-nathan-gyi
pyi-daw-byan	(G)	leì-bauk

too far from the contemporary modal ideal to be considered usable. Although the human voice is considered the ideal medium for performance of Burmese music, instrumental accompaniment is an integral part of the song tradition. The basic structure of the accompaniment pattern is fixed and rigidly transmitted by oral tradition but can easily be amplified and ornamented by skilful musicians.

'Natural consonances', which the Burmese regard as their form of harmony, are essential to the accompaniment patterns of traditional Burmese songs. The natural consonance for any pitch is the pitch a 5th below. These consonances are used as simultaneously sounding concordances, and frequently in cadential phrases (*ataw*) the supporting pitch alternates with the main pitch in a variety of melodic patterns emphasizing the main pitch. Generally the upper range of the instrumental part carries the melody while the lower range sounds the concordant notes and octaves, weaving them into a complex, secondary melodic line. The texture of this traditional two-part instrumental pattern is best thought of as an amplified single melodic line, rather than as truly polyphonic. The texture uses suspensions and appoggiaturas, octaves and 5ths as concordances, and frequently both parts combine in a single melodic line for rapid and complex melodic passages. This two-part instrumental style is the basis of the playing technique for the *saùng-gauk*, *pat-talà* and *pat-waìng*, as well as the gong-chime instruments. A subtle aspect of the Burmese modal system is the effect of microtonal intervals produced at times by slight modification of the secondary pitches in the *hnè*, *palwei* or vocal line.

III. 20th-century practice

Burmese musicians have not felt obliged (unlike the musicians of other South-east Asian countries, e.g. Thailand and Indonesia) to develop a notation for their traditional music. While some Burmese musicians have attempted to reduce Burmese music to Western staff notation, the results are neither widely known nor considered authoritative. Innovation within the tradition is occurring, however, as exemplified by a series of recordings, issued by the government, of modern compositions with alternating sections played by the *hsaìng-waìng* ensemble and the *saùng-gauk* (arched harp), a non-traditional combination of a percussion ensemble with a chamber instrument. Some musicians have been attempting to devise a digital system for recording Burmese music by taking advantage of the possibilities offered by MIDI technology.

In the 1940s schools of the fine arts were established in Yangon (Rangoon) and Mandalay, where musicians from all parts of the country are supported while learning the traditional repertory and improving their instrumental skills. These schools send teachers of the classical tradition to other parts of Myanmar and often contribute members to the touring *hsaìng-waìng* theatre troupes. Western popular music is performed, recorded and emitted from radios and loudspeakers throughout Myanmar, but indigenous traditions appear much more viable. Western forms popular among the young have the same meanings and associations as traditional forms, with close connections to the history of Myanmar, rites of passage, dramatic forms and religious rituals. However, the mass media dissemination of newer popular forms continues, sometimes at the cost of the older forms.

ROBERT GARFIAS (I; II, 2 and 4); JUDITH BECKER/ROBERT GARFIAS (II,1; III); MURIEL C. WILLIAMSON (II, 3)

Myaskovsky, Nikolay Yakovlevich (*b* the fortress of Novo-Georgiyevsk [now Modlin], Poland, 8/20 April 1881; *d* Moscow, 8 Aug 1950). Russian composer, critic and teacher. He received his first piano lessons as a child at home, but following in the family tradition (his father was a military engineer and subsequently a professor of the Military and Engineering Academy in St Petersburg) he studied at the cadet corps at Nizhniy-Novgorod (1893–5) and St Petersburg (1895–9), and then finally at the St Petersburg Military and Engineering College (1899–1902). During these years he sang in the choir of the cadet corps, took lessons on the piano and the violin, and played in an amateur orchestra. His first attempts at composition were made at the age of 15 and consist of a group of piano preludes (all written over the period 1896–8). After completing his military studies, he began his service in a Moscow sappers' battalion. On the recommendation of Taneyev he took lessons in harmony from Glier (January–May 1903), and after his transfer to St Petersburg in the autumn of 1903, he studied counterpoint, musical form and orchestration under Krïzhanovsky, a pupil of Rimsky-Korsakov. In 1906 he entered the St Petersburg Conservatory, where he studied composition with Lyadov, orchestration with Rimsky-Korsakov's class and form with Vītols. A year later he resigned his commission and began work in one of the civilian offices. For his graduation examination at the conservatory (1911) Myaskovsky presented two string quartets and the suite for voices *Madrigal*, op.7, setting poems by Bal′mont. However, he had already set out his artistic credo in *Razmïshleniya* ('Reflections'), a cycle of seven songs after Baratïnsky, op.1 (1907). The *negromkiy golos* ('quiet voice') and the *nezvonkiye strunï* ('muted strings') which characterize the literary environment of Baratïnsky, the composer's favourite poet, proved to be particularly harmonious with Myaskovsky's musical thinking. He had also won acclaim with his romances on poems by Zinaida Hippius, op.4, which were first heard in December 1908 at one of the Evenings of Contemporary Music held in St Petersburg. That same year he wrote his First Symphony, op.3, a work that defined the subsequent direction taken by the composer of 27 symphonies: 'I felt that it was in this sphere that I would always be able to express myself with the greatest readiness' wrote the composer in his autobiographical notes of 1936. The year 1911 saw Myaskovsky's début on the concert platform: the symphonic poem *Molchaniye* ('Silence'), op.9, after Edgar Allan Poe was first heard at a Moscow concert that summer. A year later, again in Moscow, his Second Symphony, op.11 was first performed. His composing career continued to develop primarily along orchestral lines with the Sinfonietta, *Alastor*, a symphonic poem after Shelley, and the Third Symphony of 1914. In the summer of 1911 Myaskovsky began his work as a music critic in the pages of the Moscow weekly *Muzïka*, edited by Derzhanovsky. The numerous notices, reviews, listings of music publications, the round-ups of the musical life of St Petersburg that appeared between 1911 and 1914 pushed the young critic into the front ranks of Russian writers on music. Articles such as 'Betkhoven i Chaykovsky' ('Beethoven and Tchaikovsky', 1912) and 'N.

Metner: vpechatleniya ot yego tvorcheskogo oblika' ('Nikolay Medtner: impressions of his creative persona', 1913) reflect the way that the composer contemplated the musical world around him.

With the outbreak of the World War I Myaskovsky, a reserve officer, was immediately mobilized and sent to the Austrian front. There he was on the front lines almost constantly, and only after suffering shell-shock during the last year of the war was he sent to help build the naval fortress at Reval in Estonia. After the October Revolution he was transferred by the Soviet command to the Naval General Staff in Petrograd, and in 1918 he moved with it to Moscow. That same year the composer's father died in tragic circumstances: as an engineer and general of the Russian army, he was torn to pieces by the 'revolutionary' mob. This conflict later found musical expression in Myaskovsky's Sixth Symphony: the finale of the symphony relies on the contrast between songs of the French revolution (the 'Carmagnole' and 'Ça ira') and an old Russian sacred chant 'O rasstavanii dushi s telom' ('On the Parting of the Body and Soul') the title of which is of obvious significance. After final demobilization in 1921, Myaskovsky was invited to teach at the Moscow Conservatory, where he remained as professor of composition for 30 years up to the time of his death. An outstanding teacher, he lead the Moscow school in the footsteps of Taneyev, and trained scores of talented musicians. His pupils included Boris Chaykovsky, Kabalevsky, Aram Khachaturian and Shebalin. Myaskovsky became one of the leading figures in the musical life of Moscow. From 1919 to 1923 he was a member of the Moscow Composers' Collective and during the 1920s was actively involved with the Association of Contemporary Music. In later years he was a member of the Organizing Committee of the Soviet Composers' Union. He served on the editorial boards of the journal *Sovetskaya muzika* and of the State Music Publishers; he was also a consultant of the Moscow Philharmonia. By the middle of the 1920s performances of his fifth (1918) and sixth (1922–3) symphonies in Russia and abroad had brought the composer international fame. Myaskovsky distinguished himself by his erudition, professional and moral authority, and selfless interest in the creative work of his colleagues and pupils. It is not by chance that he was called the musical conscience of Moscow. He received the award Honoured Representative of the Arts of the RSFSR (1927), Doctor of Arts (1940), People's Artist of the USSR (1946), and was a laureate of Stalin prizes in the 1940s and 50s. These awards and decorations gave the illusion of a successful and harmonious existence. Too much significance should not, however, be ascribed to the mandatory declarations made by the composer during the Soviet era. His pronouncements in the press – as well as the few compromises he made in his work – were probably the result of a forced tribute to Soviet officialdom. Still less account should be taken of the awards foisted on the composer, the dedications, and especially of the various ideological interpretations of his works. As with Pasternak in literature, Myaskovsky in music represented the phenomenon of inner emigration, a form of spiritual resistance to a suppressive regime. This resistance never took the form of active dissidence, but party critics and the ideological authorities vigilantly identified in the Sixth Symphony 'intellectual outbursts' that were alien to the working class, 'abstract humanism' and 'an overblown and woeful psychologism'. Similarly, they criticized the Seventh Symphony (1922) for sinking into an 'abyss of subjectivism', the Tenth (1927) for its 'morbid expressionism' and its 'conception of individualistic pessimism'. The 13th Symphony (1933) was labelled a 'symphony of torments' and was bestowed with adjectives such as 'dark, gloomy, nervously-expressive and in places weighed down by depression'. The 26th Symphony (1948) based on old Russian themes was also rebuked for its 'gloominess'. A number of Myaskovsky's best, but insufficiently 'objective' symphonies, failed to conform to the canonized genre of the 'optimistic tragedy' and thus were ostracized and were excluded from the concert repertory for decades. It is not surprising that in 1948, along with Prokofiev and Shostakovich, Myaskovsky was one of the main targets of the celebrated party resolution on 'formalism' in music.

Myaskovsky was a typical introvert; for him, concealing and especially suppressing the subjective element of composition, so necessary for the stimulation of what he described as the 'fermenting agent', was destructive and could sap the music and bleed it to death. With the appearance of the Fifth Symphony, two trends subsequently developed alongside each other. One line ran from the Fifth Symphony (taking only the most prominent examples) to the eighth, 12th, 14th, 16th and to some of the symphonies of the late 1930s and 40s, which at times resemble suites. Here Myaskovsky comes closest to the lyrical and epic style of Balakirev, Borodin and Rimsky-Korsakov. The other line, reflecting the saturated inner world of the composer, appeared at its most potent in the sixth, seventh, tenth and 13th symphonies. Here Myaskovsky perpetuated the line of earlier compositions such as *Alastor* and the first four symphonies; compositionally, he can be seen as an heir to Romantic symphonism and to Tchaikovsky in particular in these works. At the intersection of these lines we find, on the one hand, the popular 21st and 27th symphonies and the Cello Concerto, and on the other hand, the 26th Symphony, which, together with the 27th, forms the composer's swansong. The symphony was incontestably Myaskovsky's principal genre and in his works in this form there can be seen a concentration of his artistic thoughts and a kind of testing ground for various experiments in form, texture and melodic language. His 27 symphonies, a number scarcely matched since the Classical era, form a unique autobiography of the composer. Another link with 18th-century composers resides in Myaskovsky's eagerness to express himself through the medium of the quartet. His first quartet in F major (later revised and published in 1945 as no.10, op.67) was written in the summer of 1907 when he had only just entered the conservatory, while he wrote his 13th Quartet at the very end of his life. Various chamber and solo instrumental genres fulfilled the role of 'travelling companions' for his symphonies: if the first ten symphonies were accompanied by large-scale piano sonatas, then later the string quartet performed this function. Like the symphonies, the quartets reveal many general and characteristic features in the evolution of the composer's style and the symbiosis of the two genres rendered the last two decades of Myaskovsky's life especially productive.

Myaskovsky's contemporaries, Stravinsky and Prokofiev, attempted to brashly overturn tradition while courting critical fury and public outrage. Whilst sympathizing with everything progressive in art, Myaskovsky did not ascribe

particular nor independent significance to what in his own words he called 'the last word in musical technique and invention'. He sought to forge a path from 'the living past of Russian music, through the stormily pulsating present to the prophetic gift of the future' (Boris Asaf'yev). The 'muted strings', the reticence, the austere reserve of his expression presupposes in the listener a reciprocal concentration and a tendency towards a philosophical disposition, but these traits promise for Myaskovsky's music a muted but enduring glory.

IOSIF RAYSKIN

Mychelson, ?Robert (*fl* 1490–1505). English composer. A five-voice *Magnificat* with a compass of 22 notes, now lost, was attributed to him in the Eton Choirbook (*GB-WRec* 178). He is probably identifiable with Robert Michelson, lay clerk at St George's Chapel, Windsor Castle, who arrived at Windsor on or shortly before 21 December 1492, was listed 16th among the clerk-members of the City Fraternity of St Nicholas in 1493, and was still present at Windsor in September 1504. The composer is probably not identifiable with the John Michelson who was a clerk at the chapel of St Thomas, London Bridge, between 1528 and 1538.

MAGNUS WILLIAMSON

Mycielski, Zygmunt (*b* Przeworsk, 17 Aug 1907; *d* Warsaw, 5 Aug 1987). Polish critic and composer. His initial education in Kraków was followed by composition studies with Boulanger and Dukas in Paris, where he lived from 1928 to 1936. He was an active member of the Association of Young Polish Musicians, and became a close friend of Karol Szymanowski. During World War II he saw active service in Poland and in France, before being interned as a prisoner of war. On repatriation, he took a leading role as a music critic; his political and aesthetic views, however, were not always in tandem with those of the state. He was editor of *Ruch muzyczny* (1946–8) and later its editor-in-chief (1962–8). In his capacity as President of the Polish Union of Composers (1948–50) he was prominent at the 1949 Łagów conference on socialist realism in music. His collected essays and articles are significant commentaries on postwar musical life in Poland.

As a composer, he was indebted to the music of Szymanowski's late period (*Lamento di Tristano* is dedicated to his memory). The fresh and spirited language of Mycielski's prizewinning *Symfonia polska* (1951) recalls Panufnik's *Sinfonia rustica* of a few years earlier, even though the latter was banned at the time. His reaction to the avant-garde expression of the late 1950s was moderate: his subsequent symphonies, despite dodecaphonic elements, are still dominated by neo-classical and folk impulses. A strong and often syncopated rhythmic drive characterizes his instrumental music, while the return to choral music in the last years emphasized the more sombre and anguished aspects of his personality.

WORKS

ADRIAN THOMAS

Myco, Richard. *See* MICO, RICHARD.

Myers, Rollo (Hugh) (*b* Chislehurst, 23 Jan 1892; *d* Chichester, 1 Jan 1985). English music critic, writer on music and translator. After studying at Oxford and for one year at the RCM, he worked as a music correspondent in Paris for *The Times* and the *Daily Telegraph* (1919–34). He returned to London in 1935 and worked in the information department of the BBC until 1944, then went back to Paris in 1945 as music officer for the British Council. After 1945 his life alternated between London and Paris; he was the editor of *The Chesterian* (1947–50) and worked as a music journalist and editor. His final post was with the Organization for European Economic Cooperation. He also made translations of vocal works by Milhaud (1949–57) and Honegger (from 1953).

As an enthusiast of Gallic music and culture, Myers played an important role in promoting the music of Debussy, Satie and their French contemporaries to English audiences and in drawing attention to the impact of symbolism, impressionism and cubism on music. His books were for many years the standard works in English on their subjects and remain important texts.

ROSEMARY WILLIAMSON

Myers, Stanley (*b* Edgbaston, 6 Oct 1930; *d* London, 9 Nov 1993). English composer. After leaving Oxford University he began his professional career in the 1950s writing songs for cabarets, among others working with Joan Littlewood's Theatre Workshop, and acting as musical director for West End shows, including *Grab Me a Gondola* (1956), before composing for BBC television plays from about 1964. In nearly thirty years he composed over 100 film and television scores. His first feature film score, which included several big band arrangements, was for the comedy-thriller *Kaleidoscope* (1966). Joseph Strick's experimental treatment of James Joyce's *Ulysees* (1967) drew an unconventional, poly-stylistic score from Myers. Although in demand in Europe, Australia, Canada and the USA, he chose to live in England even after his success with 'Cavatina', a prominent theme in *The Deer Hunter* (1978), and for which he won an Ivor Novello Award in 1977. A version of this theme had earlier appeared in the film *The Walking Stick* (1970). In the 1980s he worked with Hans Zimmer on the scoring of several films, and like many film composers has worked with orchestrators, notably Christopher Palmer. Myers enjoyed close collaborations with several directors including Stephen Frears, Gavin Millar, Nicholas Roeg and Jerzy Skolimowski. His score for *Prick Up Your Ears* (1987) won the 1987 Cannes Award for Best Artistic Contribution, and *The Witches* (1990) won him a second Ivor Novello Award in 1991. Myers died while scoring the BBC adaptation of *Middlemarch*. The remaining music, drawing wherever possible upon Myers's original material, was completed by Christopher Gunning. In 1995 Myers received a posthumous BAFTA Award and another Ivor Novello Award for this music. His Concerto for Soprano Saxophone and Orchestra, written for John Harle, with whom he composed the music for *Prick Up Your Ears*, was first performed in 1991.

WORKS
(*selective list*)

Film scores (director in parentheses): Kaleidoscope (J. Smight), 1966; Ulysees (J. Strick), 1967; The Walking Stick (E. Till), 1970; King, Queen, Knave (J. Skolimowski), 1972; The Deer Hunter (M. Cimino), 1978; Eureka (N. Roeg), 1981; Moonlighting (Skolimowski), 1982, collab. H. Zimmerman; Success is the Best Revenge (Skolimowski), 1984, collab. Zimmerman; Dreamchild (G. Millar), 1985; Insignificance (Roeg), 1985, collab. Zimmerman; The Lightship (Skolimowski), 1985; Castaway (Roeg), 1986; My Beautiful Laundrette (S. Harle; Sammy and Rosie Get Laid (Frears), 1987; Tidy Endings (Millar), 1988 [for TV]; Track 29 (Roeg), 1988; Danny, Champion of the World (Millar), 1989 [for TV]; Paperhouse (B. Rose), 1989, collab. Zimmerman; Torrents of Spring (Skolimowski), 1990; The Witches (Roeg), 1990; Heart of Darkness (Roeg), 1994 [for TV]; Middlemarch, 1994, completed by C. Gunning [for TV]

DAVID KERSHAW

Mykietyn, Paweł (*b* Oława, 20 May 1971). Polish composer. He studied composition at the Warsaw Conservatory with Kotoński, graduating in 1996, and then in Vienna with Bargielski. As a clarinetist, he founded the Nonstrom ensemble (1991), the successor to Zygmunt Krauze's Music Workshop. His *3 for 13* and *Epiphora* took first prize at UNESCO competitions for young composers in 1995 and 1996 respectively. With their lyricism, pulsating rhythms, unison melodies and resonant harmony, Mykietyn's early works draw as much from jazz as from the music of Messiaen. An example of his early style is the clarinet trio *Choć doleciał Dedal* ('Though Dedalus reached'). Later works embrace minimalism and postmodernism more readily; the combination of deconstruction and enhancement covers a broad range of sources from the 18th century onwards and can be violently as well as gently parodistic.

WORKS

ADRIAN THOMAS

My Ladye Nevell's Booke. *See* SOURCES OF KEYBOARD MUSIC, §II, 2(vi).

Mylius, Johann Daniel (*b* Wetter, nr Marburg, 1584/5; *d* after 1627). German lutenist and music anthologist; he came from the same family as W.M. Mylius. Trained in chemistry and medicine at various German universities, he completed his doctorate in medicine at Marburg University in 1618. In 1606 he became a citizen of Frankfurt. The records of St Bartholomäus there (now the cathedral) show that on 15 June 1618 he received permission to present Sunday lute concerts with organ accompaniment, for which he was paid 16 gulden a year. He wrote the large-scale *Philosophia reformata* and books on theology and medicine, the last known one in 1628; one or two include a portrait dated 1618 ('aetatis suae 33'). His musical importance lay in a large anthology of lute pieces – apparently lost – *Thesaurus gratiarum in quibus continentur diversorum authorum cantiones selectissimae, utpote praeambula, toccatae, fugae, fantasiae, galliardae, courantes, voltae, alemandi, passomezi, branles et eius generis choreae ad testudinis tabulaturam* (Frankfurt, 1622, 3/1644). The volume presented a wide range of compositions from the previous 100 years and illustrated changes in the style of lute music during this period and also the development of the lute from a six- to a ten-course instrument.

GEORGE J. BUELOW

Mylius [Möller], **Wolfgang Michael** (*b* Mannstedt, Thuringia, 1636; *d* Gotha, late 1712 or early 1713). German composer and theorist; he came from the same family as J.D. Mylius. He studied theology at the University of Jena. On 31 July 1661 he became a musician at the court of Duke Friedrich Wilhelm II at Altenburg. The duke immediately sent him to Dresden to study with Christoph Bernhard; he was there from 1 August 1661 to 10 December 1662. In summer 1666, on the occasion of the first marriage of the Emperor Leopold I, he went to

Vienna, where he perfected his composition skills. In 1669, when the Altenburg Kapelle was disbanded, he was allotted sufficient income for three years. He later joined the Kapelle at Gotha of Duke Ernst I of Saxe-Gotha, who had inherited the Altenburg domain; in 1676 he was appointed Kapellmeister in succession to G.L. Agricola and held that position until his death.

Although Mylius wrote many sacred vocal works, as well as Singspiels, he apparently did not succeed in having any of them published: the title of his own manuscript list of many of them, *Musicalische Opera, welche mit der Hülffe Gottes erhoftes nach und nach getrucket werden sollen* (in *D-Fsm*), obviously alludes to his continuing efforts to find a publisher, and he expressed a similar sentiment in his *Rudimenta musices, das ist: Eine kurtze und grundrichtige Anweisung zur Singe Kunst* (Mühlhausen, 1685). Only two of his musical works, both sacred, have survived: a motet for four voices and continuo, dated 1697 (*D-Bsb*), and a dialogue for soprano and alto with four-part chorus, five viols and continuo (*D-Dl*). *Rudimenta musices*, essentially a practical teaching manual for use with his own students, is also extant. According to its preface he wished to teach his students how to sing modern music correctly. He therefore rejected any instruction based on outmoded musical knowledge, including solmization and the modes. His concise, well-organized text introduced students to contemporary notation, the major and minor scales, intervals, proportions, and various refinements of the vocal art, including vocal production and aspects of expressive singing. The most important feature of his writing about singing is his account of various types of vocal ornaments, such as the tremolo, tirata, *variatio notae* and *passaggio*, which he claimed to have based on his study with Bernhard. This section, illustrated with many music examples, provides invaluable clues to important and still largely unresolved questions of performing practice concerning improvisatory vocal embellishments and their application to sacred music of the Baroque period.

Myltzewski, Marcin. *See* MIELCZEWSKI, MARCIN.

Myriell, Thomas (*b c*1580; *d* 1625). English clergyman and amateur musician. He is best known as the compiler and scribe of the manuscript anthology *Tristitiae remedium*, 1616 (*GB-Lbl* Add.29372–7), a major source for anthems, motets and madrigals by English composers of the period. Each partbook has an engraved title-page. *Tristitiae remedium* is a good, early, and in some cases unique, source for the works of Thomas Tomkins, Peerson, Ward, Lupo, Ferrabosco (ii) and John Milton senior. The manuscript *Lbl* Add.29427 is a collection of rough drafts, partly in Myriell's hand, for *Tristitiae remedium*. Other manuscripts partly written by him are *Och* 44, 61–7, 459–62. The manuscript *Och* 67 also contains two items in the hand of Thomas Tomkins, and *Och* 44 music in the autograph of Benjamin Cosyn. Myriell's friendship with Tomkins is confirmed by the latter's dedication to him of *When David heard* in the *Songs* (London, 1622). Cosyn's exact connection with Myriell is not known, but Monson (1982) notes that a further Cosyn autograph (*US-Ws* V.a.412) includes concordances with *Tristitiae remedium*. A manuscript of songs and motets, chiefly by English composers, in Brussels (*B-Br* II 4109, formerly Fétis 3095) bears Myriell's signature as owner. Myriell can now be identified as the rector of St Stephen Walbrook, London, 1616–25. He was also chaplain to George Abbot (Archbishop of Canterbury, 1611). A detailed account of Myriell's manuscripts and musical circle is given by Monson (1982). Other scribes in *Och* 61–7 are re-examined by Payne; one appears to be John Ward.

PAMELA J. WILLETTS

Mysliveček [Mysliweczek, Misliweczek, Misliveček], **Josef** (*b* Prague, 9 March 1737; *d* Rome, 4 Feb 1781). Czech composer. The elder of identical twin brothers, he grew up in Prague in the households of his father and stepfather, both prosperous millers. Although it is believed that Mysliveček's father arranged musical instruction for his sons before his death in 1749, there is no evidence to confirm speculation that they were taught by Felix Benda, a near neighbour. Reports that the twins attended the Dominican Normalschule at the Church of St Giles (Jiljí) and the Jesuit Gymnasium in the Clementinum are conjectural, but their enrolment in the philosophy faculty at Charles-Ferdinand University (now Charles University) is confirmed in surviving matriculation records. Owing to a lack of academic success, Mysliveček withdrew from the university in March 1753 without graduating. The following May, the twins became apprentice millers; they were admitted into the Prague millers' guild as journeymen in 1758 and became master millers in 1761.

In the early 1760s, Mysliveček abandoned the family business to devote himself to music. Probably he began studies in composition with Franz Habermann, but soon transferred to Josef Seger, organist at the Týn Church in Prague. According to Pelcl, Mysliveček completed six symphonies named after the first six months of the year within six months of study with Seger (no symphonies with evocative titles survive to confirm the legend, however). It seems that he established an excellent reputation as a violinist; nonetheless, there is no evidence to support reports that he was employed as a church violinist.

In November 1763, Mysliveček left for Venice to study operatic composition, funded at least partly by his twin brother Jáchym and his long-standing patron Count Vincenz von Waldstein. His studies there with G.B. Pescetti brought quick (and impressive) results in the form of a first opera, *Semiramide*, performed in Bergamo in 1765 and Alessandria in 1766. The librettos confirm that

he was by then referred to as 'Il Boemo' by Italians, who had difficulty pronouncing his name. (The famous nickname 'Il divino Boemo' can be traced only to the title of a Czech 'romanetta' published in 1884; similarly there is no evidence that the Italian equivalent of his surname, 'Venatorini', was commonly used during his lifetime.)

Mysliveček achieved his first great operatic success in 1767 with *Il Bellerofonte* at the Teatro S Carlo in Naples. The cast included Caterina Gabrielli, a singer with whom Mysliveček's name has been linked romantically even though there is no evidence of a love affair either with her or with Lucrezia Aguiari earlier at Parma. From this time onwards Mysliveček lived mainly in Italy, where he travelled continually in order to fulfil operatic commissions, almost always at major houses with excellent casts. In 1771 he was admitted into the Accademia Filarmonica of Bologna after befriending Padre Martini.

Mysliveček made at least three trips to northern Europe after establishing himself in Italy. The first, a triumphant return to Prague in 1768, was probably occasioned by his mother's death in 1767 and the settlement of his father's estate. His second trip, in 1772, may have been intended to establish his reputation in Vienna. If so, the effort clearly failed, but he did meet Charles Burney in September. Mysliveček ventured north for the last time at the invitation of Maximilian III Joseph, Elector of Bavaria, in 1777–8 (reports of an earlier trip to Munich in 1773 cannot be verified). While in Munich, he witnessed successful productions of his opera *Ezio* and his oratorio *Isacco* and sought surgical treatment for what is believed to have been venereal disease, with the result that his nose was burnt off.

On his return to Italy in 1778, Mysliveček enjoyed operatic successes in Naples and Venice, but his final decline was signalled by the failure of both of the operas that he prepared for Carnival 1780 (*Armida* for Milan and *Medonte* for Rome). He died in Rome, in abject poverty; his funeral at the church of S Lorenzo in Lucina was paid for by a mysterious Englishman named Barry, a former pupil. Mysliveček's adventurous life has been the subject of numerous fictionalized treatments in Czech and German, including an opera *Il divino Boemo* (1912), by Stanislav Suda.

Mysliveček's relations with the Mozart family form a topic of considerable interest. After meeting Leopold and Wolfgang in Bologna in March 1770, he was an intimate friend of both for about eight years. He is one of the composers most frequently mentioned in the Mozart correspondence, which is the only source of a number of personal details (including a reputation for sexual promiscuity). For years the Mozarts found his dynamic personality (full of 'fire, spirit and life') irresistibly charming, but their friendship soured in 1778 when Mysliveček failed to fulfil a boastful promise to arrange an operatic commission for Wolfgang at the Teatro S Carlo in Naples for Carnival 1779. Leopold also resented Mysliveček's shameless (but successful) efforts to obtain patronage through him from the Prince-Archbishop of Salzburg. During the period of their friendship, Mozart undoubtedly turned to Mysliveček for stylistic models; for example, he composed his first *opera seria*, *Mitridate*, with reference to Mysliveček's *Nitteti*, and he borrowed musical ideas from Mysliveček's concertos, symphonies and keyboard sonatas in various works (see e.g. Freeman, 1995). The incipit of a symphony particularly admired by Mozart (the overture to *Demofoonte*, 1769) is quoted in a postscript to a letter written by Leopold in Milan on 22 December 1770. Mysliveček's most famous composition is the aria 'Il caro mio bene' as arranged (supposedly by Mozart) with the substitute text 'Ridente la calma' (K152/210*a*).

Mysliveček adopted italianate modes of expression in almost all his compositions. At the centre of his output were of course his *opere serie*: in the period 1765–80 he was the most prolific composer of *opera seria* in Europe. His contributions did not involve innovation, however, but rather the refinement of existing (usually conservative) traditions. At first he composed works dominated by elaborate dal segno arias with brilliant passage-work and sophisticated accompaniments, but in 1773 (especially with *Romolo ed Ersilia*) he began to respond to trends associated with reform opera by constructing almost all of his arias in sonata and other forms; he also began to introduce more accompanied recitative and to use simpler, more tuneful aria themes. Beginning with *La Calliroe* (1778), his operas generally feature even more elaborate sections of accompanied recitative and many arias of the slow–fast rondò type, in which he excelled. His arias and ensembles from all periods are distinguished by a fertile melodic invention and skilful techniques of phrase extension. Mysliveček was also a fine composer of oratorios; his setting of Metastasio's *Isacco figura del redentore* is perhaps his greatest work.

Mysliveček's symphonies form his principal contribution to instrumental music. All are cast in three-movement format and are essentially indistinguishable in style from his opera overtures, which were unsurpassed in Italy and frequently disseminated as independent works. The strength of his writing lies in his keen mastery of textural subtleties, lyrical melodic style and harmonic inflection. His violin concertos are also among the greatest of his day.

Mysliveček's chamber and keyboard works are generally less interesting, but he did produce a great variety of chamber works cast in the three-movement arrangements common to Italian chamber music of the day. His Quintets op.2 (Paris and Lyons, 1767–8) are among the earliest scored for two violins, two violas and cello. Similarly, his wind octets (probably composed in Munich, 1777–8) are among the earliest compositions scored for pairs of oboes, clarinets, horns and bassoons.

WORKS

Br. cat. – listed in Breitkopf catalogue(s)

Catalogue: A. Evans and K. Dearling: *Josef Mysliveček (1737–1781): a Thematic Catalogue of his Instrumental and Orchestral Works* (Munich, 1999)

OPERAS

all opere serie

Semiramide (3, P. Metastasio), Bergamo, Cittadella, sum. 1766, *CZ-Pnm* (inc.), *P-La*; sinfonia, *CZ-Pnm*, *US-Wc*

Il Bellerofonte (3, G. Bonecchi), Naples, S Carlo, 20 Jan 1767, *D-Dl*, *F-Pn*, *I-Fc*, *Rdp* (frag.), *P-La*; sinfona, *CZ-Pnm*, *D-SWl*

Farnace (3, A.M. Lucchini), Naples, S. Carlo, 4 Nov 1767, *D-Mbs*, *H-Bn*, *I-Nc**, *P-La*; sinfonia, *CZ-Pnm*, *I-Gl*

Il trionfo di Clelia (3, Metastasio), Turin, Regio, 26 Dec 1767, *Fc*, *Tf*, *P-La*; sinfonia, *CH-E*, *EN*, *CZ-KRa*, *Pnm*, *D-W*, *S-Skma*, ed. in The Symphony 1720–1840, ser. B, xiii (New York, 1984)

Demofoonte [1st version] (3, Metastasio), Venice, S Benedetto, 17 Jan 1769, *I-Vnm* (Act 1), *P-La*; sinfonia, *CZ-Pnm*, *D-Rtt*, *E-Mp*, *US-Wc*

L'Ipermestra (3, Metastasio), Florence, Pergola, 27 March 1769, *A-Wn**, *CZ-Pnm*, *I-Fc*, *P-La* (Acts 1 and 3); sinfonia, *CZ-Pnm*, *D-W*

La Nitteti (3, Metastasio), Bologna, Nuovo Pubblico, 29 April 1770, *I-Fc*, *P-La*, *Rus-SPit** (Acts 1 and 2); sinfonia, *CZ-Pnm*, *D-Rtt*, ed. E. Hradecký (Prague, 1957)
Motezuma (3, V.A. Cigna-Santi), Florence, Pergola, 23 Jan 1771, *A-Wgm**, *CZ-Pnm*, *I-Fc*, *P-La* (Acts 2 and 3), *US-Wc*, 1 aria in Journal d'ariettes italiennes (Paris, 1784); sinfonia, *D-WEY*
Il gran Tamerlano (3, A. Piovene), Milan, Regio Ducal, 26 Dec 1771, *A-Wn**, *F-Pn*, *I-Fc*, *P-La* (Acts 1 and 3); sinfonia, *CH-Zz*, *I-Mc*, ed. H. Müller (Zürich, 1975)
Il Demetrio [1st version] (3, Metastasio), Pavia, Quattro Cavalieri, 24 May 1773, *D-Bsb**, *I-Fc*; sinfonia, *CH-EN*, *I-Mc*, *Mcom*, *MAav*, in 6 sinfonie (Florence, ?*c*1777), ed. G. Zampieri, in *Bollettino storico pavese*, ii (1939), 1–32
Romolo ed Ersilia (3, Metastasio), Naples, S Carlo, 13 Aug 1773, *CZ-Pnm* (Act 2), *I-Fc*, *Nc*, *P-la*; sinfonia, *F-Pn*
Antigona (3, G. Roccaforte), Turin, Regio, 26 Dec 1773, *A-Wn**, *P-La* (Act 1); sinfonia, *I-MAav*, *Rdp*, *RVE*, in 6 sinfonie (Florence, ?*c*1777)
La clemenza di Tito (3, Metastasio), Venice, S Benedetto, Jan 1774, *P-La*
Atide (3, based on T. Stanzani, after P. Quinault), Padua, Nuovo, June 1774, *A-Wn**, *I-Pl*; sinfonia from Antigona
Artaserse (3, Metastasio), Naples, S Carlo, 13 Aug 1774, *Fc*, *Nc*; sinfonia, *CH-EN*, *I-MAav*, in 6 sinfonie (Florence, ?*c*1777), ed. J. Sehnal (Prague, 1973)
Il Demofoonte [2nd version] (3, Metastasio), Naples, S Carlo, 20 Jan 1775, *A-Wn**, *I-Fc*, *Nc*, *P-La*, *US-Wc*, 1 aria in Journal d'ariettes (Paris, 1782); sinfonia, *D-WEY*, *I-MAav*, in 6 sinfonie (Florence, ?*c*1777)
Ezio [1st version] (3, Metastasio), Naples, S Carlo, 30 May 1775, *A-Wn**, *CZ-Pnm* (Act 2), *F-Pn* (Acts 1 and 2, attrib. P. Anfossi), *I-Fc*, *Nc*, *P-La*, 2 arias ed. J. Branberger, Album českého bel canta (Prague, 1949); sinfonia, *CH-EN*, *F-Pn*, *I-MAav*, in 6 sinfonie (Florence, ?*c*1777), also pubd separately (Florence, ?*c*1777)
Adriano in Siria (3, Metastasio), Florence, Cocomero, 8 Sept 1776, *I-Fc* (without sinfonia); sinfonia, *D-WEY*, *I-MAav*, in 6 sinfonie (Florence, ?*c*1777), also pubd separately (Florence, ?1776)
Ezio [2nd version] (3, Metastasio), Munich, Hof, carn. 1777, *D-Mbs* (2 copies); sinfonia, *CH-EN*, *CZ-Pnm*, ed. R. Münster (Milan, 1962)
La Calliroe (3, M. Verazi), Naples, S Carlo, 30 May 1778, *F-Pn*, *I-Nc**, *P-La* (Acts 1 and 2), 1 aria in Journal d'ariettes italiennes (Paris, 1783); sinfonia, *CH-E*, *EN*, *CZ-NR*, *Pnm*, *I-Mc*, *MOe*, *S-Skma* (Florence, ?*c*1777–8), ed. H. Müller (Zürich, 1979)
L'olimpiade (3, Metastasio), Naples, S Carlo, 4 Nov 1778, *I-Nc*, *P-La*; sinfonia, *S-Skma*
La Circe (3, D. Perelli), Venice, S Benedetto, 12 May 1779, aria and terzetto, *D-Mh*, 3 arias and 1 duet, *D-MÜs*
Demetrio [2nd version] (3, Metastasio), Naples, S Carlo, 13 Aug 1779, *I-Nc*, *P-La*
Armida (3, based on G.A. Migliavacca, after Quinault), Milan, Scala, 26 Dec 1779, *F-Pn* (inc.), *P-La*, 1 aria in Journal d'ariettes italiennes (Paris, 1782); sinfonia, *CZ-Bm*, *I-MOe*, *Rc*, ed. E. Hradecký (Prague, 1957)
Il Medonte (3, G. De Gamerra), Rome, Argentina, 26 Jan 1780, *F-Pn** (Act 1), *I-Rc* (Act 1), *RUS-SPsc* (inc.), 1 aria in Journal d'ariettes italiennes (Paris, 1786), 1 aria in *Musikaliskt tidsfördrif* (Stockholm, 1794); sinfonia, *CZ-KRa*, *I-MOe*, *PEsp*, *US-AAu* (attrib. D. Cimarosa)
Antigono (3, Metastasio), Rome, Alibert, 5 April 1780, aria, *A-Wn*, *CH-Fcu*, *D-Bsb*, *Mh*, *DK-Sa*, *I-BGc*, *Rc*, *US-R*, pubd (London, 1790), 2 arias, *D-Mh*, 1 duet, *E-Mp*
Other dramatic works: Il Parnaso confuso (dramatic cant., Metastasio), ?*c*1765–6, *CZ-Pnm*, *I-Rsc*, sinfonia, *CZ-Pnm*, *D-AB*, *I-Gl*; Elfrida (verse play with choruses, A. Pillori), Florence, Piazza Vecchia, 8 Dec 1774, music lost; Das ausgerechnete Glück (children's operetta, after J.C. Krüger: *Herzog Michel*), Prague, Divadlo v Kotcích, 22 April 1777, music lost; Theodorich und Elisa (melodrama), ? Munich, 1777–8, kbd arr. *D-DO*
Music in: ?Orfeo ed Euridice, Naples, 1774; Creso, Naples, 1776; Adriano in Siria, Livorno, 1777; Ezio, Genoa, 1777; Demofoonte, London, 1778, 2 arias in Favourite Songs; Alessandro nell'Indie, London, 1779, 2 arias in Favourite Songs; ?Erifile (? Genoa, 1779); Il soldano generoso, London, 1780; Il Begliar-Bey di Caramania, Dresden, 1780; Mitridate a Sinope, Genoa, 1781; Giunio Bruto, Genoa, 1782; Giannina e Bernardone, Vienna, 1784
Doubtful: Medea, Parma, Ducale, 1764; Erifile, Munich, 1773; Achille in Sciro, Naples, 1775; Merope, Naples, 1775; Armida, Lucca, Pubblico, 15 Aug 1778

ORATORIOS

Il Tobia (2) Padua, 1769, *D-Mbs*, *Rp*, *I-Pca*
I pellegrini al sepolcro (2, ?S.B. Pallavicino), Padua, 1770, lost
Giuseppe riconosciuto (2, Metastasio), Padua, ?*c*1770, lost (music in score attrib. Mysliveček, *Pca*, is by J.A. Hasse)
Adamo ed Eva (2), Florence, 24 March 1771, *I-Rf*; sinfonia, *Gl*
Betulia liberata (2, Metastasio), Padua, 1771, lost
La passione di Nostro Signore Gesù Cristo (2, Metastasio), Florence, 24 March 1773, *D-F* (facs. in IO, xxiii, 1986), *Mbs* (pt i), *Rp* (as La morte di Gesù)
La liberazione d'Israele (2, G. Basso Bassi), Prague, Crusaders' Church, Good Friday 1775, lost
Isacco figura del redentore (2, Metastasio), Florence, 10 March 1776, *CZ-Nlobkowicz*, *Pnm*, *Pu*, *D-Bsb* (attrib. J. Haydn), *Dl* (attrib.Haydn), *Mbs*, *Rp*, *F-Pn*, *H-Bn*, *I-Fc* (attrib. W.A. Mozart), *MOe* (in Ger.), *Rf*; sinfonia, *D-MÜs*, *WEY*
Spurious: 'L'ascenza di S Benedette', cited in *ČSHS*

OTHER VOCAL WORKS

Cants.: Cantata per S.E. Marino Cavalli (N. Mussato), Padua, Accademia dei Ricovrati, 30 Aug 1768, lost; Narciso al fonte (Zangarini), Padua, 1768, lost; Cantata a 2, by 1771, *CZ-Pnm*, *D-AB*, *I-Gl*; Enea negl'Elisi (Il tempio d'eternità), Munich, 1777, lost; Armida, *A-Wn*; Ebbi, non ti smarir, *GB-Lbl*; Non, non turbati, o Nice (Metastasio), *Lbl*, *I-CRE*; 6 birthday cants., Naples, S Carlo, 1767–79, lost
Arias and ensembles: Il caro mio bene, *CZ-Pnm*, *F-Pn*, *I-Vc*, ?*c*1773, arr. ?W.A. Mozart as Ridente la calma (K152/210*a*); Ah che fugir … Se il ciel mi chi rida (scene and aria), *D-Bsb*; 3 duetti notturni, 2 vv, insts (probably from a cycle of 6), *CZ-Pnm*, ed. in MAB, 2nd ser., vii (1972/*R*); over 550 arias and ensembles most from ops, many with sacred Lat. texts substituted, principal sources *CZ-Pnm*, *D-MÜs*, *F-Pn*, *I-Nc*
Sacred: Veni sponsa Christi (ant), test composition for admission to Accademia Filarmonica, Bologna, 1771, *I-Baf*, *Bc*; Lytanie laurentanae, *D-Mbs*; Offertorium Beatus Bernardy, *D-EB*, doubtful; 2 masses, lost, mentioned in *DlabacžKL*; other works; attrib. Mysliveček, doubtful

SYMPHONIES

*c*45 syms.: C, 1762, *CZ-Pnm*, ed. H.H. Stuckenschmidt (Vienna, 1940); 6 sinfonie a quattro op.1, hn and ob ad lib, as op.1 (Nuremberg, *c*1764); 2 syms., D, G, by 1768, 1 in *CZ-Pnm*, *I-Gl*, 1 in *A-LA*, *D-Rtt*; D, E♭, by 1769, *CZ-Pnm*, 1 also in *US-Wc*, ed. E. Hradecký (Prague, 1957); F, by *c*1770, *D-Rtt*; 2 syms., C, F, by 1771, *CZ-Pnm*, *I-Gl*, 1 also in *D-AB*, *US-Wc*; D, by 1771, *A-VOR*; F, 1771, *CZ-Pnm US-Wc*; 6 Overtures (London, 1772); 1 in 6 Overtures … Collected by A. Kammell (London, 1773); 6 syms., C, D, E♭, F, G, B♭, 1778, *D-WEY*, 2 ed. in The Symphony 1720–1840, ser. B, xiii (New York, 1984); 5 syms., C, D, F, F, G, by *c*1780, *CZ-Pnm*, 1 also in *D-Rtt*, 1 also in *D-W* (incl. extra movt), 1 ed. E. Hradecký (Prague, 1956); D, 1780, *I-RVE*; E, *CZ-Pnm*; G, *US-Wc*; Sinfonia-serenade, G, *I-MOe*, 5 syms., str, D, E♭, G, A, B♭, *CZ-Pnm*, 1 ed. E. Hradecký (Prague, 1957); 25 separately preserved ovs. to ops, orats and cants. (see above)
Doubtful: D, by 1766, *CZ-Pnm*, *I-Gl*, D, 1769, *CZ-Bm*, *D-Rtt*, *SK-BRnm*, *MO*, F, *CZ-Pnm*, *D-Bsb*, *Z*, E♭, by 1771, *PL-CZ*, all also attrib. C. Ditters von Dittersdorf; D, by 1774, *F-Pn*, also attrib. J.C. Bach
Syms. with conflicting attribs.: D, by 1766, *CZ-KRa*, by Dittersdorf; C, *Pnm*, by P. van Maldere, op.4 no.2; D, *US-AAu*, by D. Cimarosa; E♭, *D-Dl*, *I-MAav*, by F.A. Hoffmeister
Lost: 5 syms., by 1771, formerly *A-VOR*; 6 syms., cat. 1776–7; Sym., C, formerly Berlin, Staatsbibliothek Preussischer Kulturbesitz, destroyed

CONCERTOS

8 for vn, by ?1772, *A-Wgm* (1 frag.), *CZ-Pnm*, *Pu*, *I-Gl*, 2 ed. in RRMCE, xli (1994), 1 ed. J. Čeleda (Kutná Hora, 1928/*R*), 3 ed. E. Hradecký (Prague, 1956–7), 1 ed. E. Hradecký (Prague, 1957), 1 ed. K. Moor and L. Láska (Prague, 1948); 1 for vn, by 1769, *CZ-Pnm*, *S-Sm*, ed. in RRMCE, xli (1994); 1 for vn, by 1770, *D-WRl*, arr. for vc, *A-Wgm*, *CZ-Pnm*, *Pu*, ed. O. Pulkert (Leningrad, 1973); 2 for kbd, ?1777–8, *F-Pn*, *CZ-Pnm*, *D-MÜs*, *I-Rc*, *S-Skma*, 1, ed. E. Fendler (London, 1958); 1 for fl, *PL-WRu*, ed. M. Munclinger (Prague, 1969) and in MVH, xxiii (1969); Concertino, *D-BFb*, *Rtt*

OTHER INSTRUMENTAL WORKS

Octets: 3 for 2 ob, 2 cl, 2 hn, 2 bn, 1777–8, *D-DO*, ed. in MAB, lv (1962/*R*)

Qnts: 6 for 2 vn, 2 va, vc, op.2 (Paris and Lyons, 1767–8); 6 for 2 vn, 2 va, vc, ?1773, *I-Mc*, *MOe*, 3 ed. in MAB, xxxi (1957, 2/1973), 3 ed. in MAB, lxxxiii (1988); 6 for ob/fl, 2 vn, va, b, ?1777, Br. cat. 1782–4, 1 in *E-Mp*, 1 in *I-Rc*, others lost; 6 for 2 ob, 2 hn, bn, *c*1780, *D-MÜs**; 1 for 2 vn, 2 va, b, *CZ-Pnm*, doubtful; Cassation, 2 cl, 2 hn, b, *CZ-Bm*, doubtful

Str qts: 6 as op.3 (Paris and Lyons, 1768–9), 1 ed. F.X. Thuri (Prague, 1992), 1 ed. A. Martínková (Prague, 1971); 6 as op.1 (Offenbach, 1778); 6 str qts (Berlin and Amsterdam, 1781); 5 str qts, *CZ-Pnm*, also arr. str orch, *Pnm*; ?1 qt listed in J.N. Weigl: Quartbuch, *c*1775, lost; 1, F, *Pu*, by I. Pleyel

Trios: 6 for 2 vn, b, Br. cat. 1767, 1, in *US-BEm*, others lost, 6 for 2 vn, b, op.1 (Paris, 1768), also as op.2 (Offenbach, 1779), 4 also in 6 Trios (London, 1772); 6 for 2 vn, b, op.4 (Paris, 1772); 6 for 2 fl, b, op.5 (Paris, *c*1775–7); 6 for fl, vn, b (Florence, *c*1775–85), 4 as op.1 (Amsterdam, n.d.), ed. in MVH, xlii (1978), 2 ed. W. Kölbel (Wilhelmshaven, 1991), 1 ed. H. Steinbeck (Zürich, 1972); 6 for 2 vc, b, by *c*1780, *CZ-Pnm*; 2 for fl, vn, b, in 6 Trios (London, *c*1795), incl. works by Venturini and L. Leo; 10 for vn, vn/vc, b, *CZ-Pnm*, 6 concordant with printed sources, 1 ed. B. Malotín (Prague, 1975); 6 for 2 fl, b, *A-HE*, all concordant with printed sources, ed. T.D. Mystic chord [Promethean chord]. The name given by Skryabin to the chord in altered 4ths *c–f♯–b♭–e′–a′–d″*. It appeared in his work as early as 1903, in the Fourth Piano Sonata, but became famous by its use in the tone poem *Prométhée* op.60 (1911), for which reason it is sometimes called the 'Promethean chord'. In his late piano music, particularly the last five sonatas, Skryabin used similar chord formations as a basic element of his harmony, and also extended the mystic chord to 'horizontal' (i.e. melodic) constructions.

□

Mysz-Gmeiner [née Gmeiner], **Lula** (*b* Kronstadt [now Braşov, Romania], 16 Aug 1876; *d* Schwerin, 7 Aug 1948). German contralto. She came of a musical family: her sister Ella, likewise a contralto, appeared at Covent Garden in 1911 in Humperdinck's *Königskinder*, her brother Rudolf was also a successful singer, and her sister Luise was a pianist. Lula Gmeiner first studied the violin under Olga Grigorovich at Kronstadt, 1882–92, and then singing under Rudolf Lasse there, 1892–6, afterwards with Gustav Walter in Vienna (where she is said to have impressed Brahms), with Emilie Herzog, Etelka Gerster and Lilli Lehmann in Berlin, and with Raimund von Zur Mühlen in London. She began her concert career at the turn of the century, and in 1900 married Ernst Mysz, an Austrian naval officer. She was regarded as an outstanding interpreter of lieder, comparable with Julia Culp and Elena Gerhardt, although less famous internationally than either of those singers. She was appointed *Kammersängerin*, and was a professor at the Hochschule für Musik in Berlin, 1920–45. Among her pupils were Peter Anders and, briefly, Elisabeth Schwarzkopf. In the 1920s Mysz-Gmeiner made several lieder recordings, notably a Schubert series to commemorate the centenary of the composer's death; although by that time she had trouble in maintaining pitch, the best of those recordings, especially *Die junge Nonne*, well capture the intimacy and purity of her style.

N

Nabokov, Nicolas [Nikolay] (*b* Lyubcha, Novogrudok, nr Minsk, Belorussia, 4/17 April 1903; *d* New York, 6 April 1978). American composer of Russian origin, cousin of the writer Vladimir Nabokov. He first studied composition privately with Rebikov in Yalta and St Petersburg (1913–20), then at the Stuttgart Conservatory (1920–22) and the Berlin Hochschule für Musik with Juon and Busoni (1922–3). He studied at the Sorbonne in 1923–6, and was awarded the degree of Licence ès lettres. From 1926 to 1933 he taught in Paris and Germany, then emigrated to the USA, where he became a citizen in 1939.

Nabokov taught at Wells College, Aurora, New York (1936–41), St John's College, Annapolis (1941–4), and the Peabody Conservatory (1947–52). During and after World War II he held several US government cultural positions in Europe. From the 1950s he lived chiefly in Paris, although he was active as a composer and a promoter of music festivals all over the world. He became secretary-general of the Congress for Cultural Freedom in 1951, and organized the Paris festival 'Oeuvre du XXe Siecle' (1952), the 'Music in our Time' festival (Rome, 1954), and the 'East-West Music Encounter' in Tokyo (1961). He served as director of the Berlin Festival (1963–6), and was composer-in-residence at the Aspen Institute for Humanistic Studies (1970–73).

As a composer Nabokov is closely identified with music for dance. His first important work, the ballet-oratorio *Ode* (1927), was commissioned by Diaghilev, who produced it in London, Paris and Berlin. A pronounced lyricism, occasionally infused with bitonality, informs both this work and his ballet *Union Pacific*, which was written to commemorate the completion of the transcontinental railroad, and makes use of popular 19th-century American tunes. Whether or not conceived for the stage, Nabokov's music shows strong dramatic powers and unusual orchestral eloquence. He wrote an entertaining volume of essays, *Old Friends and New Music* (Boston, 1951), the books *Igor Stravinsky* (Berlin, 1964) and *Bagázh: Memoirs of a Russian Cosmopolitan* (New York, 1975), and articles – mainly on Russian music and musicians – for numerous periodicals including *Atlantic, Harper's, Musical America, New Republic* and *Partisan Review.*

WORKS
(*selective list*)

STAGE

Ode: Méditation sur la majesté de Dieu (ballet-orat, R. Desormières, after M. Lomonosov, choreog. L. Massine), Paris, 6 June 1928
La vie de Polichinelle (ballet), Paris, 1934
Union Pacific (ballet, A. MacLeish, choreog. Massine), Philadelphia, 6 April 1934
Samson Agonistes (incid music, J. Milton), Aurora, NY, 14 May 1938
The Last Flower (ballet, after J. Thurber), 1941
The Holy Devil (op, 2, S. Spender), Louisville, KY, 16 April 1958: rev. as Der Tod des Grigorij Rasputin, (3), Cologne, 27 Nov 1959
Don Quixote (ballet, 3, Nabokov and G. Balanchine), Aug 1965
The Wanderer (ballet), 1966
Love's Labour's Lost (op, W.H. Auden, C. Kallman, after W. Shakespeare), Brussels, 7 Feb 1973

VOCAL

Choral: Collectionneur d'échos, S, B, unison vv, perc, 1932; Job (orat, J. Maritain), male vv, orch, 1933; America was Promises (cant., MacLeish), A, Bar, male vv, perf. 1940
Solo vocal: The Return of Pushkin (elegy, V. Nabokov, after A. Pushkin), S, T, orch, perf. 1948; Vita nuova (after Dante), S, T, orch, perf. 1951; Symboli chrestiani, Bar, orch, perf. 1956; 4 poèmes de Boris Pasternak, 1v, pf (1961); 6 Lyric Songs (A. Akhmatova: *Requiem*), 1966

INSTRUMENTAL

Orch: Symphonie lyrique, perf. 1930; Pf Conc., 1932; Le fiancé, ov. after Pushkin, 1934; Sinfonia biblica, perf. 1941; Fl Conc., 1948; Conc. corale, fl, str, pf, 1950; Les hommages, conc., vc, orch, perf. 1953; The Last Flower, sym. suite, 1957; [4] Studies in Solitude, perf. 1961; Sym. Variations, 1967; Sym. no.3 'A Prayer', perf. 1968; Variations on a Theme by Tchaikovsky, vc, orch, 1968
Other works: Pf Sonata (1926); 3 Dances, pf (1929); Serenata estiva, str qt, 1937; Pf Sonata (1940); Sonata, bn, pf, 1941; 3 Sym. Marches, band, 1945; Canzone, Introduzione e Allegro, vn, pf (1950)

Principal publishers: Editions Russes, Senart

BRUCE CARR/KATHERINE K. PRESTON/MICHAEL MECKNA

Nacaires (Fr.; It. *nacchera, naccheroni*; Sp. *nacara*). *See* NAKERS. The plural form of the Italian term, *nacchere*, means CASTANETS; *see also* RATTLE.

Nacchini, Pietro. *See* NACHINI, PIETRO.

Nachahmung (Ger.: 'imitation'). (1) In any music other than the purely abstract or 'absolute', the copying of sounds of nature or everyday life, or the expression of emotions by musical means (*see* AFFECTS, THEORY OF THE; PROGRAMME MUSIC; RHETORIC AND MUSIC; WORD-PAINTING).

(2) In counterpoint, the process of IMITATION.

Nachbaur, Franz (Ignaz) (*b* Giessen, nr Friedrichshafen, 25 March 1835; *d* Munich, 21 March 1902). German tenor. After studying in Milan with Lamperti and at Stuttgart with Pišek, he made his début in 1857 at Pessau, then appeared at Meiningen, Cologne, Hanover and Prague

(1860–63), where he sang Lionel in Flotow's *Martha* and Gounod's Faust, and Darmstadt (1863–8), where his roles included Gounod's Romeo. He began a 23-year association with the Hofoper, Munich, on 24 June 1867 as Flotow's Alessandro Stradella and sang Walther at the first performance of *Die Meistersinger* (1868), Froh at the première of *Das Rheingold* (1869), the title role in *Rienzi* (1871) and Radames in *Aida* (1877). In 1878 he sang Lohengrin in Rome and in 1882 made his London début as Adolar in Weber's *Euryanthe* at Drury Lane. He also sang in Berlin, Hamburg and Moscow. His farewell appearance in Munich on 13 October 1890, when he sang Chapelou in Adam's *Le postillon de Lonjumeau*, was his 1001st performance at the Hofoper. Although he sang many heavy, dramatic roles including Siegmund (*Die Walküre*), a superb technique preserved the suppleness and lyricism of his voice throughout a long career.

ELIZABETH FORBES

Nachini [Nacchini, Nachich, Nachik, Nakik, Nanchini], **Pietro** [Nakič, Petar] (bap. Podgrebaća, Bulič, Dalmatia, Feb 1694; *d* Conegliano, Treviso, 16 April 1769). Italian organ builder. His place of birth was then part of the Venetian Republic. He studied philosophy at Sebenico, theology in Venice (he became a friar) and organ building under Giovanni Battista Piaggia, also in Venice. By his industry and excellent workmanship he established himself as the principal organ builder of his time in Venice, Dalmatia and the surrounding area. For a short period in 1729 he worked with Pierantoni and Pescetti.

The development of the Italian organ under Nacchini may be seen in the specifications of two fine organs surviving in Venice. The first, an *organo doppio* built in 1737 for S Martino (rebuilt by Gaetano Callido in 1799; restored, 1983–4), has two manuals (unusual in Italy at this time; *see* ORGAN, §V, 10) of 59 keys each (*C'D'E'F'G'A'*–d‴, short first octave) and a pedal-board of 20 pedals (*CDEFGA–b*, short octave). The first three keys of the *organo grande*, and the first eight each of the *organo piccolo* and Pedal department, are coupled to the corresponding pipes of the next octave. The *grande* consists of a divided Principale (12′) and six Ripieno stops, Voce umana, Flauto in ottava (6′, divided), Flauto in XII, Cornetta (1⅗′, treble only), Violetta (divided, 4′ in the bass), Tromboncini (8′, divided). *Piccolo*: Principale (8′) and four Ripieno stops (Ottava divided), Flauto in ottava (4′, divided), Cornetta (1⅗′, treble only), Tromoncini (8′, divided). The division of the bass and treble is between *a* and *b♭*. Pedal: Contrabbassi 16′, Ottava di Contrabbassi, Tromboni. The second, op.160, for S Maria dei Derelitti, the church of the Ospedaletto (1751; restored 1983), had one manual, C (short) to *c*‴, 45 notes; nine separate ranks of chorus stops from Principale (8′ divided), to Trigesimasesta, Voce umana, Flauto in ottava (4′), Flauto in XII, Cornetta soprani, Tromboncini (8′ divided); Pedal (*C* to *g♯*, 17 notes): Contrabassi 16′, Ottava 8′; Tiratutti; Rollante.

Other surviving organs include: S Rocco, Venice (1743; restored, 1959 and in practically original condition); op.98, San Servolo, near Venice (1745; restored, 1989; nearly original condition), op.158, Muzzana del Turgnano, Udine (1750, restored, 1971); all have one manual of 45 keys (*C–c*‴ with short first octave) and 17 pedals.

Nacchini built about 500 organs. He invented the *tiratutti a manovella*, a stop-knob which brings on the whole of the ripieno ranks. His pupils included Francesco Dacci (Dazzi), Gaetano Callido (at some time between 1748 and 1763), who may be considered his successor, and Franz Xaver Chrismann, who incorporated many features of Nacchini's Italian style into a new and particular type of Austrian organ.

GUY OLDHAM/UMBERTO PINESCHI

Nachsatz (Ger.). Consequent phrase. *See* ANTECEDENT AND CONSEQUENT.

Nachschlag (Ger.). A term used to denote particular ornaments. *See* ORNAMENTS, §§8–9.

Nachspiel (Ger.). *See* POSTLUDE. The term, used to signify a concluding voluntary, appears in the organ works of C.-L.-J. André and Rinck.

Nachtanz (Ger.: 'after-dance'). A generic term for the second of a pair of dances, usually a fast, triple-metre reworking of the harmonic and melodic material of the first. Many familiar dance forms, particularly of the Renaissance and early Baroque periods, fulfilled this function, appearing in musical sources with a bewildering variety of names including *rotta*, *espringale*, saltarello, piva, tourdion, galliard, *tripla*, *sciolta* and *Proportz*.

The idea of contrasting an elegant gliding dance (usually with foot movements close to the floor, often processional) with a vigorous leaping one seems to date at least from the 12th century, for literary references mention *carole-espringale* pairs. The earliest surviving musical documentation of a *Nachtanz* is a 14th-century Italian manuscript (*GB-Lbl* Add.29987); there each of two pieces, *Lamento di Tristano* and *La Manfredina* (f.64*r*), is followed by an after-dance called 'La Rotta' which condenses and ornaments the thematic material of its predecessor without changing the basic metre. In the 15th century it seems to have been common to pair the basse danse (in Italy the bassadanza) with the *pas de Brabant* (or saltarello). Ordinarily the *Nachtanz* for a basse danse consisted of a new polyphonic arrangement woven round the tenor of the first dance, with the tenor played twice as fast (for an illustration of the application of proportions to dance tenors, *see* SALTARELLO). The pairing of dances in this way was apparently a genuine reflection of contemporary dance practice, for Antonio Cornazano's treatise *Libro dell'arte del danzare* (*c*1455) explicitly prescribes the pairing of bassadanza and saltarello: 'detro ad ella [the bassadanza] se fa sempre lui [the saltarello]'.

In the 16th century the pairing of dances was seldom mentioned in treatises. Printed collections of instrumental music, however, contain innumerable examples of dance pairs based on similar thematic material, and at the beginning of the 17th century at least some writers on

music still thought the relationship between paired dances worthy of mention. The relationship of *Nachtänze* to their models in certain 16th- and 17th-century pairs became nearly standardized, and served to distinguish otherwise almost identical pairs. For example, the choreographic differences between the two commonplace groups pavan-galliard and passamezzo-saltarello seem to have been limited to slight variations in tempo and height of step from the floor. Nonetheless, the respective pairs were musically linked in different ways: the *Nachtanz* galliard was usually a triple-metre variant of the pavan melody, while the *Nachtanz* saltarello was a triple-metre variant of the characteristic tenor or bass ostinato in the passamezzo. Morley (1597), Haussmann (preface to *Venusgarten*, 1602) and Isaac Posch (preface to *Musicalische Ehrenfreudt*, 1618) all attested to the fact that *Nachtänze* were often improvised in performance. Morley gave quite specific instructions on the proper method of deriving a galliard from its pavan (*see* GALLIARD), while Posch defended his decision to include *Nachtänze* in his collection by decrying the resulting disorder when composers left their creation to the dubious craftsmanship of performers. The *Tanz-Nachtanz* pairing persisted in 17th-century collections of dance music from Germany and England longer than in French or Italian sources, even appearing within multi-movement suites like those of Schein's *Banchetto musicale* (1617). There each suite ends with an allemande and its *tripla*, the latter nothing more than the simplest possible metrical transformation of the allemande themes.

Some scholars, particularly Hermann Beck (*Die Suite*, Mw, xxvi, 1964; Eng. trans., 1966) and Philipp Spitta (*Johann Sebastian Bach*, Eng. trans., 1884–5, 2/1899/*R*, ii, 84ff), have argued that the *Tanz-Nachtanz* idea was a direct forerunner of the Baroque suite. For a different view of the relationship between these formal ideas, *see* SUITE, §§2, 3.

SUZANNE G. CUSICK

Nachtgall, Othmar. *See* LUSCINIUS, OTHMAR.

Nachthorn (Ger.). *See under* ORGAN STOP.

Nachtigal, Sebald (*b* Nuremberg, *c*1460; *d* Nuremberg, between 24 Feb and 26 May 1518). German organist and ?composer. He was the son of the Nuremberg Meistersinger Konrad Nachtigall. He was probably close to the Nuremberg humanist circles around Conradus Celtis and in particular to the patron Sebald Schreyer who was *Kirchenmeister* at St Sebaldus. In March 1490 he was appointed senior organist at St Sebaldus, where he remained until his death.

Nachtigal was the only outstanding Nuremberg organist between Conrad Paumann, who left Nuremberg in 1450, and Paulus Lautensack (ii), active there from 1541. For this reason Gerber attributed to him certain anonymous compositions in the Sebald liturgy (in *D-Bsb* 40021). These are four-voice sections of the Sebald hymn *Hymnum cantet plebs iucunda* and of a rhymed Office for St Sebald with a cantus firmus in the tenor, and three three-voice settings of *Regiae stirpis soboles Sebalde*, written by Celtis in 1493. (R. Gerber: 'Die Sebaldus-Kompositionen der Berliner Handschrift 40021', *Mf*, ii (1949), 107–27)

FRANZ KRAUTWURST

Nachtigall (Ger.). A bird-imitating ORGAN STOP (*Vogelgesang*).

Nachtmusik (Ger.: 'night music'). The German form of the Italian term NOTTURNO; the term was used in the late 18th century, mainly for works intended for performance at night (around 11 p.m.). Mozart often preferred this term to the Italian one, particularly for works of relatively simple scoring such as the Trio K266/271*f* and *Eine kleine Nachtmusik* K525. The latter originally had two minuets, thus corresponding to a common, earlier divertimento form (the first of the minuets is apparently lost). In letters to his father (3 November 1781, 27 July 1782) Mozart referred to the wind serenades K375 and 388/384*a* as 'Nacht Musick' and 'Nacht Musique'. Romantic keyboard composers (Field, Chopin, Schumann) chose more literal translations of notturno, as NOCTURNE and *Nachtstück*; Mahler used the title 'Nachtstück' for two movements in his Seventh Symphony.

For bibliography *see* NOTTURNO.

HUBERT UNVERRICHT/CLIFF EISEN

Nachtstück (Ger.). *See* NOCTURNE.

Naderman. French family of musicians, publishers and instrument makers.

(1) **Jean Henri** [Joannes Henricus] **Naderman** [Nadermann] (*b* Lichteneau, nr Paderborn, Westphalia, bap. 20 July 1734; *d* Paris,4 Feb 1799). Publisher and instrument maker. Designated an *ouvrier étranger* on his arrival, he probably reached Paris in 1762–3. He was awarded a maker's licence in November 1766 and in 1774 he became a master of his guild, later styling himself 'Editeur, Luthier, Facteur de Harpes et autres instruments de musique'. One of the most important harp makers of the 18th century, he worked from premises in the Rue d'Argenteuil, where he made many single-action pedal harps equipped with a hook (*à crochets*) mechanism (see illustration). Highly ornate – carved, gilded and decorated in the Vernis Martin style – they were considered to be the most superior instruments of their time from both the mechanical and constructional points of view. In 1778 Jean Henri was officially appointed harp maker to Marie Antoinette, but of the five extant Naderman harps said to have been her property, only two – the first (1774) in the instrument collection of the Georg-August-Universität, Göttingen, and the second (1776) at the Musée de la Musique, Paris – carry definite proof of having been made for her. Both bear labels concealed behind the plaques on their necks on which is written 'Naderman/Maître Luthier, ordinaire de Madame/la Dauphine/Rue d'Argenteuil, butte/Saint Roch, à Paris'.

Despite various improvements made by other harp makers, such as Cousineau, who, in 1782, replaced the unsatisfactory *crochets* with *béquilles* (*see* HARP, §V, 7), Naderman continued with his tried and trusted system, concentrating on the ornamentation of the harp. In 1785, however, at the request of Jean-Baptiste Krumpholtz, he produced a short-lived *harpe augmentée* or *harpe à renforcement* where the resonance of the harp was

Single-action pedal harp by Jean-Henri Naderman, Paris, 1780 (Musée de la Musique, Paris)

improved by placing it on a hollow wooden base. In the same year he fixed a damping mechanism along the length of the centre strip of the soundboard which was operated by an eighth pedal placed to the player's left (*harpe à sourdine*). These improvements were followed in 1786 by a *harpe à volets*, where five shutters placed in the back panel of the harp were operated by another pedal, placed centrally between the pedals operated by the left (D, C, B) and right (E, F, G, A) feet. The improved harp received approval when it was played by Anne-Marie Krumpholtz before the Acadêmie des Sciences et des Beaux-Arts in November 1787. The programme included her husband Jean-Baptiste Krumpholtz's Sonata no.6, specially written to illustrate the capabilities of the new instrument. This instrument is now housed in the Kunsthistorisches Museum, Vienna. The only element which was to be permanently retained was the shutters; this idea was also incoroporated into Erard's harp.

Georges Cousineau and his son Jacques Georges became harp makers to Marie Antoinette in 1783, and after this time the Naderman firm seems to have concentrated its activities more on the publishing side, though it continued to make its single-action harps, albeit in a rather less ornate and exaggerated style. The earliest publishing licence granted to Naderman is dated 7 November 1777, and in conjunction with harp makers Cousineau and Salomon he published Krumpholtz's Fifth Harp Concerto in 1779. In 1784 Naderman published two of the solo symphonies for harp and small orchestra played by Madame Krumpholtz at the Concert Spirituel. One of Naderman's earliest catalogues (*c*1790) lists 43 publications, mainly harp or piano solos (including Krumpholtz's final six sets of harp sonatas) and *ariettes* with harp or piano accompaniment. The fullest and the latest of his catalogues that has come to light (*c*1795) lists about 320 publications, of which more than 200 are for harp or piano in various combinations; most of the remainder are for violin, wind instruments or wind band. Between 1791 and 1799 Naderman published orchestral scores of at least eight operas, including Cherubini's *Lodoïska*, Le Sueur's *La caverne* (see LE SUEUR, JEAN FRANÇOIS, fig.2) and Steibelt's *Roméo et Juliette*. These were, however, to remain his most substantial publications, and it was chamber music, especially for harp, that continued to predominate in his output, numerous works being either composed or arranged by his elder son (2) François Joseph. Late in 1796 Naderman took over the business and plates of Boyer, many of whose publications were subsequently reissued under Naderman's imprint. Most of Naderman's publications are elegant (with some notably handsome ornamental title-pages in the 1790s); all were printed from engraved plates. After his death, his business was carried on by his widow and sons. In 1835 the publishing house either went out of business or was taken over by G.-J. Sieber..

(2) (Jean) François Joseph Naderman (*b* Paris, 12 Feb 1781; *d* Paris, 3 April 1835). Harpist and composer, son of (1) Jean-Henri Naderman, and the most celebrated member of the family. It has been suggested that he was a student of Krumpholtz, but although the latter was closely associated with his father it is unlikely that the young Naderman studied with him at anything but a superficial level since Krumpholtz committed suicide in 1790. Although not otherwise known as a harpist, his father may have been his teacher, an H. Naderman being named as having performed the difficult Sonatas no.5 and 6 of Krumpholtz in 1785. For composition he was a student of Desvigne.

Naderman lived through a period of immense change, but he seems to have possessed a remarkable ability to adapt to any and every social situation. His first compositions were published in 1798, and their dedications to his aristocratic pupils indicate the social milieu in which he moved. His sets of variations and potpourris demonstrate an awareness of the music of his contemporaries, and include arrangements of music by Boieldieu and Lesueur, including two suites based on Lesueur's opera *Ossian ou Les Bardes*. Later, he composed a Rossiniana and Variations on *La Gazza Ladra*. Three sonatas for harp with violin and cello were dedicated to Dussek, with whom Naderman made one of his rare public appearances in a concert at the Salle de l'Odéon on 22 March 1810. In 1818 another group of three sonatas was dedicated to Clementi.

From 1813 Naderman was successively harpist to the royal chapel and harp soloist to the Emperor. After the Restoration (1815) he, his brother and mother were named harp makers and music sellers to the King, and François-Joseph himself was appointed the post of King's

chamber composer and first solo harpist. He was made a Chevalier of the Légion d'Honneur in 1821, and finally, in 1825, he was appointed to the Paris Conservatoire as its first professor of harp, his brother (3) Henri acting as his deputy. His meticulously thoroughgoing *Méthode Raisonnée* (1825) was intended for his pupils at this institution, and includes the *Sept Leçons Progressives* which are still used as teaching material today. The harp adopted by the Naderman brothers for use at the Conservatoire was the single-action Naderman harp to which they would admit no superior, despite the acceptance and continuing success of Erard's double-action harps since their introduction to England (1811) and France (1812).

WORKS

2 hp concs.; 2 qts, 2 hps, vn, vc; trio, 3 hps; duos and trios, hp, other insts.
Hp solo: 7 sonatas, variation sets, fantasias, potpourris, other works
Didactic: Ecole ou Méthode raisonnée pour la harpe (Paris, *c*1832); Dictionnaire des transcriptions pour s'exercer dans l'art de préluder et d'improviser tant sur la harpe que sur le piano (Paris, n.d.)

(3) Henri (Pascal) Naderman (*b* Paris, 12 Feb 1783; *d* Paris, 1842). Instrument maker and publisher, son of (1) Jean-Henri Naderman. His early training was directed towards harp making and the business side of the family firm, but he also took enough harp lessons from his brother to enable him to be appointed his official deputy. By 1825, the Nadermans were virtually the only firm left in Paris making single-action harps. Despite the Baron de Prony's submission to the Academie Française (1815) that the double-action harp should be the one adopted by the Conservatoire, the Nadermans made certain that only the single-action harp made by their firm should be used. In November 1827 Fétis published an article in the *Revue Musicale* drawing attention to the superiority of the Erard double-action harp over the kind adopted by the Conservatoire; this sparked off an acrimonious public correspondence between Henri Naderman and Fétis. Motivated by self-justification, misguided self-interest, pride, arrogance and jealous protection of the Nadermans' business interests, Henri's retrograde arguments appear pathetic and slightly ridiculous, especially in view of the fact that after the expiry of Erard's 1802 French patent for a new fork mechanism the Nadermans introduced this mechanism to their own instruments, thus tacitly admitting its superiority over their own hook mechanism.

ANN GRIFFITHS, RICHARD MACNUTT

Nadezhdin, Boris Borisovich (*b* Smolensk, 4 May 1905; *d* Tashkent, 7 March 1961). Russian composer. He graduated from the Moscow Conservatory in 1937 having studied composition with Litinsky. In the period 1935–6 he then taught at the Tatar national studio attached to the conservatory, and from 1937 until the end of his life he lived and worked in Tashkent. He became a composition professor of the Tashkent Conservatory, his pupils including Babayev, Giyenko, Kïdïrov and Sabitov. A Tashkent music school bears Nadezhdin's name.

As a teacher and composer he made an important contribution to the musical culture of Uzbekistan. Nadezhdin's work reflected a trend typical of the period stretching from the 1930s to the 1950s – that of interaction between Russian composers and the musicians of the various republics of the former USSR. For example, the musical dramas *Kasos* ('Vengeance'), *Aerlar* ('Centuries') and *Farkhad i Shirin* ('Farkhad and Shirin'), were written jointly with Uzbek folk musicians. These works were written for the Mukimi Theatre of Musical Drama which was founded in 1939. Uzbek musical drama acquired a special popularity during World War II and is a distinctive genre in which the music, based on and often directly quoting folklore, was subordinated to the text, and singing alternated with spoken dialogue. As a rule, the subjects were a lively reflection of the events of everyday life.

Nadezhdin's works for an orchestra of Uzbek folk instruments are notable for their original colour, while his individuality showed itself most clearly of all in his works for children. His music in this genre is marked by simplicity, elegance and impeccable taste, as well as a strong reliance on Uzbek melodies; these pieces have entered the teaching repertory of music schools and have become popular with young artists.

WORKS
(selective list)

Musical dramas: Kasos [Vengeance] (A. Umari, Sh. Uygun), 1941, Mukimi Theatre, Tashkent [collab. with Yu. Radjabi]; Farkhad i Shirin (K. Yashen), 1947, Tashovet Theatre, Tashkent (collab. with Radjabi]; Aerlar [Centuries] (Uygen), 1948, Mukimi Theatre, Tashkent [collab. with T. Djalilov]
Orch: Sym. 1934–5; Segokh, suite, 1939 [collab. with Radjabi]; Mechta [The Dream], poem, solo vv, chorus, orch, 1941; Sinfonietta, 1949 [unfinished]; Pakhta [Cotton], choreographic tableau, 1951 [collab. with Radjabi]; Val's [Waltz], poem, 1959; 2 p'yesï, 1960; Detyam [To Children], suite, 1961
Folk insts orch: Suite, orch of dömbras, 1935; Pamyati V.I. Lenina [In Memory of Lenin], poem, 1939; Suite, 1939; 8 uzbekskikh narodnïkh pesen [8 Uzbek National Songs], solo vv, chorus, orch, 1946
Chbr and solo inst: Fugue, str qt, 1932; Syuita [Suite], vn, pf, 1932; Al'bomï detskikh p'yes [Albums of Children's Pieces], pf, 1937, 1947, 1952, 1955; Pf Sonata, 1938; Poėma, vn, pf, 1938; Prelyudii [Preludes], pf, 1942–4; Malen'kaya syuita [Little Suite], pf, 1948

ALLA VLADIMIROVNA GRIGOR'YEVA

Naenia. *See* NENIA.

Nafir [nefir, nfīr]. Straight end-blown trumpet consisting of a metal tube in several parts fitted together, ending in a shallow bell. This type of trumpet has been used in European, Asian and African cultures from antiquity to the present day as a signalling instrument; a particularly

well-preserved specimen was found in Tutankhamun's tomb and is now in the Egyptian Museum in Cairo.

The Arabic term *nafīr* is confined to countries of the Islamic tradition in Asia and Africa. It can be translated as 'trumpet', 'pipe', 'flute', 'sound' or 'noise', and also as 'men in flight' or 'an assembly of men for warlike or political action', suggesting a military connection. Documentary records show that the straight trumpet is generally played with pairs of kettledrums (*naqqāra*); less often it is found in conjuction with the *zurna* (shawm) and the *davul* (double-headed cylindrical drum). The *nafīr* is primarily used as a military instrument to send signals, and in Morocco it is also used to signal the time during Ramadan, the month of fasting; it was formerly played in court festivities.

In modern Turkish the term *nefir* means 'trumpet, horn, battle signal'. The Turkish word for 'trumpeter' is *nafīrchī*, while *nafīr-nāma* means 'general order for troops to assemble', again suggesting a military connection. Early Turkish military bands used only the *nafīr* or straight trumpet; the looped trumpet of later Turkish military bands is *boru*, which translates as 'trumpet, signal horn, signal' and should not be confused with *nafīr*. The looped trumpet is a European development adopted by Eastern cultures; from the 14th century new forms of trumpets with curved tubes started to appear in Europe, and European instruments then began to supersede the straight trumpet in Islamic societies.

MICHAEL PIRKER

Nagano, Kent (George) (*b* Morro Bay, CA, 22 Nov 1951). American conductor. Born to Japanese-American parents, he received piano lessons from his mother; he also learnt the clarinet and the koto. He studied at Oxford, at the University of California, Santa Cruz (BA, 1974), with Grosvenor Cooper, at San Francisco State University (MM, 1976), where he studied conducting with Laszlo Varga and the piano with Goodwin Sammel, and at the University of Toronto (1977–9). During this time he also became répétiteur and assistant conductor for Caldwell's Opera Company of Boston and conducted chamber opera in San Francisco and ballet in Oakland. He was invited to become music director of the Berkeley SO in 1978, and thus began his long association with Messiaen. Over two decades he turned the Berkeley orchestra into a progressive force in northern California music-making. In December 1983 he was Ozawa's assistant for the première of Messiaen's only opera, *Saint François d'Assise*, in Paris. The next year he joined the faculty at the Tanglewood Music Center, made his début with the Boston SO, and became director of the Ojai Music Festival. He was the first winner (with Hugh Wolff) of the Affiliate Artist's Seaver Conducting Award and was appointed principal guest conductor for the Ensemble Intercontemporain (1986–9). He became music director of the Lyons Opéra in 1989, and was associate principal guest conductor of the LSO (1990–98) and music director of the Hallé Orchestra (1992–2000). In 2000 he took up the post of chief conductor of the Deutsches Sinfonieorchester.

Nagano excels at complex scores and has been praised for his technique, if not always for his warmth, especially in performances of Messiaen and Mahler. In Lyons he performed and recorded rare repertory, including Poulenc's *Dialogues des Carmélites*, Martinů's *Les trois souhaits*, Prokofiev's *The Love for Three Oranges* (which was named *Gramophone* magazine's Record of the Year in 1990) and the first recording of Strauss's *Salomé* with the original French text by Oscar Wilde. His exuberant and graceful movement on the podium is reminiscent of his mentor, Ozawa; and, like Ozawa, he conducts without a baton. He revived the status of the Hallé Orchestra as well, but his expensive programming, with its emphasis on contemporary works, led to empty seats in the new Bridgewater Hall and was blamed for the near-bankruptcy of the orchestra in 1998. In 2000 Nagano was replaced as the Hallé's musical director by Mark Elder.

JOSÉ BOWEN

Nagāṙā [nagārā, nagaṙa, naqqāra, naghārā etc.]. South Asian names for NAQQĀRA; the Arabic spelling is retained only in Urdu. Often, but not always, played in pairs, kettledrums have been the leading instrument of military bands and of the ceremonial band *naubat*, *naubatkhāna* or *naqqārakhāna* of courts, shrines and temples in South Asia since the Middle Ages. They are also widespread in this area as folk and Ādivāsī instruments, to accompany dancing, hunting etc; both folk and court *nagāṙā* are closely associated with oboes and horns. In Nepal the *nagārā*, a large kettledrum with metal body, is found mainly in temples and princely palaces. Very large pairs are still to be seen at the ancient palaces of Kathmandu and Bhaktapur but they are now used only rarely. The Newari people of Nepal called the instrument *jornagārā* or *dohranagārā*.

Kettledrums probably reached India after the Arab conquest of Sind, in 712 CE, together with the other Arab military instruments, the oboe and trumpet. With the establishment of Muslim Turko-Afghan rule under the Delhi Sultanate from 1192, the name *naqqāra* was adopted in India, often in an Indo-Aryan form as *nagāṙā*, *nagārā* etc. While it continued to function as an important military drum throughout the Muslim period, the *nagāṙā* soon became important also as a leading instrument of the palace ceremonial band NAQQĀRAKHĀNA, or *naubat*. The *naqqāra/nagāṙā* was played in pairs of a treble and bass drum. Although the term may in South Asia be generic for such paired kettledrums, it is clear that in the late medieval and early Mughal periods, as indicated by the *Ā'īn-i-ākbarī*, it denoted higher-pitched pairs of such drums, played alongside lower-pitched or tenor pairs known as *kuvargah* or *damāmā*, and with the large, single, bass kettledrums depicted in Mughal painting. In these sources one leading drum-pair is often depicted in the centre of the band, frequently placed on a richly embroidered cushion.

In the late Mughal and early modern periods the *nagāṙā* may be seen depicted in other court music scenes also, accompanying female dancers. The *nagāṙā* survives in modern times in a few, much reduced *naubat* bands found mainly at Muslim shrines (*dargāh*) such as those at Ajmer in Rajasthan and Mundra in Cutch.

The court *nagāṙā* as it survives today consists of two hemispherical metal bowls (somewhat pointed at the

base) – the smaller on the right (*jil*, *jhil*, from the Arabo-Persian *zir*), and the larger on the left (*dhāma*). The single skins are braced with X-lacing, divided by crosslacing in the centre. Tuning is variously effected by heat, the pouring in of water through a small hole in the base, and, in the case of the bass left-hand drum, by an interior resinous tuning-load stuck under the skin. The drums are either placed on their sides, with the two heads facing inwards, or with the right almost horizontal; they are struck with two sticks, short and thick with tapering heads. Though precise pitch is neither possible nor desired, the relationship between the drumheads appears to be of a 4th or 5th (the left at the dominant or subdominant below the right). The timbre difference is very noticeable, the right having a tight, metallic tone and the left a dark, dull thud.

ALASTAIR DICK

Nāgasvaram [nāgasuram, nāyaṉam]. Conical shawm of South India. Although the term is mentioned in texts from the middle of the 1st millennium CE onwards it is unclear if this relates to a precursor of the modern instrument and scholars remain divided on the question of the instrument's origins. It is approximately 95 cm long, and its large double reed, of cane, is fashioned similarly to that of the ŚAHNĀĪ. The reed is mounted on a short, stubby conical staple, which is inserted into a conical wooden pipe containing seven equidistant finger-holes, and no thumb-hole; five additional holes are bored near the distal end of the pipe, two on each side and one on top. These holes, which may or may not be completely or partially filled with wax, assist in tuning the instrument. A widely flared wooden bell is attached to the distal end of the pipe. Additional reeds, staples and supporting paraphernalia are strung and kept together, to be readily accessible during performance. Although the instrument exists in longer (*bāri*) and shorter (*timiri*) examples, with gradations between, the longer variety has become more popular during this century. A metal bell is usually associated with the shorter *nāgasvaram*.

Three fingers are used in the proximal position and four in the distal position. Normally the left hand is proximal. Skilful lip command of the pliable double reed, virtuoso tonguing and breath control facilitate a wide variation of pitch and tone quality, important features of *nāgasvaram* technique. The range of the instrument is two octaves.

The exceedingly vibrant, penetrating sound of the *nāgasvaram* is valued as auspicious. Though also appearing on the concert stage today, historically the *nāgasvaram* is part of the *periya meḻam* which plays mainly in Hindu temples, at yearly festivals and at marriages. It is accompanied by the *tavil*, the *tāḻam* (small hand cymbals of bell metal) and the *surudippeṭṭi* (a bellows-activated drone box containing free reeds).

Periya meḻam (temple instrumental ensemble), with (left to right) tavil and two nāgasvaram, Ambalapuzha, Kerala, South India

The *tavil* (or *tavul*, *davul*) is a double-headed barrel drum made of jackwood. The body is 40 cm to 45 cm long and 35 cm in diameter at the centre, about 21 cm at the heads, and the shell is less than 5 mm thick. The two skins are stretched on very thick hoops of bent bamboo bundles, covered with cloth, which project beyond the end of the drum and higher than its centre. The heads are interlaced by leather straps in a V pattern, but these are tightened by straps passing two or three times round the centre. The right head is played by the fingers, encased in plaster thimbles and the left is struck with a stick. The skins are said to be sometimes double, with an interior tuning-load.

Nagaya, Kenzō. *See* HAYASHI, KENZŌ.

Nagel. German firm of music publishers. In 1835 Adolph Nagel (1800–73) took over the music shop, music-publishing firm and lending library of Georg Christian Bachmann in Hanover and ran them under his own name. In 1913 the business was acquired from his heirs by Alfred Grensser (1884–1950), who appreciated the stimulus given to music publishing after World War I by the youth music movement. He specialized in editions of early music, and produced performing editions of Baroque and early Classical works in the series Nagels Musik-Archiv, which numbered over 200 issues in the mid-1970s. When the Hanover premises were completely destroyed in World War II the firm moved to Celle and in 1952 was taken over by the Vötterle publishing group; it still trades from Kassel under its own name.

THEODOR WOHNHAAS

Nagelgeige [Nagelharmonika] (Ger.). *See* NAIL VIOLIN.

Nägeli, Hans Georg (*b* Wetzikon, nr Zürich, 26 May 1773; *d* Zürich, 26 Dec 1836). Swiss writer on music, music publisher and composer. He received his first musical instruction from his father, who was a parson, and in 1790 he went to Zürich to study with Johann David Brünings, who gave him special instruction in Bach's music. About this time Nägeli founded a music shop and lending library, and shortly afterwards a publishing business. His lending library, the first of its kind in Switzerland, flourished in the early years of the 19th century and became known beyond the Swiss borders. Nägeli also made contact with other European music publishing houses, and from 1803 his first editions of works by Beethoven (the op.31 piano sonatas), the Abbé Stadler, Clementi, Cramer and eight other contemporary composers appeared in the series Répertoire des Clavecinistes. He gradually acquired a valuable collection of autographs and copies of works by the old masters and began a subscription edition of keyboard works by Bach and Handel. With his *Musikalische Kunstwerke im strengen Stile* (1802) he revived some of Bach's neglected compositions. In 1807 the clergyman J.C. Hug (Nägeli's creditor) and his brother Kaspar took over the direction of the publishing house; Nägeli left the firm in 1818 to found one of his own.

In 1805 Nägeli founded the Zürich Singinstitut, where he had his own works frequently performed. He also compiled a singing tutor and published various pamphlets; thereby he came into contact with many music teachers, notably Pestalozzi, whose educational theories and views on human nature had a lasting influence on him. He also corresponded with major writers and composers including Rückert, Zelter, E.T.A. Hoffmann, Schubert, Weber, Spohr, and from 1817 with Beethoven. Significantly, perhaps, it was at this time that he contributed to a new, Romantic understanding of the German Lied in which text, voice and instrumental part were to be interdependent. In 1824 he gave ten lectures on musical aesthetics in various German cities; these met with great interest but also with controversy, the severe criticism of Mozart giving particular offence. On returning to Zürich, Nägeli discovered that the Singinstitut had collapsed in his absence; in its place he founded the Sängerverein der Stadt Zürich in 1826 and the Musikalischer Frauenverein two years later. In 1826 his *Vorlesungen über Musik*, containing the most celebrated of his essays, were published in Stuttgart; in these Nägeli showed himself to be a precursor of Hanslick, the classical exponent of the formalistic view of musical aesthetics. A number of passages in these writings reduce the innovative importance that has been ascribed to Hanslick's ideas, and others show that Nägeli, like Herder, whom he revered, was an early proponent of the idea of musical dynamism, a concept of music as a kind of energy. The same idea is evident in the fact that Nägeli was the first to transfer the scientific term 'dynamics' to music (*Gesangbildungslehre*, 1810; he had already defined 'dynamic' qualities in music in *AmZ*, col.774). The impact of Nägeli's publications became ever more widespread, and he was invited to lecture throughout Germany and France. The University of Bonn awarded him an honorary doctorate in 1833 for his services to singing and aesthetics.

Some of Nägeli's opinions have turned out to be questionable, arbitrary or prejudiced, for example his criticism of certain composers of his time, including Beethoven and Mozart. Sponheuer has shown that Nägeli's theory 'is not always easy to understand in its peculiar mixture of ideas, combining as it does phenomenological objectivity, a systematic conceptual construction verging on dogmatism, and a considerable quantity of speculative religiosity tinged with mysticism'. Concepts such as *Anschauung* (sense perception, intuition or apprehension), assimilation, methods of thinking that aim to make syntactical connections, and the intentionality of consciousness all play a considerable part in his line of argument. While he was a committed proponent of the idea of absolute music, his consistent recourse to sensuousness and concreteness should not be forgotten. He reminded his readers that art gained significance only in its manifestations and effects (*Vorlesungen*, p.24).

His encouragement of practical performance and his performance theory were sustained by his critical comments on virtuosity and brilliance of manner, and by a principle of order and proportionality derived from medieval scholarship. Musical beauty, he believed, can reveal itself and thrive only in the context of proper performance, in line with the proportions of the musical syntax. One of his central concepts is that of freedom: in performance, he expected a musician to succeed in giving the 'illusion that everything is welling up spontaneously from within, as if he himself were creator of the work of art' (*Aufsätze*, 1978, p.51).

As a composer Nägeli was concerned with ethical considerations and accordingly devoted himself chiefly to choral music. Occasionally his didactic purpose as 'an educator of the people' comes all too clearly to the fore, but his choral songs are generally simple and effective, whether straightforward melodies in a popular idiom or motets that are rich in modulation. His solo songs cause him to be counted among the more noteworthy of Schubert's forerunners. He showed a careful and critical attitude in the selection of texts, revealing a preference for Goethe. He was also gifted as a conductor and was president of several music societies; the honorary title 'Sängervater' has remained associated with his name.

LUISE MARRETTA-SCHÄR

Nagovitsin, Vyacheslav Lavrent'yevich (*b* Magnitogorsk, 21 Dec 1939). Russian composer. He attended the Leningrad Conservatory (1958–63) where he studied the violin with Belyakov and composition with Salmanov and Voloshinov. He then took a postgraduate course under Shostakovich (1963–6) before heading the music department of the Leningrad Academic Comedy Theatre,

working as an editor and directing the composition course at the Musorgsky College. In 1970 he was appointed to teach polyphony and composition at the Leningrad Conservatory and in 1989 he became senior lecturer in the music theory department. He has written a number of works concerning the teaching of polyphony and compositional technique. His own style combines various 20th-century methods – such as serial monothematicism – with a certain formal academicism but also encompasses an interest in folklore (he wrote the first Buryat string quartet). He orchestrated and edited Musorgsky's unfinished operas *Salammbô* and *Zhenit'ba* ('The Marriage') for productions at the Mariinsky Theatre.

Naich [Naixh, Naxhe], **Hubert** [Huberto, Hubertus, Robertus] (*b* ? Liège, *c*1513; *d* ?Rome, *c*1546). Several musicians bearing variants of this name were active at the collegiate church of St Martin in Liège from the early to late 16th century. One was an acolyte about 1501, and chaplain and cantor from 1516 until about 1550. Another was *duodenus* in 1553 and 1561 and was still appearing in the church records in 1598. The Naich who was active as a madrigalist in Rome in the years *c*1540–56, however, was probably a third figure, 'Hubertus Naxhe junior', who was *duodenus* from 1529 until 1532.

Whether the composer was 'Ubretto' in a lost painting by Sebastiano del Piombo, described by Vasari, is uncertain, as is his possible identification with the 'Bruett' cited by Doni (*I marmi*) as a companion of Verdelot in Florence; both seem unlikely on chronological grounds. Naich's one solo publication, *Exercitium seraficum*, a volume of madrigals published by Antonio Blado in Rome about 1540 (and, according to Gesner, reprinted in Venice), identifies him as a member of an 'accademia degli amici' gathered around the Florentine expatriate banker Bindo Altoviti in Rome. This academy may have been an informal group of musicians and poets. It seems likely that Arcadelt, whose *Quinto libro* of 1544 includes seven pieces by Naich, was a member as well. Six of these pieces are also in the *Exercitium*; a seventh, *Spargi tebro di fior*, refers to 'Margherita', possibly Margaret of Austria who married Ottavio Farnese in Rome in 1538.

Arcadelt had published six *note nere* madrigals in Veggio's *Madrigali* of 1540; Naich may have learnt about the new madrigal type at that time. He contributed a number of pieces in this subgenre to Gardane's *Primo libro ... a misura di breve* (RISM 1542[17]). He is represented by seven madrigals in Rore's *Secondo libro a 5vv* (1544[17]); but no clear musical relationship to Rore is evident. Naich's *note nere* madrigals are perhaps his most characteristic work. They tend to begin with comparatively broad declamatory gestures followed by the quick and sometimes syncopated patter characteristic of the type. One of them, *Proverb'ama chi t'ama*, setting a truncated stanza of a Petrarchan canzone (cv), is closely modelled on a setting by Nola (published 1545 but clearly written earlier).

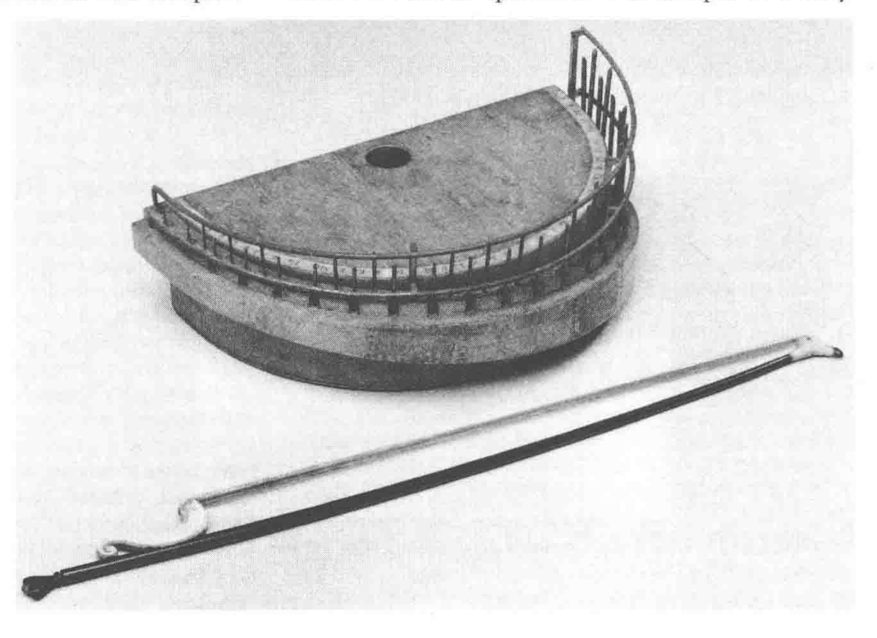
JAMES HAAR



Nail violin (Fr. *violon de fer*; Ger. *Nagelgeige*, *Nagelharmonika*, *Eisenvioline*; It. *violino di ferro*). A friction idiophone (not a violin) consisting of metal, wooden or glass rods (which are in some cases bowed, in others struck) fastened at one end to a sounding-board. It has

similar acoustic properties to a stopped organ pipe as opposed to one that is open at one end, having only odd-numbered overtones, and sounding one octave lower than a rod that is fixed or free at both ends.

The instrument was invented in 1740 by Johann Wilde, a German violinist in St Petersburg, after he accidentally scraped the hair of his bow across the metal peg upon which he was about to hang it, producing a musical sound. The flat wooden sounding-board is usually in a half-moon shape and the metal nails are mounted perpendicularly around its curved edge. As these nails diminish in height the notes rise in pitch, and the chromatic nails are distinguished by being slightly bent. The instrument was held in the left hand by a hole underneath, and the sound was produced by rubbing a well-rosined bow across the nails. In 1780 it was improved by the addition of sympathetic strings in the 'violino harmonico' of Senal of Vienna, who also excelled upon it as a performer. Modern copies of an early design have been made by Michael Meadows. In the 19th century a type in which wooden rods were rubbed with rosined gloves was known as the Stockspiel or Melkharmonica (resembling an inverted milking-stool). In 1791 an oblong keyboard form, the Nagelclavier, was produced by Träger of Bernberg (Saxony); it was played by a treadle-operated band coated with rosin. Bowed steels rods were also the basis of Franz Schuster's six-octave Adiaphonon (1818–19). The vertical wooden rods in Schortmann's restrained Äolsklavier (*c*1822) were, exceptionally, blown on by a bellows. Late-19th-century variants of the nail violin, which are struck rather than bowed, are the toy piano and the chimes in some household clocks.

Around the mid-19th century some acousticians analysed the acoustical properties of rods, including those fixed at one end; 'Marloye's harp' was a 20-note chromatic instrument (wooden rods), Forré constructed a similar 22-note instrument in 1884, while Charles Wheatstone's 'kaleidophone' featured glass beads attached to the free ends of metal rods to indicate their vibration patterns visually. The traditional Latin-American tubular rattle *palo de lluvía*, recently popular in the West as the 'rainstick', is often a hollow cactus stem with the spines removed and reinserted inside; when the rainstick is inverted, seeds or pebbles fall past the protruding spines, striking them randomly.

Most writers assume that the nail violin disappeared in the second half of the 19th century, but in recent years its principle has been revived in many new instruments and sound sculptures, with the 'nails' bowed or struck or both. The circular arrangement of the Stockspiel is retained in Mauricio Kagel's large instruments with metal or wooden rods; in Richard Waters's Waterphone rods mounted on a water-filled resonator and played with a stick, the hand or a bow (for illustration *see* SOUND SCULPTURE, fig.2) and in Hal Rammel's 'triolin', except that the resonator-base is triangular. Many of the Baschet brothers' 'Structures sonores' feature threaded steel rods (the attached glass rods are 'bowed' with wettened fingers). Daniel Schmidt's Western Gamelan includes tuned wooden rods which are both struck and function as resonators. Reinhold Marxhausen builds sea-urchin-like 'manual walkmans' worn on a player's head as a private instrument. Tom Nunn has specialised in 'space plates' (such as the Crustacean) with bronze rods and 'electro-acoustic percussion boards' (such as the Bug) that include rods. Hugh Davies uses miniature amplified rods that are rubbed or plucked in his Stickleback, Hedgehog and Porcupine, as does Richard Lerman's Plinky. Amplified struck rods produce the sounds in some electric carillons and the electric pianos of Harold Rhodes. James Wood's microtonal 'microxyl' features stroked rods. Rods form one element of combination instruments by Chris Brown, David Cope, Hans-Karsten Raecke, Ferdinand Försch, George Smits, Giorgio Battistelli, Les Phônes, Johannes Bergmark and others. When some plastic toys are moved, a suspended internal beater randomly strikes a circle of rods. Much longer flexible metal rods are used in the Sonambient sound sculptures of Harry Bertoia, David Sawyer's Angel Bars, Robert Rutman's Bow Chimes and Buzz Chimes, and amplified instruments played by electric motors (Max Eastley) and by compressed air (Mario Bertoncini); in these the 'unbalanced' relationship between the diameter and length of the rods produces a rich and resonant spectrum. Rods clamped at exactly

Nail violin, ?German, c1800 (Royal College of Music, London)

mid-length with both ends free function like two linked rods fixed at one end. They are normally mounted vertically; the unstruck side resonates in sympathy with the struck one, as with the twin arms of a tuning fork, and when rubbed (e.g. with rosined gloves) they produce a surprisingly high frequency. Examples include the Metallstabharfe (used in Germany between the wars for variety performances) and Dean Drummond's one-octave set of just intonation aluminium Juststrokerods.

Nakada, Yoshinao (*b* Tokyo, 1 Aug 1923). Japanese composer. Son of an organist, he began to play the piano and to compose in his boyhood. He studied the piano with Nobori Kaneko and later with Noboru Toyomasu at the Tokyo Music School (1940–43). After a short period in the army at the end of World War II he became active as a composer, joining the group Shinsei Kai in 1946. In 1948 he made his début as a pianist, playing his own pieces, and in 1949 his Piano Sonata won second prize at the National Music Competition. A period of concentration on piano music and songs was followed by an extensive output of choral works, children's songs and incidental scores for radio and television. His music follows the tradition of the Romantic lied and *mélodie*, making no use of later developments. The lyricism of his songs and his successful handling in them of Japanese texts have brought them great popularity within Japan. A director of the JASRAC (the Japanese performing rights society), he was also a professor at Ferris Women's College, Yokohama (1964–93), and has published *Jitsuyō wasei gaku* ('Keyboard harmony', Tokyo, 1957).

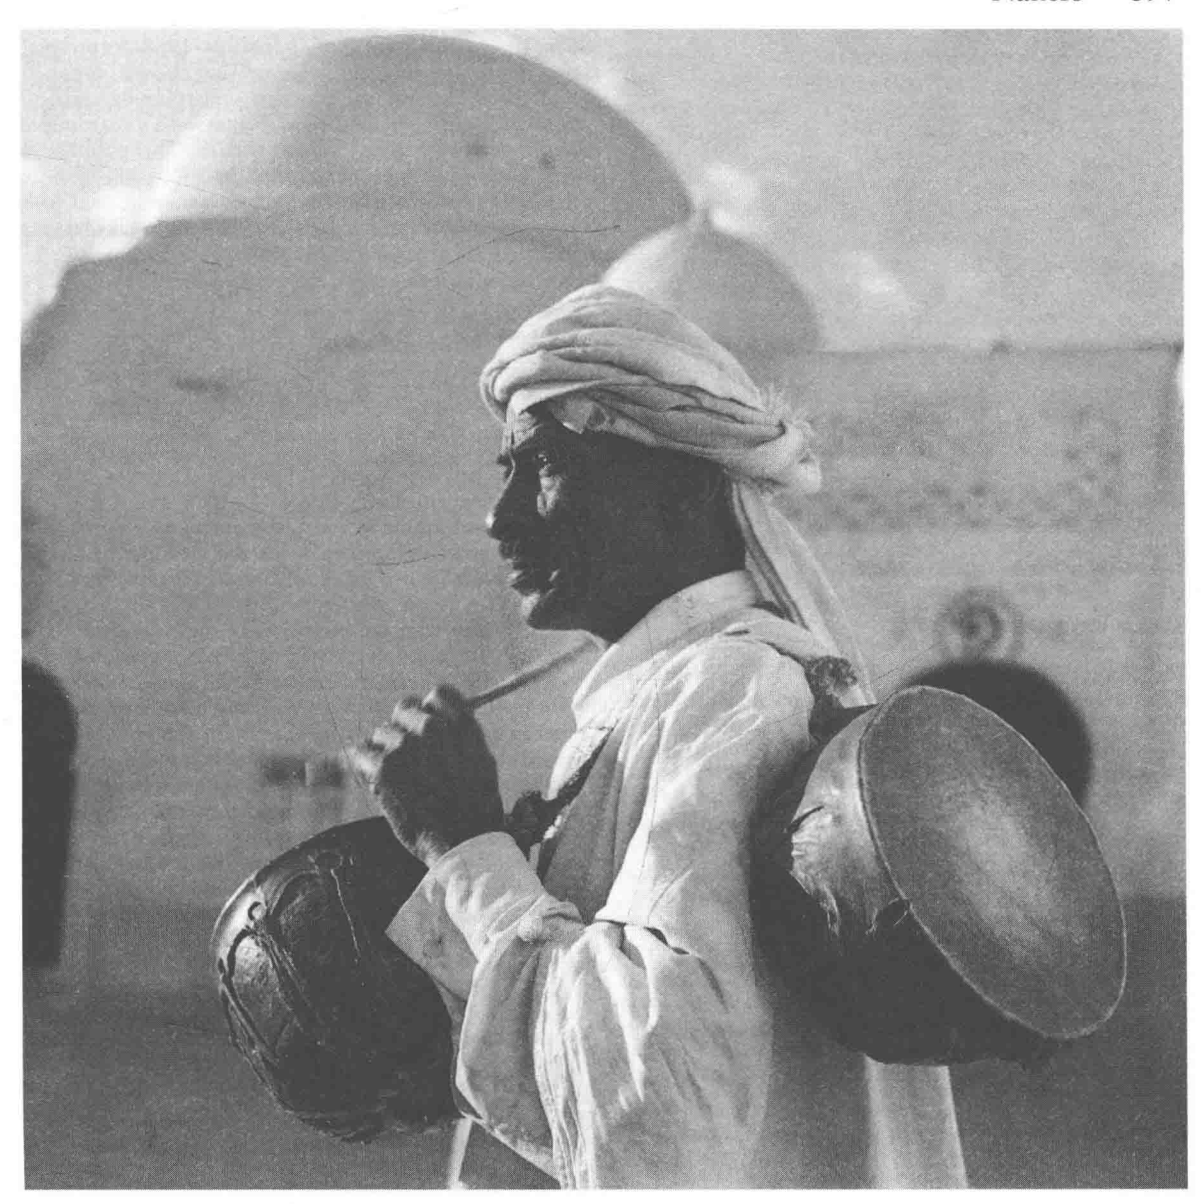
MASAKATA KANAZAWA

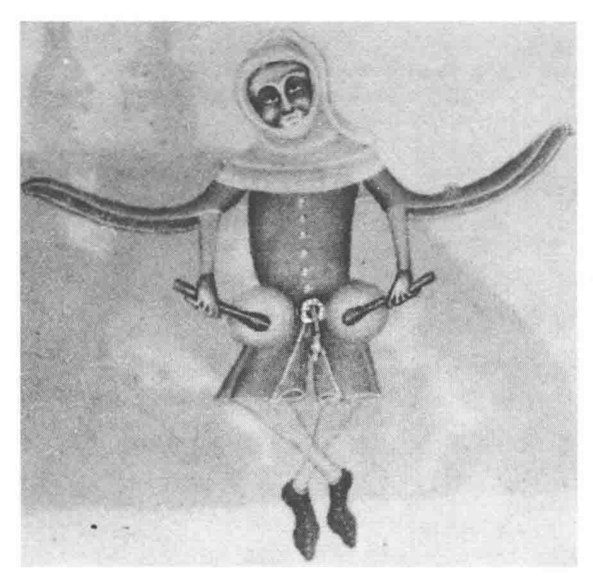


Nakasuga Kengyō. *See* MIYAGI, MICHIO.

Nakers (from Arabic *naqqāra*; Fr. *nacaires*; It. *nacchera*; Sp. *nácar*, *nacara*). Small kettledrums of the medieval period, of Arabian or Saracen origin (in the system of Hornbostel and Sachs they are classified as membranophones). At the end of the 20th century the instrument was represented in North Africa, Turkey, Egypt and Syria by small drums with bowl-shaped bodies of wood, metal or clay, and covered on their open tops with animal skin (fig.1). The Western form was often crafted from thick leather, shaped while still wet over a mould. While nakers were introduced into Spain by the Moors in the early 8th century, there is no hard evidence for their use in Western music prior to the era of the Crusades (1096–1291). Nakers represent one manifestation of the cultural exchange between the Muslim states and the West, a phenomenon that began before the Crusades with Frankish mercenaries serving in Byzantium and under Muslim potentates, and Saracen troops serving the Normans in Sicily (*see also* JANISSARY MUSIC).

From the numerous representations of the instruments of this period it is clear that nakers were more or less hemispherical or parabolic in shape, from 15 to 25 cm in diameter, and with a common feature in the single skin head. The heads were attached in various ways: nailed, braced with cords or neck-laced; they could therefore not be tuned with the same precision as the larger kettledrums (*see* TIMPANI). However, the fact that nakers were usually played in pairs suggests that one instrument had a 'higher' sound, the other a contrasting 'lower' one, a feature of some African as well as Eastern drum traditions. Nakers were either suspended in front of the player by means of a strap around the waist or the shoulder, carried on the back of an apprentice who marched in front, set on a low wall or balcony, or placed on the ground. In most cases they were played with two drumsticks, usually straight with a bulbous end or, occasionally, curved in the shape of a crook. Both timpani and nakers were used in many contexts: warfare, processions, tournaments, banquets and dances. More elaborate rhythms may have been used on the nakers than on the small tabor played with the pipe, partly because two sticks were used, partly because a pair of drums offered greater possibilities for contrasting sounds. For further contrast, snares were sometimes attached.

Literary sources confirm the use of small kettledrums in Europe from the beginning of the 12th century onwards. They first appeared with the long straight trumpet (*buisine*). 'Buisines, nakaires et tabours' are mentioned in the semi-fictional *Chanson de geste* celebrating the exploits of Godfrey of Bouillon (*c*1100), and Saracen military music, with its *buisines* (or *cors sarrazinois*) and *nacaires*, appears frequently in the contemporaneous *Chanson de Roland*. In German literature no distinction was made between large and small kettledrums; 12th- and 13th-century epics refer to both types as *puke*, later *Paucke* and the diminutive *Paüklein*. In Italy, Marco Polo's 'il grand nacar' in *Il Milione* (1298) was a large kettledrum.



By the mid-13th century Eastern-style trumpets and nakers were widely popular. At the siege of Damietta (Dumyât) (1249) Louis IX heard the 'noisy *nacaires* and *cors Sarrazinois* of the Sultans of Babylon' playing from the shore, while nakers, field drums and trumpets played on the deck of the Count of Jaffa's flagship. According to Froissart (*Chroniques*), when Edward II marched into

1. *Nakers (naqqāra) from Tunisia*

Calais in 1346 he was greeted by 'trompes, tabours, nacaires et chalemies'. Machaut in *La prise d'Alexandrie* (*c*1369) described a fanciful performance after a feast by an ensemble including nakers, and Chaucer in the *Knight's Tale* described a tourney with 'Pypes, trompes, nakers, clariones / that in the battaille blowen sounes'. The 15th-century *Echecs amoreux* mentions 'trompes, tabours, tymbrez, naquaires' among the loud [*haulz*] instruments performing for a dance. While the European nakers were smaller than the Muslim instruments, the many references to their 'awesome' or 'terrible' sounds suggests that they were sometimes used in multiple pairs, especially in battle, where massed ensembles of trumpets and drums were described. From the 14th century onwards European courts were employing naker players: in 1304, Edward I included 'Janino le nakerer' among his musicians and the retinue of Louis IX (1314–16) included a 'Michelet des nacquaires' among the *Musicque de la chambre du roy*.

Excellent examples of nakers are found in the Luttrell Psalter (*c*1330–40, now *GB-Lbl* Add.42130). One illustration (fig.2) shows a player with a pair of small drums at his waist and a stick in each hand. The most copious pictorial source for early nakers is a *Romance of Alexander* (1338, *GB-Ob* MS Bod.264). Among its many illustrations is a nakerer playing from atop a castle wall; the lacings of the instrument are clearly visible. An example reflecting the pervasive Eastern influence appears in the manuscript *De Septem vitiis* (*c*1390, *GB-Lbl* Add.27695); there a blackamoor carries the nakers on his back as the master-drummer plays them with a pair of mallets. While most of the nakerers depicted are men, in religious art nakers are played by women and angels, in the company of soft instruments such as the viol or the portative organ (e.g. Matteo di Giovanni, *The Assumption of the Virgin*, 1470–80, National Gallery, London). Nakers were still depicted in an encyclopedia produced

2. *Pair of nakers from the Luttrell Psalter, English, c1330–40 (GB-Lbl Add.42130, f.176r*

for Henry III of France (1574–89). From Praetorius (*Theatrum instrumentorum*, 1620) onwards only the larger *Heerpaucken* were hemispherical in shape, with their heads lapped over a hoop, and provided with tuning hardware: they were tuned to definite pitches.

JAMES BLADES/EDMUND A. BOWLES

Nakič [Nakik], **Petar.** *See* NACHINI, PIETRO.

Naksawat, Uthit (*b* Samut Songkhram, Thailand, 1923; *d* 1982). Thai composer, performer and writer on music. An economist by training (obtaining the doctorate in Economics from Cornell University) he began composing for the radio station of the Ministry of Education while holding a professorship in economics at Kasetsat University. Naksawat was a close disciple of LUANG PRADIT PHAIRAU, studying with him from 1945 until the teacher's death in 1954. In the 1960s and 70s he was part of a broader movement to reinvigorate Thai music by bringing it to the masses through radio and television. In 1960, soon after television came to Thailand, he presented 'The Advancement of Thai Music', a programme so popular that it led to another, 'Dr. Uthit and Thai Music', that ran for almost 20 years.

Naksawat left behind an impressive body of accomplishments. He wrote numerous newspaper and magazine articles about Thai music history, playing techniques, theoretical concepts and performers' life histories. He eventually assembled some of these essays into the book *The Theory and Practice of Thai Music* (1968), an unusual and important publication about Thai classical music in addressing the musical concepts underpinning classical music to a general audience. Naksawat's programmes and writings were very popular with the Thai public, and it is largely due to his efforts that the 1970s and 80s saw a surge of middle-class interest in classical music, with many parents arranging for their children to take lessons in Thai rather than Western music.

DEBORAH WONG

Naldi, Antonio [Il Bardella] (*d* Florence, 25 Jan 1621). Italian lutenist and singer, inventor of the chitarrone. Sometimes styled 'bolognese' (and probably related to the Bolognese composer Romolo Naldi), he was associated with the Medici court in Florence from 1571, and by 1588 he was custodian of the court's musical instruments. In 1609 his salary was a high 16 *scudi* per month, comparable with that of Giulio Caccini. He is recorded often as performing at court, sometimes as a singer (e.g. in the first of the *intermedi* for the wedding of Grand Duke Ferdinando I and Christine of Lorraine in 1589) but chiefly as an instrumentalist. Emilio de' Cavalieri credited him with the invention of the chitarrone (in a letter to Luzzasco Luzzaschi of 1592; see Prunières) – Naldi seems to have designed and first used the instrument in the 1589 *intermedi* – and his virtuosity on the instrument was praised by Caccini in the preface to *Le nuove musiche* (1601/2/*R*). Naldi acted as a guarantor of the castrato Onofrio Gualfreducci for his appointment as sacristan of S Lorenzo in 1593, and recommended Antonio Brunelli for the post of *maestro di cappella* of S Stefano in Pisa in 1612. Francesco Rasi noted that although Naldi lived 'sordidamente', he left some 24,000 *scudi* on his death, an astonishing amount.

TIM CARTER

Naldi, Hortensio (*b* ?Piacenza; *fl* 1606–7). Italian composer. All that is known of his life is that he lived at Cento, Emilia, in 1606, the year in which his *Psalmi omnes qui . . . in solemnitatibus decantari solent, cum 2 Magnificat, et falsi bordoni . . . lib.I*, for four voices and instruments, appeared at Venice. This was followed by the *Concerti ecclesiastici* for one to four voices with basso continuo (Venice, 1607). These two sacred collections point up the divergence between a conventional polyphonic style for psalms and a novel concertato texture for motets. One of the latter was reprinted in a German

anthology (RISM 1626[2]); it sets the words *Pulchra es O Maria* for SATB and is unified by a triple-time refrain, as were many early four-part concertato motets.

JEROME ROCHE

Naldi [Naldo, Naldio], **Romolo** [Romulo] (*b* ?Bologna, mid-16th century; *d* Rome, 21 May 1612). Italian composer and organist. He was a doctor of theology and of civil and canon law, and was named a Knight of St Peter's and cross-bearer to the pope. According to Fétis, he was organist of the Dominican church in Ferrara, but he is documented in Rome for a number of years after 1585. He was second organist of S Luigi dei Francesi in January 1585 and again from July 1587 to September 1590, and was probably the only organist there between January 1591 and March 1592. He was also in Rome in 1600 when he signed the dedication of the book of motets to his patron Cardinal Inico d'Avalos. Naldi is noted primarily for this volume which includes two works for 12 voices and one for 16.

RUTH I. DEFORD

Nalson, Valentine (*b* ? 14 Feb 1683; *d* York, 3 March 1723). English churchman and composer. The only evidence for the date of his birth is his first name. His father, John, was a royalist pamphleteer under Charles II. Valentine was admitted sizar at St John's College, Cambridge, in 1699, and after graduating (1702–3) was ordained deacon in 1706 and priest in 1707, when he also became succentor of York Minster and vicar of St Martin's, York. He was also a prebendary of Ripon from 1713. As succentor, Nalson was effectively in charge of the minster's music. His Service in G was his best-known work and enjoyed quite a wide circulation. The four anthems to which his name is attached are English adaptations of Latin motets; their technical accomplishment and modern Italian idiom are likely to have been beyond him. (I. Spink: *Restoration Cathedral Music, 1660–1714*, Oxford, 1995)

WORKS

Service, G (TeD, Bs, Ky, Cr, Mag, Nunc), for the Peace of Utrecht, 1713, 6vv, *GB-Cu*, *DRc* (inc.), *Ob*, *Y*

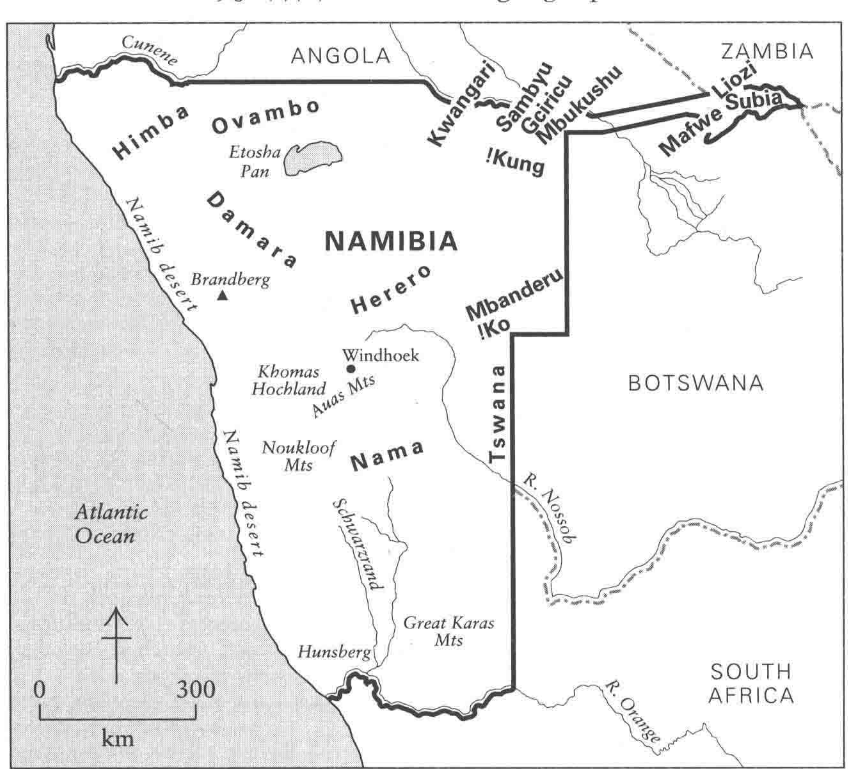
Mass, G (Ky, Gl), a 10 (vv and str), *Y* (inc.), doubtful

4 anthems (adaptations of Latin motets, orig. composer in parentheses): Give thanks unto the Lord (P.A. Fiocco), *Cu*, *DRc* (inc.), *Lbl*, *LF*, *Ob*, *Y*; [O] clap your hands (P.A. Fiocco), *Cu*, *LF*; O most blessed who can praise thee (J.-J. Fiocco), *Cu*, *LF*; Thou, O God, art praised in Sion (P.A. Fiocco), *Cu*, *Y*

IAN SPINK

Namibia, Republic of. Country in south-west Africa. It has an area of 824,269 km² and a population of 1.73 million (2000 estimate). European colonial influence in south-west Africa began in 1847, with the activities of the Rheinische Missionsgesellschaft, which gradually aroused German interest until the formal establishment of German authority over the territory in 1884. Formal declaration of independence of the new nation of Namibia occurred in 1990.

Namibia is scarcely populated; the southern half is largely desert, and the rural population is found mainly in a narrow strip in the north, bordering Angola. The diversified population's languages fall into three groups: (a) Bantu languages; (b) Khoisan languages such as Nama, Damara, !Ko, !Kung' etc. (fig.1); and (c) Indo-European languages (German, Afrikaans etc.). Some population elements form clusters with subdivisions. During the era of South African apartheid 12 ethnic groups were officially distinguished.



1. MUSICAL TRADITIONS OF THE MAIN ETHNIC GROUPS. Music and dance in Namibia are predominantly associated within six socio-economic contexts: (1) educational institutions such as schools and churches, including mission schools; (2) government-sponsored events such as festivals, public performances, political rallies, radio and TV presentations; (3) entertainment in bars, nightclubs and drinking spots, generally known as 'drankwinkel'; (4) work-songs, choir singing and music for wedding ceremonies performed on large farms mostly owned by German or Afrikaans-speaking entrepreneurs; (5) the life-cycle of rural communities based on agriculture and animal husbandry; and (6) the nomadic life of certain foragers.

The division of Namibia into farms with dependent worker populations and a few areas 'reserved' for 'native' populations has reinforced ethnic and language differences and confirmed their relevance for the study of music in the country. In addition to long-established German farms around Windhoek, there are many owned by Afrikaans-speaking South Africans. Interaction between settlers and farm workers of various ethnic backgrounds has resulted in farm-specific musical activities.

(i) Khoisan-language speakers.

(a) Nama traditions. On farms south-east of Windhoek, the influence of Protestant church music on Nama music was strong. 19th-century European hymnody survives in several Nama-speaking farm communities. In some communities, a specific harmonic style of choir singing has emerged integrating older Nama traditions.

In documents of the German colonial era, a characteristic Nama dance with reed flutes (*≠ai*) is mentioned, but by the 1970s it had disappeared (Budack, 1979). Attempts to revive it have not led to significant results. Nama workers gather during leisure time at drinking parties, performing a dance accompanied by accordion and guitar called the 'Nama step'. 'Nama step' implies an intense quivering of the whole body, affecting consecutive body parts. Regarding the sung parts, they mostly consist of vocables. Another characteristic of this music is an unusual tri-partite segmentation of the cycles by the chord sequences involved. Clearly, this style is rooted in older traditions of Khoisan-speaking peoples in south-western Africa.

1. *Map of Namibia showing approximate location of main ethnic groups*

Older Nama musical traditions were greatly affected in the 19th century and the early 20th by both Christian religious influences and everyday life in workers' quarters on the farms, yet the Kubik-Malamusi survey (1991–3) published in 1994 indicates that oral Nama-language narratives continue to this day. *Izes* (folktales) are generally trickster tales about wolves and jackals, but there is a great variety of themes.

(b) Damara ('Bergdama') traditions. The Damara speak a Khoisan language very close to Nama. They are the descendants of an early, *c*100–200 CE migration of Angolan Bantu-language speakers from Angola, who adopted the Nama language. They live in the mountainous areas of north-west and central Namibia. Many of them are scattered, however, working on farms in the area of Windhoek. Although songs accompanied by a musical bow have been reported (Wängler, 1955–6), musical instruments of any kind except imported instruments such as the accordion and guitar are now extremely rare (Kubik, 1994). By contrast, there is a strong choir tradition, stylistically similar to Nama choir traditions, characterized by a compact homophony. Many of the most impressive Damara choirs, especially those formed by worker communities on farms, are hardly known outside their local communities. Some of these choirs are composed entirely of family and close relatives of the leader.

Some older Nama-Damara musical concepts concerning form and the structure of motion survive in recent types of local popular music. While MBAQANGA and other popular music from South Africa draw on a four-part division of cycles, Damara 'Nama step' music includes harmonic changes at points dividing a cycle of 18, 24 or 36 pulses into three or six segments. In a typical 24-pulse cycle at the basis of one of the songs recorded from Adolf !Hanegu //Naobeb, an internal relationship was observed between the fundamental 24-pulse cycle felt by musicians and dancers, the dancers' reference beat and the timing of the chord changes performed by the guitarist and the keyboard player. The structure shown in ex.1 is characterized by a 6x4 segmentation of the 24-pulse cycle. This

Ex.1 Chord sequence and segmentation of the cycle in a song for electric guitar, keyboard and voices by Adolf !Hanegu Naobeb, rec. in Khorixas

pulse: (24)	. . . .	. . . .	. . . .	. . . .	. . . .	. . . .
dance beat:	X	X	X	X	X	X
chords:	C	C	C^9	F	F^6	G^7

is a salient Nama-Damara characteristic, unusual in the broader context of contemporary southern African popular music, where such a cycle normally demonstrates an 8x3 segmentation with the referential beat on every third or sixth fundamental pulse.

(c) Bushmen traditions. In Namibia, south-eastern Angola and Botswana, the Bushmen (also often referred to by the Nama name San, though this is generally considered insulting and derogatory by the Bushmen themselves) are reputed to be extraordinarily musical. Their tonal system is derived from the auditory experience of the natural harmonics of a stretched string (Kirby, 1932, 1961; Kubik, 1970, 1994). On Namibian territory, there is a great number of different Khoisan languages and ethnic divisions, including the !Kung' on the border with Angola, the Mbarakwengo (Xun) and the !Ko of the Kalahari.

Bushmen musical traditions that survive today depend to a great deal on socio-economic and environmental

factors. !Ko families who serve a Herero chief remember a spectacular fighting game between men, while women still practise polyphonic singing. By comparison, !Ko families on the farm of Ansie Strydom, north-east of Gobabis, practise an astonishing variety of musical instruments, including musical bows, lamellophones, pluriarcs, guitars and accordions. It was among these !Ko families that some unusual observations were made: a *dengo* board lamellophone with 23 lamellae arranged in two ranks and tuned in an ascending scale from left to right; a double-braced musical bow with two tuning loops (fig.2); and a *too* pluriarc with five strings used as an accompaniment to singing.

Somewhat different in their musical culture are the northern Bushmen. !Kung' refugees from Angola display female polyphonic singing and the use of mouth- and gourd-resonated musical bows derived from the hunting bow (Kubik, 1970). A friction bow is also used, as are lamellophones (Kubik, 1994, p.171). The *≠gauka* (pluriarc) originally from south-western Angola was found played by a musician of the Mbarakwengo, Johannes Kamate, recorded near Bagani. Some ecstatic dance practices, especially quivering dances performed by men, also survive in a small community of !Kung' refugees west of Rundu, Okavango region.

(ii) Bantu-language speakers.

(a) Tswana traditions. Tswana is an important Bantu language spoken in Botswana and Bophutatswana, South Africa, as well as in small areas of Namibia, south-east of Gobabis. Older Tswana traditions, notably *dithlamane* (storytelling) with interspersed songs, survive in the area of Aminuis, eastern Namibia. A remarkable musical instrument, technologically, is the *seganpure* (also *sexaŋkure*, *sekampure* in local pronunciations), a friction chordophone (Rycroft, 1966) made from a long stick, with one string attached to a tuning-peg at the stick's lower section, and capped with a tin at the upper section. It is still played by Tswana performers living on Namibian territory (fig.3). The *seganpure* has been referred to as 'Buschmanngeige' (Bushman violin) (Heunemann and Heinz, 1975), because it was also recorded among !Ko-speaking neighbours of the Tswana. It could be either an older Bushmen invention or a creative response to a Dutch-imported 17th-century bowed instrument. Rycroft has suggested that the genesis of the *seganpure* might be connected with the 'Trumscheit' (*see* TRUMPET MARINE; Rycroft, 1966).

(b) Herero traditions. The Herero and the related Himba (Zemba) pastoralists count among the most important

2. Double-braced musical bow played by Thomas Jacob, Strydom farm, north-east of Gobabis

3. Seganpure, bowed monochord played by Petrus Sechele (b 1926), Hugus, south of Aminuis, eastern Namibia

cattle-raising peoples of southern Africa. In commemoration of the Herero leader Samuel Maharero (1890–1923), a Herero Day is celebrated every year in Okahandja, a town north of Windhoek. It is characterized by solemn parades of cavalry with men dressed in uniforms, some in pre-World War I styles. The women wear characteristic Victorian-style robes, with head-dresses in the shape of cattle horns (fig.4). Similar celebrations take place in various contexts, always with a solemn display of old uniforms and military drills by what has become today a symbolic association of 'veterans' of the Herero-German war. On such occasions, dominated by the presence of important Herero chiefs, declamatory songs (*omuhiva*) and praise-poetry (*ondoro*) are performed by the uniformed men. Like the traditions of other African pastoralists, Herero music is characterized by an absence of musical instruments. The only instrumental object commonly seen is a wooden plank.

Omuhiva song texts suggest the importance of social stratification among the Herero. Vocal music is predominant, with both unison and leader-chorus singing. The *oucina* dance-song genre is performed by women who accompany their songs with swaying body movements and hand-clapping on off-beats. One of the alternating lead singers and dancers binds a percussion plank on her right foot, hitting the ground with it in a slow and rhythmically complex pattern of strokes. The Ociherero name for this instrument, *ocipirangi*, comes from 'Planke' (Ger.: 'plank'). It seems to be a late 19th-century or early 20th-century innovation; earlier, a piece of cow skin (*orukaku*) was used, and struck into the sand to accompany women's songs. *Oucina* songs, in their characteristic pentatonic modes, focus in their content on the most important economic asset of the Herero, cows. Some of them are sung during milking, others describe tiresome journeys with ox-carts or praise historical personalities, such as Samuel Maharero who died in exile.

Although the Ovahimba, a Herero related ethnic group, have become a tourist attraction in Namibia, their music has been little researched. The Namibian pastoralists are among the most culturally conservative in the country. With a deeply rooted tradition of unison singing in a pentatonic mode, and their harsh, declamatory vocal timbre, Herero youths often have difficulty adapting to multi-part singing in the diatonic system in Western-style schools. Contemporary South African popular music has also found relatively little resonance.

(c) Ovamboland traditions. Storytelling, including *chantefables* and other narrative genres, such as *omahokololo*, still play an important role in Ovambo (Kwanyama) cultures, as do other forms of vocal music, particularly choir singing, mission and school songs and, more recently, patriotic songs. In contrast to many other Namibian ethnic groups, work-songs are common among the Ovambo, such as songs by women pounding finger millet with interlocking strokes.

By the 1990s the ecology of Ovamboland was seriously damaged due to overgrazing, resulting in total deforestation, which may explain the general absence of drums these days. Except for a few imported musical instruments, such as accordions and guitars, Ovambo musical culture is now barren of musical instruments. Neither the 'Ovambo guitar', a pluriarc, nor the *kambulumbumba* gourd-resonated musical bow, recorded by Sabine Zinke (1992), can be easily found in 21st-century Namibia. It is uncertain whether the famous Ovambo horn ensemble (Guildenhuys, 1981, p.29) still exists. Ovambo music is dominated by choirs, with diverse repertories, from groups such as the SWAPO-Hanyeko Choir singing liberation songs to more religously orientated groups, such as those founded by Efafnasi Barnabas Kasita and Junias Shigwedha.

(d) Okavango traditions. It is significant that the Gciriku (Diriku), an Okavango people, known for a remarkable oral literature, have click sounds in their language, adopted from Khoisan speakers. Unaccompanied vocal music performed by groups, as well as dances with drums, rattles and wooden concussion slabs play an important role in their musical traditions. Music-dance genres include: *manthongwe*, a healing dance; *chikavedi*, a dance for chiefs performed every year when, after a successful harvest, millet is presented to the chief; *thiperu*, an entertainment dance shared with the Mbukushu performed throughout the year. Musical instruments of the Gciriku are shared with their neighbours; certain ones, such as the *chinkhuvu* (slit-drum), have been recently adopted from the Vanyemba, Angolans of various ethnic backgrounds.

Kwangari (Kwangali) musical traditions include a variety of dances shared by men and women such as *epera*, in which the men imitate cows, and *muchokochoko* performed by men wearing leg rattles of the same name. The dancers are accompanied with the standard set of three long, single-head drums, played by men with their

4. *Oucina dance-songs performed by Mbanderu women, Epukiro 'post 3', north-east of Gobabis*

hands. The lowest-tuned drum (with a lump of tuning wax in the centre) is called *nkurugoma* (big drum), the other two are *nkinzo* and *mpumo*. A ceremonial dance called *mayauma* with swaying movements by the women pays respect to the chief. A popular dance for young people is called *axi*. Musical instruments for individual use include no fewer than four different types of musical bows: *rugoma*, a mouth-resonated stick rather than bow, played exclusively by women, made of a river reed; *kaworongongo*, a mouth-resonated friction bow; *mbu-rumbumba*, an unbraced musical bow held against an external resonator, such as a washing-tub with orifice facing down on the ground; and *kamburumbumba*, an unbraced musical bow with a gourd- or tin-resonator pressed by the performer against the stave. Two types of lamellophones have been traced: *edumudumu*, with fan-shaped board and notes arranged in two ranks, and *ndingo*, a board lamellophone imported from south-eastern Angola. *Ngoma nkhwita* is the Kwangari name for a friction drum with internal friction stick, a type widely found in south-western Angola.

The easternmost branch of the Okavango peoples is the Mbukushu. Most popular at Bagani is the *thiperu* dance with drums. Participants form a three-quarter circle. Participating women hold wooden slabs, 10x15x1·5 cm in size, in their hands, clapping them together. Inside the circle there is a dance master whose head is decorated with feathers. He performs a dance with a female, working out tiny steps with occasional turns and jerky movements. The music is organized in cycles of 12 or 24 elementary pulses.

There is an old Mbukushu dance for the chiefs called *rengo*; another dance performed by old women during female initiation ceremonies is called *dichemba*. Lamellophones are popular in the area. They are called *thishanji*, with fan-shaped boards and lamellae arranged in two ranks. The proximity to Zambia has had a notable effect on youths who, like their peers in Zambia, make homemade banjos.

(e) East Caprivi traditions. The Subia and the Lozi are among the people settled in this area. Subia musical culture emphasizes drum-accompanied genres, such as healing dances. Such events require the use of three *ingoma*, tall, single-head drums with tuning paste applied to the centre of the skin. The set includes *iingóma inkando* (deep-tuned drum), *chikumwa* (medium-pitched drum), and *kambiri mulyata* or *iintunguni* (high-pitched drum). A medical practitioner performs the dance shaking two *inchinza*, tin-rattles with a handle, while singing the leader's vocal line with response by a mixed chorus.

Matangu, storytelling with songs, is still a popular evening activity among the Subia. On such occasions *chisiyankulu* ('What the old people have left behind'), i.e. oral history, can also be discussed and explained to the young. Among the musical instruments used for individual performance, the *kang'ombyo* Caprivi-type lamellophone is popular. A typical *kang'ombyo* has 14 iron lamellae mounted upon a fan-shaped board with its lateral rims raised.

As in Zambia, one of the salient expressions of Lozi musical culture is the playing of gourd-resonated xylophones called *silimba*. The base of these xylophones is a stand, almost like a table (fig.5). The Lozi are the only ethnic group in Namibia with such a tradition of xylophone playing. The *kang'ombyo* lamellophone was also adopted from their Subia-speaking neighbours. In

5. Silimba xylophone player, Fred Sitali, Bukolo Boma, Caprivi region.

addition, the performance of *chantefables* (*matangu*) is an important activity.

2. Recent developments. Independence brought an influx of people from rural areas into cities, notably Windhoek's Katutura township. It remains to be seen, however, what effects this will have on urban musical activities. The Ministry of Education and Culture has promoted traditions with 'national' messages, not always conducive, however, to the encouragement and promotion of living individual artists; rather it has aided the rise of folkloristic groups and generated educational music for school activities, such as the mushrooming marimba (xylophone) school ensembles using industrially manufactured instruments and a modified Carl Orff approach to school music teaching.

Popular guitar-based music has also had a long history in Namibia. South African-made acoustic guitars were and still are readily available, which is not so in many other African countries. Accordion and guitar groups have existed among the Nama and Damara since the early decades of the 20th century. While this tradition continues among various peoples settled on farms, for example among !Ko workers on the fringes of the Kalahari steppe east and north-east of Gobabis, it has been transformed in some places into an electric version, with an electric guitar and keyboard, while the essential dance movement, the 'Nama-step', remains the same.

3. Research. Although ethnological interest in the peoples and cultures of Namibia was considerable during the period of German rule, reports on musical activities were scarce until the 1960s. In a select bibliography of articles on the music of south-west Africa, Darius Thieme (1962) cited three publications specifically concerned with music: Bleek (1928), Grimaud (1956) and Wängler (1955–6). The more extensive bibliography by L.J.P. Gaskin (1965; pp.29–30) lists 23 entries.

Among the classic works on Khoisan music analysing material from northern Namibia are two articles by Nicolas England (1964, 1967). Also of importance for comparison are field documents on the !Ko in Botswana by George Nurse (1972) and D. Heunemann and H.J. Heinz (1975). Two related articles on 'Bushman' and 'Hottentot' musical practices by David Rycroft (1978) and E.O.J. Westphal (1978) demonstrate the benefit of interrelating music and language research in Namibia. Erika Mugglestone (1982) introduced a further, historically oriented perspective by analysing data on Khoisan, notably 'Hottentot' music, as found in Peter Kolb (1719).

Systematic recording in Namibia began with Hugh Tracey's brief recording tour in 1965. In spite of the vast distances he had to traverse, Tracey recorded 111 items in different parts of the country. In 1988 Andrew Tracey of the International Library of African Music, South Africa, made recordings at Nyangana Mission in the north, documenting rare instruments such as the *rugoma* (mouth bow) and *ruwenge* among the Okavango peoples. In 1990 Minette Mans organized a symposium on 'Independence and Namibian Music' at the University of Namibia in cooperation with Andrew Tracey. Choirs and musicians were invited and heard for the first time by international audiences. Beginning in 1991, Gerhard Kubik and Moya A. Malamusi carried out a three-year survey project on music, dance and oral literature in

Namibia. Archival copies of the sound recordings are deposited at the Phonogrammarchiv of the Austrian Academy of Sciences, Vienna, and at the Ethnomusicological Department of the Museum für Völkerkunde, Berlin. A preliminary account of the results of this research was published in the journal *EM-Annuario degli Archivi di Etnomusicologia dell'Accademia Nazionale di Santa Cecilia* (Kubik, 1994).

GERHARD KUBIK, MOYA ALIYA MALAMUSI

Namieyski (*fl* 2nd half of the 18th century). Polish composer. He was probably active in the Wielkopolska district. Only one of his compositions is known, a five-movement symphony in the early Classical style (ed. in Symfonie Polskie, v); Abraham has said that it shows an assured technique and can stand alongside all but the best Mannheim or J.C. Bach symphonies. It is uncertain whether he is the Johann Namiesky, a 'Harmoniemusik-director' in Baden, whose extant works include two masses, an aria, four *Tantum ergo*, two graduals, an offertory and two litanies (*A-Wn*).

ZYGMUNT M. SZWEYKOWSKI

Namur, Jean de. *See* GALLICUS, JOHANNES and DUFON, JEAN.

Nancarrow, (Samuel) Conlon (*b* Texarkana, AR, 27 Oct 1912; *d* Mexico City, 10 Aug 1997). American composer. Sent by his father (the mayor of Texarkana) to the Western Military Academy in Illinois, he started playing trumpet there, and later attended the national music camp at Interlochen, Michigan. His father pushed him towards an engineering career, for which purpose Nancarrow briefly attended Vanderbilt University. Enrolment in Cincinnati College Conservatory (1929–32) did not result in graduation, but it did, in 1930, expose him to Stravinsky's *The Rite of Spring*, which sparked an interest in rhythmic complexity. In 1934 he moved to Boston and studied privately with Sessions, Piston and Slonimsky. A communist party member, he volunteered for the Lincoln Brigade and fought in the Spanish Civil War. Upon returning home, he reacted to growing anti-communist activity in America by moving to Mexico City in 1940, where he lived until his death.

Nancarrow's works from 1930 to 1945 were for piano (*Prelude* and *Blues*), small orchestra, string quartet and small chamber ensembles. Best known, however, are his series of about 50 (the numbering is ambiguous) studies for player piano, which explore a fascinating range of techniques for achieving extreme rhythmic complexity. In 1947, living on inherited money and inspired by Cowell's book *New Musical Resources* (in which Cowell recommended using a player piano to achieve complex polyrhythms), Nancarrow travelled to New York to buy a

player piano and have a roll-punching machine built for him. His first pieces, later gathered together as Study no.3, were experiments in extremely fast jazz pianism, influenced by Nancarrow's favourite pianists Art Tatum and Earl Hines. The piece officially numbered Study no.1 spun fragments of a 30-note pitch row around marching major triads in two simultaneous tempos of four against seven.

Considering that three quarters of Nancarrow's output is for the same instrument, the variety of his musical strategies is astonishing. Nevertheless, his music can be summed up as deriving from four basic rhythmic ideas: ostinato, isorhythm, tempo canon and acceleration. The early blues-influenced studies, nos.1, 2, 3, 5 and 9, are generated by setting ostinatos against each other at different tempos. In Studies nos.6, 7, 10, 11 and 20, he revived the medieval technique of isorhythm (though inspired by a strong interest in the tāla structure of Indian music), employing multiple repetition of the same rhythm against different pitch sequences. The climax of the early studies is no.7, in which three isorhythms are set against each other in myriad combinations and at lightning-fast speed. Even here the feeling for jazz harmony remains strong, and the isorhythms simulate the freedoms of a wild jazz pianist.

With Studies nos.13–19, Nancarrow discovered the technique with which he would be most identified: tempo canon. In the tempo canons, a melody (or, later, textual block) is superimposed upon itself at different levels of transposition and at varying tempo ratios, for example 4:5, 12:15:20, and so on. Formal variety is achieved by varying the placement of the convergence point, i.e. the moment at which the melodies reach the same point in their respective material. For instance, the simple Study no.14 has two voices at a 4:5 ratio, with the convergence point at the exact mid-point of the piece. Study no.31 ends just seconds before its three voices (at ratios 21:24:25) would have converged. Starting with Study no.24, Nancarrow works with highly elaborate schemes in which the melodies begin at a convergence point, grow further and further apart, switch tempos, grow back together, reach a second convergence point, and repeat the process over and over again.

In his most elegant canons (Studies nos.24, 32, 33, 36, 37, 43) this process achieves a classic interdependence between form and content. Near a convergence point, the motives tend to be brief and to echo from voice to voice quickly. In between such coincidences, the melodies tend to stretch out at greater length. As Nancarrow developed this technique, his rhythmic ratios grew to almost unimaginable complexity: the square root of 2 against 2 in no.33, e against π in no.40 (e being the base of natural logarithms), and in no.37 a scale of 12 tempos analogous to the pitch ratios of a justly-tuned chromatic scale (similar to a scale Stockhausen had used in *Gruppen*, and which both may have taken from Cowell's book).

The remaining rhythmic idea is acceleration (and deceleration), employed in Studies nos.8, 21, 22, 23, and 27 to 30. Study no.27, for instance, is a canon in which the voices accelerate (and decelerate) at rates of 5%, 6%, 8% and 11%. (In a 5% acceleration, each note is 5% shorter in duration than its predecessor.) While acceleration was arguably Nancarrow's most original device (though again suggested by Cowell), it was difficult to control structurally in the pre-computer era, and did not prove as fertile as tempo canon or isorhythm.

In Nancarrow's early works, these rhythmic ideas remain fairly distinct. In his late studies, though – nos.25, 35, 41, 42, 45, 46, 47 and 48 – he begins, as Beethoven did in his last sonatas and string quartets, to combine his structures into hybrid forms. For example, in nos.45–7, a tempo canon based on an isorhythm creates an acceleration effect as it nears a convergence point. Also, beginning with the spectacular Study no.25, Nancarrow began to develop what was idiomatic about the player piano, indulging in superfast glissandos and arpeggios, figures that traverse the keyboard within a split second. At the thunderous climax of no.25, 1028 notes swirl by in 12 seconds. Perhaps Nancarrow's greatest works, though, are his chaotic-sounding late canons, Studies nos.41 and 48, in which frenetic glissandos and jazz gestures are flung together according to well-concealed accelerative structures.

Nancarrow composed in almost total isolation until the late 1970s, when Peter Garland began publishing his scores in *Soundings* and the studies started appearing on record. Late fame brought a series of commissions for live-performed works (*Tango?*, String Quartet no.3, Piece no.2 for small orchestra, *Two Canons for Ursula*) and invitations to major music festivals in America and especially Europe; in 1983 the MacArthur Foundation awarded him its prestigious 'genius' award of $300,000. Nancarrow's player piano studies have had a tremendous impact on young composers for their almost unparalleled fusion of visceral excitement and structural elegance.

WORKS

CHAMBER AND ORCHESTRAL

Sarabande and Scherzo, ob, bn, pf, 1930
Toccata, vn, pf, 1935
Septet, 1940
Trio no.1, cl, bn, pf, 1942

KYLE GANN

Nanchini, Pietro. *See* NACHINI, PIETRO.

Nancy. City in north-east France, capital of the former province of Lorraine, now the département of Meurthe-et-Moselle. Founded in the 11th century, Nancy became the capital of the Duchy of Lorraine in the 12th century. In 1339 Duke Raoul founded the collegiate church of St Georges, where Charles II (1391–1431) installed an organ and established a choir school. His successor René I employed 12 singers in the chapel and organized sumptuous musical entertainments including singing, dancing and pantomime for the visit of Charles VII of France and the wedding of Margaret of Anjou and Henry VI of England in 1444–5. René II (1473–1508) established a minstrel's school at Pont-à-Mousson in 1477, built an organ at St Georges in 1487, strengthened the choir and appointed as choirmaster Pierrequin de Therache (1492). His successor Antoine I (1508–44) retained Therache until 1527, when he appointed Matthieu Lasson. Antoine was an ardent music lover, and separated the Musiciens de Chambre from the Chapelle, using choristers ('les petits chantres de Monseigneur') and instrumentalists (viols, lutes and shawms) for his levées and dinners. Under René II and Antoine alike, musical life at Nancy enjoyed close connection with that of the French royal court.

Charles III (1545–1608), raised at the French court, employed many musicians including F.M. Caietain and L'Estocart. He introduced masquerades, ballets and concerts for ceremonial and family occasions. During the reign of Duke Henri II (1608–24) the court ballet continued in vogue, and, with the annual carnivals, provided employment for the duke's string band, which included French, English and Italian musicians. *Intermedii* in the Italian manner, divertissements and ballets accompanied the accession of Charles IV in 1624 but the musical life at court was interrupted by the Thirty Years War (1618–48), a plague (1630) and the occupation of Lorraine by French troops (1633–59). After his restoration Charles revived musical entertainments, mounting ballets and carousels in 1664, 1665 and 1669. Occupied once more by the French between 1670 and 1698, Lorraine was subsequently returned to Duke Leopold, who married King Louis XIV's niece and imitated the pomp of Versailles, appointing Lully's pupil Desmarets as *surintendant de musique* and C.M. Magny as *maître de ballet*. The two collaborated in a divertissement entitled *Le temple de l'Astrée*, performed at the inauguration of an opera house in 1709. Several operas by Lully and Desmarets followed while the latter also directed his motets at St Georges with the duke's musicians-in-ordinary, whose numbers had been increased from 12 to 35.

François III (1729–37) gave his protection to an Académie de Musique active between 1731 and 1756, which gave twice-weekly concerts of music by Campra, Mouret and others. The last Duke of Lorraine, Stanislas Leszczynski (1737–66), sought to make Nancy one of the palatial cities of Europe: the municipal theatre, the Pavillon de la Comédie, housed near the Place Stanislas from 1755 until it burnt down in 1906, mounted operas and *opéras comiques* by Rameau, Rousseau, Favart, Philidor, Monsigny, Pergolesi, Grétry and Gluck. The cathedral, built for Duke Leopold, had a new organ by Du Pont (1757) and an excellent choir directed by Joseph-Antoine Lorenziti.

The disbanding of the court after Lorraine's union with France (1766), the Revolution and the ensuing wars had a detrimental effect on the city's musical life. The Conservatoire Municipal founded in 1882 achieved national status in 1968; its directors have included Joseph Guy Ropartz (1894–1919), Alfred Bachelet (1919–29) and Marcel Dautremer (1946–7). The conservatory offers courses in singing, the piano and wind instruments. The Grand Théâtre de Nancy, designed by Hornecher, was built in 1919; its annual season (October to June) includes several operas, in addition to operettas, ballets and performances by visiting companies. Under the direction of Antoine Bourseiller it achieved critical acclaim during the 1980s for many enterprising productions, including Henze's *Boulevard Solitude* and Tippett's *King Priam*.

FRANK DOBBINS

Nani. Maltese family of musicians. Together with the Bugeja family, they dominated Maltese church music during the 19th and early 20th centuries.

(1) Angelo Nani (*b* Venice, 16 March 1751; *d* Valletta, Malta, 27 Feb 1844). Violinist and impresario. He was the son of Girolamo Nani, a Venetian notary, who was the author of an important criminal code and treasurer to the Council of Ten, as well as an amateur violinist. Angelo

studied with his father and Nasari, and during a concert tour with the flautist J.-D. Rapp arrived in 1766 in Malta, where his virtuosity impressed Grandmaster Manoel Pinto, who appointed him chamber musician. His marriage on 11 April 1768 to Ninfa Schembri precluded further advancement within the Order of St John, but for a time he led the orchestra at the Manoel Theatre. According to the French scholar Davolos (cited in Bonello) Nani was one of the most gifted violinists of his day, 'who, for the graciousness of his bowing, outshines perhaps even the famous Lully'. Nani was also impresario of the Manoel from 1783 to 1787 and from 1791 to 1793. Of his 12 children, (2) Emmanuele, Agostino (1782–1846) and Vincenzo (1775–*c*1840) were violinists and composers.

(2) **Emmanuele Nani** (*b* Valletta, 15 March 1769; *d* Valletta, 26 Feb 1860). Violinist and composer, son of (1) Angelo Nani. He studied with his father and Vincenzo Anfossi. His fame as a virtuoso spread to Italy, where he was much in demand both as an instrumentalist and as a conductor. In about 1791 he was in Modena and Lucca, and at the invitation of the doge went to Venice, where he performed with Giuseppe Rovelli, Alessandro Rolla and Gaetano Grossi, celebrated musicians at the court of the Duke of Parma. In 1794 he was in Sicily as leader of the orchestras of the Palazzo Biscari and Principe S Domenica theatres. A poem from this time probably written by Giovanni Sardo designates him 'l'illustre Nani' and 'Nani divino'. In 1821–2 he was again in Sicily, at the new Teatro Comunale Provvisorio in Catania.

Most of Nani's dated works were written between 1832 and 1835, when he was again at the Teatro Comunale Provvisorio and reputedly first violinist at Catania Cathedral. His settings of the 'Qui sedes' and 'Quoniam', the Duos concertants for two violins and the overtures in 'Pot Pourri' (composed while on a concert tour in Egypt) contain brilliant violin writing, reflecting the fine technique he must have possessed.

WORKS
(*selective list*)

Sacred vocal: Mass, D, 4vv, orch, 1835; 12 mass movts, incl. Quoniam, S, 4vv, vn, insts, 1832, Kyrie, C, 4vv, vn, org, 1834, Qui sedes, S, vn, insts; 13 other works, incl. Juravit, T, ob, insts, 1833, Litanie della Beata Vergine, 1834, TeD, 4vv, orch, 1834, Dixit, S, 4vv, orch, 1835, Mag solenne, 4vv, orch

Inst: 3 Duos concertants, 2 vn, 1837; 6 ovs. in Pot Pourri, orch, 1845

(3) **Paolo Nani** (*b* Valletta, 18 Nov 1814; *d* Valletta, 22 March 1904). Church musician and composer, nephew of (2) Emmanuele Nani on his brother's side. He studied with Giuseppe Burlon and Emmanuele Muscat and graduated as a lawyer, but then went to study with Zingarelli, Donizetti and Ruggi at the Naples Conservatory. Donizetti is reputed to have held him in high esteem, presenting him with his own silver filigree pen. In August 1838 he returned to Malta to form his own independent *cappella*, offering musical services to churches without their own. The *cappella* became extremely popular, with a cult following that verged on hysteria. Between 1841 and 1887 he was *maestro concertatore* at the Manoel Theatre and subsequently at the Royal Opera House, where he gained experience of operatic idioms that influenced his own compositions. He was a member of the Accademia Filarmonica of Bologna, and his popularity found final expression in the most impressive funeral ever accorded a Maltese musician.

Of Nani's 250 extant works, only 11 are non-liturgical, and 120 were written between 1838 and 1869 for his rapidly expanding *cappella*. Many works reveal a high level of inspiration and an assured harmonic and contrapuntal technique that justifies Donizetti's admiration. His forceful but highly melodious and theatrical style, skilful orchestration and use of brass instruments resulted in controversial liturgical creations. Muscat-Azzopardi wrote that Nani's music possessed 'il brio di Rossini ed il sentimento di Bellini'; there is also a dramatic quality reminiscent of Verdi, especially in the splendid antiphons which are perhaps his most significant works.

WORKS
(*selective list*)

SACRED VOCAL
all with orchestra

Masses and mass movts: Messa solenne, 1848; Messa completa del vescovo; Messa solenne Kyrie Gloria; 5 Ky, 3 Gl, 4 Laudamus, 4 Domine Deus, 4 Cum Sancto Spiritu, 2 Qui sedes, 2 Cr, 5 Qui tollis, San ed Ag

Ants: 3 Flos Carmeli, 2 Gloriosae Virginis, 2 Sancte Paule, Adest nobis S Agostino, 3 Beata mater, 2 Crucem sanctam, Quae audistis, 3 Amavit eum Dominus, Iste Sanctus, In sepulcrum, Levita Laurentius, O crux splendidior, Sancte Michael Archangelo, O pastor eterne, Salve Sancte Pater, Ego sum Nicolaus, Sancta Maria, Spiritus Sanctus, Cum pervenisset, Prudens et vigilans, Sancte mater Theresia, Beati omnes, Quaerite primum regnum, O Beata Virgo, O sanctissima anima, Beate Juliana

Psalms: 3 Domine ad adjuvandum, 4 De torrente, 3 Dixit Dominus, 2 Juravit, 3 Laudate pueri, 2 Laudate Dominum, 3 Judicabit, Nisi Dominus, Beatus vir, Miserere, Quis sicut Dominus, Credidi, Virgam virtutis, Gloria Patri, 2 Confitebor tibi, Deus in adjutorium

Other sacred vocal: Offertorio della Domenica delle Palme; 5 Tantum ergo; 2 Salve regina; 2 TeD; Litania della Sanctissima Vergine; Lamentazione del Mercoledì Santo; Improperi del Venerdì Santo; O sacrum convivium; responses: di Natale, del Corpus Domini, del Mercoledì Santo, del Venerdì Santo, del Giovedì Santo; hymns: Vexilla regis, Paolo sacrati litoris, Per S Agostino, Egregie dottor Paule, Ave maris stella

OTHER WORKS

La mezzanotte (ob, 1, F. Malagricci), Valletta, Manoel, 22 May 1844; Inghilterra per sempre (cant., G.A. Vassallo), T, Bar, B, STTBB, Valletta, Manoel, 18 Dec 1847; 4 sinfonias: C, D, La bizzarra, Il naufragio di S Paolo, orch; Sovra Malta (romanza), S, STB, orch; The Flower Show, march, pf

(4) **Anton Nani** (*b* Valletta, 6 Oct 1842; *d* Valletta, 25 Feb 1929). Composer, church musician and impresario, son of (3) Paolo Nani. He studied with his father, Giuseppe Burlon and G. Spiteri Fremond in Malta and with Aniello Barbati and Nicola De Giosa in Naples, where he lived from 1867 to 1879, and where he composed the majority of his mature works including his first opera, *Zorilla* (1870). He took over the Nani *cappella* after his return from Naples, although most of the music performed continued to be his father's. Anton himself, though not a prolific composer, did compose some of the masterpieces of Maltese church music, especially the Requiem Mass, written as a memorial for his mother and awarded a gold medal at the 1886 London Universal Exhibition. Nani also developed an interest in opera, and was impresario of the Royal Opera House, Valletta, from 1885 to 1889, during which time the theatre's facilities were improved.

The popularity of the Nani *cappella* continued undiminished into the 20th century, but the *Motu proprio* on sacred music of Pius X in 1903 meant that the Nanis' music, highly operatic and heavily orchestrated, was no longer liturgically acceptable. Anton Nani at first refused to compose in accordance with the new stipulations, and by the time he did, beginning with his Mass in F (1908),

many churches had started employing *maestri di cappella* willing to comply.

With Anton Nani, Maltese Romanticism reached its peak, and his Requiem is probably the single composition that best represents it. Although even his shorter works show an attention to orchestral colouring and tonal structure, it was in longer works such as his three operas, the Requiem, the Responsories for Wednesday of Holy Week and O *salutaris hostia* that he excelled. His ability to handle large structures gave them a substance, energy and purpose that few Maltese composers have attained.

WORKS
(*selective list*)

STAGE

Zorilla (comic op, 3, A. Spadetta), 1870; Naples, Rossini, 22 Feb 1872
Agnese Visconti (melodramma, 4, E. Golisciani), 1876; Valletta, Royal Opera House, 13 Jan 1889
I cavalieri di Malta (dramma lirico, prol, 3, Golisciani), 1877; Valletta, Royal Opera House, 16 Jan 1880

SACRED VOCAL
all with orchestra

Masses: Messa del naufrago, 1871; Messa de requiem, 1879; Messa, F, 1908
Psalms: De torrente, 3 Dixit Dominus, Gloria Patri, 2 Deus in adjutorium, Judicabit, 2 Laudate Pueri, 2 Domine ad adjuvandum, Dominus a dextris
Other sacred vocal: 3 Tantum ergo, Crux fidelis, Responsori del Mercoledì Santo, Responsori del Giovedì Santo, O salutaris hostia, Responsori dei morti, TeD, Antifona Gabriel Angelus; Subvenite, Ave Maria, Justus ut palma, Veritas meas, Domine Deus

Orch: Sinfonia, D, 1864; L'addio; ov.; The Welcome, waltz
Pf (solo unless otherwise stated): Il dovizioso, waltz; 3 galops: The Tribute, Malta, The Wellington; La farfalla, pf 4 hands; Le rimembranze; 2 nocturnes: Il sogno melanconico, Un estate a Napoli; 2 polkas: La bizarra, L'amore
Other inst: Fantasia sopra I Lombardi di Verdi, vn, pf; Melodia, vn, pf; Notturno, vn, pf
Songs: Bambina mia (anon.), T, pf; Carminie (E. Golisciani), S, orch; L'ultimo bacio (A. Gulia), T, pf; Ritornerà (P. Cesareo), T, pf

(5) **Paul** [Paolo] **Nani** (*b* Valletta, 23 Dec 1906; *d* Sliema, 6 Sept 1986). Composer and conductor, son of (4) Anton Nani. He studied with his father and Carlo Fiamingo and, after 1928, in Rome with Didonato and Wolf-Ferrari. On his return to Malta in 1936 he set about reviving the Nani *cappella*, winning back some of the churches formerly associated with it, and, in the manner of his forefathers, composing new liturgical works for them. Between 1936 and 1952 he organized a remarkable series of concerts during which he introduced novel orchestral and vocal forms and new composers to the Maltese public. To service these concerts, he opened in 1936 a music studio where over 200 musicians received training and in 1939 he set up the Malta SO. As a conductor, Paul Nani was greatly gifted. His massive frame and rugged face, allied to a wide-ranging language of hand gestures, exerted immense suggestive powers, his inner vision of a score taking on an aesthetic and aural form that often became a virtuoso interpretation, especially of works by Maltese and English composers for which he had intuitive sympathy.

After 1952 a changing social and political environment put an end to these initiatives. Moreover, the dictates of the Vatican II Ecumenical Council meant changes to traditional liturgical music and led to Nani's retirement after 1967. Joseph Gatt was appointed director of the *cappella* in 1978.

WORKS
(*selective list*)

Sacred vocal: Tantum ergo, T, Bar, orch, 1929; Laudate Dominum, ps, B solo, B chorus, orch, 1930; Messa del naufragio, T, B, TTB, SATB, orch, 1930; Credidi, ps, T, B, orch, 1931; Mag, T, B, TB, orch, 1931; Sancte pater Augustine, ant, TB, orch, 1931; Flos Carmeli, ant, T, B, orch, 1932; Crudelis Herodes, hymn, B, TB, orch, 1934; In exitu, ps, TB, orch, 1934; Paulo sacrati litoris, hymn, Bar, TTBarB, orch, 1934; Lauda Jerusalem, ps, T, B, orch, 1937; Ave Maria, Bar, TrT, orch, 1938; Laetatus sum, ps, T, B, TB, orch, 1938; Laudate pueri, ps, T, Bar, B, TB, orch, 1938; Nisi Dominus, ps, T, B, TB, orch, 1938; Ave maris stella, hymn, Bar, TrT, orch, 1939; Virgo prudentissima, ant, T, TB, orch, 1939; Messa da Requiem, S, Mez, T, B, SATB, orch, 1943; Tantum ergo, T, B, TB, orch, 1944; Beatus vir, ps, T, B, TB, orch, 1947

JOSEPH VELLA BONDIN

Nanino, Giovanni Bernardino (*b* Vallerano, *c*1560; *d* Rome, 21 or 26 May 1618). Italian *maestro di cappella* teacher and composer, brother of GIOVANNI MARIA NANINO. Like his elder brother, he was a boy soprano at Vallerano Cathedral (near Viterbo). From 1591 to 1608 he was *maestro di cappella* at S Luigi dei Francesi, Rome, a post previously held by his brother. Before his appointment at S Luigi and after the appearance of his first book of madrigals in 1588, he was *maestro di cappella* first at the Confraternita della SS Trinità dei Pellegrini from May 1585 to October 1586 and then at S Maria de' Monti. After leaving S Luigi in 1608, he was *maestro di cappella* at S Lorenzo in Damaso, the small church in the Palazzo della Cancelleria, the residence of Cardinal Montalto, who was one of the richest and most cultured patrons of the early Baroque in Rome. It is now clear that Nanino supervised a great deal of music, both sacred and secular, for Cardinal Montalto from 1608 until his death ten years later (Hill).

Although Nanino seems never to have achieved the august reputation enjoyed by his brother, he was nevertheless one of the most important musicians in the Roman school across the turn of the century. During his years as *maestro di cappella* of S Luigi, his teaching activities (in

conjunction with his brother) were especially important. As the tutor of the choirboys at the church, he taught many of the most influential musicians of early 17th-century Rome.

Nanino's earliest published works were secular music. His madrigals from the 16th century show him already a master of the pastoral, brightly coloured, tonally and harmonically clear style of the 1580s and 1590s in Rome. He seems never to have indulged in the experiments in individual expression characteristic of his brother or of Marenzio. From 1610 onwards there appeared an important series of sacred publications, which incorporate the innovations of basso continuo and of the highly ornamented Roman style of accompanied secular song. While in the service of Montalto, he was an important teacher in the distinctive Roman school of solo singing. Further study of Roman music from 1585 to 1625 will doubtless reveal Nanino as a prominent figure at this time.

WORKS

SACRED

Motecta, 2–4vv (Rome, 1610)
Motecta, liber secundus, 1–5vv, bc (Rome, 1611)
Motecta, liber tertius, 1–5vv, bc (Rome, 1612); 1, ed. J. Killing, Kirchenmusikalische Schätze (Düsseldorf, ?1910)
Motecta, liber quartus, 1–5vv, bc (Rome, 1618)
Salmi vespertini, 4, 8vv (Rome, 1620[7]); 4, ed. K. Proske, Musica divina, i/3, ii/2 (Regensburg, 1860–74)
Venite exultemus, 3vv, bc (Assisi, 1620)
10 motets, psalms, antiphons (some possibly reprints), 1607[2], 1614[3], 1615[1], 1616[1], 1617[1], 1618[3], 1620[1]
Laetatus sum, 8vv, bc (org), *A-Wn*
Other sacred works, *I-Rsg*, *Rvat*

ANTHONY NEWCOMB

Nanino, Giovanni Maria (*b* Tivoli, 1543 or 1544; *d* Rome, 11 March 1607). Italian teacher, *maestro di cappella* and composer, brother of GIOVANNI BERNARDINO NANINO. He was a boy soprano at Vallerano Cathedral (near Viterbo). He may have studied with Palestrina during the early and mid-1560s, when Palestrina was *maestro di cappella* at S Maria Maggiore in Rome. The identity of 'Gaudio Mell', with whom both Nanino and Palestrina are said by some early sources to have studied, is unresolved (see Schuler, 1963, pp.8–9). Nanino became *maestro di cappella* at S Maria Maggiore some time between 1567 and 1569, probably in 1567 when Palestrina left the post (according to Schuler, 1963). In April 1575 he became *maestro di cappella* at S Luigi dei Francesi, a post he held until October 1577, when he was admitted as a tenor to the papal choir. For the rest of his life he retained his position as one of about 25 singers in the papal choir. After 1586 he was elected on several occasions to the post of *maestro di cappella*, to which musicians were appointed in rotation (until the reforms of September 1586 the *maestro di cappella* had been an ecclesiastic, not a musician). In November 1586 he was sent to Mantua to thank Duke Guglielmo Gonzaga for a favour on behalf of the papal choir. Although the letters written on this occasion say nothing about music, they do give a good indication of Nanino's methodical and reliable personality.

Nanino remained informally associated with S Luigi dei Francesi after joining the papal choir. His continuing activity as a teacher of the boy sopranos there (four boy sopranos at any given time; each boy stayed for four to eight years) has led several writers to assert that he was the principal teacher in a public music school founded in the last decades of the 16th century in Rome (see Antimo Liberati's published letter of 1684–5 in *GaspariC*). In 1591 Nanino's younger brother, Giovanni Bernardino, became *maestro di cappella* at S Luigi, and the brothers, living together in a house owned by the church, kept and taught the four choirboys of the school. According to Cametti, such fine 17th-century Roman composers as Gregorio and Domenico Allegri, Vincenzo Ugolino, Antonio Cifra, Domenico Massenzio, and Paolo Agostino passed through this small choir school. Other famous pupils of Nanino were Felice Anerio, who was at S Maria Maggiore as a choirboy from 1569, and Antonio Brunelli. During the late 16th century Nanino was almost certainly the most influential composition teacher in Rome. Evidence of this extensive pedagogical activity remains in manuscript notes of Nanino's teaching, found in various hands in many of the libraries of Europe (see *EitnerQ* and *GaspariC*, i). His reputation as a craftsman is indicated by his being chosen (with Soriano) to uphold the reputation of Roman composers as contrapuntists against the slurs of Sebastián Raval in 1593 (see Casimiri). However, it now seems clear that the 157 counterpoints on 'La Spagna', preserved in a 17th century manuscript (*I-Bc* C36) and attributed to Nanino in many later secondary sources, are in fact 125 counterpoints by Costanzo Festa plus some canonic motets by Nanino (published in 1586) and four otherwise unknown works (Agee).

Nanino's immense prestige in Roman and European musical circles is demonstrated not only by anecdotes and by his numerous pupils, but also by the contents of music prints between 1570 and the date of his death. The first edition of Nanino's first book for five voices is lost, but the specification of his postion as *maestro di cappella* at S Maria Maggiore, repeated on later editions, suggests that the book was first published during his tenure at the basilica (1567–75). One poem in the collection (*Le strane voci*) was once thought to commemorate the victory at Lepanto in October 1571. It is now clear this is not the reference, but more probably an allusion to the temporary

victories in the French wars of religion in 1569. Although he seems to have published only three books of madrigals and one of canzonettas, he contributed numerous pieces to anthologies and his madrigals were often reprinted. Scarcely an important anthology appeared in these years without a contribution by him. Nanino was the most often represented composer in anthologies printed between 1555 and 1620 with the single exception of Alessandro Striggio. In this area he surpasses even Marenzio and Palestrina (Piperno, 1985, pp.21–2). Often his pieces were given the place of honour in the print: for example, in *Le gioie* (RISM 1589[7]), an anthology published as a self-advertisement by the brotherhood of Roman musicians, Nanino's madrigal is placed first (Palestrina's is second, and one by Anerio, who was the *maestro di cappella* of the brotherhood, is third). Title-pages confirm Nanino's reputation: Anerio and G.B. Nanino proudly proclaimed their position as his students on the title-pages of their early publications; Phalèse, in reprinting Anerio's first book of madrigals for six voices in 1599, added to the title-page that Anerio was a student of Nanino. In the 15 years before Palestrina's death, Nanino rivalled him as the most esteemed of Roman composers; in the decade after Palestrina's death, Nanino was the undisputed head of the large and important Roman school.

Despite his prestige with his contemporaries, in modern histories Nanino's secular music is scarcely discussed, and his sacred music remains eclipsed by Palestrina's. Nanino deserves better treatment than this. He gets scarcely a passing mention in Einstein's *The Italian Madrigal* (*EinsteinIM*), and is probably the most interesting madrigalist of the late 16th century to remain unstudied. From his first publication, he showed a powerfully individual musical personality, whose model is not to be found in Palestrina.

Even the first madrigals of the early 1570s are the work of a musician of great versatility and imagination, who could unite in a single collection the polyphonic, angular and serious *Le strane voci*; one of the most popular lighter madrigals of the end of the century, *Morir non può*; and the deftly sketched pastoral narrative of *Lasso, ch'il caldo estivo*. The widely influential Roman style of the last quarter of the century, mentioned by Giustiniani in his brief history of the madrigal of 1638, finds its roots in pieces like the last two. Such a piece as *Dolorosi martir* from his 1586 publication shows a greater drive towards personal expression than that of any other Roman musician of the time except Marenzio. His religious music shows a similar variety and versatility within the more restricted spectrum of sacred styles. Although only one book of motets and a few pieces in anthologies of the 1610s were printed, a good deal of sacred music survives in manuscript.

WORKS

SACRED

Motecta ... nova inventione elaborata, 3–5vv (Venice, 1586); 4 ed. K. Proske, Musica divina, i/2, 4 (Regensburg, 1854–62); 14 ed. in RRMR, v (1969)

ANTHONY NEWCOMB

Nanna. *See* NINNA.

Nantermi [Nanterni]. Italian family of musicians.

(1) Filiberto Nantermi (*d* Milan, March 1605). Composer. He was *maestro di cappella* at S Maria presso S Celso, Milan, probably from 1568, and held the post for 35 years. As a composer he is known only by a madrigal for five voices and continuo in (3) Michel'Angelo Nantermi's *Primo libro de madrigali* (RISM 1609[26]).

(2) Orazio Nantermi (*b* Milan, *c*1550; *d* probably Milan, early 17th century). Composer, singer and organist, son of (1) Filiberto Nantermi. He began to work at S Maria presso S Celso, Milan, around 1570. Towards the end of his father's life he shared (unofficially) the work of *maestro di cappella* and succeeded his father in the post, which he held until the end of 1607, leaving because of unspecified disagreements. In a letter of 1605 he mentioned that he acted not only as *maestro*, but also as singer and organist when double-choir music was performed. Morigi described him as a 'sensitive and intelligent musician' whose work was praised by his contemporaries.

WORKS

Partito del primo libro delli motetti ... nuovamente ristampato, 5vv (?1601, Milan, 2/1606) [first edn lost; dedication to 1606 edn dated 3 Jan 1601]

7 motets in 1608[13], 1615[13], 1620[2]; 2 madrigals, 5vv, bc, in 1609[26]
Motet 'Domine Jesu', 5vv, in MS dated Rome, 1613, *I-Bc*

(3) **Michel'Angelo Nantermi** (*fl* 1593–1619). Composer, organist and chitarrone virtuoso, son of (2) Orazio Nantermi. He was a singer at S Maria presso S Celso, Milan, from 1593 to the end of 1607. In 1609 he was organist of the collegiate church of S Lorenzo Maggiore in Milan. His one published volume of music, *Il primo libro de madrigali* for five voices and continuo (Venice, 1609[26]), also includes pieces by (1) Filiberto and (2) Orazio Nantermi. Borsieri described him as one of the finest musicians of Milan, and called him a follower of Monteverdi; Einstein, too, suggested that there is evidence that he knew Monteverdi's work. The continuo line in his madrigal book is, in effect, a *basso seguente*.

JOHN WHENHAM

Nantes. City in France, on the Loire estuary. The cathedral was founded in 570, and from the 10th century until 1532 Nantes and Rennes were the main centres of the Duchy of Brittany. The accounts and chronicles of the dukes show that they patronized music: Jean IV engaged minstrels with tambourines, nakers, shawms and hunting horns for festivities in 1341, and in 1407 Jean V employed four instrumentalists and four singers. Choirs were maintained at the Cathedral of St Pierre and St Paul, and at the collegiate church of Notre Dame. During the Middle Ages laity and clergy collaborated in the performance of Passion plays with music. The city's musical life reached its height at the end of the 15th century during the reign of Anne, who sang and played the mandora and whose accounts include payments to singers, organists and municipal trumpeters. Her funeral in 1514 was commemorated with motets by Mouton, Moulu and Festa.

During the 17th century the municipal guilds organized a band of 'symphonistes' comprising six 'violons ordinaires', oboes and fifes, which played for both official and private celebrations and dances. The bass viol, serpent, cornett and crumhorn were among instruments played by clergy and laity attached to the cathedral about 1700. The serpent player was paid about the same as the singers, and half as much as the organist. Louis XIV's taste for instrumental participation in sacred music influenced cathedral music, despite the chapter's resistance to interludes for the violins in a *Te Deum* performed in August 1708. The performance of a mass and another *Te Deum* for Louis XV's convalescence in 1721 included the municipal band.

In 1727 the mayor Gérard Mellier founded an Académie de Musique which organized weekly concerts for its 200 members: it engaged professional musicians (including one or two directors to arrange parts and conduct) but also provided opportunities for 'académiciens exécutants' to join in some concerts. Meeting first at the Hôtel Rosmadec and later in the Bourse, the Académie invited visiting virtuosos including Guignon and Mascitti. Its repertory (in manuscripts in *F-Nm*) included cantatas by Clérambault, Montéclair, Boismortier, Campra, Bernier and Mouret, and parts of operas by Lully and Blavet. The Académie was expelled from the Bourse after organizing a ball in 1743, but a similar group resumed regular concerts in 1751 and continued its activities until 1767. Concerts continued during the late 18th century and the 19th; the Société Philharmonique was founded in 1826 and a Société des Beaux-Arts in 1830.

Opera was introduced to Nantes in 1687–8 when the visiting troupe of the Sieur d'Aumont presented Perrin and Cambert's *Ariane*; their *Pomone* and *Les peines et les plaisirs de l'amour* were performed about the same time at the Jeu de Paume in the rue St Leonard. The first permanent opera company was established in 1770 and a new theatre, designed in neo-classical style by Matturin Crucy and endowed by the banker Graslin, was completed in 1788. Destroyed by fire during a performance of Grétry's *Zémire et Azor* in 1796, the Théâtre Graslin was rebuilt by Crucy in 1813 and thereafter turned from *opéra comique* and vaudeville to a truly international repertory. Restored with new technical installations in the late 1970s, it offers a season of six to eight productions between October and May. In 1995 a new opera house and concert hall (seating 2000) were built in the Cite des Congrès.

In 1971 the Orchestre Philharmonique des Pays de la Loire was founded. The 114 players were divided into two groups, one based in Angers, the other in Nantes under the baton of Jean-Claude Casadesus. The two groups were frequently combined under the musical directorship of Pierre Dervaux, who was succeeded by Marc Soustrot in 1978, and Hubert Soudant in 1993.

A private music conservatory was founded by Bressler in 1844, and the Ecole César Franck, specializing in organ and church music, in 1930. Composers born at Nantes include Bourgault-Ducoudray, whose compositions reflect the influence of Breton and other folk music, which he collected avidly; and Ladmirault, whose opera *Gilles de Retz* was performed in Nantes when he was only 16 (1893). In 1920 Ladmirault became director of the conservatoire at Nantes, and most of his work is influenced by Breton subjects and folksong.

FRANK DOBBINS

Nantier-Didiée, Constance (Betzy Rosabella) (*b* St Denis, Ile de Bourbon [now Ile de la Réunion], 16 Nov 1831; *d* Madrid, 4 Dec 1867). French mezzo-soprano. She studied with Duprez at the Paris Conservatoire and in 1849 won the *premier prix* for opera. In 1850 she made her début at the Teatro Carignano, Turin, as Emilia in Mercadante's

La vestale. She appeared in *Luisa Miller* at the Théâtre Italien in 1852, and the next year began a three-year engagement at Covent Garden, where she made her début as Gondì in *Maria di Rohan* and sang in the English premières of *Rigoletto* and *Benvenuto Cellini*. In 1854–6 she sang in Spain and North America, then for two years at the Théâtre Italien. On 15 May 1858 she returned to Covent Garden to sing Urbain (*Les Huguenots*) at the gala opening of the present theatre, where she continued to appear until 1864. Meyerbeer and Gounod wrote her additional music for productions there of *Dinorah* (1859) and *Faust* (1863). She was the first Preziosilla in *La forza del destino* (1862, St Petersburg), and had a wide repertory of comic, dramatic and travesty roles. (H.F. Chorley: *Thirty Years' Musical Recollections*, London, 1862/*R*, abridged 2/1926/*R* by E. Newman)
